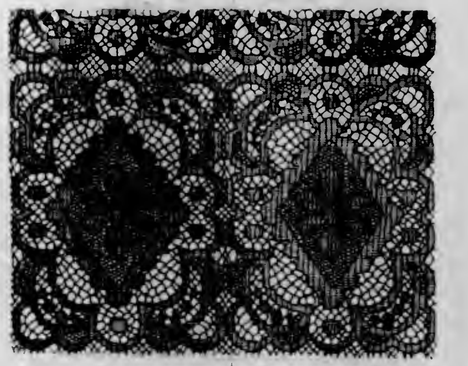
The ornamental design for a tag or similar article, as shown.

76,057. AQUARIUM STAND. HARRY SCHEINER, JACOB SILBERHARTZ, and PHILIP SILBERHARTZ, Brooklyn, N. Y. Filed June 11, 1927. Serial No. 22,409. Term of patent 7 years.



The ornamental design for an aquarium stand as shown.

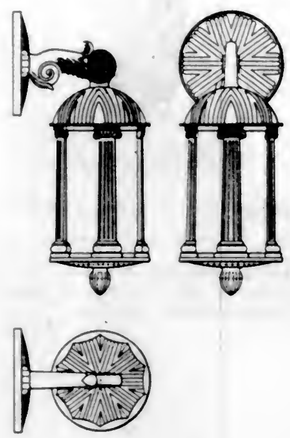
76,058. LIGHTING FIXTURE. HARRY SCHREIBMAN and LOUIS GOLDBERG, Brooklyn, N. Y. Filed June 9, 1928. Serial No. 27,069. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

76,059. LACE. HANS SEEL, Hopkinton, R. I. Filed Apr. 13, 1928. Serial No. 26,312. Term of patent 3½ years.

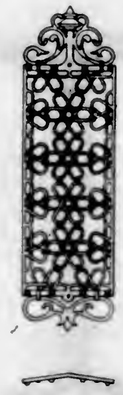
The ornamental design for lace as shown.

76,060. LIGHTING-FIXTURE STRAP OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed June 8, 1928. Serial No. 27,054. Term of patent 7 years.



The ornamental design for a lighting fixture strap or article of analogous nature substantially as shown.

76,061. LIGHTING-FIXTURE PLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed June 8, 1928. Serial No. 27,056. Term of patent 7 years.

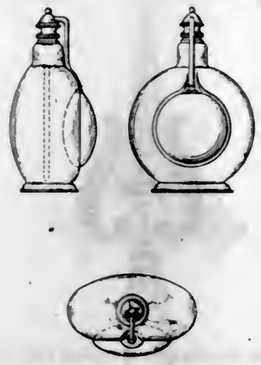


The ornamental design for a lighting fixture plate or article of analogous nature substantially as shown and described.

76,062. LANTERN ELECTRIC-LIGHT FIXTURE. JAMES SHORTT, Los Angeles, Calif., assignor to Alloy Metal Products Co., Los Angeles, Calif., a Copartnership composed of James Shortt and Claude E. Chapman. Filed May 9, 1928. Serial No. 26,613. Term of patent 3½ years.

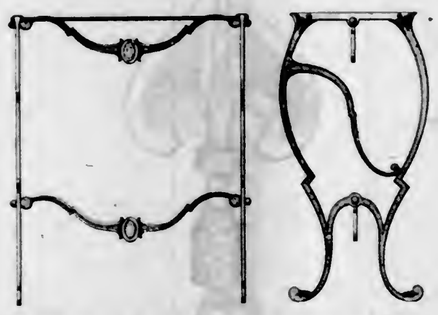
The ornamental design for a lantern electric-light fixture, as shown.

76,063. PANEL FOR ELECTRIC-LIGHT FIXTURES. JAMES SHORTT, Los Angeles, Calif., assignor to Alloy Metal Products Co., Los Angeles, Calif., a Copartnership composed of James Shortt and Claude E. Chapman. Filed May 9, 1928. Serial No. 26,614. Term of patent 3½ years.



The ornamental design for a panel for electric light fixtures, as shown.

76,064. LAMP BASE OR ARTICLE OF ANALOGOUS NATURE. PHILIP SILBERHARTZ, Brooklyn, N. Y., assignor to Majestic Lamp Works, New York, N. Y., a Partnership consisting of said Silberhartz, Jacob Silberhartz, and Harry Scheiner, Brooklyn, N. Y. Filed June 9, 1928. Serial No. 27,065. Term of patent 3½ years.



The ornamental design for a lamp base or article of analogous nature substantially as shown.

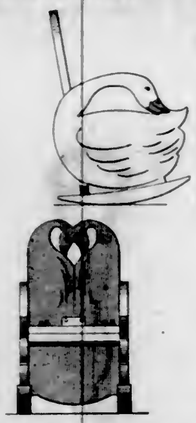
76,065. ATOMIZER OR SIMILAR ARTICLE. FULTON W. SMITH, Hillside, N. J., assignor to Colgate & Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 14, 1927. Serial No. 24,477. Term of patent 14 years.

The ornamental design for an atomizer or similar article, substantially as shown.

76,066. DISPLAY STAND. JOSEPH SOBEL, Brooklyn, N. Y., assignor to Genuine Bronze Fixture Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 21, 1928. Serial No. 25,938. Term of patent 7 years.

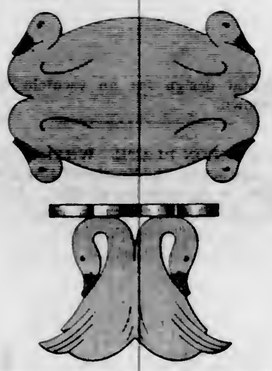
The ornamental design for a display stand, as shown.

76,067. ESCUTCHEON PLATE. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Sept. 19, 1927. Serial No. 23,466. Term of patent 7 years.



The ornamental design for an escutcheon plate substantially as shown.

76,068. ESCUTCHEON PLATE. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Sept. 19, 1927. Serial No. 23,467. Term of patent 7 years.



The ornamental design for an escutcheon plate substantially as shown.

76,069. NURSERY CHAIR. MARGARET M. SUTTON, Baxter Springs, Kans. Filed Apr. 25, 1928. Serial No. 26,452. Term of patent 7 years.

The ornamental design for a nursery chair as shown.

76,070. TABLE. MARGARET M. SUTTON, Baxter Springs, Kans. Filed Apr. 25, 1928. Serial No. 26,453. Term of patent 7 years.

The ornamental design for a table, as shown.

76,071. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,220. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,072. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,222. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,073. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,225. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,074. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,226. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,075. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,227. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,076. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,228. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,077. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,229. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,078. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,230. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,079. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,231. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,080. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,232. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,081. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,233. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,082. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,234. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,083. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,236. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,084. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,237. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,085. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,239. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,086. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,240. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,087. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,241. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,088. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,242. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,089. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,243. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,090. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,244. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,091. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,245. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,092. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,246. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,093. DRAPERY-POLE END. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,249. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

76,094. DRAPERY-POLE CENTER. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,254. Term of patent 3½ years.

The ornamental design for a drapery pole center, as shown.

76,095. DRAPERY-POLE CENTER. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,255. Term of patent 3½ years.

The ornamental design for a drapery pole center, as shown.

76,096. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,257. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,097. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,258. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,098. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,259. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,099. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,260. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,100. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,261. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,101. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,262. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,102. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,263. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,103. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,264. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,104. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,265. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,105. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,267. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

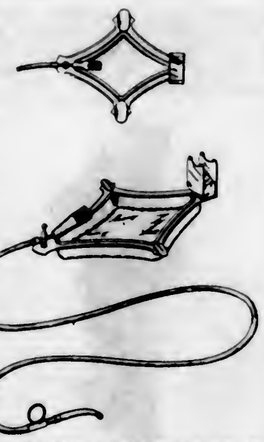
76,106. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,268. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,107. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,269. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,108. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,270. Term of patent 3½ years.

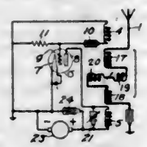


The ornamental design for a drapery pole bracket, as shown.

76,109. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,271. Term of patent 3½ years.

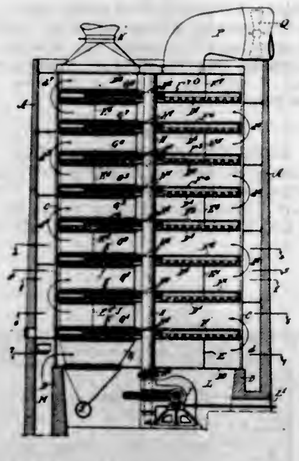
The ornamental design for a drapery pole bracket, as shown.

76,110. SMOKING SET. SAMUEL YOUNG, San Francisco, Calif. Filed May 18, 1928. Serial No. 26,734. Term of patent 7 years.



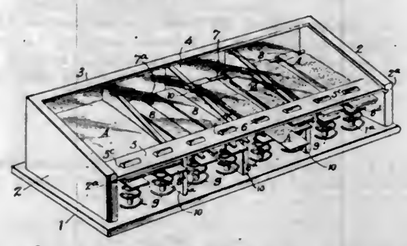
The ornamental design for a smoking set substantially as shown.

PATENTS



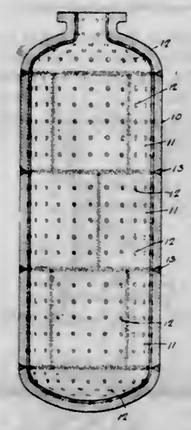
GRANTED AUGUST 14, 1928.

1,680,273. GENERATING AND TRANSMITTING SYSTEM. MILTON K. AKERS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,555. 9 Claims. (Cl. 250—17.)



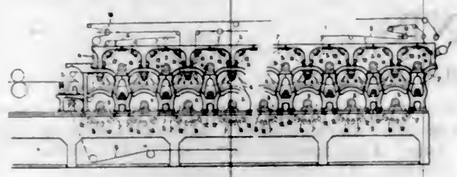
1. An oscillation generating discharge device comprising a frequency-determining circuit, inductance means in said frequency-determining circuit having four groups of turns, an input coupling coil for said device, and an output coupling coil for said device, said coils being in fixed relation to two of said groups of turns and in variable relation to two other of said groups of turns.

1,680,274. DRYING APPARATUS. FRANK L. ALLEN, Montclair, N. J., and ARTHUR D. FLOWER, Wilmington, Del., assignors to Edge Moor Iron Company, Edge Moor, Del. Filed Mar. 7, 1927, Serial No. 173,373, and in Cuba Mar. 2, 1926. 6 Claims. (Cl. 34—23.)



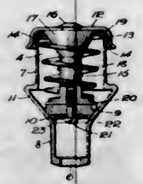
1. Drying apparatus comprising a series of cylindrical drying chambers arranged one above the other and separated by spaces interconnected to form a flue for heating gases, long and radially arranged delivery conduits connecting the drying chambers, means for sweeping the material to be dried over the floor of each chamber, a heating gas flue comprising as a part thereof the spaces separating the drying chambers and vent openings for steam and gas leading from the drying chambers into the heating flue.

1,680,275. DISPLAY CASE. MAURICE ALBAUGH, Quincy, Ohio. Filed May 25, 1927. Serial No. 194,012. 15 Claims. (Cl. 312—53.)



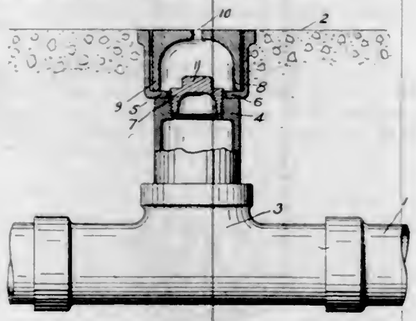
1. In combination, a casing open at the front and top; a transparent closure for the top; a strip at the front edge of the closure, said strip having a series of aligned openings therethrough; rollers in said openings extending above and below the strip; and spring pressed followers within the casing disposed below the rollers and adapted to normally contact therewith.

1,680,276. OIL-REFINING STILL. ORRIN E. ANDRUS and SUNE HERMANSON, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 29, 1927. Serial No. 229,780. 17 Claims. (Cl. 219—10.)



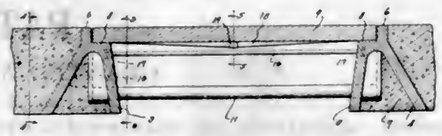
1. The method of lining vessels, which comprises the operations of securing a liner within the vessel by disposing a thin imperforate sheet of corrosion resisting alloy against the inner wall of the body of the vessel, and bonding the said liner to the said body by electrical welding at frequent and contiguous points through the liner without changing the nature of the liner, to thereby prevent distortion of the liner from its position in the vessel by temperature differences and provide for an increased transference of heat between the liner and the body of the vessel.

1,680,277. PAPER-MAKING MACHINE. ARTHUR BELLEMARE, Three Rivers, Quebec, Canada. Filed Aug. 26, 1927, Serial No. 215,680, and in Canada Oct. 19, 1926. 10 Claims. (Cl. 34—48.)



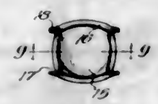
1. In a paper making machine, the combination of a rotary dryer roll having a grooved periphery, a rope adapted to run in said groove, and means adapted to receive said rope when it becomes displaced from the groove, substantially as described.

1,680,278. LUBRICATOR. FREDERICK C. BLANCHARD, Detroit, Mich. Filed Mar. 26, 1923. Serial No. 627,592. 12 Claims. (Cl. 184—87.)



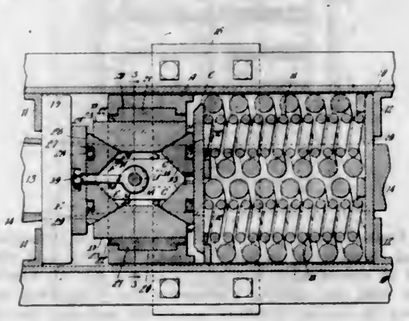
1. A lubricator presenting a reservoir having an inlet and an outlet, a valve seat, an outlet valve comprising a pervious disk the latter contacting with said seat, a cover for said inlet, and a connection between said valve and said cover to cause opening movement of said cover to be accompanied by opening movement of said valve.

1,680,279. COVER FOR CONDUIT FITTINGS. EDWARD W. N. BOOSEY, Detroit, Mich. Filed May 15, 1925. Serial No. 30,436. 3 Claims. (Cl. 137—13.)



1. A fitting for drainage conduits comprising a tubular member adapted for connection with a conduit at one end and having a threaded aperture at the opposite end, a threaded plug for closing the said aperture, and a cover member including an open ended cup shaped member having a central aperture in its bottom greater in diameter than the ping and through which the plug extends, and a second cupped member having an open end seating in the bottom of the cover member about the said plug and the opposite end practically flush with the open end of the cover member, the opposite end of the second member having an aperture of small diameter.

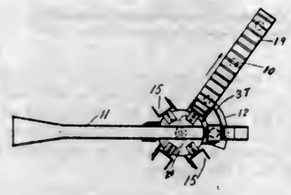
1,680,280. TRENCH COVER AND FRAME. EDWARD W. N. BOOSEY, Detroit, Mich. Filed June 26, 1925. Serial No. 39,795. 3 Claims. (Cl. 72—0.5.)



1. In trench construction, frame members each adapted to form a side of the trench and to be embedded in concrete each frame having an inner closed flange and an outer notched flange at an angle one to the other, the frames having the upper edges thereof practically flush with the concrete surface and formed with a longitudinal shoulder, the said inner closed flanges each having a series of recesses extending to adjacent the bottom of the flanges and opening through the outer face thereof, a series of hanger bars in the recesses extending transversely of the trench and providing spacers, and bolts extending between the frame members adjacent the upper edge tying the parts together.

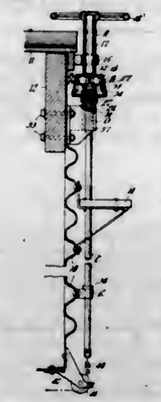
1,680,281. METHOD OF MAKING WATCHCASES. GEORGE W. BOWEN, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Aug. 25, 1927. Serial No. 215,358. 4 Claims. (Cl. 29—179.)

2. The method of producing a watch case which consists in blanking a piece of sheet metal, in bending the edges thereof to form an upstanding flange having return bends at four points to provide lugs, and in pressing down and inwardly upon the flange to bend the same and fold one wall of each lug over upon the other, substantially as described.



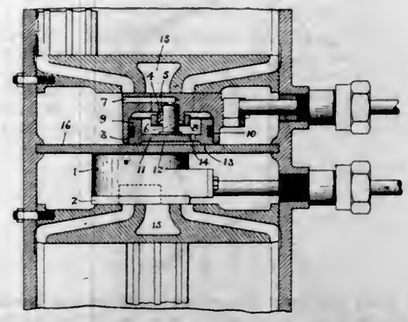
1,680,282. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 22, 1922. Serial No. 608,403. Renewed Feb. 2, 1927. 7 Claims. (Cl. 213—34.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having opposed interior friction surfaces; of a spring resistance; friction shoes



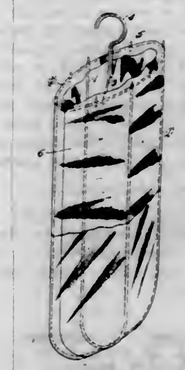
cooperable with said shell surfaces, said shoes having oppositely arranged wedge faces at the ends thereof extending at a relatively keen angle with respect to the axis of the mechanism; front and rear sets of wedge elements cooperable with said wedge faces of the shoes; and centrally disposed means interposed between and cooperable with said front and rear sets of wedge elements, said means and wedge elements having engaging wedge faces extending at a relatively blunt releasing angle with respect to the axis of the mechanism.

1,680,283. APPARATUS FOR SETTING UP AND TRANSFERRING BOTTLES AND OTHER ARTICLES. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,019. 16 Claims. (Cl. 198—22.)



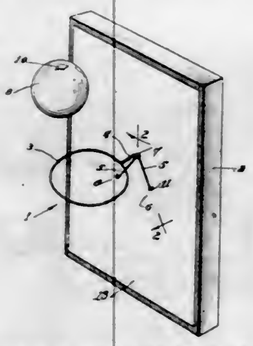
4. The combination of a stationary platform, an inclined chute down which articles slide by gravity in a cumbent position, means on said platform adjacent the discharge end of the chute for setting the articles one by one in an upright position on said platform, a horizontally traveling conveyor, transfer devices, and means to bring said transfer devices successively into operation to receive the articles directly from the chute and shift them from the platform onto the conveyor.

1,680,284. HAND BRAKE. CHARLES E. DATH, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 23, 1923. Serial No. 676,468. 8 Claims. (Cl. 74—40.)



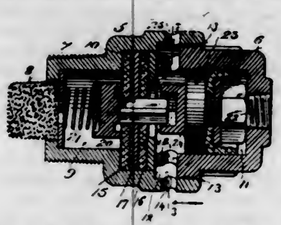
1. In a hand brake, the combination with a brake mechanism proper; of operating means therefor; and a releasable connection between said mechanism and means comprising a worm and a rotatable split nut, the split portions of said nut being bodily separable and slidably connected to said operating means.

1,680,285. SLIDE VALVE FOR STEAM ENGINES. JOHN DOCKINOS, Hamilton, Ontario, Canada. Filed July 10, 1926. Serial No. 121,628. 1 Claim. (Cl. 121—184.)



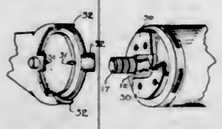
A slide valve for steam engines comprising the combination with a steam chest and cylinder having inlet and exhaust ports, of a valve body in said steam chest co-operating with said ports and having a shallow cylindrical bore in its outer face, a boss threaded externally and extending centrally of said shallow bore from the bottom thereof, a cylindrical bore of small diameter in said boss having a piston therein extending beyond the end of the boss into the shallow cylindrical bore, a packing nut threaded on the end of said boss and sealing said piston, a passage in the valve body connecting the small cylindrical bore with the interior of the steam chest, a piston in said shallow cylindrical bore having a depressed outer head and adapted to be engaged and forced outwardly by the former piston, steam passages in said valve body at either side of said central boss connecting the inner end of the shallow cylindrical bore with the exhaust port, and a vent in the depressed head of the piston leading to the interior of the shallow cylindrical bore.

1,680,286. FRAME FOR SAUSAGE CASINGS. RALPH ETTLINGER, Kansas City, Mo. Filed Mar. 26, 1928. Serial No. 264,946. 3 Claims. (Cl. 17—45.)



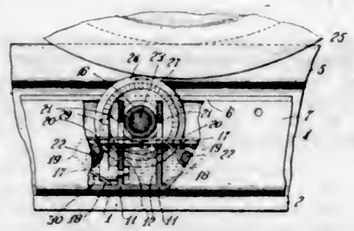
1. A frame for coating sausage casings, comprising longitudinal spreaders for extending the casing during the coating operation, and means along the upper edge of the frame for holding the casing against displacement on the frame.

1,680,287. GAME APPARATUS. KEITH J. EVANS, Chicago, Ill. Filed Feb. 21, 1927. Serial No. 169,794. 2 Claims. (Cl. 273—1.)



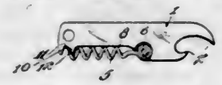
1. Game apparatus comprising a shallow box having a substantially flat bottom wall, a wire loop having a radially extending neck and diverging leg portions at the outer end of the neck, said loop when in use having its neck portion bent at an angle of ninety degrees at the outermost end thereof, means for securing the diverging legs securely to the bottom wall of the box, and an inflated balloon for projection through the loop, said box being of sufficient size to confine all of the parts of the apparatus, including the wire loop, prior to the bending of its neck as described.

1,680,288. AUTOMATIC DRAIN VALVE. ALBERT GOTTSCHALK, New York, N. Y. Filed Aug. 10, 1923. Serial No. 656,747. 8 Claims. (Cl. 303—88.)



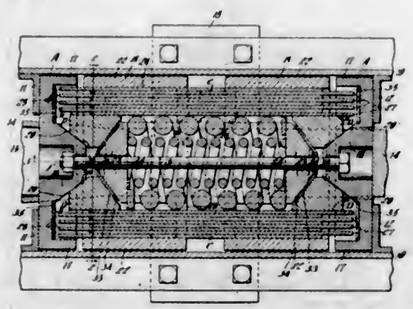
5. A drain valve structure comprising a body having internal chambers adapted, respectively, to communicate with a reservoir and a source of control pressure, said body having an outlet port, oppositely facing valve seats intermediate said chambers, valves disposed, respectively, in said chambers and cooperating with said valve seats, and means arranged in one of said chambers, to be operated by the control pressure supply for seating one of said valves, the seating of said valve operating to unseat the other valve after the lapse of an interval of time during which both valves are unseated.

1,680,289. HAIR-CLIPPING DEVICE. CLEMENT H. GRAEFF, Lakewood, Ohio, assignor to The Auto Tool & Gauge Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 16, 1924. Serial No. 732,367. 5 Claims. (Cl. 30—1.)



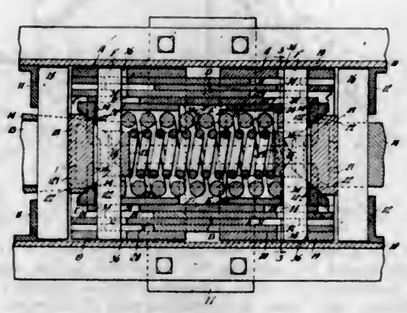
1. In a hair cutting device, the combination with a frame, of spaced flexible members carried thereby, each of said members having a locking shoulder thereon, a head having a cutting element mounted thereon, said head having means cooperating with the shoulders on said members for locking it to said frame.

1,680,290. WHEEL-FLANGE OILER. PERRY H. HAMILTON, Baltimore, Md., assignor to Maintenance Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,418. 14 Claims. (Cl. 184—3.)



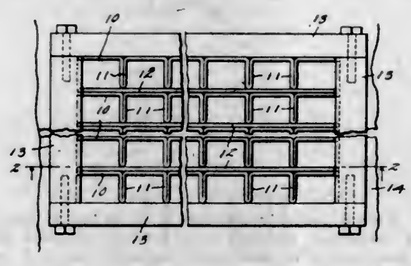
1. A wheel flange oiler, comprising a receptacle for oil adapted to be mounted adjacent a rail, and rotatable means yieldingly mounted in the receptacle and projecting upwardly into the path of the wheel flange, whereby it will be depressed and rotated by the flange and throw oil upwardly onto the flange.

1,680,291. CORKSCREW. THOMAS HARDING, Newark, N. J., assignor to J. L. Sommer Manufacturing Co., a Corporation of New Jersey. Filed Feb. 20, 1926. Serial No. 89,629. 4 Claims. (Cl. 65—48.)



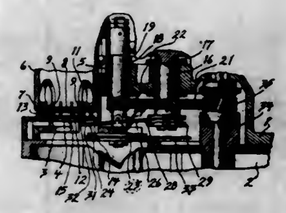
1. A corkscrew comprising a body, a corkscrew bit pivotally connected at one end to said body upon an axis transverse to said body to swing alongside of and away from the body, said body having a surface parallel to said axis transversely of the plane of swinging of the bit and eccentric to said axis in said plane of swinging of the bit which surface is engaged by the side of the pointed end of the bit as said bit is swung alongside of the body to frictionally hold said bit in closed position.

1,680,292. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 26, 1923. Serial No. 664,868. Renewed Feb. 16, 1928. 13 Claims. (Cl. 213—33.)



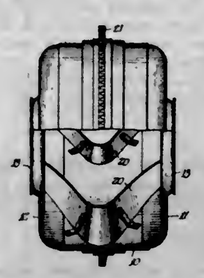
1. In a friction shock absorbing mechanism, the combination with front and rear main followers movable toward and away from each other; of front and rear spring follower shells; a spring resistance co-acting with said shells; a longitudinally arranged wedge pressure creating means coacting with said followers and shells; and longitudinally arranged friction plates adapted to be moved relatively during relative movement of said main followers, said plates being divided into two groups on opposite sides of said wedge pressure creating means.

1,680,293. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 10, 1924, Serial No. 725,107. Renewed Feb. 6, 1928. 10 Claims. (Cl. 213—33.)



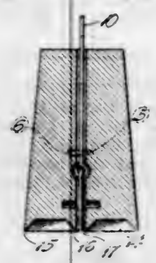
1. In a friction shock absorbing mechanism, the combination with front and rear followers, relatively movable toward and away from each other; front and rear friction casings, said casings being also relatively movable toward and away from each other, said casings and follows having limited relative movement; a plurality of longitudinally disposed, reatively movable friction plates within said casings engageable with said followers and adapted to be moved by the latter, said plates being divided into two groups at opposite sides of the mechanism the plates of said groups being intercalated; a lateral wedge pressure creating means at each end of the mechanism; tapered friction elements interposed between each group of plates and the lateral wedge pressure creating means; and a main spring resistance.

1,680,294. METAL CANDY-MOLDING DEVICE. KARL W. HOLZAPFEL, Larned, Kans. Filed Dec. 21, 1923. Serial No. 682,043. 1 Claim. (Cl. 107—19.)



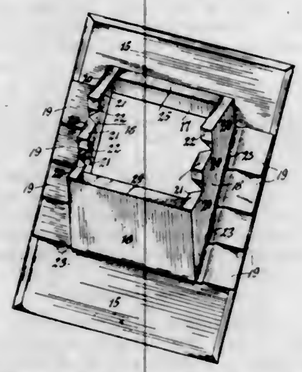
In a candy mold, a rigid outer frame, a plurality of parallel mold strips arranged within the frame and each comprising a single strip of resilient material bent to form a base having projecting outwardly from one side thereof a plurality of partitions, each partition comprising parallel flatly engaging portions of the strip and separating strips arranged between each mold strip and the ends of the partitions of the next adjacent mold strip.

1,680,295. MOTION-PICTURE APPARATUS. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 1, 1922, Serial No. 572,170. Divided and this application filed Apr. 24, 1924. Serial No. 708,706. 6 Claims. (Cl. 88—18.4.)



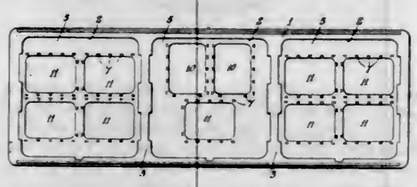
1. A motion picture projecting machine including an apertured film guide, a shuttle for engaging and feeding a film therein, a rotating cam for effecting film advancing and return movement of the shuttle and disposed to the side of one edge of the film in said guide on an axis normal to the plane of the film, means for effecting engagement and disengagement of the shuttle with a film in timed relation with but one of each plurality of advancing movements of the shuttle to intermittently feed the film including a second rotating cam and a rotatory connection between the cams effecting a plurality of revolutions of the first mentioned cam during one of the second cam, and a revolving light shutter secured with the first mentioned cam and adapted to sweep over the aperture of the guide to interrupt the light during advance of the film.

1,680,296. MIXER-DRUM CONSTRUCTION. ELBERT C. LEACH, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed July 8, 1926. Serial No. 121,078. 1 Claim. (Cl. 88—78.)



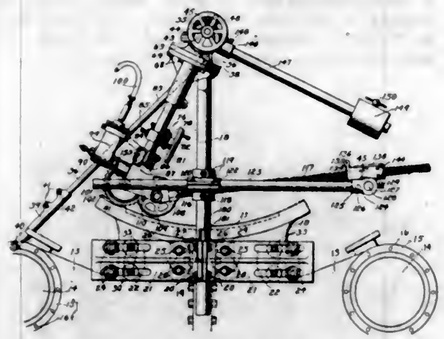
In a mixer drum, a head in the form of a single apertured sheet metal disk which is shaped in such a way that the portion of the disk immediately surrounding the aperture lies in one plane and is located farther from the inside of the drum than the other portions of the disk, and a drip ring of greater circumference than the portion of the disk about the aperture, which ring is welded to said portion in radial continuity with the same.

1,680,297. PLUMB BOB. FLOYD M. LEWIS, Pascagoula, Miss. Filed Jan. 13, 1927, Serial No. 160,861. Renewed June 25, 1928. 5 Claims. (Cl. 33—216.)



1. In a plumb bob adapted for use with a metallic tape, a body formed in the shape of a frustrum of a cone split along its longitudinal center line into two portions; each of said portions having corresponding recesses adapted to receive said tape; and means for fastening the portions together.

1,680,298. CHIMNEY FLASHING. JOHN A. LOCK, Buffalo, N. Y. Filed Sept. 17, 1926. Serial No. 136,112. 4 Claims. (Cl. 108—26.)

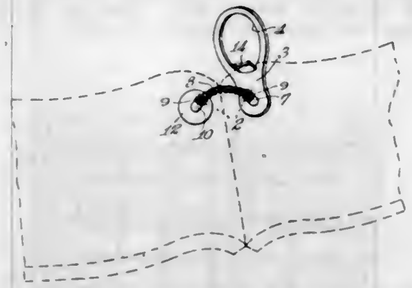


1. A chimney flashing comprising a base plate adapted to be placed over the boards of a roof and having an opening adapted to register with the chimney opening in the roof, a tubular body rising from said base around the opening thereof and adapted to receive the chimney which extends through the roof, and wings arranged on the base to lap one another and adapted to be interculated with the shingles of the roof.

1,680,299. MEANS FOR MOUNTING NEGATIVES FOR DIAGNOSES. ELLIOTT B. MABEE, Brooklyn, N. Y. Filed Nov. 30, 1923. Serial No. 677,918. 5 Claims. (Cl. 40—158.)

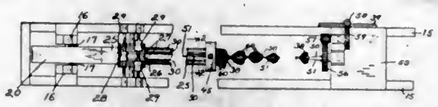
1. The herein described means for the examination of negatives which comprises a holder in combination with a series of individual mounts provided with openings, the mounts being separately adjustable in the holder in a plurality of positions, means on the holder for retaining the mounts therein, and means on the mounts for retaining negatives in register with the openings in said mounts, substantially as and for the purpose set forth.

1,680,300. CYLINDER-SADDLE MILLING MACHINE. LOUIS V. MALLORY, Kansas City, Mo., assignor of one-half to R. F. Best, Kansas City, Mo. Filed June 7, 1926. Serial No. 114,229. 9 Claims. (Cl. 90—12.)



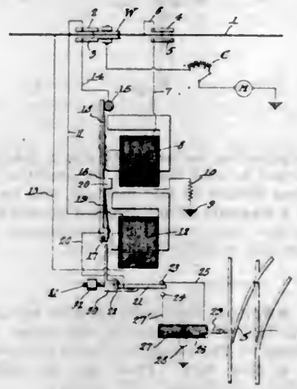
1. In a machine of the character described, a framework, means for securing the framework to the work to be operated on, a cutter carrying head, a rotatable arm carrying said head mounted on said framework, and means for supporting said arm, said arm being mounted to swing about the axis of said means and being rotatable about an axis transverse thereto and movable parallel to the axis of said means.

1,680,301. STEEL ALLOY. GEORGE L. NORRIS, Summit, N. J., assignor to Vanadium Corporation of America, a Corporation of Delaware. Filed Jan. 19, 1927. Serial No. 162,208. 1 Claim. (Cl. 75—1.)



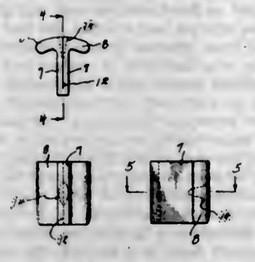
A steel alloy consisting of silicon 0.40% to 2.00%, vanadium 0.05% to 0.50%, manganese 0.20% to 0.60%, and carbon 0.10% to 1.00%, the balance being iron with the usual impurities of commercial steel.

1,680,302. COMBINED BOOK HANGER AND ADVERTISING MEDIUM. EDWARD ELLERY O'CONNOR, Strathmore, Quebec, Canada. Filed May 14, 1926. Serial No. 109,136. 3 Claims. (Cl. 45—58.)



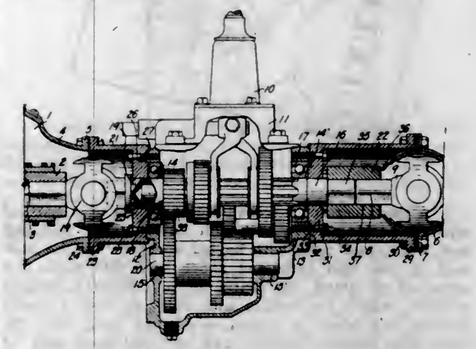
1. A book hanger consisting of a vertically disposed rigid suspension member, a horizontally disposed flexible post carried by and projecting from the said member and adapted to be passed through a book, and a removable retaining means mounted upon the free end of said post and adapted to prevent displacement of the book therefrom, and means for maintaining the suspension member in its position relatively to the book.

1,680,303. TINSEL AND THE LIKE AND METHOD FOR THE MANUFACTURE THEREOF. WILLIAM H. SCHNEIDER, Milwaukee, Wis., assignor to Arthur C. Kootz, Milwaukee, Wis. Filed Jan. 10, 1925. Serial No. 1,710. 8 Claims. (Cl. 41—10.)



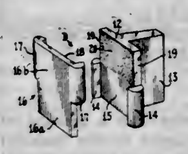
1. The method of manufacturing tinsel comprising the slitting of the web inwardly from its side margins leaving a continuous central portion of the web unslitted, the application to such portion of re-enforcing tensile members and the twisting of such members whereby to twist said central portion.

1,680,304. ELECTRIC TRACK SWITCH. RICHARD R. SCOGGAN, Jeffersonville, Ind., assignor to Cheatham Electric Switching Device Company, Louisville, Ky. Filed Dec. 23, 1924. Serial No. 757,670. 10 Claims. (Cl. 246—227.)



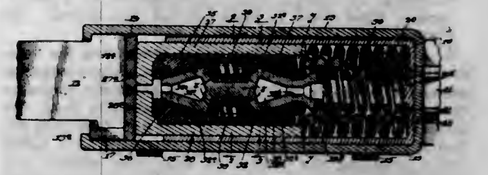
2. In an electric track switch having trolley wire contactors, track magnets, a control magnet operated by car motor current, an electric connection between a trolley contactor and the track magnets, a switch arm forming a part of said connection, a retractile armature co-operating with said switch arm and with said control magnet to break the circuit between the contactor and the track magnets after the control magnet is deenergized.

1,680,305. DENTURE ATTACHMENT. ISIDORE STERN, New Rochelle, N. Y. Filed Sept. 2, 1926. Serial No. 133,121. 4 Claims. (Cl. 32—12.)



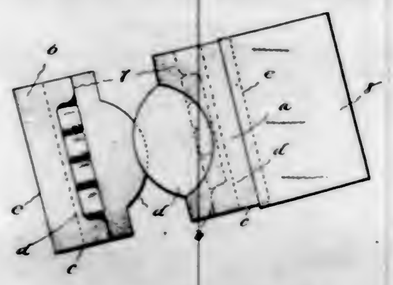
1. An adjustable denture attachment comprising, a bridge connecting shank provided with a cleavage plane paralleling the shank surfaces and dividing it into two parts which are joined at one end and separably free for adjustment at the other end, and provided with a spreading tool receiving socket at the free end, and said receiving socket having an elliptical mouth, the major axis of which is coincident with the cleavage plane.

1,680,306. TRANSMISSION. LAWRENCE L. STEWART, Kansas City, Mo. Filed Aug. 12, 1927. Serial No. 212,493. 1 Claim. (Cl. 74—58.)



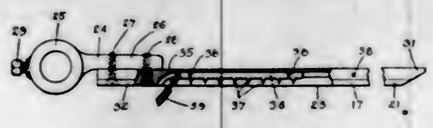
An adapter having an exterior annular flange for attachment to a transmission housing, an internal annular flange for attachment to a second transmission housing, and a bearing opening to receive the driving member of the second named transmission.

1,680,307. DENTURE ATTACHMENT. ISIDORE STERN, New Rochelle, N. Y. Filed Nov. 26, 1926. Serial No. 150,670. 5 Claims. (Cl. 32—12.)



1. In a denture attachment, a T-shaped support having a head, flanges carried with the head along opposite sides thereof, a leaf spring, flanges carried with the spring to overlie the sides of the head, and means to secure the leaf spring to the head to flex between the first named flanges.

1,680,308. DRAFT GEAR. SVEN J. STRID, Chicago, Ill., assignor to Roy J. Cook, Chicago, Ill. Filed Mar. 13, 1926. Serial No. 94,393. 4 Claims. (Cl. 213—32.)



1. A socket member, a pair of slide members slidably mounted therein, a plunger tapered at each end, a wedge block between each tapered end and one of said slide members, means to yieldingly resist movement of said slide members, plunger and blocks, said blocks being spaced apart, means yieldingly maintaining said blocks in normal spaced relation, said last named means comprising a coiled spring said plunger being recessed to accommodate said spring.

1,680,309. DISPLAY CONTAINER. ARNOLD J. TANNER, North Haven, Conn. Filed Apr. 30, 1927. Serial No. 187,788. 3 Claims. (Cl. 206—44.)

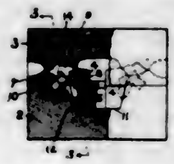
1. A container for merchandise composed of a pair of separate packing units, each unit having front, side and back walls, said units both having an open top, the back wall of one unit extending above said side walls and arranged to stand constantly in a relatively upright position, means for uniting said units to form a single package and when so united said units lying with the open tops thereof together and said extended back of one unit overlapping the other unit.

1,680,310. STATIC COLLECTOR FOR PRINTING PRESSES. CHARLES WEBER, Remer, Minn. Filed Mar. 29, 1924. Serial No. 702,991. 2 Claims. (Cl. 175—264.)

1. In combination with a grooved member for manipulating sheets of paper having engaging surfaces adapted to come in contact with said sheets, charge collectors mounted upon said member in said groove having a multiplicity of points formed thereon adapted to extend outwardly in spaced relation to said member and to within a short distance of the engaging surfaces thereof and means for connecting all of said points together and for grounding the same.

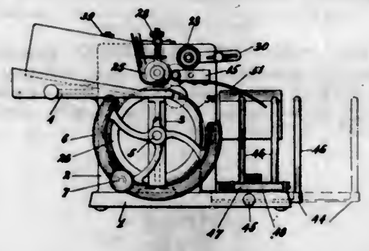
1,680,311. RECIPROCATING MOTOR. CARL S. WEYANDT, Pittsburgh, Pa., assignor to Central Electric Tool Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 1, 1926. Serial No. 85,245. 69 Claims. (Cl. 172—126.)

1. A portable reciprocating motor comprising the combination with a reciprocating core system, electro-magnetic means for actuating said system, and structure enclosing them, of an operator's handle offset laterally from the path of movement of said core system and from said enclosing structure adjacent one end thereof, and a buffer spring receiving the impact of said core system and visibly disposed outside of said enclosing structure beyond said handle.



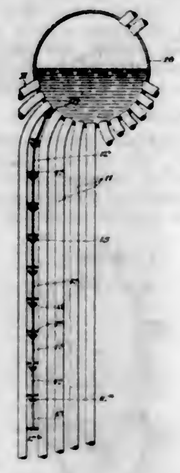
19. A reciprocating motor comprising a reciprocating core system, and an energizing winding therefor of conductor having low specific gravity and high specific resistance as compared with copper.

28. A percussive tool comprising a ballast tamper or other tool to be operated with long high power strokes, a reciprocating motor comprising a moving core system for impacting the tamper or other tool, said core system having a weight lying within the range from about two to about four pounds, a magnet system having an air gap of such length as to effect a stroke of said system lying within the range from about 1¼ inches to about 2½ inches, and winding structure for energizing said magnet system.



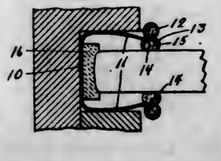
50. A reciprocating motor comprising a tubular barrel, bearings carried by said barrel, a reciprocating core having extensions slidable in said bearings, and magnetizable elements of a magnetic circuit disposed around said barrel and having pole tips extending therethrough and lying substantially flush with its internal bore.

1,680,312. METHOD AND MEANS FOR MOLDING ARTIFICIAL TEETH. GEORGE H. WHITELEY, Jr., York, Pa., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Apr. 22, 1926. Serial No. 103,703. 10 Claims. (Cl. 32—6.)



1. Molding means for molding artificial teeth, which consists of a three-part mold two of which parts are detachably clamped in fixed relation and the other part in detachable loose relation and wherein the two parts which are clamped in fixed relation provide separated clamping recesses opening into their line of contact and one of them has a core receiving socket, and a combustible core having a shank fitted to the core receiving socket of the first mentioned mold parts and having its body part projecting into the tooth space, said core also provided with laterally extending arms the ends of which are respectively clamped in the recesses between the first mentioned two mold parts which are detachably clamped in fixed relation and about which core the porcelain material is molded, said core adapted to be subsequently burned out when vitrifying the tooth whereby said tooth will be properly molded with a recess in its cervical end and with lateral passages opening from said recess through the outer walls of the body of the tooth.

1,680,313. MAIL-MARKING MACHINE. LAWRENCE J. ZAHN, Long Island City, N. Y., assignor to International Postal Supply Company, Brooklyn, N. Y. Filed Aug. 1, 1925. Serial No. 47,496. 14 Claims. (Cl. 101—236.)

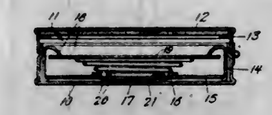


1. In a mail marking machine, a base, a housing extending from the base, a main operating shaft having a support in said housing, an inker and a separator roller both adjustably carried on the housing, a printing die and trip mechanism therefor and a printing pressure roller also carried on the housing and a single feed roll carried directly on said shaft in cooperation with the separator roller.

1,680,314. BAFFLE FOR WATER-TUBE BOILERS. NORMAN APPENZELLER, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 2, 1927. Serial No. 165,278. 9 Claims. (Cl. 110—98.)

1. In a boiler of the series drum and tube type, the combination with the rearward bank of water tubes and the overlying drum to which they are connected, of integral cast iron baffle plates assembled in successive rows between adjacent tubes, the abutting longitudinal edges of the plates of the respective rows having articulated joints, said joints being formed by similar laterally extending flanges along the edges of the plates of one rod, there being a relatively wide arcuate groove between the flanges in which are seated the edges of the plates in adjacent rows, and means supporting the assembled plates and maintaining the uppermost row thereof in close relation to the said drum.

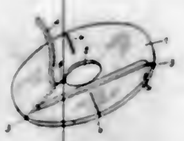
1,680,315. WINDOW-GLASS GUIDE. EDWIN W. M. BAILEY, Amesbury, Mass. Filed Feb. 25, 1925. Serial No. 11,450. 8 Claims. (Cl. 296—44.5.)



1. A window glass guide comprising a U-form metal channel strip having two rows of teeth formed on each side, one on the edge thereof and the other on an adjacent portion of the side, and cushioning material disposed on the inner surfaces of each side and having portions thereof clamped between each pair of corresponding rows of teeth.

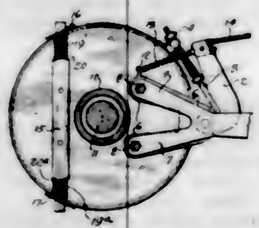
2. A window glass guide comprising a channel form metal strip having the outer portions of its sides extended from each other and then reversely to form clamping members disposed without the planes of the inner surfaces of the sides, and cushioning material disposed on said inner surfaces and having portions thereof held between said clamping members.

1,680,316. COMPOSITE TITANIUM PIGMENT AND METHOD OF MAKING SAME. LOUIS E. BARTON and LONNIE W. RYAN, Niagara Falls, N. Y., assignors to Titanium Pigment Company, Inc., New York, N. Y., a Corporation of Maine. Filed July 8, 1925. Serial No. 42,319. 18 Claims. (Cl. 134—58.)



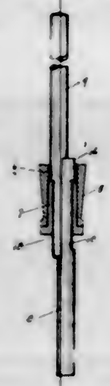
3. The method of making composite titanium pigments from a titanium solution which comprises separately and preliminarily forming a suspension comprising acicularly crystalline particles of calcium sulphate, then adding same to the titanium solution, treating the charge to precipitate the titanium compounds upon said calcium sulphate particles, separating the precipitates from the solution, and calcining same.

1,680,317. RECEPTACLE FOR FACE POWDER AND THE LIKE. PHILIP C. P. BOOTY, Chicago, Ill., assignor to Michael T. Daley, Chicago, Ill. Filed Feb. 25, 1926. Serial No. 90,473. 15 Claims. (Cl. 132—83.)



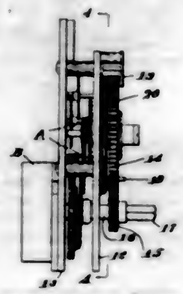
1. A receptacle for face powder and the like, comprising in combination a casing having an opening thereinto, a plate on the inner face of the casing adapted to close the opening and held against displacement edgewise with respect to the opening, a second opening being provided into the casing, a second plate on the inner face of the casing adapted to close said second opening and adapted to be displaced edgewise from the opening for filling the casing, and spring means adapted normally to hold said plates yieldingly in closing position, the arrangement being such that by the inward and outward movement of the first named plate air is forced from the casing through said first named opening for carrying a supply of powder from the receptacle.

1,680,318. ASSEMBLY DISK FOR ELASTIC MATERIAL. CHRISTIAN E. CALLAHAN, Willard, Ohio, assignor to The Pioneer Rubber Company, Willard, Ohio, a Corporation of Ohio. Filed June 25, 1927. Serial No. 201,306. 7 Claims. (Cl. 46—53.)



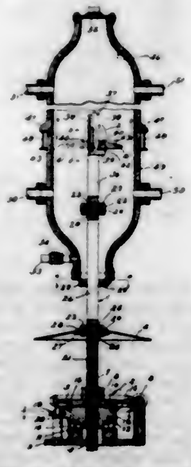
1. In a connector for an elastic member, a relatively stiff sheet material part having an opening formed therein and having slots extending from the inner and outer edges of the sheet material part, the edges of the slots being positioned sufficiently close to pinch the elastic member between the edges of the slots when the elastic member is forced into the slots.

1,680,319. BRAKE MECHANISM FOR VEHICLES. DELBERT R. CAPES, Chicago, Ill., assignor to A-C Manufacturing Co., Inc., a Corporation of Illinois. Filed Jan. 9, 1926. Serial No. 80,159. 4 Claims. (Cl. 188—77.)



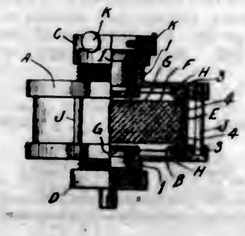
1. In a brake mechanism, a brake band having spaced guides on the periphery thereof, an offset bar extending across a portion of said band and projecting through said guides, and yieldable means associated with said bar and tending to force said band outwardly.

1,680,320. BUSHING REMOVER. EDMUND COOKENMASTER, Fairgrove, Mich. Filed Sept. 9, 1926. Serial No. 134,400. 1 Claim. (Cl. 29—88.2.)



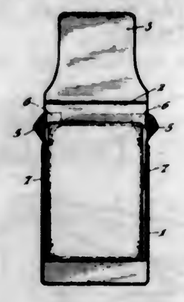
In a bushing remover, the combination of cylindrical driving and driven members, one end of the driving member having a flatted section adapted to form a shoulder, the opposite side having a shorter turned section forming a bushing engaging shoulder, there being a flatted section and shoulder formed on one side of the driven member and adapted to engage the flatted section on the driving member, the opposite side having a rounded section the upper end of which is shouldered and tapered to engage a bushing, the end of each member engaging the shoulder formed on the other member.

1,680,321. TIME-CLOCK INDICATOR. FRANKLIN E. CRAWFORD, Winchester, Mass., assignor to Bankers Electric Protective Association, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1921. Serial No. 490,838. 2 Claims. (Cl. 177—311.)



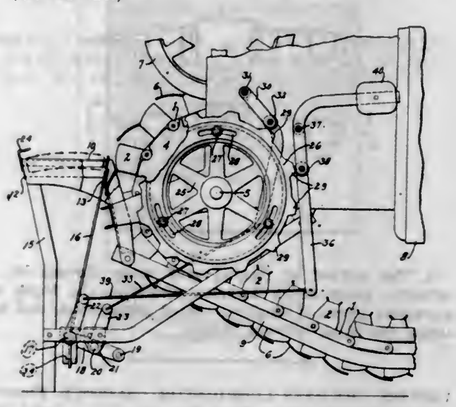
1. Vault protection apparatus comprising lock control mechanism located inside the vault and inaccessible from the exterior thereof when the vault is locked, said mechanism including means adapted to be set so that the vault lock will be conditioned for opening at the end of a period of time of determined length, and being designed to prevent the unlocking of the door until the expiration of said period, and an indicator outside of the vault for indicating the unelapsed portion of said period, and means whereby said indicator is electrically controlled by said mechanism to show the unelapsed portion of said period, whereby the condition of the lock control mechanism is indicated exteriorly of the vault during the time in which it is inaccessible.

1,680,322. EXCAVATING DEVICE. BUTLER P. CRITTENDEN, Watertown, and ALVIN C. KILLINGER, Everett, Mass., assignors to Beacon Oil Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 1, 1926. Serial No. 138,878. 8 Claims. (Cl. 83—6.)



1. Apparatus for excavating the contents of containers having in combination a thrust bearing fixedly mounted on the axis of an opening into the container, an axially movable shaft and propelling means therefor reacting against said thrust bearing, a boring head on said shaft, and means for rotating and for axially propelling said shaft as a consequence of its rotation, means for varying the propulsion thrust, and means permitting said shaft to be interposed and removed from interposition between said thrust bearing and said container.

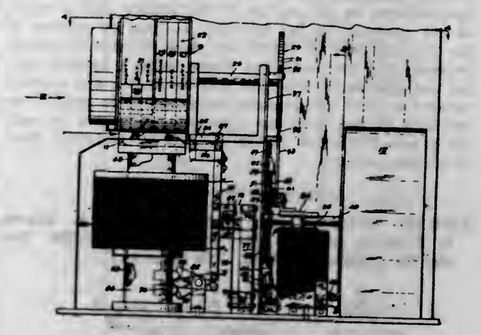
1,680,323. WATER FILTER ATTACHABLE TO FAUCETS. HERBERT HUDSON CULVER, St. Louis, Mo. Filed July 16, 1925. Serial No. 43,968. 6 Claims. (Cl. 210—81.)



6. In a filter for service on a faucet, a body comprising paired retaining members, and a tube spacing said retaining members, the retaining members having annular grooves and inlet and outlet necks, ring gaskets seated in said grooves and spacing the tube ends from the retaining members, a filter element within the tube and bearing on said gaskets and means for securing the retaining members to retain the elements assembled therein.

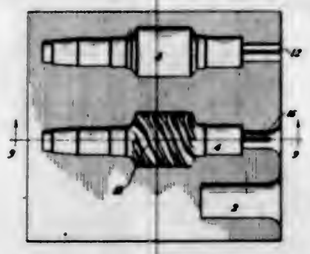
1,680,324. CIGARETTE CASE. FRANK F. DANVILLE, Gloversville, N. Y. Filed Mar. 8, 1926. Serial No. 93,046. 1 Claim. (Cl. 106—41.)

A container for packages comprising a box open at the top for the reception of the package, a cover for the box, said box and cover being composed of a flexible material and the cover being integrally formed with the box along one edge and adapted to open along said edge, a ribbon composed of a single piece of yielding flexible material and having both of its ends secured rigidly to the cover, said ribbon extending beneath the package and along opposite sides thereof, and straps secured to the interior opposite sides of the box for guiding the ribbon and for maintaining the same flat against the side of the box.



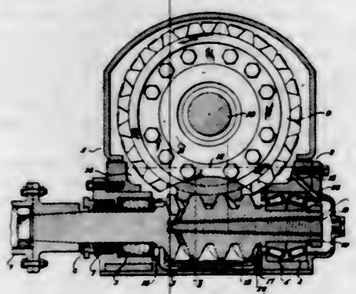
1,680,325. LOADING DEVICE. JOSEPH W. DAWSON, St. Louis, Mo., assignor to Barry-Wehmiller Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 11, 1926. Serial No. 134,831. 12 Claims. (Cl. 198—24.)

1. In a loading device, guides for the articles to be loaded, a series of pushers extending into said guides to push the articles therein, a shield extending over the course of said pushers, said pushers being movable from a starting position below said shield to a delivery position remote from said shield, means for withdrawing said pushers from the course of the articles in said guides, and means for returning the pushers to said starting position while they are withdrawn.



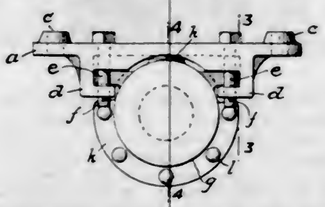
2. In a loading device, guides for the articles to be loaded, and a series of pushers movable in said guides to push the articles therein, said pushers comprising a series of elongated elastic rods having free ends which yieldingly engage the articles.

1,680,326. AUTOMATIC TIME-PRINTING DEVICE. CHARLES S. DUTTON, Oakland, Calif. Filed Apr. 4, 1927. Serial No. 180,695. 7 Claims. (Cl. 234—41.5.)



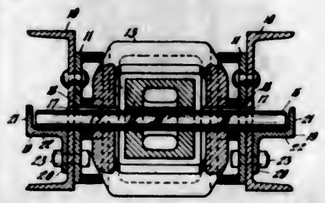
1. In a device of the character described, type means against which a card is arranged to be projected, means normally spaced from said type means to receive the card, a displaceable member arranged in the path of insertion of the card, means associated with said displaceable member to cause the projection of the card against said type means upon the displacement of the displaceable member by a card, and means thereafter automatically operative for releasing the printed card and for returning said displaceable member to its original position.

1,680,327. METHOD OF FORGING GEAR WORMS. ALBERT L. EICHER, Canal Fulton, Ohio. Filed June 26, 1926. Serial No. 118,659. 17 Claims. (Cl. 78—45.)



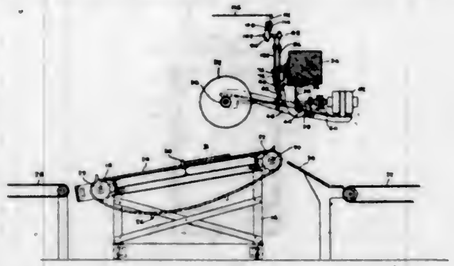
1. The method of forging gear worm threads on a cylindric blank which includes subjecting the blank to successive blows of identical thread impressions, and rotating the blank between blows.

1,680,328. BY-PASS LUBRICATOR. ALBERT L. EICHER, Canal Fulton, Ohio. Filed Feb. 12, 1927. Serial No. 167,673. 11 Claims. (Cl. 184—11.)



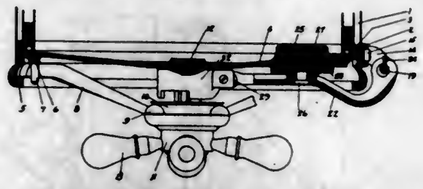
1. Lubricating means for friction contact members, such as worm gears and the like, including a housing member for containing a lubricant, gear members in the housing member operating to create a region of high pressure in the lubricant in one portion of the housing and a region of low pressure in the lubricant in another portion of the housing adjacent the initial place of friction contact between said gear members, there being a by-pass having one opening in said high pressure region and another opening in said low pressure region, so as to permit the lubricant to flow from the high pressure region through the by-pass to the low pressure region at the initial place of friction contact.

1,680,329. JOURNAL BOX FOR CAR WHEELS. JAMES R. FLEMING, Scranton, Pa. Filed Sept. 10, 1926. Serial No. 134,626. 1 Claim. (Cl. 308—40.)



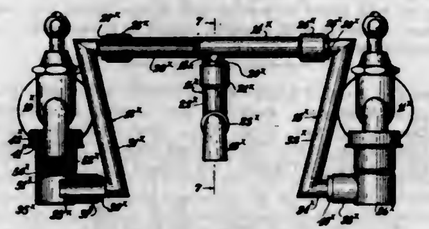
A journal box for car wheels comprising a hanger adapted to be secured to a car and a barrel carrying a bearing for the end of an axle, said barrel being provided with oppositely extending flanges and said hanger having guideways formed therein to receive said flanges, said guideways extending parallel to the axle and open at their outer ends to permit removal of the barrel by axial outward movement thereof relative to the hanger, and removable pins extending across said guideways and engaging the flanges to normally prevent outward movement of the barrel, said guideways being higher than said flanges to permit relative vertical movement between the barrel and hanger, and a stop means for limiting vertical movement between the hanger and bearing comprising a member on one engaging a surface on the other.

1,680,330. DRAFT-RIGGING-KEY RETAINER. WILLIAM A. GEIGER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1925. Serial No. 61,929. 4 Claims. (Cl. 213—50.)



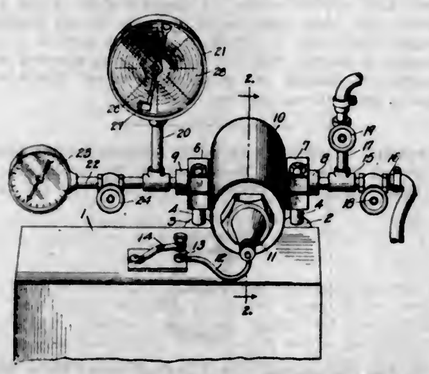
1. In a railway draft rigging, the combination with draft sills having alined key receiving openings and a connecting key working in said openings and having the ends thereof projecting through the sills and beyond the outer sides of the same; of means for limiting endwise movement of said key to retain it in assembled relation with the draft rigging, said means including a detachable, rigid bracket fixed to each sill adjacent the key receiving opening thereof, each of said brackets having one end section thereof secured to a draft sill and having the other free end section thereof overlapping the corresponding end of the key.

1,680,331. SAWING MACHINE. HENRY C. HILKE, Seattle, Wash. Filed Feb. 12, 1926. Serial No. 87,783. 3 Claims. (Cl. 143—41.)



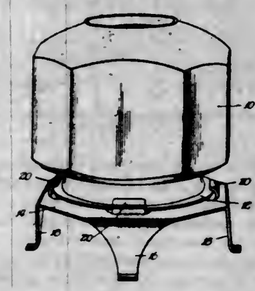
1. A sawing machine comprising means for feeding boards, a beam, a swinging support pivotally mounted between its ends on said beam, a circular saw mounted on the front end of said support, a motor mounted on the rear end of said support, driving connections between said motor and saw, rods pivotally attached at one end to the forward portion of said support, arms secured to said beam, said arms having openings through which said rods extend, enlargements on the other ends of said rods, springs between said enlargements and arms normally holding the front end of said support upwardly, and means for depressing said front end in opposition to the tension of said springs.

1,680,332. DOOR MOUNTING. RAYMOND L. JEWELL, Millcreek Township, Erie County, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 71,481. 8 Claims. (Cl. 220—55.)



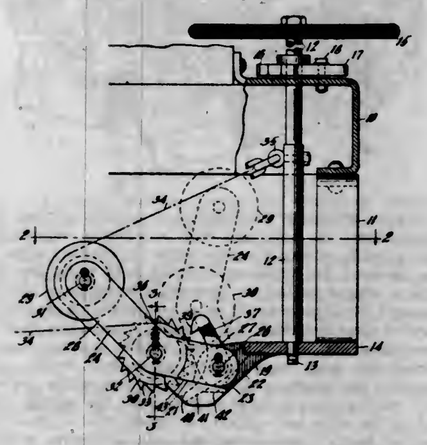
1. In a door mounting, the combination of a door seat; a door; a door supporting arm having a slot at its inner end and a hinge connection at its outer end; a joint connection between the door and the arm; and a screw operating in the slot to adjust the door across the arm.

1,680,333. WATER-SUPPLY-FAUCET ATTACHMENT. LOUIS KOOPERSTEIN, New York, N. Y. Filed May 25, 1927. Serial No. 193,982. 5 Claims. (Cl. 137—111.)



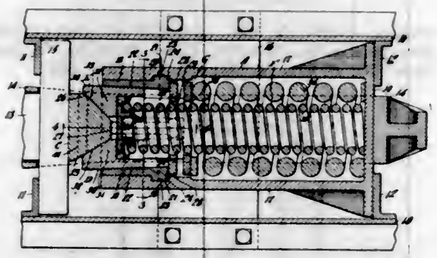
3. A twin faucet attachment comprising a tubular coupling member to lie between the faucets and having a forward discharge, cups adapted to be connected with the discharges of the faucets and having outlets, main branch pipes slidably and rotatably connected at their upper ends with the ends of said coupling member and slidably and rotatably connected at their lower ends with the outlets from said cups, said discharge from the coupling member comprising a nipple rigid with said member, a tubular angle-coupling having one of its members rotatably mounted on said nipple and a spout on the other coupling member.

1,680,334. TESTING DEVICE. JAMES O. LEWIS and HOMER R. PIERCE, Tulsa, Okla. Filed Mar. 28, 1927. Serial No. 178,974. 10 Claims. (Cl. 73—51.)



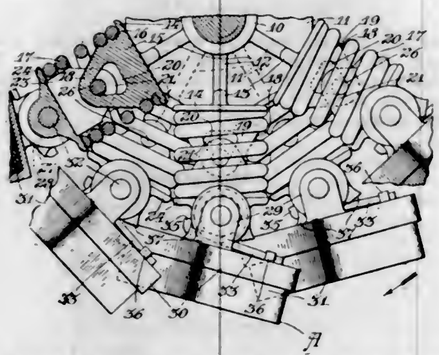
1. In a testing device of the character described, the combination of a combustion chamber, air and gas inlets leading to said chamber, gauges communicating with said chamber, means arranged within said chamber for mixing the fluid introduced to said chamber, and means for causing combustion in said chamber.

1,680,335. DISPLAY AND DISPENSING CONTAINER. EDWARD MESSER, Cincinnati, Ohio. Filed Jan. 13, 1926. Serial No. 80,951. 6 Claims. (Cl. 221—146.)



2. A display and dispensing container comprising an inverted transparent receptacle having a mouth and a lip around said mouth, a supporting annulus clamped to said lip, a downwardly and rearwardly extending discharge chute fastened to said annulus, and spaced legs on said annulus co-operating with said chute to form a multi-point support for said annulus and receptacle, said receptacle having a flat side opposite said chute to co-operate with certain of said legs to form a multi-point support when said container is turned on its face with said chute opening up for filling.

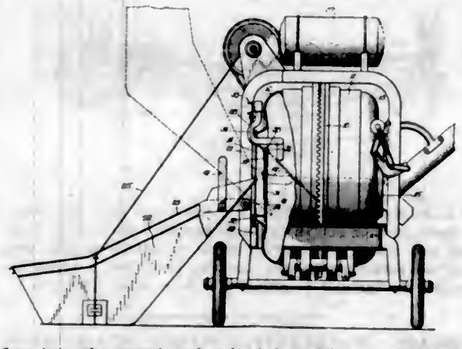
1,680,336. HAND BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 5, 1923, Serial No. 610,754. Renewed Feb. 16, 1928. 12 Claims. (Cl. 254—149.)



1. In a hand brake, including a brake chain, the combination with a vertical brake staff; of a lever pivotally mounted between said staff and the brake mechanism proper and chain guiding means on said lever, said chain guiding means comprising a pair of radially spaced sheaves, said chain connected at its ends to said staff and brake mechanism and passing over said sheaves.

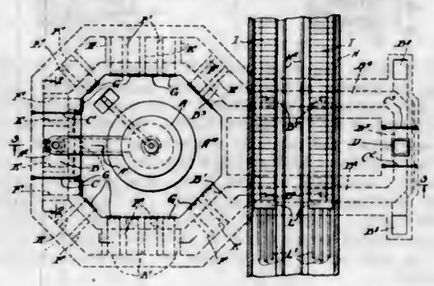
1,680,337. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 28, 1927. Serial No. 171,407. 4 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a spring cage having opposed interior liners at the outer end thereof, said liners presenting interior opposed friction surfaces; of interengaging means on the liners and cage for detachably connecting the liners to the cage and locking the liners against longitudinal movement with respect to the cage; friction shoes cooperating with the friction surfaces of the liners; a wedge member engaging the shoes for spreading the same apart against the liners to hold the liners interlocked with the cage; means rigid with the wedge member engaging the inner ends of the liners for anchoring the wedge to the cage and limiting outward movement of the wedge; and spring resistance means within the cage opposing movement of the shoes.



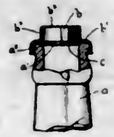
1,680,338. WHEEL. DARIUS T. PHILLIPS, Chicago, Ill. Filed Jan. 26, 1925. Serial No. 4,688. 6 Claims. (Cl. 305—12.)

3. In a wheel, the combination of a center portion provided around its periphery with a plurality of enlarged spring heads alternately protruding on opposite sides of the plane of the wheel, each spring head being provided with a tongue having an aperture enlarged in a circumferential direction towards its inner portion, a connecting member provided with an inwardly protruding portion carrying a pin adapted to move within said aperture, a spring for each intermediate connecting section surrounding the tongue and the coacting protruding portion, and bearing at its inner end against the spring head and at its outer end against the intermediate connecting portion, and a tread section for each connecting portion pivotally mounted thereon.



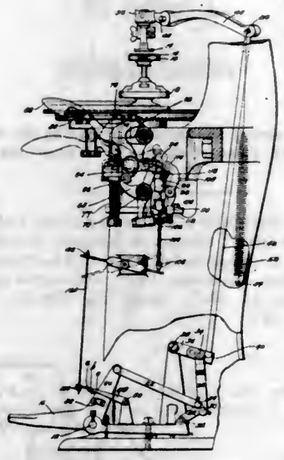
1,680,339. CONCRETE MIXER. ARNOLD REUSS, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Nov. 2, 1927. Serial No. 230,466. 8 Claims. (Cl. 83—73.)

1. A machine of the class described, a supporting frame, a mixing vessel arranged for movement on said frame, said vessel having an opening, a splash shield supported in front of said opening to prevent splashing of the contents of the vessel during mixing operations, means for charging the vessel arranged movably between a charging position in which the contents thereof tend to



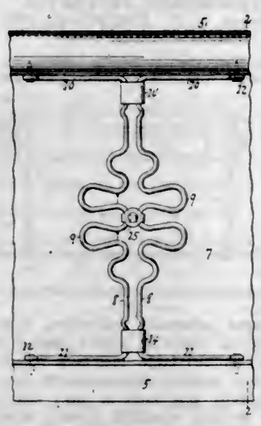
flow into the vessel and a loaded position in which the contents thereof do not tend to flow into the vessel, and means for causing said splash shield to open the opening of said vessel to permit flow of the charge into said vessel whenever said charging means is brought into the charging position.

1,680,340. GAS-PRODUCER-CONDUIT SYSTEM. HARRY M. ROBERTSON, Rockville, Md., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 19, 1920. Serial No. 382,594. 6 Claims. (Cl. 158—7.)



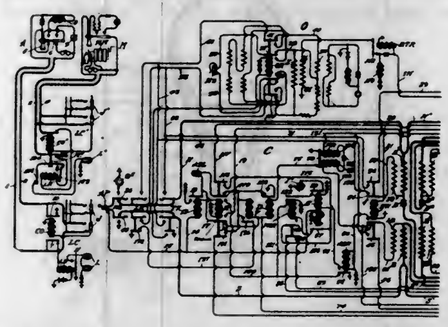
1. The combination with a gas producer of a delivery conduit comprising a central portion located at one side of the producer and connected to the gas outlet of the producer and end portions extending transversely away from said central portion at opposite sides of the producer, and projecting beyond the side of the producer remote from that at which the central portion of the conduit is located, said end portions being provided with means for cleaning the gas, and clean out openings at spaced points along said end portions.

1,680,341. BOTTLE CAP AND DISPENSING STRAW. FRANK ROSENTHAL, New York, N. Y. Filed Sept 3, 1926. Serial No. 133,389. 7 Claims. (Cl. 215—11.)



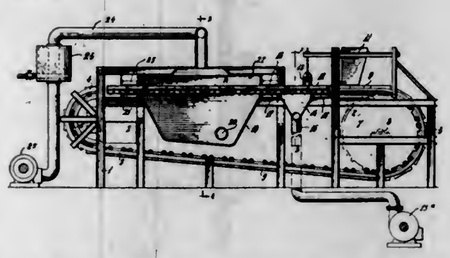
1. The combination with a sealing means for a bottle closure, of a folded dispensing tube, the two being so arranged and associated, that the latter means is received within the former means.

1,680,342. SOLE-ROUNDING MACHINE. ERNEST E. SABIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 1, 1926. Serial No. 85,250. 17 Claims. (Cl. 12—25.)



1. In a sole rounding machine, sole clamping mechanism, a member for controlling the sole clamping mechanism, rounding mechanism, an independently operable member for setting in operation the rounding mechanism, and means operated upon movement of the second-named member for locking the first-named member in an operative position.

1,680,343. STAIR-CARPET FASTENER. EUGENE A. SAVARY, Phoenicia, N. Y. Filed Dec. 7, 1925. Serial No. 73,542. 2 Claims. (Cl. 16—11.)

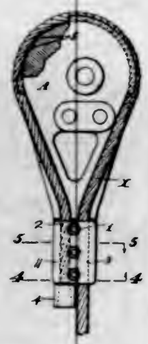


1. In a stair carpet fastener the combination with a pair of vertical members arranged alongside of each other, each member having an upper and lower arm extending laterally from the member, and a plurality of resilient loops formed in each member, of clips for connecting the members to longitudinally fold them together, and means for fastening the members to a stairway riser.

1,680,344. TELEPHONE SYSTEM. MICHAEL B. STAZAK, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1926. Serial No. 80,438. 10 Claims. (Cl. 179—51.)

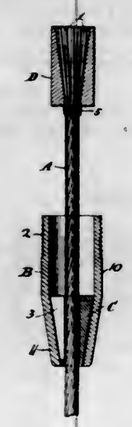
1. A telephone system of the character described including a plurality of subscribers' lines, some of said lines having common battery substations and the remainder having magneto type substations, a cord circuit provided with answering and calling terminals for connecting any two of said lines, a set of repeating coils for said cord circuit, means associated with said answering and calling terminals effective to include said coils in or exclude them from said circuit, and a relay associated with said means being arranged to include said coils in said circuit whenever one of the connected lines is of the common battery type.

1,680,345. METHOD OF AND APPARATUS FOR SINTERING. HENRY J. STEHLI, Cedar Grove, N. J. Filed Nov. 19, 1926. Serial No. 149,337. 2 Claims. (Cl. 266—21.)



1. A sintering machine comprising means to support and operate movable receptacles, an igniter for igniting combustible material on the receptacles, a wind box in position to receive products of combustion from the igniter drawn through said material, means to induce suction through the wind box, a substantially closed chamber spaced from the igniter having means to permit the travel of the charged receptacles therethrough, and means independent of said suction inducing means for blowing air or other gases free from initial combustion products from the igniter through said chamber for passage through the material on the receptacles.

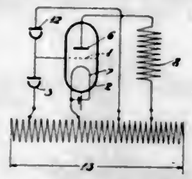
1,680,346. ROPE THIMBLE. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 17, 1926. Serial No. 148,806. 7 Claims. (Cl. 24—123.)



7. A rope thimble combined with a clamp at the inner end of the thimble having two rope passages formed

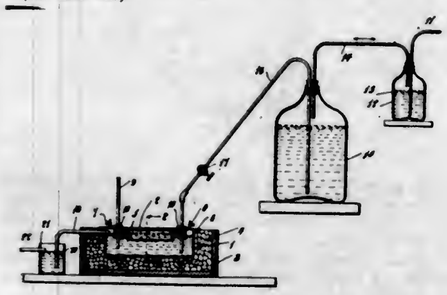
therein, one of said passages being constructed to hold the dead end of the rope against slip and the other passage constructed to permit slip of the rest of the

rope on the thimble, and a button on the dead end of the rope for holding the dead end positively against slip in the clamp.



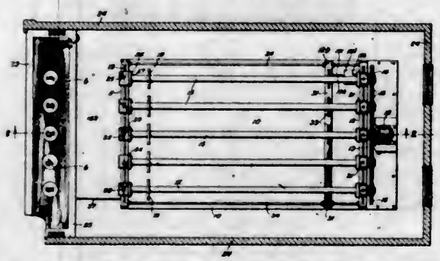
1,680,347. SOCKET FOR WIRE CABLES OR STRANDS. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 17, 1926. Serial No. 148,807. 4 Claims. (Cl. 24—123.)

1. A cable or strand connection, comprising a body of filling material in which the separated ends of the strand are embedded, a basket on the strand enclosing said body and in which said body is free to move along the strand, said basket having a portion decreasing in interior diameter in the direction of rope tension, and a compressible wedge in said basket portion free to move on the strand and compressed on the strand by the filled strand end under tension on the strand.



1,680,348. MEANS FOR REGULATING GRID VOLTAGE OF ELECTRON TUBES. GÜNTHER THILO, Friedenau, near Berlin, Germany, assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1924, Serial No. 757,886, and in Germany Jan. 6, 1923. 5 Claims. (Cl. 250—27.)

1. Means for regulating the grid voltage of a thermionic tube having three or more electrodes, input and output circuits interlinking said electrodes, a plurality of light sensitive elements, one of said elements being included in series with said input circuit and the other of said elements being included in series with a portion of



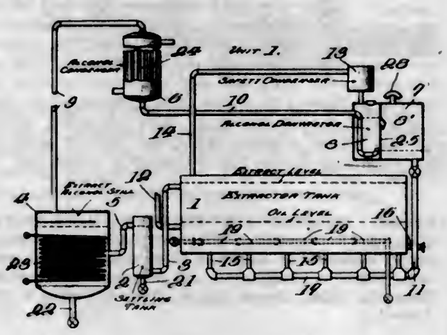
said output circuit and means for varying the illumination of said light sensitive elements to alter the resistance thereof.

1,680,349. PROCESS AND APPARATUS FOR DIALYZING LIQUIDS. OLIVER M. URBAIN, Columbus, Ohio, assignor, by mesne assignments, to The Travers Process Corporation, Columbus, Ohio, a Corporation of Ohio. Filed July 15, 1927. Serial No. 205,958. 5 Claims. (Cl. 210—2.)

1. A method for dialyzing a putrescible liquid comprising maintaining the liquid in a dialyzing tray floated in water in a zone free from oxygen.

1,680,350. AMUSEMENT APPARATUS. WILLIAM B. WARING, Bronx, N. Y. Filed Feb. 12, 1927. Serial No. 167,758. 7 Claims. (Cl. 273—86.)

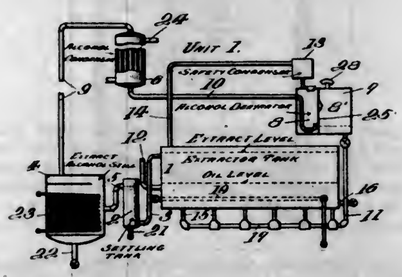
1. Amusement apparatus comprising a series of horizontally disposed rotatable shafts, means for imparting rotation thereto, rotatable members loosely carried by said shafts and slidable longitudinally thereof, and trip members adjacent the ends of said shafts adapted to be operated by said rotatable sliding members substantially as, and for the purpose specified.



1,680,351. RAILROAD SPIKE. OAKLEY H. WARNE, Elburn, Ill. Filed June 5, 1925. Serial No. 35,030. 1 Claim. (Cl. 85—30.)

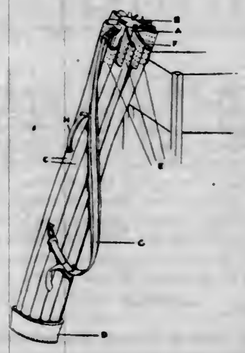
A railroad spike having a head projected from one face thereof and having a lower tapered surface along said face lying in a single transverse plane, the opposite face of the spike having two beveled faces extending from points above the upper termination of said tapered surface, said beveled faces meeting at an exterior sharp

edge, the edges of said first surface and of said other faces being tapered inward and meeting in a point at the termination of the spike.



1,680,352. PROCESS FOR THE FRACTIONAL EXTRACTION OF PETROLEUM HYDROCARBONS WITH ALCOHOL. THEODORE A. WERKENTHIN, Lima, Ohio, assignor to The Solar Refining Company, Lima, Ohio, a Corporation of Ohio. Filed Nov. 19, 1924. Serial No. 750,783. 7 Claims. (Cl. 196—13.)

1. The process of treating skimmed petroleum oils comprising successively extracting the same with heated anhydrous alcohol at a temperature somewhat below its boiling point, and recovering from the extraction products, a cracking stock and lubricating oils and alcohol for use in the process.

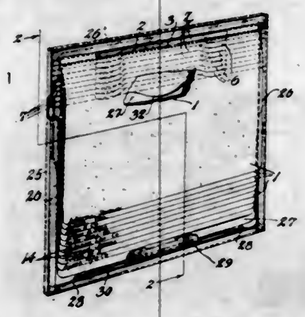


1,680,353. APPARATUS FOR THE FRACTIONAL EXTRACTION OF PETROLEUM HYDROCARBONS WITH ALCOHOL. THEODORE A. WERKENTHIN, Lima, Ohio, assignor to The Solar Refining Company, Lima, Ohio, a Corporation of Ohio. Original application filed Nov. 19, 1924, Serial No. 750,783. Divided and this application filed Nov. 4, 1925. Serial No. 66,727. 4 Claims. (Cl. 196—13.)

1. In an apparatus for extracting hydrocarbons with an alcohol, the combination in operative relation of an extractor-tank having means for introducing alcohol, means for withdrawing alcohol therefrom, means for introducing a hydrocarbon oil, and means for withdrawing a hydrocarbon oil after extraction with alcohol; an extract alcohol-still for recovering alcohol and hydrocarbon, a settling chamber intermediate the extractor-tank and the extract alcohol-still provided with means for receiving an alcoholic extraction-product from said

extractor tank and means for conducting the extraction-product after settlement into the alcohol extract-still; a combined alcohol storage and dehydrator tank having means for conducting the hydrated alcohol to said extractor-tank; and an alcohol condenser having means for receiving uncondensed alcohol from the extract alcohol-still, and means for conducting condensed undehydrated alcohol to the storage and dehydrator-tank.

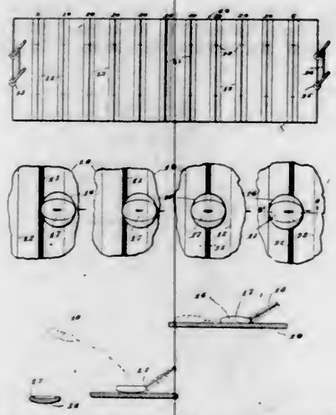
1,680,354. GOLF BAG. CLARK C. WILLIAMS, Ascot, near Brisbane, Queensland, Australia. Filed Nov. 15, 1926. Serial No. 148,495. 2 Claims. (Cl. 150—105.)



1. A substantially-indeformable golf bag, comprising a central cylindrical casing to receive golf balls; and a multiplicity of vertical club-receiving pockets arranged entirely around the casing and coextensive in height therewith, said pockets being secured permanently to said casing.

1,680,355. VISIBLE INDEX SYSTEM. GEORGE WOODHOUSE, Butte, Mont. Filed Mar. 31, 1926. Serial No. 98,795. 8 Claims. (Cl. 129—16.)

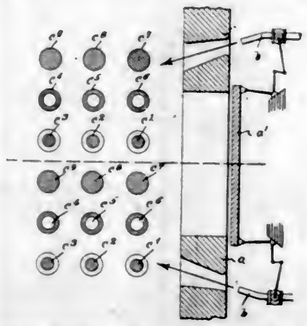
4. An index card or sheet comprising a body portion having a bendably connected extension, and a removable carrier member mounted in said extension and projecting beyond the side edges thereof, said carrier being retained by passage through apertures in said extension.



6. An index card or sheet comprising a body portion provided with means for supporting the same in a holder and recesses at the lower side edges thereof, and a pro-

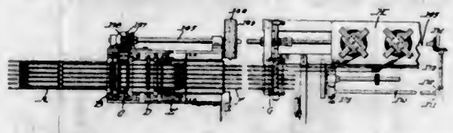
tector bent upon itself to embrace said edges and formed with a tongue cut therefrom so as to project from its base toward the bend line to interlock with said recesses.

7. In a card index, the combination with a holder, of a series of associated sheets slidingly mounted therein and adapted to engage the upper portion of the holder, and a retaining device supported by the lower portion of the holder and adapted to be withdrawn laterally of the assembled sheets.



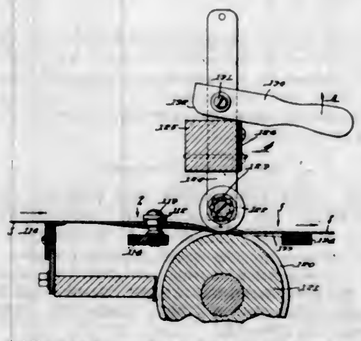
1,680,356. INDOOR PARLOR MINIATURE FOOTBALL GAME. MORRIS EDWARD YABAUS, Cambridge, Mass. Filed Dec. 30, 1927. Serial No. 243,743. 4 Claims. (Cl. 273—94.)

1. An improved indoor football game comprising a football gridiron, said gridiron marked off in yard lines, said yard lines provided with parallel zone lines, a ball composed of a disk, said disk convexed on one side and concaved on the other side, a stylus adapted to move the ball horizontally along the said gridiron when brought in contact with the convexed edge of said ball and to raise the ball in an arc when contacted with the concaved side of said ball, portable goal posts adapted to be erected at each end of said gridiron.



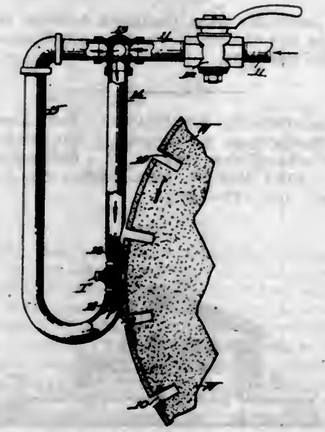
1,680,357. MANUFACTURE OF GLASSWARE. PIERRE ARBEIT, Paris, France, assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Apr. 24, 1925, Serial No. 25,573, and in France May 1, 1924. 8 Claims. (Cl. 49—77.)

1. The glass-working method which comprises periodically applying a gathering implement to the surface of a stationary supply of molten glass, and, in the intervals between such gathering operations, directing a flame upon the region of the glass surface where said gathering takes place, to reheat such portion of the glass as may be chilled by contact with said gathering implement.



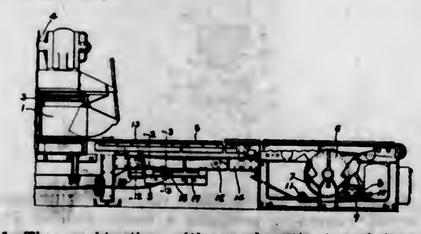
8. In combination with a container for molten glass having a work opening above the glass level for the reception of a gathering implement, a door for the opening, said door arranged to be opened and closed at each gathering operation, means for applying a heating medium to the surface of the glass near the opening, and means operated in synchronism with the opening or closing of the door for regulating the application of the heating medium.

1,680,358. MACHINE FOR MAKING FIBER REED. EARL F. BALDWIN and FRANK E. WOODS, Gardner, Mass., assignors to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1926. Serial No. 97,468. 11 Claims. (Cl. 154—1.)



1. A machine for making fiber reed having, in combination, a folding device, means for pressing the folded fiber, an unfolding device, means to gum the unfolded fiber, a refolding device, and a repressing mechanism.

1,680,359. FOLDING AND PRESSING MECHANISM. EARL F. BALDWIN and FRANK E. WOODS, Gardner, Mass., assignors to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1926. Serial No. 97,470. 5 Claims. (Cl. 154—1.)

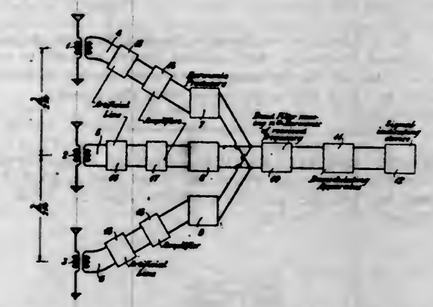


5. A folding and pressing mechanism which comprises folding rolls loosely mounted on adjacent parallel axes, one of said rolls being grooved and the other of said rolls formed with a relatively thin flange projecting into the groove of the first mentioned roll, means to draw a strip of gummed and sticky fiber between said rolls, said latter means comprising a grooved driven roll and a freely rotatable presser roll having a portion projecting into the groove of said driven roll and effective to compress the folded fiber therein to the full width of the groove, and means for pressing said presser and driven rolls together, and additional means for manually separating said freely rotatable roll from said driven roll and for holding the separated roll in raised position.

1,680,360. LUBRICATING DEVICE FOR GRINDING MACHINES. JOHN BATH, Worcester, Mass. Filed Apr. 23, 1923, Serial No. 633,989. Renewed Feb. 15, 1928. 5 Claims. (Cl. 51—267.)

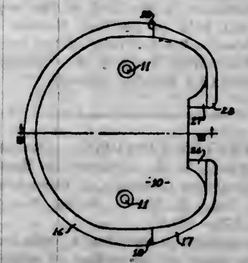
1. In a grinding machine, a grinding wheel, a lubricant conveying pipe extending downward substantially in the plane of rotation of said wheel to a point directly above the point of contact of the wheel with the work, a second lubricant conveying pipe extending upward substantially in the plane of rotation of said wheel to a point directly below the point of contact of said wheel with the work, whereby converging streams of lubricant are delivered to the wheel and work at the cutting point, and means to control the flow of lubricant from the two pipes and vary that of one relative to the other.

1,680,361. CULLET DUMP FOR LEERS. THOMAS E. BEACH, Baltimore, Md., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 19, 1927. Serial No. 241,009. 4 Claims. (Cl. 49—47.)



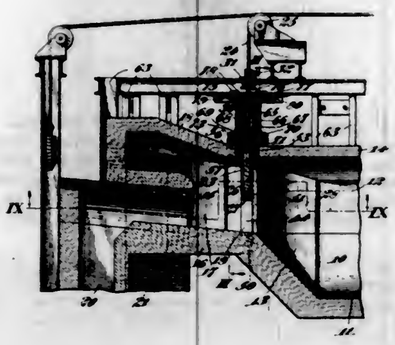
1. The combination with an elongate tunnel leer for annealing glassware, an endless flexible belt for conveying the ware therethrough, an open ware cooling and sorting table over which said belt travels, and driving means for said belt, of an S-turn in the return strand of said belt beneath said sorting table, the upper loop of the S being directed toward the direction of motion of said strand, and a receptacle for catching any cullet dumped from said strand located beneath said upper loop.

1,680,362. FLEXIBLE CLOSURE. RALPH H. BINNS, Pittsburgh, Pa., assignor of two-sevenths to Edward H. Binns, Pittsburgh, Pa. Filed Feb. 18, 1925. Serial No. 10,074. 12 Claims. (Cl. 24—205.)



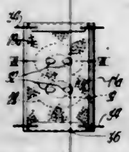
12. A slider for separable fasteners of the class described said slider having a pull device pivoted thereto to swing freely about an axis transverse to the path of movement of the slider, said pull device being provided with a stop element engageable with a fixed part of the slider to limit swing of the pull device in one direction.

1,680,363. DIRECTIVE ANTENNA. RALPH BOWN, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 13, 1924. Serial No. 749,799. 6 Claims. (Cl. 250—11.)



1. In a system for changing phase differences by frequency conversion the combination with an antenna array for receiving waves of length λ the distance between adjacent antennæ being equal to $r\lambda$ of a plurality of connecting circuits individual to and connected with the said antennæ all of said circuits being of the same length electrically, an harmonic producer individual to and connected with each of said connecting circuits, and a common translating circuit connected with the said connecting circuits and having frequency selecting device to transmit therethrough only a predetermined harmonic of those produced in each of said connecting circuits.

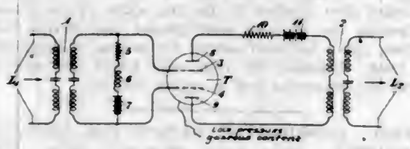
1,680,364. DENTAL FLASK. WALTER J. CLARK and WILLIAM M. ROMINE, Wichita, Kans. Filed Aug. 22, 1927. Serial No. 214,732. 2 Claims. (Cl. 18—33.)



1. In a dental flask, a top member, a base member and a composite central member comprising a forward and rear pair of elements in separable relationship, and false floor elements carried above the base member.

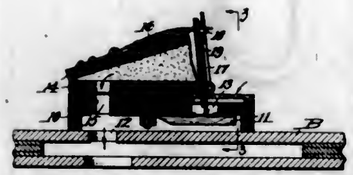
1,680,365. REGENERATIVE OPEN-HEARTH FURNACE. STEWART J. CORT, Bethlehem, Pa.; TIMOTHY BURNS, Buffalo, N. Y.; and ROBERT S. A. DOUGHERTY and CHARLES E. LEHR, Bethlehem, Pa. Filed Sept. 24, 1925. Serial No. 58,268. 4 Claims. (Cl. 122—6.)

1. In a regenerative furnace, in combination, a pair of opposed buckstays, water-cooled beams secured to opposite sides of the buckstays, and water-cooled members having key and slot connections with the beams.



1,680,366. SIGNAL DEVICE. SAMUEL JAMES CREW, Yarraville, Victoria, Australia. Filed May 6, 1926, Serial No. 107,242, and in Australia June 23, 1925. 1 Claim. (Cl. 40—133.)

A sign indicator for use in signs, including a sign plate formed with apertures arranged to simulate characters and a strip of perforated backing material, said sign plate and perforated backing material being each made up of a series of sections, the sections of the sign plate being each provided at opposite edges with inturned vertical edge portions of hook formation designed to interengage with corresponding edge portions of adjoining sections, the perforated backing material sections being adapted for attachment to the back of the respective sign plate sections and held in position thereon by bending the upper and lower edge portions of the respective sign plate sections rearwardly against the corresponding sections of the perforated backing material.

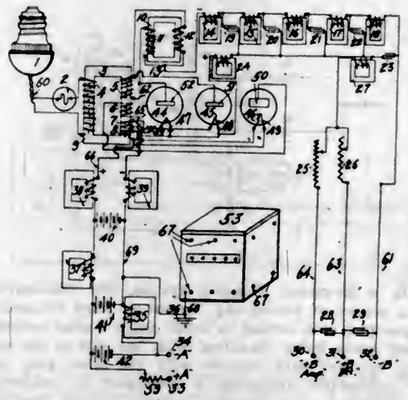


1,680,367. REPEATER CIRCUITS. CHARLES S. DEMAREST, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 7, 1922. Serial No. 573,293. 4 Claims. (Cl. 179—171.)

1. A repeater system comprising a tube having a gaseous content the state of ionization of which will vary in direct proportion to the potential to which it is subjected, a pair of electrodes in said tube between which is applied a potential varying in accordance with signal currents coming in over said system, and a second pair of electrodes connected to an output circuit of said system, the current in said output circuit varying in accordance with the incoming signal currents, said first mentioned

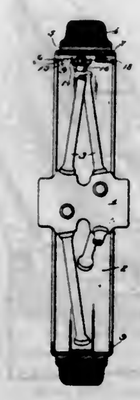
pair of electrodes being positioned between said second mentioned pair of electrodes and being independent of any connection therewith.

1,680,368. TENSION REGULATOR. JOHN ALFRED DOUGLAS, Woodside, N. Y., assignor to Auto Pneumatic Action Company, New York, N. Y., a Corporation of New York. Filed May 20, 1926. Serial No. 110,564. 3 Claims. (Cl. 137—153.)



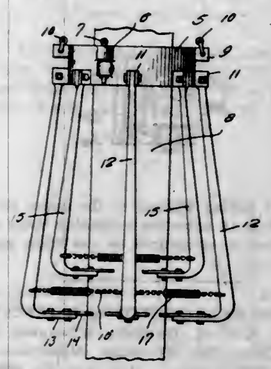
1. A tension regulator for use in connection with an air pump, comprising a pneumatic having its movable leaf exposed to the tension, a spring for distending the pneumatic, a spill valve for admitting air, and a yielding connection between the movable leaf of the pneumatic and spill valve.

1,680,369. METHOD OF MAKING COMPOUND STOCK. JAMES J. DUGAN, Wilmington, Del. Filed Apr. 9, 1925. Serial No. 21,871. 2 Claims. (Cl. 29—180.)



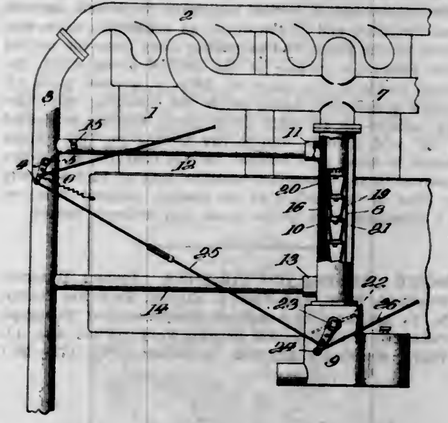
1. The method of making piston ring stock of rectangular section comprising providing a bronze member with an angular shaped dovetail and a steel member with a substantially parallel sided channel adapted to fit over said dovetail, the outer surface of said steel member being of such shape that when the side walls of said steel member are bent without substantial flowing action into engagement with the sides of said dovetail, the outer surface of said steel member without any additional substantial finishing operation forms part of the desired outer contour of the finished product.

1,680,370. RADIO POWER-SUPPLY UNIT. PHILIP E. EDELMAN, Chicago, Ill. Filed Mar. 23, 1925. Serial No. 17,489. 4 Claims. (Cl. 250—27.)



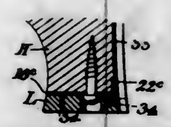
1. A radio power supply unit comprising a transformer, means to connect said transformer to a source of alternating current, a plate current supply fed by said transformer, a series cascaded filter connected to said plate current supply and including adjustable series resistances to adjust the output potential thereof and to prevent the sudden discharge of current therefrom, a filament current supply fed by said source of alternating current, and a metallic container for enclosing said plate and filament current supplies and grounded to one of said supplies.

1,680,371. LOCKING DEVICE FOR WHEEL-RIM-EXPANDING WEDGE. ERNEST E. EINFELDT, Davenport, Iowa, assignor, by mesne assignments, to French & Hecht, Inc., Davenport, Iowa, a Corporation of Iowa. Filed Dec. 24, 1926. Serial No. 156,772. 4 Claims. (Cl. 301—16.)



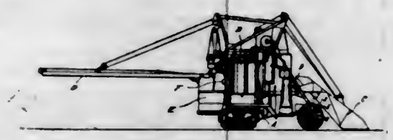
1. In combination with a split wheel rim having on its ends wedging surfaces and adapted to be expanded to seat within a tire ring, said ring being provided with sloping faces, an expanding wedge seated between said wedging surfaces, and a wedge locking device attached to the wedge and adapted to bear on said sloping faces and thereby resist the backing out movement of the wedge.

1,680,372. PILE SCRAPER. LOREN C. FENN, Chinook, Wash. Filed July 5, 1927. Serial No. 203,522. 5 Claims. (Cl. 15—236.)



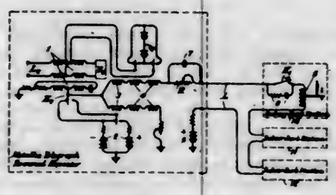
2. In a device of the class described, a plurality of scrapers arranged in circular formation in overlapping relation and means connecting said scrapers yieldably inducing the convergence thereof.

1,680,373. INTAKE MANIFOLD AND HEATING-MEDIUM CONTROL FOR INTERNAL-COMBUSTION ENGINES. JACOB RICHARD FRANCIS, Flint, Mich. Filed Jan. 18, 1922. Serial No. 530,022. 1 Claim. (Cl. 123—122.)



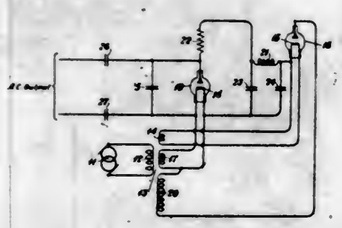
The combination with an internal combustion engine having an exhaust passage, intake passage connected thereto, of a charge forming device connected to said intake passage having a throttle valve and provided with an annular heating chamber, said intake passage being provided with a plurality of annular chambers provided with inlets and outlets, a heater for heating said passages, pipes connecting said exhaust passage to said heaters, a pipe connecting the exhaust passage to said heating chamber surrounding the mixing chamber of said charge forming device being provided with a valve, a valve disposed in said exhaust passage, a connection between said valves and said throttle valve and an air heater disposed in said exhaust passage on the engine side of said valve for supplying warm air to said charge forming device.

1,680,374. HEEL-LIFT-ATTACHING MEANS. BENJAMIN GILOWITZ, New York, N. Y., assignor of one-half to Harry Aronstam, Bronx, New York, N. Y. Filed Nov. 9, 1925. Serial No. 67,904. 4 Claims. (Cl. 36—34.)



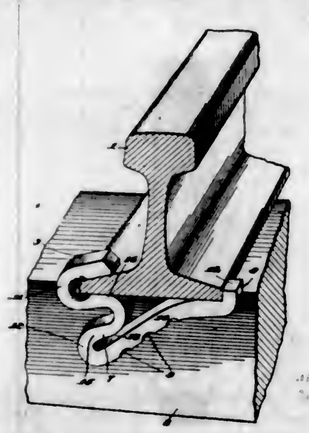
3. A heel lift having secured to the upper side thereof near its front end an upwardly extending sheet of flexible material adapted to be secured to the front side of the heel.

1,680,375. CONCRETE MIXING AND DISTRIBUTING MACHINE. ERIC O. HAMEEN, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 22, 1926. Serial No. 96,573. 1 Claim. (Cl. 214—17.)



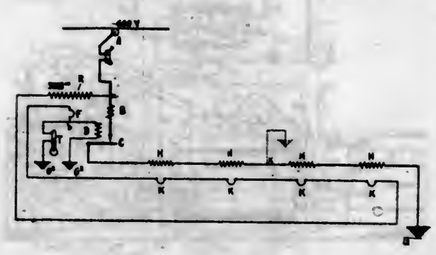
In a paving machine, the combination of a rotary concrete mixing drum, a portable frame supporting the drum, a charging skip for delivering material into the drum at one end, a bucket to receive the mixed concrete from the other end of the drum, an adjustable boom supported by the frame and extending away from the mixing drum above the surface of the ground along which the bucket moves to the place of delivery, a cross piece extending across the frame below the charging skip, casings secured to the said cross piece, springs supported in the said casings, and a bar resting on the springs adapted to serve as a bumper for the charging skip when it moves to its lowermost position, and to hold it above but close to the surface of the ground, whereby it serves as a counterbalance to the boom and delivery bucket.

1,680,376. TELEGRAPH CIRCUITS. JOSEPH HERMAN, Westfield, N. J., and FRED J. SINGER, Rockville Center, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 11, 1927. Serial No. 212,216. 4 Claims. (Cl. 178—59.)



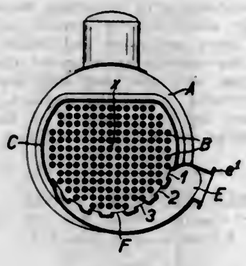
1. In an electrical signaling system a circuit adapted to accommodate both polar signals and open-and-close signals, and correcting devices in said circuit to make the wave shapes of both types of said signals approximately alike.

1,680,377. ALTERNATING POTENTIAL GENERATOR. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 17, 1924. Serial No. 750,492. 3 Claims. (Cl. 250—1.)



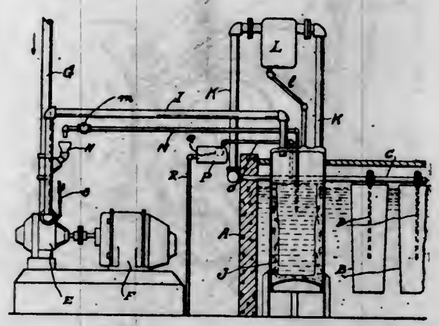
1. In a frequency changing system, the combination with a source of alternating current of fixed frequency, of a gas filled tube having an anode and a heated cathode, the said anode being connected with one side of the said source, and the said cathode with the other side, the latter connection including a condenser of relatively large capacity to be charged by the rectified impulses produced by the said tube, a second gas filled tube having an anode and a heated cathode effectively connected across said condenser, the anode connection including an impedance, a second condenser bridged across the electrodes of the second tube, and an output circuit connected with the said second condenser, the value of the said impedance being such that the voltage drop therethrough will stop the discharge of the said second tube when the charge taken by the said second condenser reaches a predetermined value, whereby the frequency of the oscillations is controlled.

1,680,378. RAILWAY-RAIL ANCHOR. JACOB A. HYLE, Atlantic City, N. J., and CLARENCE R. KEATLEY, Los Angeles, Calif., assignors to Continental Railway Supply Corporation, a Corporation of Delaware. Filed Jan. 7, 1928. Serial No. 245,166. 5 Claims. (Cl. 238—330.)



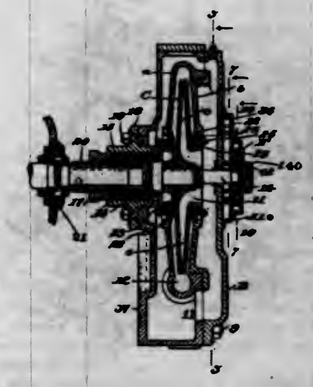
1. A single piece rail anchor comprising a metallic bar formed with a jaw member, and downwardly extended body portion having a thinner portion formed between its upper and lower points, and an outwardly extended arm portion terminating with an upright outer end, said arm portion being provided with a plurality of depressions intermediate its length.

1,680,379. ELECTRIC HEATING SYSTEM. LEE P. HYNES, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Dec. 6, 1924. Serial No. 754,333. 7 Claims. (Cl. 219—20.)



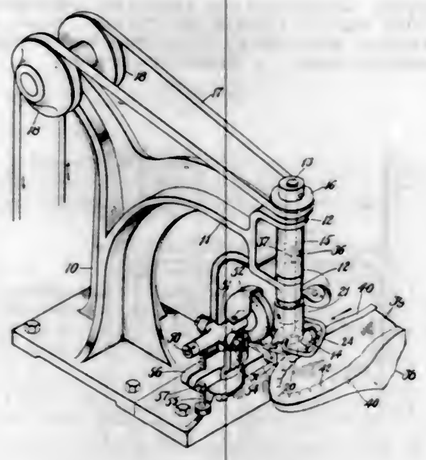
1. An electric heating system comprising an electric heater, a circuit-closing switch therefor, a magnet controlling said switch, a circuit for said magnet shunting the heater with a device adjacent to the heater and responsive to excessive heat therein which controls the said magnet together with a thermostat responsive to the temperature of the apartment heated and also controlling the said magnet.

1,680,380. HORIZONTAL WASTE-GAS STEAM BOILER. GOTTLIEB JAHN, Kiel, and ARTHUR RUNKWITZ, Elenschenhagen, near Kiel, Germany, assignors to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Apr. 3, 1926, Serial No. 99,534, and in Germany Aug. 13, 1925. 1 Claim. (Cl. 122—7.)



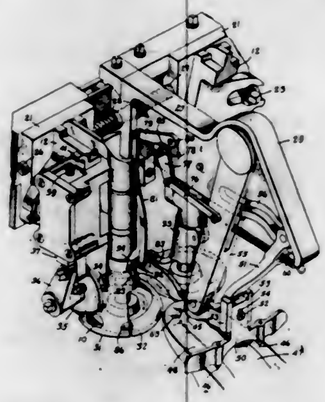
A horisontal waste gas steam boiler, comprising heating tubes extending from one head wall of the boiler to the other, an intake chamber arranged on one of the head faces of the boiler so as to communicate with the heating tubes, a waste gas distributing chamber arranged to partly surround the intake chamber, means for introducing a current of waste gas into the distributing chamber, and nozzles in the shell of the intake chamber for establishing communication between the distributing chamber and the intake chamber and breaking up the waste gas current into a plurality of divisional currents, the said nozzles being arranged to extend through the shell of the intake chamber at angles different from one another in such a manner that the nozzles impart to the divisional currents substantially concentric circular movements each of different radius in the intake chamber and thereby effect a uniform distribution of the waste gas over the entire head face of the boiler.

1,680,381. APPARATUS FOR SUPPLYING DEHUMIDIFIED AIR TO ICE-MAKING PLANTS. IRVING C. JENNINGS, South Norwalk, Conn. Filed Mar. 13, 1925. Serial No. 15,416. 10 Claims. (Cl. 62—159.)



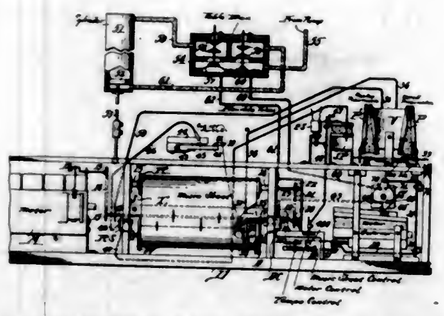
1. The combination of an ice making plant comprising a tank for containing a cooling medium such as brine, ice cans therein, air supply tubes extending into the ice cans, and means for supplying air to the tubes, consisting of a hydro-turbine pump connected to said tube for compressing the air, and means for cooling the liquid that is used in the pump.

1,680,382. SELF-PRIMING CENTRIFUGAL LIQUID PUMP. IRVING C. JENNINGS, South Norwalk, Conn. Filed Mar. 25, 1925. Serial No. 18,275. 7 Claims. (Cl. 103—113.)



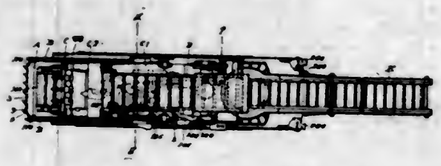
1. A self priming centrifugal pump consisting of a body, a head secured thereto, a separator chamber formed therein, a rotary impeller, and a hydro-turbine air pump secured on the head and connected to draw from the space between the body and the head and discharge to the separator chamber.

1,680,383. SHOE-TRIMMING MACHINE. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 6, 1923. Serial No. 679,040. 24 Claims. (Cl. 12—83.5.)



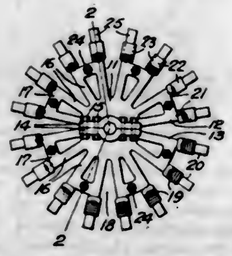
1. A machine of the character described, comprising a rotary disk-knife arranged to trim lumps from the overdrawn marginal portion of an upper lying on the insole of a lasted shoe, and a shield arranged in contiguous relation to the body of the knife to bear on the trimmed part of said marginal portion.

1,680,384. TRIMMING MACHINE. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1924. Serial No. 685,381. 43 Claims. (Cl. 12—83.5.)



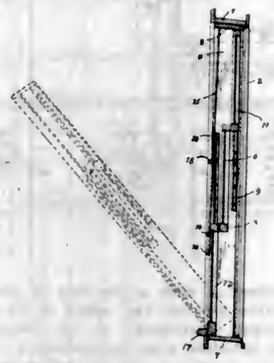
1. A machine of the character described comprising cutting means arranged to trim surplus material projecting from a convex surface, said means being regulatable whereby its effective shape is variable and approximately conformable to the convexity of said surface.

1,680,385. AUTOMATIC MECHANISM FOR OPERATING DRAWERS OF AUTOMATIC MUSICAL INSTRUMENTS. HUBERT J. LA JOIE, New York, N. Y., assignor to Auto Pneumatic Action Company, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1926. Serial No. 139,259. 9 Claims. (Cl. 84—116.)



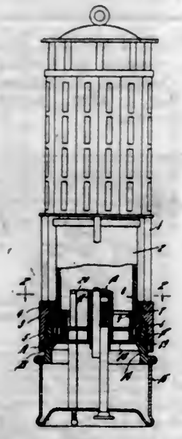
1. In an automatic musical instrument, the combination of a slidable drawer, music sheet manipulating mechanism carried by said drawer, and automatic mechanism mounted on said instrument and connected to said drawer to open and close the same.

1,680,386. MINING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 7, 1917, Serial No. 184,946. Renewed Dec. 19, 1924. 32 Claims. (Cl. 262—9.)



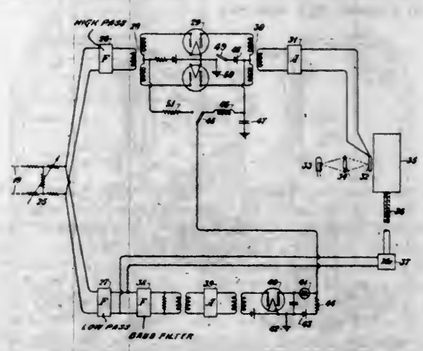
1. In a machine for cutting, breaking down and loading coal, the combination of a carriage movable relative to the coal body, simultaneously operable cutting mechanism, breaking down mechanism and loading mechanism mounted upon the carriage to be moved therewith into operative relation with the coal, said breaking down mechanism comprising cooperating pressure exerting devices and impact devices adapted to be simultaneously actuated to engage the same working face to dislodge the coal.

1,680,387. BLEACHERY REEL. JOHN J. LYTH, Valleyfield, Quebec, Canada. Filed Nov. 17, 1924. Serial No. 750,435. 6 Claims. (Cl. 242—115.)



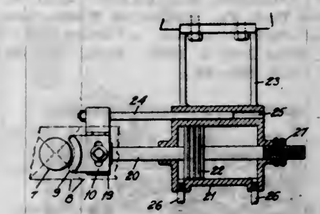
1. A device of the class described comprising a pair of similar spiders each having an even number of arms, rim members connecting the arm in pairs adjacent their free extremities, members connected between corresponding arms of the two spiders, and bolts passing through the rim members intermediate the arm and clamping said members between the spiders.

1,680,388. WINDOW. FRANK W. MCLEAN, Shreveport, La. Filed Sept. 30, 1926. Serial No. 138,734. 2 Claims. (Cl. 20—45.)



1. The combination with a window frame, of a sash frame fitting closely within the window frame and resting at its lower end upon the sill of the window frame and adapted to rock forwardly upon the same to be withdrawn from the window frame, said lower end of the sash frame being wholly detached from the window frame, a latch secured upon the window frame and engaging the sash frame to releasably secure the sash frame within the window frame, and a plurality of sashes carried by and within the sash frame.

1,680,389. LAMP. EDWARD P. MCOLVIN, Wolf Summit, W. Va. Filed Apr. 22, 1925. Serial No. 25,082. 1 Claim. (Cl. 240—18.)

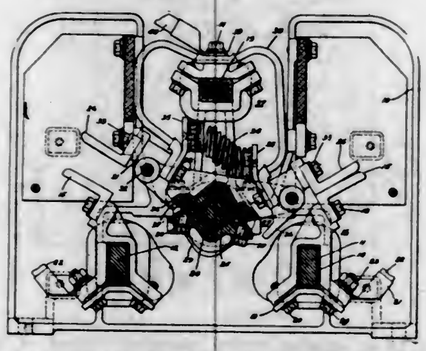


In a safety miner's lamp, a fount, an annular top member therefor exteriorly threaded adjacent its upper end, a centrally arranged partition in said top member, a wick tube rising from said partition, a barrel threaded onto said top member, an annulus threaded into the upper end of said barrel, and including an inwardly directed continuous flange constituting a support for the globe of the lamp, a sleeve arranged between said annulus and said top member and having an upwardly directed flange engaging the flange of said annulus, a centrally located partition within said sleeve, an extinguishing tube supported by said partition and receiving said wick tube, and a gauge ring surrounding said sleeve and reposing upon the partition of said top member, said top member having air inlet openings.

1,680,390. PICTURE-TRANSMITTING SYSTEM. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,353. 17 Claims. (Cl. 178—7.)

1. In a signaling system employing current of two components, one for transmitting message signals, the other for synchronizing, the method of keeping the signal current at proper energy level, which consists in automatically adjusting it by the variation of the synchronizing component.

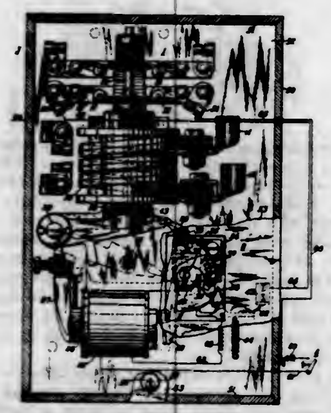
1,680,391. MOLD-CHARGE GUIDE FOR GLASS-FEEDING APPARATUS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 3, 1923. Serial No. 678,130. 22 Claims. (Cl. 49—55.)



1. In combination with a glass feeding mechanism arranged to deliver molten glass through a downwardly opening outlet in a succession of pendant masses, a pair of shear blades arranged to meet periodically beneath said outlet and in axial alignment therewith to sever mold charges from said masses, and a guide mounted independently of said shear blades and located only at the side of the path of travel of said charges opposite to the side from which the lower shear blade approaches the said path of travel of the charges, for opposing the deflection of a charge in its path of travel by the action of said shear blades.

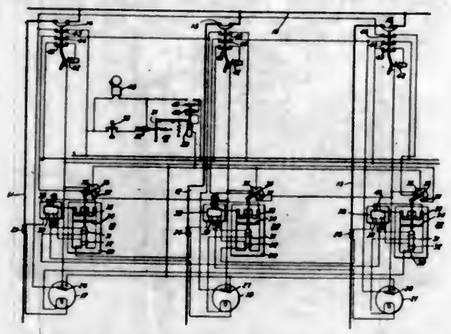
22. In glass feeding apparatus, a severing device having a cutting edge movable transversely through a freely hanging mass of molten glass to sever a mold charge therefrom, and a guide independent from said severing device and movable at the side of the axial line of said suspended mass substantially opposite to said cutting edge to and from position to prevent lateral "batting" of the mold charge at the time of its severance.

1,680,392. COMPOSITION OF MATTER FOR USE AS FUEL. HUGH S. REID, Shawinigan Falls, Quebec, Canada, assignor to Canadian Electro Products Company, Limited, Montreal, Canada. Filed Mar. 30, 1925. Serial No. 19,543. 10 Claims. (Cl. 44—9.)



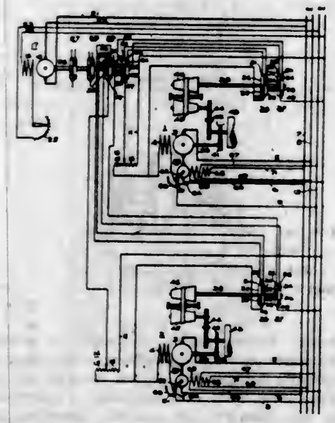
1. A composition of matter for fuel containing liquid hydrocarbon fuel and an acetic aldehyde having acetylene gas dissolved therein.

1,680,393. PNEUMATIC REVERSING SWITCH. LYNN G. RILEY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,937. 10 Claims. (Cl. 200—6.)



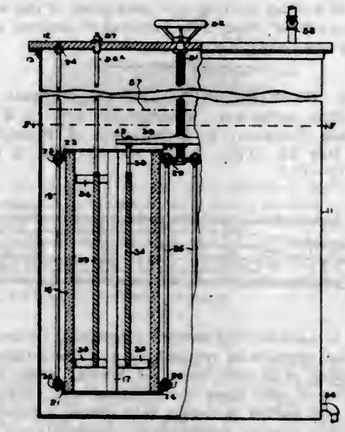
1. In a reverser, in combination, a plurality of contact members disposed for oscillatory movement, stationary contact members disposed to receive the movable contact members, and means for oscillating the movable contact members comprising a cross-head disposed for reciprocatory movement and means co-operative to oscillate the contact members when the cross-head is actuated, said contact-oscillating means being adapted to permit movement of the cross-head independently of the contact members.

1,680,394. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 7, 1920. Serial No. 394,430. 11 Claims. (Cl. 200—89.)



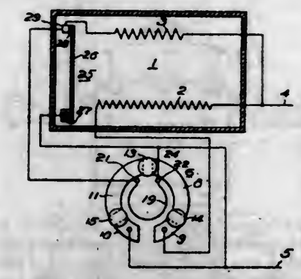
1. The combination with a relay, of means for locking the relay to prevent operation and means manually operable to release the relay, and means for limiting the number of operations of the relay to any predetermined number.

1,680,395. RELAY SYSTEM. HARVEY P. SLEEPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,448. 5 Claims. (Cl. 175—294.)



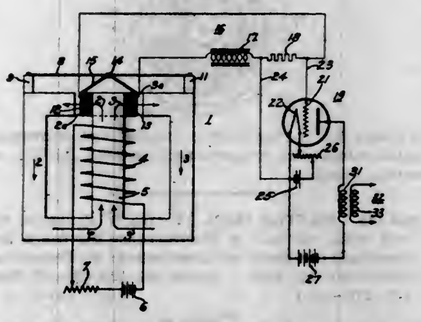
1. The combination with a plurality of parallel-connected conductors between two points of an electrical system and circuit interrupters for the respective conductors, of an induction relay for selectively controlling either interrupter depending upon the occurrence of a fault thereon affecting a predetermined ratio between the currents normally traversing the conductors, said relay comprising a controlling member movable in two directions, two differentially-acting windings, a winding co-operating with the differential windings to actuate the movable member in one direction or the other depending upon the degree of energization of the differentially-acting windings and means for energising the said winding in accordance with the variation from a predetermined ratio of the currents traversing the pair of conductors, said means serving also to introduce an electrical angular displacement between the magnetic flux established by the said winding and the flux established by the differentially-acting windings, the fluxes co-operating to effect movement of the movable member, in a time interval dependent upon the degree of energization of said winding.

1,680,396. REGULATOR SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,671. 6 Claims. (Cl. 171—312.)



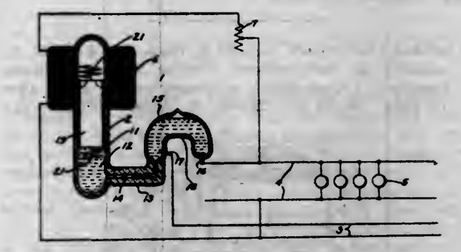
1. In a regulator system, a dynamo-electric machine, means responsive to speed variations of said machine for varying the excitation thereof, and a torque motor responsive to the load upon said machine for varying the excitation thereof, said torque motor having a field winding responsive to the voltage of said machine.

1,680,397. ELECTRIC STEAM BOILER. HANS STRANSKY, Vienna, Austria, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1926, Serial No. 104,090, and in Austria July 7, 1925. 8 Claims. (Cl. 219—38.)



1. In an electrode steam boiler, in combination, a fixed tubular member of insulating material having an open top and bottom, a pair of co-operating spaced electrodes in said tubular member, means embodied in said tubular member for holding one of said electrodes in a predetermined position therein, and means embodied in said tubular member for holding the second electrode in predetermined spaced relation to said first electrode and for permitting it to be moved longitudinally of its length.

1,680,398. TEMPERATURE-CONTROL SYSTEM. IRVIN G. THOMAS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1927. Serial No. 231,535. 7 Claims. (Cl. 219—20.)

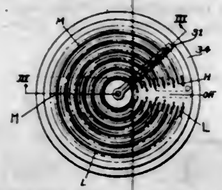


6. In a temperature control system for a body to be heated, in combination, a source of supply of electric energy, a main resistor element in said body to be energized from said source, an auxiliary resistor element in said body and continuously energized from said source, a circuit interrupter for controlling the energization of the main resistor, means connected in circuit with and responsive to current traversing the auxiliary heating element, and thermostatic means responsive to the temperature of said body for shunting said current responsive means when the temperature of the body attains one predetermined value and for rendering said means responsive to said current when the temperature of the body reaches another value.

1,680,399. DISTORTIONLESS DYNAMIC TRANSMITTER. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,271. 10 Claims. (Cl. 178—44.)

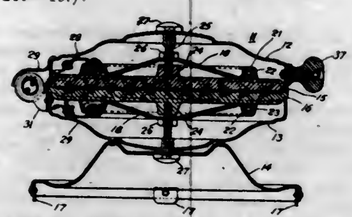
1. In an electrical system, a resilient member adapted to vibrate in accordance with the varying intensity of sound waves, means co-operating therewith for translating the resulting fundamental and harmonic frequency vibrations into modulated electromotive forces and a circuit including said source of electromotive forces, a translating device and an inductance device, the ohmic resistance of said circuit being negligibly small as compared with the reactive impedance thereof, whereby the amplitude of the resultant modulated electromotive forces are caused to vary in accordance with the amplitude of said vibrations only.

1,680,400. AUTOMATIC ELECTRIC FLASHER. DAYTON ULERY and DANIEL I. MAYNE, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 28, 1923. Serial No. 648,245. 8 Claims. (Cl. 200—90.)



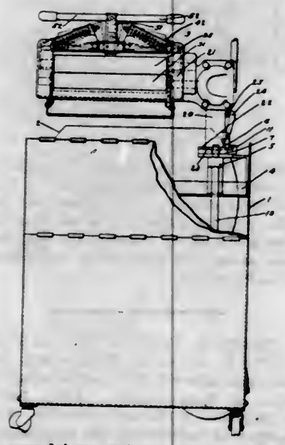
1. In a switch structure, a vessel, a conducting fluid in said vessel, means for causing said fluid to interrupt and close an electrical circuit by changing the level thereof, and means for causing a time lag in the movement of said fluid comprising means for utilizing the surface tension of said fluid and means for controlling the delivery of fluid to the last said means.

1,680,401. CONTROL SYSTEM FOR RADIANT HEATERS. VICTOR G. VAUGHAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 20, 1923. Serial No. 652,664. 3 Claims. (Cl. 219—34.)



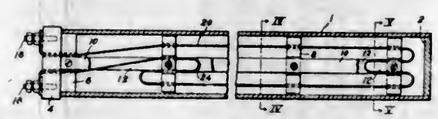
1. The method of controlling the energization of a plurality of radiant electric heating elements, located in superposed, parallel-spaced relation relatively to each other to simulate the action of a radiant gas heater, which

comprises the simultaneous insertion of variable resistors in series-circuit relation with the individual heating elements, the amount of resistance thus inserted being a



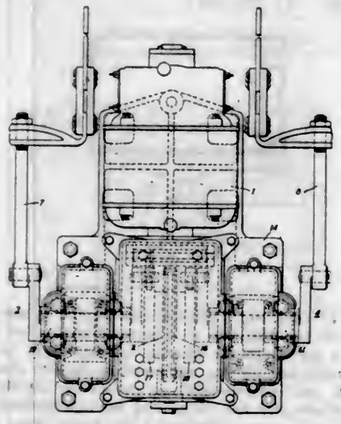
maximum for the top heating element and decreasing in predetermined and proportionate amounts for the other heating elements.

1,680,402. WAFFLE IRON. VICTOR G. VAUGHAN, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1927. Serial No. 190,430. 2 Claims. (Cl. 219—19.)



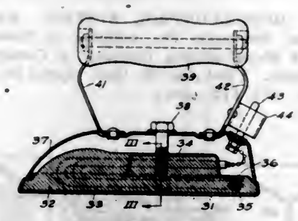
2. In a waffle iron, the combination with a plane baking surface of substantially circular contour, and a casing therefor, of a resilient sheet metal plate shaped to provide an annular groove in one face thereof, a resistor member in said groove, expansively-oxidized electric-insulating material surrounding said resistor to tightly hold it therein, the annular groove being of such diameter to permit the energized resistor to heat the baking surface to a uniform temperature, and a single means for clamping the sheet metal plate against the baking surface and for holding them in the casing.

1,680,403. WRINGER. ALLEN S. WISE, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1924. Serial No. 720,529. 3 Claims. (Cl. 68—32.)



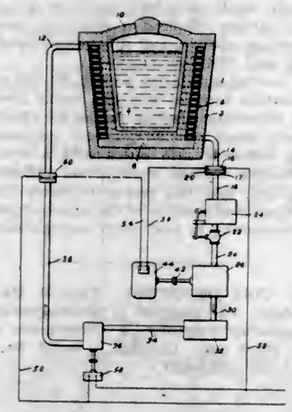
1. In a power-driven wringer, the combination with a vertically-extending power-driven shaft section, a clutch member mounted on the upper end of the shaft section, a bracket for supporting said power-driven shaft section, a wringer including a frame, a tubular support for the wringer and hinge means pivotally supporting the wringer and tubular support on the bracket and permitting the wringer, frame and tubular support to swing on a horizontal axis from an upper operating position to a lower inoperative position, of a shaft section operatively connected to the wringer and extending through the tubular support, and a gravity-actuated clutch member on the last named shaft section effective to couple the two shaft sections in driving relation upon movement of the wringer, frame and support from their inoperative position to their operative positions.

1,680,404. HEATING UNIT. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1927. Serial No. 190,415. 3 Claims. (Cl. 219—19.)



2. An encased heating element comprising a convolution of resistor ribbon and return-bent portions adjacent the ends thereof to provide increased heating areas thereat, a plurality of split discs spaced along said resistor convolution and slotted to receive said ribbon, a tubular casing for said resistor substantially coextensive in length with the length of said convolution and coextensive in internal diameter with the diameter of said discs, a removable closure for an end of said casing, terminal means thereon for the terminals of said ribbon, and means carried by said closure for supporting said discs in spaced relation perpendicular to the area of said casing.

1,680,405. MOTOR-OPERATED CIRCUIT INTERRUPTER. WALTER M. AUSTIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1923. Serial No. 638,514. 7 Claims. (Cl. 200—92.)

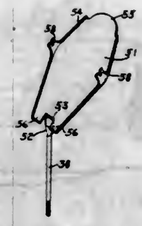


1. In combination, a ratchet, a crank arm, a pawl carried by said crank arm for co-operation with said ratchet, and means having a cam surface, in the path of travel of said pawl and a second member disposed at a different point in the travel of said pawl for controlling the co-operation between said pawl and said ratchet.

1,680,406. ELECTRIC IRON. CHRISTIAN B. BACKER, Brooklyn, N. Y.. Filed Oct. 20, 1927. Serial No. 227,444. 5 Claims. (Cl. 219—25.)

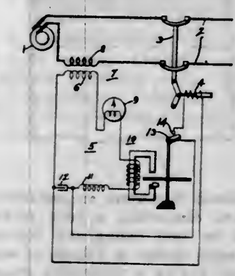
4. In an electric iron, in combination, a mass of cast metal, a metal-encased tubular heating element embodying a plurality of return-bent portions located in two different planes embedded in said mass and a sheet-metal top plate, of inverted cup-shape, having openings in the rim portion through which the upper portions of the tubular heating element extend to be held thereby.

1,680,407. INDUCTION FURNACE. PORTER H. BRACE, Wilkinsburg, Pa.. assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1927. Serial No. 216,153. 6 Claims. (Cl. 266—1.5.)



1. In an induction furnace, the combination with a water-cooled inductor coil, of means for converting the heat energy of steam effluent from said coil into electrical energy, and means for returning said electrical energy to the electrical circuit of said inductor coil.

1,680,408. CONDENSATION PRODUCT AND METHOD OF MAKING THE SAME. ARTHUR L. BROWN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 23, 1922. Serial No. 538,748. 15 Claims. (Cl. 260—4.)

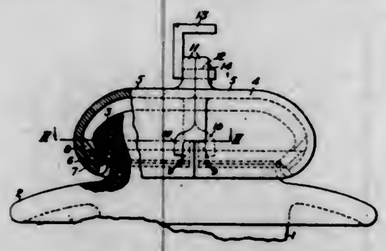


1. A resinous phenolic condensation product resulting from reacting a mixture consisting of a phenol, a substance containing an active methylene group and China wood oil.

1,680,409. TELEPHONE DEVICE. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1923. Serial No. 679,075. 29 Claims. (Cl. 179—108.)

8. In a device of the class described, an armature of magnetic sheet material having a substantially flat body and up-turned edges.

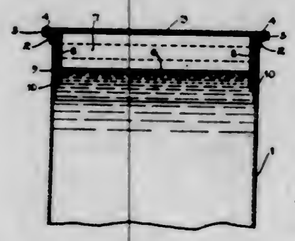
1,680,410. RELAY-TRIPPING SYSTEM. LESLIE N. CRICHTON, Edgewood, and LAWRENCE R. GOLLADAY, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,151. 1 Claim. (Cl. 175—294.)



In an electric circuit, the combination with a circuit-interrupter provided with a trip coil controlling said circuit, of a current transformer connected in said circuit, a relay, a winding for said relay and a condenser connected in series with the secondary winding of said transformer, said series circuit being resonant at the normal frequency, and means whereby said relay connects the trip coil of said circuit-interrupter in shunt to said condenser upon the occurrence of abnormal conditions in said circuit to interrupt the same.

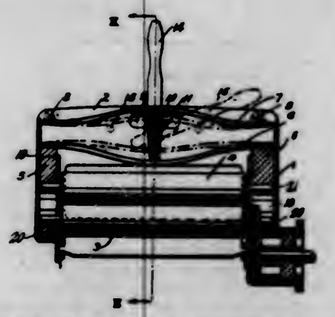
1,680,411. INSULATOR CONNECTER. GEORGE M. EATON, Pittsburgh, and EDWARD E. ROSE, Edgewood, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1919. Serial No. 310,974. 7 Claims. (Cl. 173—318.)

1. A suspension insulator device, for an insulating member embodying a terminal projection having an enlarged outer end, comprising a longitudinal-tension terminal structure longitudinally divided into separable interchangeable sections for longitudinal interlocking relation to said end and having preshaped rigid integral transverse interlocking portions for holding the sections together.



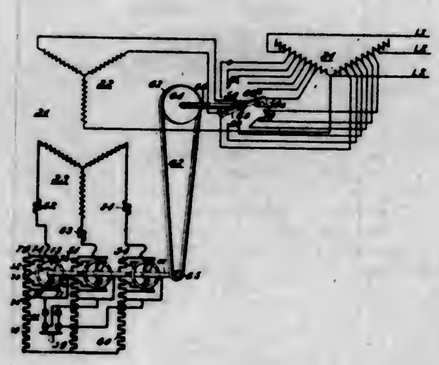
4. The combination with an insulating member embodying a terminal projection having an enlarged outer end.

of a longitudinal tension terminal structure longitudinally divided into separable sections having longitudinal



interlocking relation to said end and preshaped rigid integral transverse interlocking portions for holding the sections together.

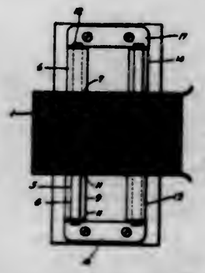
1,680,412. TANK STRUCTURE. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,282. 7 Claims. (Cl. 220—85.)



1. A tank adapted to contain an insulating liquid and an inert gas and comprising a body portion, a cover rigidly mounted on said casing and non-movable with respect thereto upon change in volume of said insulating liquid, said cover having a depending flange extending into the tank adjacent to its side wall and partly submerged in said liquid.

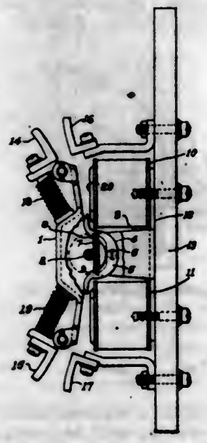
1,680,413. WASHING-MACHINE WRINGER. HARRY D. ELSE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1924. Serial No. 720,537. 3 Claims. (Cl. 68—32.)

1. A wringer comprising, in combination, a frame, a plurality of rolls movably disposed in the frame, a pair of spring plates interposed between the frame and the rolls, and means free from and pivotally disposed between the spring plates and mounted on the frame for expanding them to apply pressure to the rolls.



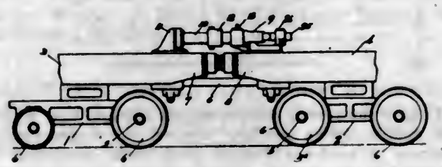
1,680,414. MOTOR-CONTROL SYSTEM. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,148. 4 Claims. (Cl. 172—120.)

1. In a control system for oil-well drilling and the like, the combination with an induction motor having a primary and a secondary winding, means for effecting a series of relatively small secondary-circuit resistance changes, means for further effecting a relatively large primary-winding voltage change, and differential-speed means for connecting said first two means.



2. In a control system for oil-well drilling and the like, the combination with an induction motor having a primary and a secondary winding, means for effecting a series of relatively small secondary-circuit resistance changes, means for following said series with a relatively large primary-winding voltage change, and differential means connecting said first two means to cause the movement corresponding to said series of changes to equal the movement corresponding to said single voltage change.

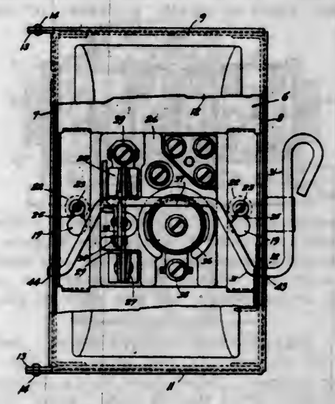
1,680,415. COIL MOUNTING. PAUL M. HENOCHSENBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 15, 1925. Serial No. 23,297. 7 Claims. (Cl. 175—350.)



1. In a coil supporting device, a pair of shouldered members positioned with their shoulders in opposite directions, and a coil supported on said members intermediate said shoulders.

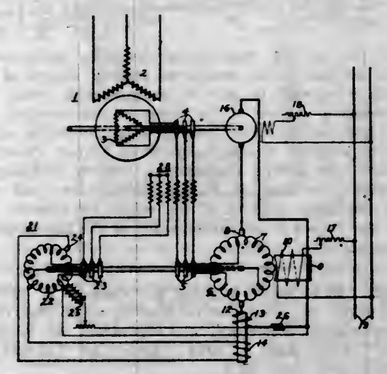
1,680,416. MAGNET SWITCH. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 22, 1924. Serial No. 687,721. 6 Claims. (Cl. 200—106.)

1. A reversing switch comprising an armature, magnetic means comprising a pair of coils for actuating the armature in either of two directions, means for latching said armature in an intermediate position, said latching means being disposed between said coils and operative in directions corresponding to the armature movement, and means for restoring said armature to said position when said magnetic means is de-magnetised.



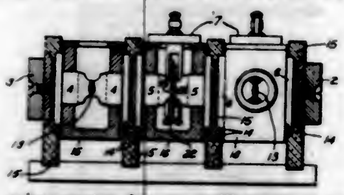
1,680,417. RAILWAY VEHICLE. HAROLD A. HOUSTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1927. Serial No. 196,429. 9 Claims. (Cl. 105—175.)

1. In a railway vehicle, the combination with a plurality of articulated trucks and means for connecting the trucks, of a centering device comprising a seat mounted on one of said trucks, a yoke mounted on a cooperating truck, and a cam rocker disposed to be interposed between the seat and the yoke.



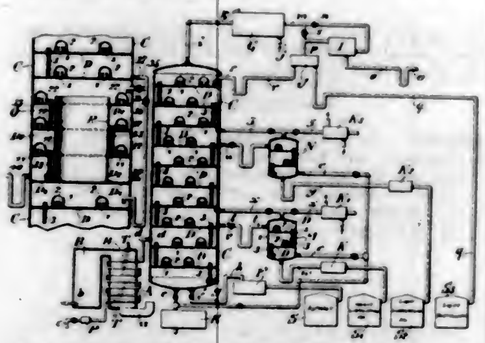
1,680,418. INCLOSED-SWITCH MECHANISM. OLIVER S. JENNINGS and FRED G. VON HOORN, Mansfield, Ohio, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1927. Serial No. 201,318. 8 Claims. (Cl. 200—168.)

1. Inclosed current-controlling mechanism comprising a housing, a carrier for a current-controlling device having side flanges fitting between the walls of the housing, and means on the bottom and side walls of the housing



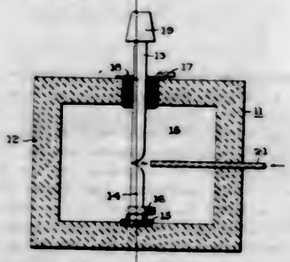
for engaging means on the carrier and flanges when relatively moved longitudinally for preventing withdrawal of the carrier from the housing.

1,680,419. VARIABLE-SPEED SET. ERNST KLOSS, Falkensee, near Spandau, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 30, 1926, Serial No. 105,759, and in Germany July 17, 1925. 9 Claims. (Cl. 171—123.)



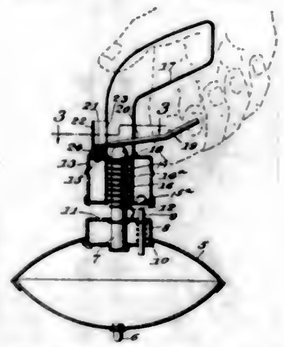
1. The combination with a rotary converter, of means for deriving a current responsive to the unneutralized difference between the alternating current and the direct current of said rotary converter, said means comprising an auxiliary dynamo-electric machine, means for exciting said auxiliary machine in response to the alternating current of said rotary converter, and means for exciting said auxiliary machine in response to the direct current of said rotary converter, the two excitations normally substantially neutralizing each other when the load conditions of the rotary converter are not rapidly changing.

1,680,420. GALVANOMETER. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Sept. 8, 1920, Serial No. 408,954. Divided and this application filed May 25, 1925. Serial No. 32,546. 8 Claims. (Cl. 171—95.)



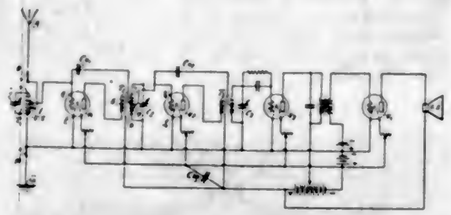
2. A galvanometer for an oscillograph comprising a magnetizable core member, a plurality of pairs of pole pieces disposed between the poles of the core member and having an air gap between the poles of each pair, and insulating means between the said pairs of pole pieces.

1,680,421. FRACTIONAL DISTILLATION. JOSEPH W. LEWIS, Jr., Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1926. Serial No. 97,202. 4 Claims. (Cl. 196—100.)



1. In the art of fractionally distilling hydrocarbon oils, the method which comprises passing vapors of the oil counter current to and in contact with reflux oil, withdrawing a portion of the reflux oil intermediate the lightest and heaviest fractions, passing the reflux oil so withdrawn counter current to steam in contact therewith to remove low boiling components, thereby yielding an intermediate fraction of higher flash point, and continuing the other portion of the reflux oil counter current to the vapors in an earlier stage of the fractionating system.

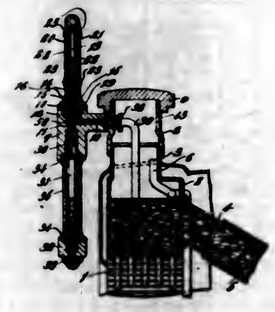
1,680,422. ELECTRIC FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1924. Serial No. 731,050. 5 Claims. (Cl. 266—15.)



1. In an electric furnace, in combination, a plurality of alined carbonaceous electrodes, means for pressing the abutting ends of said electrodes together continuously, and means for restricting the oxidation of said electrodes, when traversed by an electric current, to substantially their junction.

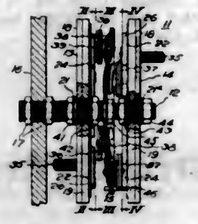
1,680,423. SPINNING HEAD FOR SPINNING TOPS. FRANK L. LINDSTROM, Bridgeport, Conn. Filed Apr. 26, 1926. Serial No. 104,768. 3 Claims. (Cl. 46—32.)

1. The combination in a spinning device for spinning tops, of a spring actuating head for engagement with a top, a hollow handle secured to said head, a hole in one wall of the handle and a slot in the opposite wall, an operating lever arranged transversely in the handle and pivoted in the hole of the handle and operable in the slot, said operating lever adapted when a top is connected to the head to be moved to engage the stem of the top to move the latter and disengage it from the head.



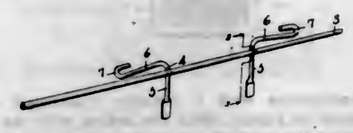
1,680,424. AMPLIFYING SYSTEM. WILLIAM A. MACDONALD, Little Neck, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 3, 1926. Serial No. 85,615. 7 Claims. (Cl. 179—171.)

1. In a multi-stage high-frequency vacuum tube amplifier system having coupling between two stages thereof whereby a tendency toward undesirable oscillation is produced in the tube of at least one stage of said system, the method of minimizing the effects of said coupling without substantially reducing the desired voltage amplification of the system, which comprises reducing all fluctuating voltages impressed upon the grid electrode of the tube thus undesirably affected, by reducing the impedance of the input circuit of that tube, and decreasing the step-up ratio between said input circuit and the output circuit of the vacuum tube next preceding, so that the desired signal voltage fluctuations upon said grid are maintained.



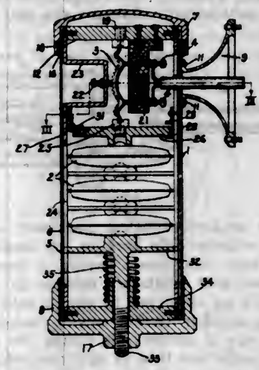
1,680,425. INDICATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. LEWIS A. MAPEL, St. Louis, Mo., assignor to The Automatic Appliance Company, St. Louis, Mo., a Corporation of Missouri. Filed May 18, 1923. Serial No. 639,735. 17 Claims. (Cl. 73—52.)

1. A device for indicating the conditions of a water cooled internal combustion engine provided with a radiator, comprising, a thermometer having a heat responsive element, a casing providing a liquid retaining chamber in which said element is positioned, and a conduit having one end immersed in the water of the radiator and having



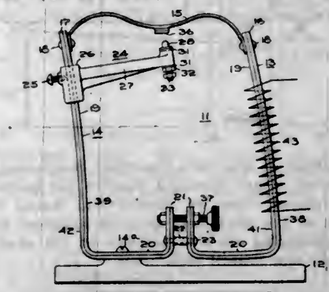
its other end opening into said chamber, said chamber being sealed above the connection of said conduit therewith in order to maintain a circulating column of liquid from the water to said chamber and in thermal contact with said element.

1,680,426. THERMOSTATIC SWITCH. HOWARD D. MATTHEWS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1926. Serial No. 104,073. 3 Claims. (Cl. 200—139.)



1. In a thermally-actuable switch, in combination, a supporting means, a bimetallic disc loosely mounted on said supporting means, contact bridging members insulatedly mounted on the disc, plates adjustably supported by the supporting means at both sides of the disc, and contact members on said plates alternately engaged by the bridging members.

1,680,427. STRUCTURAL UNIT. ROBERT B. MITCHELL, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Aug. 2, 1926. Serial No. 126,646. 2 Claims. (Cl. 72—101.)



1. An anchoring unit for concrete structures comprising a longitudinal rod of substantial length and a plurality of angled combined anchoring and attaching members disposed transversely of and welded to said longitudinal rod with their angles above the longitudinal rod, said members being disposed in coacting pairs with the arms of the pairs projecting outwardly in a plane approximately parallel with the rod to be bent upwardly for attachment to the part to be anchored, the lower ends of said members constituting anchoring parts adapted to be embedded in a concrete body and having laterally offset portions for embedding in the concrete.

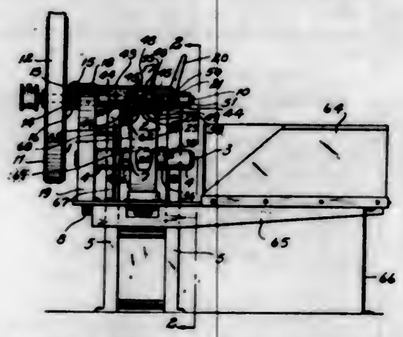
1,680,428. THERMOSTATIC REGULATOR. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 25, 1924. Serial No. 708,915. 3 Claims. (Cl. 200—140.)

1. In a thermostat, a casing, a removable threaded end member therefor, a contact spring and a thermally-responsive actuating means therefor mounted in the casing, adjusting means for the thermally-responsive member comprising the removable end member, a threaded member extending therethrough and engaging the thermally-responsive device, and a resilient member biasing the threaded member into engagement with the thermally-responsive device.

1,680,429. THERMAL RELAY. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1926. Serial No. 138,189. 4 Claims. (Cl. 200—138.)

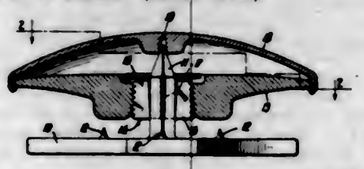
1. The combination with a resilient bridging member of substantially sinuous shape, a contact member mounted thereon, a pair of bimetallic members for supporting said resilient member, said bimetallic members being so disposed in operative relation to each other as to deflect in substantially the same direction when subjected to the same ambient temperature variations, and a stationary contact member supported by one of said bimetallic members in operative relation to the other contact member, of means for thermally energizing one of the bimetallic members to cause it to actuate the bridging member to control the engaged and disengaged position of said contact members.

1,680,430. TELEPHONE PLUG. LOUIS G. PACENT, Winfield Park, N. Y., assignor to Pacent Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1925. Serial No. 9,726. 1 Claim. (Cl. 173—361.)



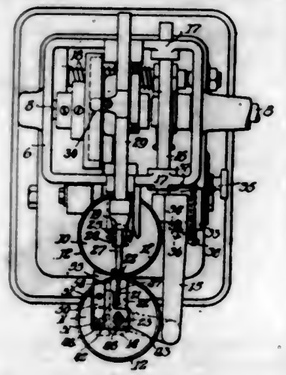
A telephone plug comprising tip and sleeve conducting members adapted to be inserted in a jack, an electrical connector associated with each of said conducting mem-

bers, each of said connectors comprising a substantially flat member having two grooves therein adapted to receive electrical conductors, a threaded member pivotally mounted between said grooves having a nut thereon of substantial size adapted to engage the conductors lying in said grooves, whereby, due to the pivotal mounting, conductors of substantially different size may be securely



retained, said connectors being positioned so that the flat faces are substantially parallel, an insulating member between said connectors having a recess therein adapted to hold said insulating member in position by cooperating with an upset lug on one of said connectors, said insulating member having means thereon to which a tie member may be secured for taking the strain from the electrical conductors held by said connectors.

1,680,431. RAND BENDING AND MOLDING MACHINE. DENNIS PARKS, St. Louis, Mo. Filed Oct. 20, 1926. Serial No. 142,947. 18 Claims. (Cl. 12—67.1.)



1. A machine of the class described comprising a rotatable carrier, means mounted thereon for receiving a rand strip placed crosswise thereof, and means located in the path of the rand strip as it is advanced by said carrier for engaging the end portions of the rand strip and bending them toward each other.

1,680,432. NECKTIE HOLDER. ROLAND E. PERRIN, Brooklyn, N. Y. Filed Nov. 30, 1927. Serial No. 236,691. 6 Claims. (Cl. 24—105.)

1. A device of the class described, including a back member having a smoothed surface, non-cylindrical pointed stud adapted to be forced through one or more layers of fabric, a front plate, and a collapsible clamping member adapted to telescope on said stud but held against rotation in respect thereto and having tapered threaded engagement with said plate, whereby upon the rotation of the plate, the clamping member may be rigidly secured to said stud.

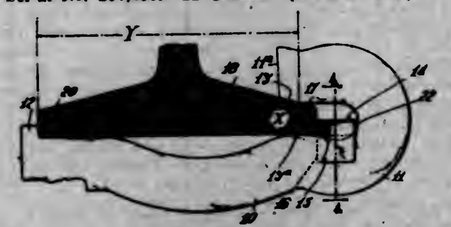
1,680,433. FUR-SEWING-MACHINE ATTACHMENT. ADOLF SCHWARTZ, Kenosha, Wis. Filed May 20, 1926. Serial No. 110,341. 10 Claims. (Cl. 112—20.)

1. In a gauge of the class described, a plate having an attaching portion, a resilient gauge member mounted on said plate near one end, and means to flex the gauge member to raise or lower the same at its free end..

1,680,434. LOCOMOTIVE STRUCTURE. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 19, 1926. Serial No. 130,203. 25 Claims. (Cl. 105—172.)

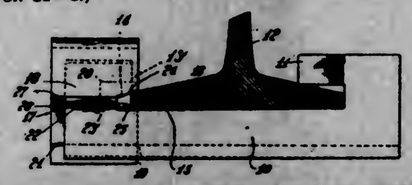
1. In an articulated locomotive, a cradle at one end, a draft element carrier at the other end, and two castings between and respectively mounting said cradle and carrier and forming the underframe for the locomotive.

1,680,435. CLIP. ALBERT F. SHORE, New York, N. Y. Filed July 5, 1923. Serial No. 649,633. 1 Claim. (Cl. 267—53.)



The combination with a multiple leaf-spring, of a yoke member to engage about the spring with the yoke legs engaging the sides of the spring and the connecting portion of the yoke engaging one face of the spring, a bowed bar of resilient material having perforations for the engagement thereof on the legs of said yoke member with the convex surface of the bar in engagement with the spring, the said bar being arranged with serrations extending radially from and about the perforations therein, and nuts threaded on to the ends of the legs of said yoke member to yieldingly draw the yoke member and bar together, said nuts having one face thereof serrated to correspond with the serrations of the bar and co-operate therewith to lock the nuts on the yoke legs.

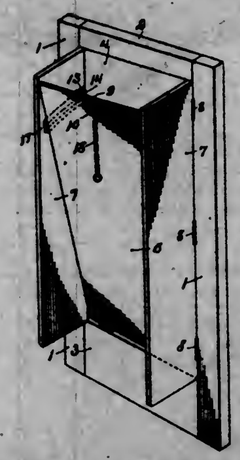
1,680,436. CLIP FOR LAMINATE SPRINGS. ALBERT F. SHORE, New York, N. Y. Filed Aug. 24, 1923. Serial No. 659,061. 5 Claims. (Cl. 267—53.)



1. The combination with a multiple leaf-spring, of a confining clip therefor, comprising a yoke and a bow-shaped member engaged on the ends of the yoke to engage the spring opposite the connecting portion of the yoke, said member having its bowed face in contact with the spring and being of convex form in cross-section to permit of rocking movement thereof on the spring and said member being adapted to co-operate with the yoke to exert a yielding binding pressure upon the spring leaves, and a rocker bearing member for said clip interposed between the connecting portion of the clip and the spring and anchored in a leaf of the spring to permit of rocking movement of the clip relative to the longitudinal movement of the spring leaves as the spring is flexed.

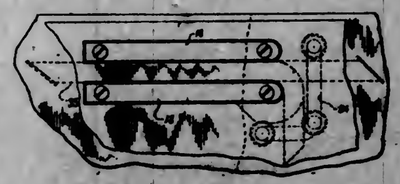
1,680,437. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1927. Serial No. 207,195. 11 Claims. (Cl. 238—329.)

1. A rail anchor comprising a rail embracing member formed with a jaw portion adapted to be driven into gripping engagement with the top and bottom surfaces of the base portion of a rail, and means carried in the space below the jaw of said member to limit the applying movement thereof, whereby said embracing member may be applied to rails having base flanges of different widths.



1,680,438. TOOL FOR APPLYING RAIL ANCHORS. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1927. Serial No. 208,800. 14 Claims. (Cl. 81—3.)

2. A device for use in applying rail anchors, comprising a member formed with a recessed portion adapted to fit over one end of a rail anchor and provided with means engaging the rail base, whereby force applied to the device in one direction exerts a torsional stress on said anchor.



1,680,439. VENTILATING DOOR. CLARK E. WEAVER, Kansas City, Mo. Filed Feb. 21, 1927. Serial No. 169,962. 1 Claim. (Cl. 98—37.)

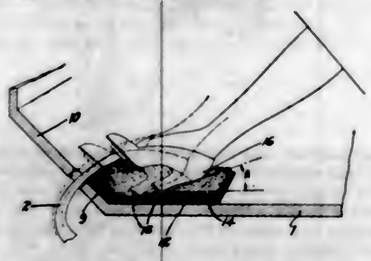
In a ventilating door, a door having a body provided therethrough with a ventilating opening, two wings hinged to said body at opposite sides respectively of said openings so as to swing from positions parallel with to positions at right angles to said body, each wing on its inner side having a transverse groove extending from its hinged edge, two plates respectively fastened to the inner sides of said wings, and respectively extending over said grooves, each of said plates having therethrough a longitudinal slot registering with said groove which is covered by said plate, a panel hinged to said body between said wings so as to be swung from a position closing said opening to an open

inclined position, and two members fastened to said panel at the ends respectively thereof, each of said members having a T shaped projection extending through and adapted for travel in the adjacent one of said slots and having its head in and adapted for travel in the adjacent groove and in slidable engagement with the inner side of the adjacent one of said plates, whereby the wings move conjointly with the panel from positions at right angles to the panel, when the latter is opened, to positions overlapping the panel, when the latter is closed.

1,680,440. CANDY-FORMING MACHINE. BRASHER O. WESTERFIELD, Detroit, Mich., assignor of one-half to Edgar C. Cox, Detroit, Mich. Filed Nov. 21, 1921. Serial No. 516,519. 9 Claims. (Cl. 107—4.)

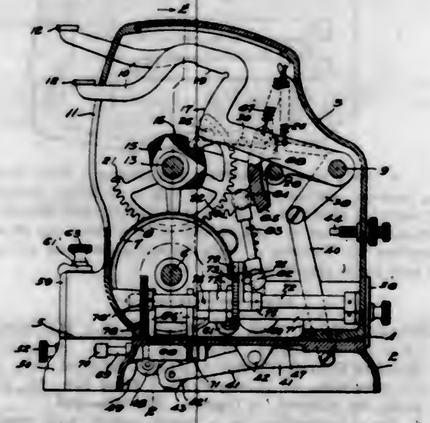
1. A candy forming machine comprising a strip receiving portion; means for dividing said strip into a plurality of parts; a plurality of forming members; and means for forcing a portion of each of said parts around one of said members for forming a crook adjacent one end of each of said parts simultaneously.

1,680,441. TRAY FOR BREAD-COOLING MACHINES. CHARLES A. ADAMS, Elwood City, Pa., assignor to Mathews Gravity Carrier Company, Elwood City, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1924. Serial No. 693,043. 8 Claims. (Cl. 198—158.)



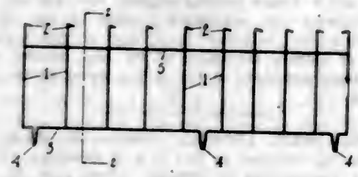
7. The combination, in a bread cooler, with driving chains and operating sprockets therefor, of a bread carrying tray having pivotal connections in one end portion with said chains, guide rails for supporting the other end

portion of the tray, wires secured to and held in spaced relation on both bottom and top of said tray, said wires being parallel to the line of movement of said chains,



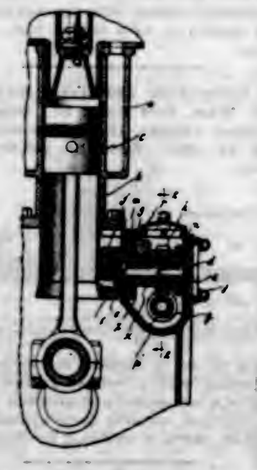
and whereby either face of the tray is adapted to receive and hold articles, and upon tilting said tray the articles supported thereon will slide off the tray.

1,680,442. FOOT MAT. MILDRED E. ANDERSON, Minneapolis, Minn. Filed Mar. 9, 1927. Serial No. 173,902. 2 Claims. (Cl. 15—215.)



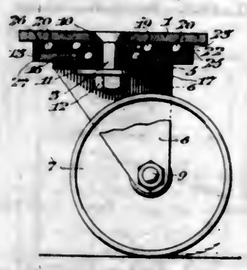
1. A pedal mat comprising a base section of flexible rubber material, and a section of natural sheep skin secured to one face side of the base section with its wool side facing outwardly.

1,680,443. CHECK-PROTECTOR. GAYLORD W. BEESE, Albany, Ga. Filed May 27, 1918, Serial No. 236,774. Renewed Sept. 5, 1924. 16 Claims. (Cl. 197—6.5.)



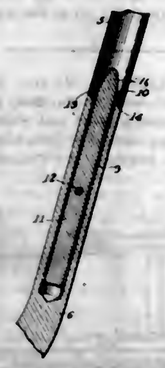
1. A check protector comprising a printing wheel having a series of peripheral marks or characters and mounted to be rocked in opposite directions, groups of cams mounted on an axis parallel with the axis of the printing wheel, means connecting one group of cams with the printing wheel to rock it in one direction and connecting the other group with the wheel to rock it in an opposite direction, said cams being positioned to impart different extent of movements to the printing wheel and disposed in the path of movement of operating keys whose axis is parallel with the axis of the cams, and keys for the cams of the different groups, said keys being disposed to be normally out of contact with their cams and adapted to be moved into contact with their cooperating cams for movement of the printing wheel.

1,680,444. STRUCTURAL UNIT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Original application filed Nov. 25, 1925, Serial No. 70,865. Divided and this application filed Aug. 6, 1926. Serial No. 127,573. 1 Claim. (Cl. 72—71.)



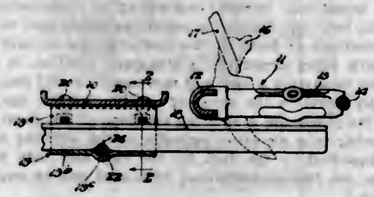
A structural unit comprising a plurality of U-shaped elements disposed in vertically spaced relation, and a pair of longitudinally disposed supporting rods disposed below and welded to the bottom cross piece of said U-shaped elements, said supporting rods having downwardly projecting loops therein disposed between certain of said U-shaped elements providing supporting legs for the unit and longitudinal side rods welded to said U-shaped elements adjacent their upper ends, said bottom and side longitudinal members coacting to rigidly support said U-shaped elements in spaced upright relation.

1,680,445. SLEEVE-VALVE GEAR. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed July 24, 1925. Serial No. 45,799. 3 Claims. (Cl. 123—81.)



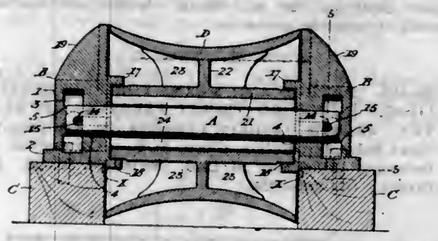
1. In a sleeve valve motor the combination of a housing, a drive shaft and drive member contained therein, a driven member and a support supported in the housing only at one end for said driven member, said support and driven member being removable from the housing as a unit.

1,680,446. CASTER. JAMES BOWEN, Manheim, Pa., assignor to Bond Foundry & Machine Company, a Corporation of Pennsylvania. Filed Dec. 10, 1926. Serial No. 153,771. 6 Claims. (Cl. 16—21.)



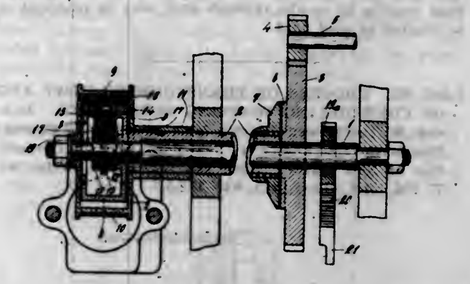
1. A swivel caster comprising two swiveled members and having a series of load carrying bearing balls, a spacer for said bearing balls spaced from the said members, and a set of bearing balls distinct from said load carrying bearing balls arranged to rotatably support said spacer for movement independently of the said swiveled members.

1,680,447. GOLF CLUB. THOMAS W. BRYANT, Torrington, Conn. Filed June 6, 1927. Serial No. 196,832. 13 Claims. (Cl. 273—80.)



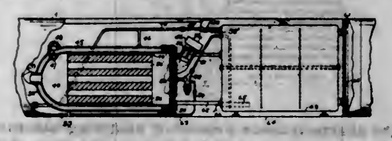
1. A golf club comprising a head having a socket, a tubular steel shaft having an end reduced in size to fit in said socket and a soft metal ring interposed between the end of the socket and a shoulder on the shaft.

1,680,448. MOUNTING FOR BRAKE-BEAM SAFETY BARS. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,394. 15 Claims. (Cl. 188—210.)



1. A mounting for a brake beam safety bar having spaced side walls and provided with a series of apertures spaced in a vertical plane and adapted to receive a safety bar locking pin, and a plurality of apertures spaced in vertical planes in definite relation with the first apertures and adapted to selectively receive means for bearing on top of said safety bar when the latter is engaged by said locking pin.

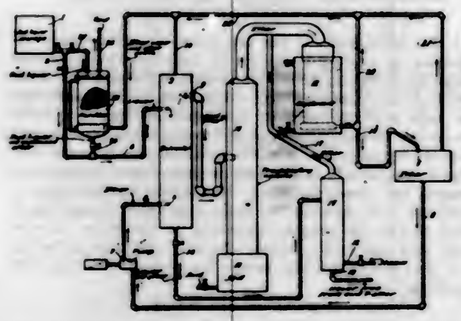
1,680,449. ROLLER AND BEARING SUPPORT THEREFOR. CHARLES S. CARD, Denver, Colo. Filed Dec. 5, 1927. Serial No. 237,899. 4 Claims. (Cl. 308—20.)



1. In mechanism of the character described, the combination of bearing boxes having inclosed chambers and openings extending from said chambers through the inner faces of the boxes, an axle supported in said openings, its ends abutting against the outer end walls of said chambers, the inner faces of said boxes being formed with circular recesses, and a roller mounted on said axle having a hub whose ends extend into said circular recesses; and pins extending through the end portions of said axle and engaging the inner end walls of said chambers, thereby to prevent spreading of the boxes on said axle, said boxes each having opposite openings extending into said chambers, and means for normally closing said openings.

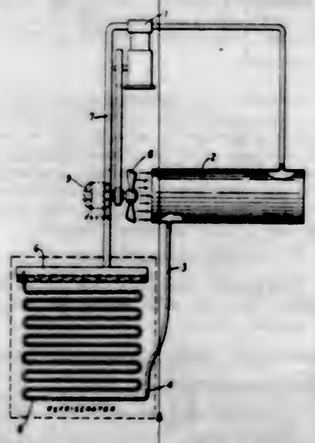
1,680,450. MACHINE FOR RAMMING PAVING STONES AND THE LIKE. ERNST HJALMAR CARLSSON, Oscarshamn, Sweden. Filed Sept. 22, 1926, Serial No. 137,019, and in Sweden June 8, 1926. 4 Claims. (Cl. 94—49.)

1. In a mechanism for actuating a ram for ramming stones, the combination with a continuously rotating member and coupling mechanism therefor, of an oscillating element about which a flexible lifting member is wound and unwound, and a radially movable coupling member turning with the continuously rotating member and being brought into and out of driving engagement with the oscillating element to effect movement thereof.



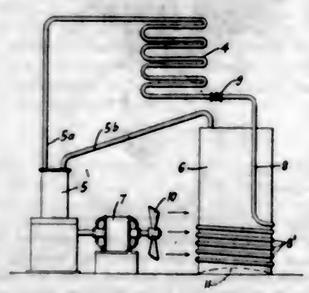
1,680,451. TORPEDO. EDWARD F. CHANDLER, Brooklyn, N. Y. Filed Mar. 12, 1918, Serial No. 221,962. 16 Claims. (Cl. 60—42.)

1. In a torpedo, a motive fluid generator, a combustible substance within the generator, storage space for a liquid combustion supporter, means for conveying liquid from said space to said generator, means for initiating a reaction between said substance and said liquid to evolve



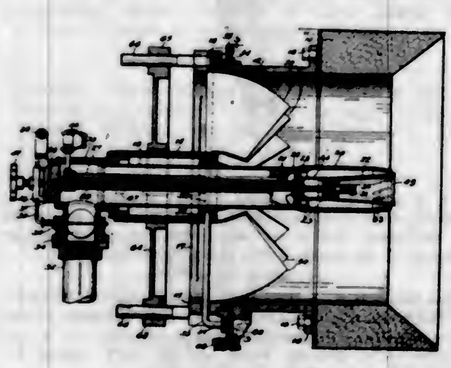
heat and means supplying water from the medium surrounding the torpedo to the reaction space and to the storage space, the water supplied to the said storage space displacing the said liquid therein and thereby forcing it into the generator.

1,680,452. METHOD AND MEANS FOR PREVENTING LOSSES IN CLOSED-CIRCUIT TREATING APPARATUS. JAMES M. COAHRAN, Colegrove, Pa., assignor to Olean Sales Corporation, Olean, N. Y., a Corporation of Delaware. Filed May 26, 1925. Serial No. 33,082. 10 Claims. (Cl. 260—122.)



1. The method of preventing leakage of a treating fluid from a cyclic treating system which comprises venting said system to the atmosphere and absorbing treating fluid tending to escape through said vent in material to be treated by said fluid.

1,680,453. PROCESS OF TRANSFORMING HEAT AND OF CONTROLLING WORKING SUBSTANCES. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 22, 1925. Serial No. 77,156. 4 Claims. (Cl. 62—178.)



1. The thermodynamic process of producing absorption of heat at a plurality of temperatures which comprises expanding a liquid-vapor-gas stream into a body of liquid and interfering with the equalizing in temperature in the liquid by restraining the free movement of the same while removing vapor from said body of liquid.

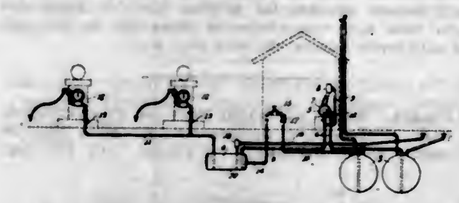
1,680,454. APPARATUS FOR PRODUCING THERMODYNAMIC EFFECTS. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1925. Serial No. 78,563. 13 Claims. (Cl. 62—115.)

1. In a thermodynamic system utilizing as a working substance a liquid and gas substantially inert to and insolubl in said liquid, the process of producing condensation of the vapor of the liquid in a stream of mingled vapor and gas which comprises maintaining a considerable volume of the vapor-gas mixture in a substantially static condition and extracting heat from the same, thereby giving the vapor time to reach condensing temperature and to extricate itself from the gas in the form of liquid.

1,680,455. OIL BURNER. MILTON A. FESLER, Stamford, Conn., and JAMES N. MACRAE, Jersey City, N. J., assignors to Petroleum Heat and Power Company, New York, N. Y., a Corporation of Delaware. Filed May 28, 1927. Serial No. 194,894. 10 Claims. (Cl. 158—77.)

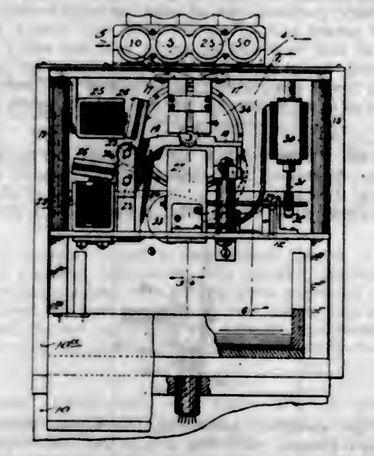
1. A liquid fuel burner, comprising in combination, a rotatable fuel cup, means for supplying liquid fuel to said cup, serrations or teeth at the discharge end of said cup, said teeth being arranged in staggered relation to each other for imparting a swirling movement to said fuel substantially equal to the speed of rotation of the cup, and means for producing a swirling envelope of air about said cup moving in a direction opposite to the swirling movement imparted to the fuel by the cup and into which envelope the fuel is discharged from said cup by centrifugal force.

1,680,456. OVEN. JAMES F. FIRESTONE, Dowagiac, Mich., assignor to The Beckwith Company, Dowagiac, Mich. Filed Feb. 13, 1928. Serial No. 254,113. 5 Claims. (Cl. 126—39.)



1. An oven comprising a top provided with a vent opening adjacent the front thereof, a door frame, a door

hinged to said frame to close against the front side thereof, and a lining for said door having its upper edge folded upon itself providing a horizontally disposed flange

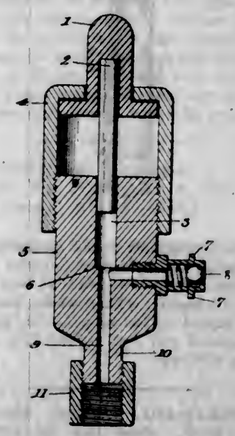


projecting into the opening of the door frame, the free arm of said flange being adapted to yieldingly engage the top edge of the door frame when the door is closed.

1,680,457. LIQUID-DELIVERY APPARATUS. JOHN J. HAWXHURST, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Liquid Dispensing Systems, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 23, 1927. Serial No. 170,196. 15 Claims. (Cl. 221—67.)

1. In liquid delivery apparatus, a storage tank, a delivery tank, means for transferring liquid from said storage tank to said delivery tank, a delivery line taking liquid from the lower portion of said delivery tank, means for controlling the transfer of liquid to maintain a cushion of compressed air acting on the liquid in the delivery tank and means for venting excess air in the top of the delivery tank to prevent said air cushion from lowering the liquid in the delivery tank below a desired minimum level.

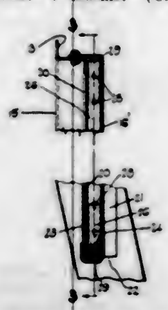
1,680,458. CONTROL MECHANISM FOR CHANGE MAKING AND EJECTING DEVICES. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Aug. 8, 1923. Serial No. 656,417. 9 Claims. (Cl. 194—6.)



1. In an apparatus of the class described, and in combination with ejector devices, and means for operating the same, of retaining devices for a deposited coin, a selector member controlled by the deposited coin when supported by said retaining devices, said operating means also controlling the release of said retaining devices, and a baffle member controlled by said operating means to direct the released coin into a receiving receptacle.

1,680,459. MARKING TAG. WILLIAM N. HEMPHILL, Toronto, Ontario, Canada, assignor to The T. Eaton Co. Limited, Toronto, Canada. Filed Nov. 16, 1925. Serial No. 69,410. 1 Claim. (Cl. 40—25.)

A marking tag, comprising a narrow strip of material having one end folded over and doubled back, a fastening member secured in the extremity of the doubled back portion having prong extensions adapted to pass through the article to be marked and through the first fold close to the fold crease, the folded, doubled back and body portions of the tag having openings punched therein adapted to register at a point spaced from said fastener member a distance less than the length of the prong extensions thereof to receive a permanent fastener whereby the spreading of the doubled back and folded portions sufficient to permit release of the prong extensions from therebetween is prevented.



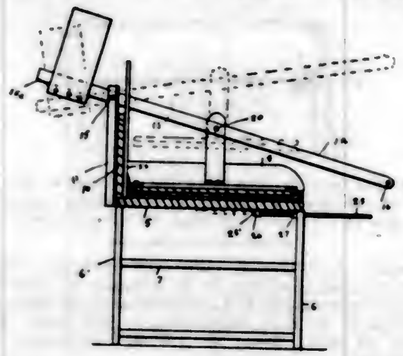
1,680,460. FLUID-PRESSURE BOOSTER. JESSE D. LANGDON, Los Angeles, Calif., assignor to Langdon Engineering Corporation, Los Angeles, Calif. Filed Nov. 14, 1927. Serial No. 233,269. 2 Claims. (Cl. 103—152.)

1. A fluid pressure boosting device comprising a cylinder, a piston disposed within said cylinder, a hammer pad on one end of said piston, a retaining cap suitably disposed to allow for the movement of said piston in a cylinder body having a cylinder therein, said cylinder being so disposed within said main body that the pis-

ton traveling within said cylinder will at all times allow the entry of fluid under pressure against the end of said piston, together with a check valved inlet to said cylinder and an outlet from said cylinder in combination with means to couple said pressure boosting device to a fluid pressure delivery line and an object to which it may be desired to deliver fluid by means of said fluid pressure boosting device.

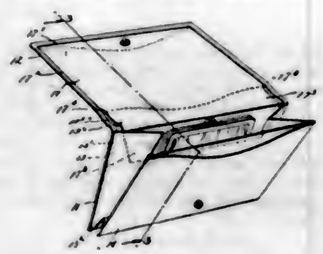
1,680,461. GLASS-RUN-CHANNEL CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1924. Serial No. 754,716. 7 Claims. (Cl. 296—4.45.)

1. A glass run channel construction comprising a rigid channel, flexible lining in said channel, and metal clips attached adjacent the ends only of the lining and attaching opposite ends of the lining at opposite ends of the channel.



1,680,462. CONTAINER FOR COLLAPSIBLE TUBES. JOSEPH LESQUENDIEU, Paris, France, assignor to J. Lesquendieu Inc., New York, N. Y., a Corporation of New York. Filed Jan. 4, 1927, Serial No. 158,968, and in France May 15, 1926. 1 Claim. (Cl. 221—60.)

A casing for collapsible tubes comprising cooperating tubular members, one having an interior pressure member spaced from the lateral wall of said tubular member, forming a channel within which the other tubular member is adapted to telescope, said pressure member having an inclined end wall adapted to cooperate with the bottom of the tube.

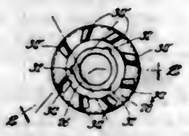


1,680,463. BREAD-ROLL PRESS. FRANK MAGAZINER, Springfield, Mass. Filed July 18, 1925. Serial No. 44,413. 2 Claims. (Cl. 107—15.)

2. A device of the class described comprising in combination, a table having a rear wall and side walls extending upwardly therefrom, spaced levers pivoted adjacent their ends to said rear wall, a cross bar fixed to the other end of said levers, a presser member over said table pivoted to and depending from said levers intermediate the ends thereof, guides fixed on said rear wall adjacent said table for engaging the rear side of

said presser member for guiding it as it approaches said table and counterbalances adjustable on the ends of said levers outside the said rear wall.

1,680,464. WOMAN'S HAND BAG OR POCKETBOOK. MAX J. MARYMONT, Brooklyn, N. Y. Filed Nov. 28, 1927. Serial No. 236,075. 2 Claims. (Cl. 150—36.)

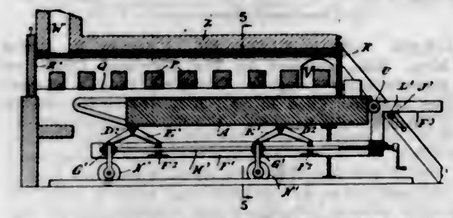


1. A woman's pocket book or the like, comprising a body having a front and back portion, the back portion being extended to form a flap adapted to fold over the front portion, two adjacent pockets between said front and back portions, one of said pockets serving as a secret pocket and having its back wall formed by the back of said body and a part of said flap and a lining for said flap having an unattached extended portion at its lower end adapted to be passed into said other pocket so as to conceal the presence of said secret pocket.

1,680,465. ELECTRICAL MEASURING INSTRUMENT. CARL T. MASON, East Orange, N. J., assignor to Tiffany Manufacturing Co., Newark, N. J. Filed July 18, 1925. Serial No. 44,497. 16 Claims. (Cl. 171—95.)

9. An electrical measuring instrument including a movable element consisting of only two pieces, an armature and a pointer with means for attaching them together, said armature having pivotal means formed integrally therewith.

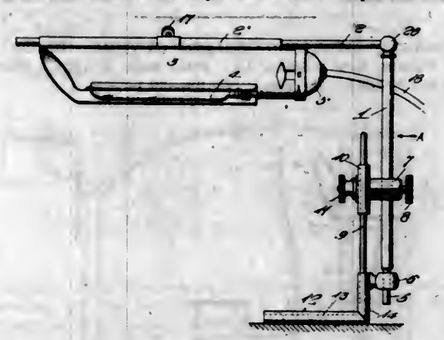
1,680,466. REAMING TOOL. WILLIAM H. EVANS, Chicago, Ill., assignor to Evans Flexible Reamer Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1924. Serial No. 728,657. 3 Claims. (Cl. 29—103.)



1. A device of the character described comprising a hollow sheet metal cutter member having a substantially conical portion with integral out-struck teeth thereon, said teeth being inclined to the radial in a plurality of series, the inclination of one series being opposite to that of the other series, said teeth being resilient and having their cutting face bent rearwardly relative to the direction of rotation from the base of the teeth whereby when the cutting edge strikes an obstacle the bending of the resilient tooth causes the edge to recede from the work.

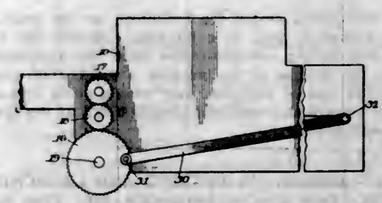
1,680,467. METHOD OF MANUFACTURING AUTOMOBILE FENDERS. MARTIN H. MATHESON, Detroit, Mich. Filed Aug. 23, 1926. Serial No. 130,903. 6 Claims. (Cl. 113—51.)

1. That method of manufacturing automobile fenders which includes stamping a right fender and its complementary left fender from a unitary sheet metal blank at one and the same time and forming the inner edge portion of each complete fender from the intermediate portion of the blank.



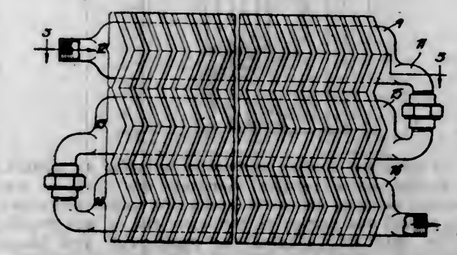
1,680,468. FURNACE. FRITZ MENNE, Wiedenau-on-the-Sieg, Germany, assignor to Herman F. Hoevel, New York, N. Y. Filed May 20, 1927, Serial No. 192,815, and in Germany Oct. 9, 1925. 3 Claims. (Cl. 263—6.)

2. A furnace having a longitudinal passage, a loose bottom arranged adjacent to said passage longitudinally thereof and provided with cooling pipes projecting lengthwise from the upper surface of the bottom and beyond one end thereof and spaced to form an open-work support at such end to permit loose material to drop through.



1,680,469. LAMP AND BRACKET. JOHN E. MORGAN, New Orleans, La. Filed Mar. 5, 1927. Serial No. 173,105. 2 Claims. (Cl. 240—52.)

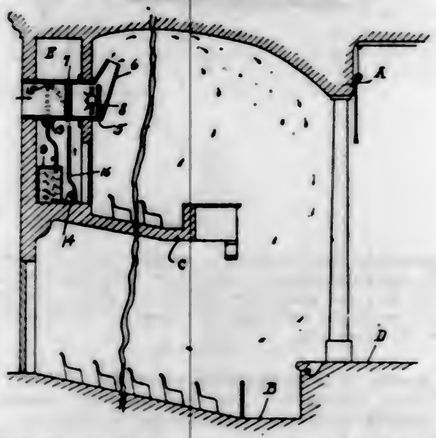
1. A combined lamp and bracket, comprising a supporting element secured to a base and formed of a single piece of material bent upon itself whereby a clip is produced, a raised portion formed in the supporting element, an upstanding member of L shaped form in cross section adapted to be engaged by the supporting element, members secured on the upstanding member and provided with means for adjustment with respect to the



upstanding member, an arm adapted to be secured to the adjustable members and an arm extending from said first arm and adapted to engage the shade of a lamp and means for positioning the shade at various angles on the second arm.

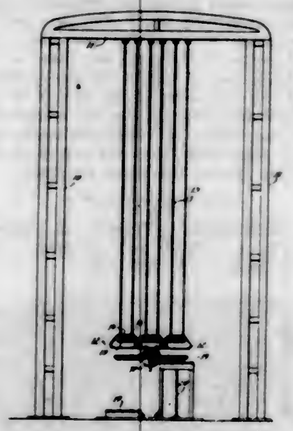
1,680,470. PAPER-FEEDING MACHINE. GARRETT W. MUDD, Chicago, Ill. Filed Nov. 15, 1926. Serial No. 148,426. 9 Claims. (Cl. 271—44.)

1. A machine for feeding sheets of paper and the like embodying a holder for a supply of sheets, an ejector below and reciprocable across the bottom of said supply, an extended arm directly supporting the ejector, means pivotally mounting the arm by one end, means for causing the ejector to remove one edge of the sheet from the supply and to buckle another portion of the sheet during the movement of the ejector in one direction, and means for bodily moving the ejector in a direction toward the supply, the last said means permitting the ejector to swing away from the bottom of the supply by swinging the ejector arm about its pivot.



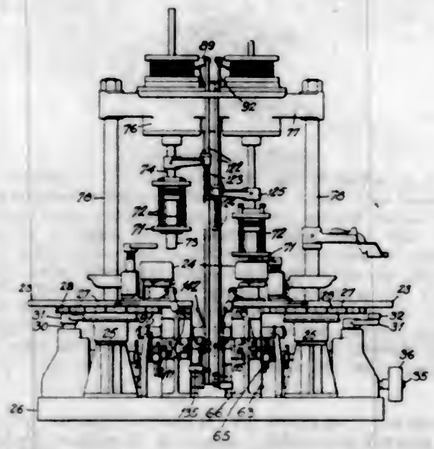
1,680,471. RADIATOR. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Aug. 8, 1925. Serial No. 48,929. 1 Claim. (Cl. 257—149.)

A radiator comprising a heating vessel and a radiating structure engaging the same, said radiating structure comprising relatively thin sheet metal formed to provide



spaced substantially vertically extending zig-zag enclosed flues, containing therein the heating vessel, said flues being so constructed as to provide corresponding zig-zag open flues within the inner and outer boundaries of said enclosed flues.

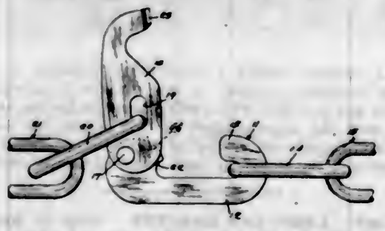
1,680,472. **BUILDING-COOLING SYSTEM.** BLAISE J. NUCCIO, New Orleans, La. Filed Sept. 3, 1927. Serial No. 217,365. 1 Claim. (Cl. 98—39.)



In a ventilating device for buildings, an air pipe arranged through a wall of a building adjacent the roof thereof and having communication with the atmosphere and with the interior of the building, a constricted nozzle at the inner end of the pipe, said nozzle being disposed inclinedly toward the roof, and a suction fan at the lower end of said nozzle.

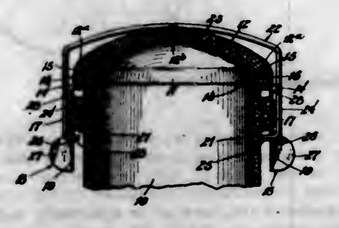
1,680,473. **AEROPLANE LANDING AND LAUNCHING DEVICE.** ORIN PARTEE, Bentonville, Ark. Filed Nov. 23, 1927. Serial No. 235,228. 1 Claim. (Cl. 244—2.)

An aeroplane landing mechanism including an upright, a flexible device pending therefrom and free for unimpeded swinging movement, and a ring spaced well above the ground and carried by the lower end of said flexible device, said ring adapted for engagement with hooks carried by aeroplanes while the latter are in flight, a plurality of said flexible devices being provided and the rings which they carry being arranged in overlapping relationship.



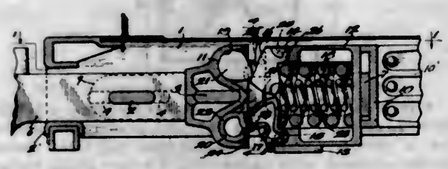
1,680,474. **GLASS-PRESSING MACHINE.** KARL E. PERLES and EDWARD H. LORENZ, West Hartford, Conn., assignors to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 10, 1918. Serial No. 249,244. 62 Claims. (Cl. 49—37.)

30. In a machine for shaping plastic glass, the combination of a rotatable mold support, a plurality of molds carried by said support, means cooperating with said molds for shaping the glass therein, a crank for intermittently rotating said support to successively position said molds in alignment with said shaping means, means timed to lock the support between its periods of rotation, a rocker device adapted to intermittently move said crank into operative relation to said support, means for actuating the rocker device, an arm on the rocker device, and means controlled by the locking means serving when the support is out of normal relation to the rotating means to engage said arm and prevent operation of the rocker device.



62. In an automatic glass machine, shaping devices, means to supply air under pressure to said shaping devices to cause a shaping operation, means adapted to successively reduce the air pressure to a predetermined amount when the shaping operation is completed, to maintain such reduced pressure constant until the glass sets, and to completely relieve the air pressure in said devices when the article is ready to be removed from said devices.

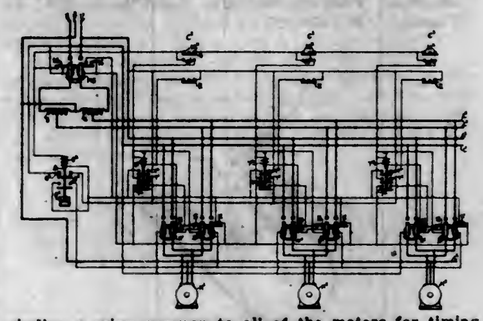
1,680,475. **CHAIN FASTENER.** CHARLES M. POWER, Kent, Ohio, assignor to The Cleveland Chain and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 11, 1927. Serial No. 204,765. 2 Claims. (Cl. 24—68.)



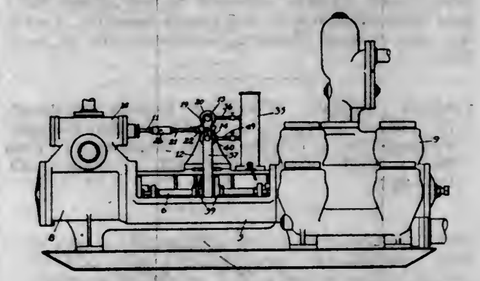
1. A chain fastener, for connecting a chain, such as an automobile anti-skid chain, comprising: a base, provided at one end with a recurrent hook forming a recess adapted to receive the chain to attach the chain to said base, said recess having that side thereof formed by the recurrent end of said hook extending substantially parallel to the direction of the strain normally imposed on said base by the chain, and a keeper, for holding said chain on said hook, pivoted to the other end of said base, provided with a projecting lip adapted to releasably hold said keeper in closed position, and provided also with a lug projecting, when said keeper is in closed position, into position to prevent the chain passing beyond said substantially parallel side of said recess.

1,680,476. **JAR CLOSURE.** EDWARD P. RICE, Eau Claire, Wis. Filed Aug. 5, 1926. Serial No. 127,414. 3 Claims. (Cl. 215—87.)

1. In combination, a container having a mouth, a closure for the mouth, trunnions formed on the container at opposite sides thereof, clamping means for the closure comprising a pair of members having bearing sleeves thereon rotatably engaged upon the trunnions and removable therefrom, and a clamping bail engageable with the closure and having its end portions pivotally connected with said members eccentric to the openings therein.



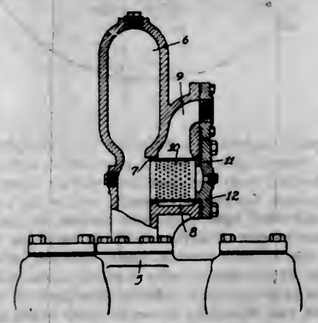
1,680,477. **DRAFT GEAR.** HERMAN C. PRIESS, Blue Island, Ill. Filed Mar. 21, 1927. Serial No. 177,045. 5 Claims. (Cl. 213—27.)



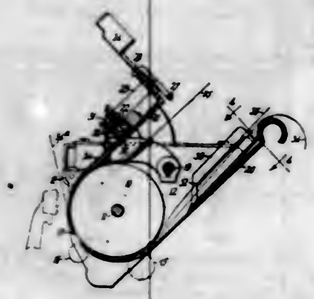
1. A draft gear including two followers; coacting rockers respectively mounted to turn upon said followers; intermeshing hook formations provided upon one of said followers and the rocker mounted thereon and positioned to hold this rocker at its seat; and a spring carried by the latter follower and pressing the rocker mounted to turn on this follower into cooperative relation with the other rocker.

1,680,478. **MOTOR CONTROLLER.** EDWIN W. SEEGER, South Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 3, 1926. Serial No. 113,355. 8 Claims. (Cl. 172—239.)

1. In a controller for a plurality of electric motors having a common supply circuit, in combination, a starting transformer, a switch for connecting said transformer to the supply circuit, a plurality of switches associated with each motor one for establishing connections to said transformer for starting and the other for establishing connections directly to the supply circuit for running, control means for said switches for preventing closure of a plurality of starting switches simultaneously and means including a relay common to all of the motors for timing opening of the starting switch of each motor and closure of the running switch therefor.

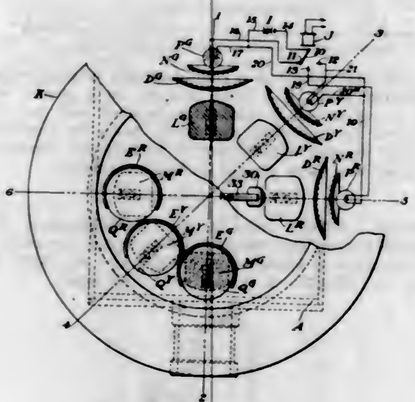


1,680,479. **PUMP.** JOHN M. SHIMER, Wilkinsburg, Pa., assignor to Wilson-Snyder Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 13, 1927. Serial No. 183,356. 9 Claims. (Cl. 121—114.)



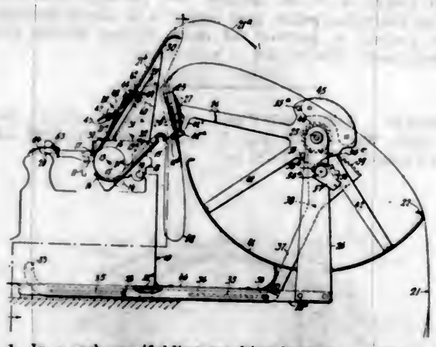
1. The combination in a pump having a valve operating mechanism including a lever mounted on a pivotal support, a piston rod, a connection between said rod and said lever for oscillating said lever, means for supplying lubricant to said support and a passage for conveying lubricant from said support to said connection.

1,680,480. **PUMP.** JOHN M. SHIMER, Wilkinsburg, Pa., assignor to Wilson-Snyder Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 13, 1927. Serial No. 183,357. 2 Claims. (Cl. 103—224.)



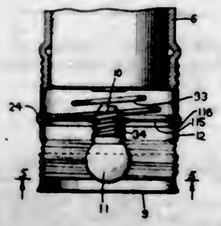
1. In a device of the class described, an air-chamber having a strainer bore associated therewith, a flange closing one end of said bore, a strainer mounted on said flange and positioned in said bore, and a discharge passage leading laterally away from said bore.

1,680,481. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 16, 1924. Serial No. 743,899. 10 Claims. (Cl. 197—127.)



1. The combination, in a typewriting machine, of means for simultaneously clamping both edges of a work-sheet upon a table at the delivery side of the platen, said means including a pair of clamps pivotally mounted upon the table, a link pivotally connected to both clamps for a joint clamping movement, and springs operative to maintain each clamp in clamping engagement with the work-sheet.

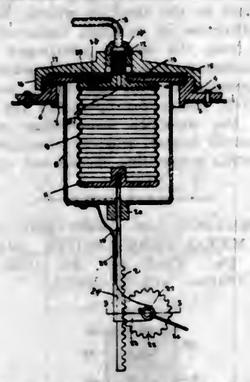
1,680,482. SIGNAL. CLARENCE S. SNAVELY, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1923. Serial No. 623,757. 1 Claim. (Cl. 177—32.7.)



A signal comprising a plurality of lamps disposed in a vertical plane, optical means associated with each lamp for projecting from the lamp an original beam of parallel rays directed toward a common center in said vertical plane, and two light reflectors located in each original beam and staggered horizontally so that one deflector is on one side of said vertical plane and the other deflector is on the other side of said vertical plane whereby said deflectors intercept two different portions of the original beam, the two deflectors for each lamp being parallel and located on opposite sides of a horizontal axis through said common center, all of said deflectors being disposed at the same angle with said horizontal axis, and each of them being positioned to redirect its portion of an original beam in a secondary beam parallel to said axis.

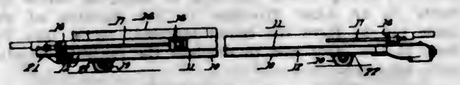
1,680,483. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Portsmouth, N. H., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 8, 1925. Serial No. 42,114. 19 Claims. (Cl. 197—126.)

1. In a web-manifolding machine having a carriage and a platen, the combination with a carbon-holder unit in the rear of the carriage movable forwardly and rearwardly, said carbon-holder stationary during letter-feeding movements of the carriage, of a normally fallen web-lifter also stationary while the carriage travels and adapted to rise intermediate the carriage and carbon-holder unit.



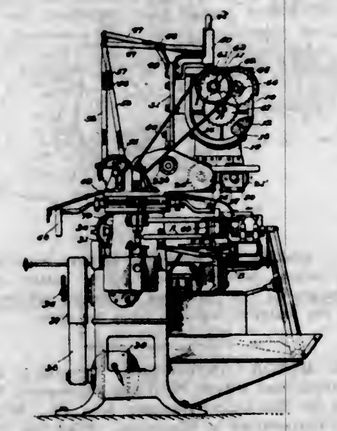
1,680,484. EXTRA-BULB CARRIER. FRANK G. STIMSON, Long Island, N. Y., assignor to Yale Electric Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 9, 1927. Serial No. 211,671. 1 Claim. (Cl. 240—10.5.)

A spare lamp carrier for flashlights including a tubular battery container having a threaded lower end, comprising a tubular carrier, a transverse partition therein formed centrally with an aperture, a volute spring battery thrust member carried within the carrier on one side of the partition and concentric with the aperture, a lamp socket so disposed within the aperture as to carry a spare lamp on the other side of the partition with the lamp terminal extending within the volute spring, said carrier being formed with female threads at one end to receive the threaded end of the battery container and with male threads at the other end to receive the bottom cap of the flashlight.



1,680,485. LIQUID-LEVEL GAUGE. HARRY B. SWAN, Detroit, Mich. Filed Aug. 16, 1922. Serial No. 582,172. 2 Claims. (Cl. 73—82.)

2. In a device of the class described, the combination with a tank provided with an opening, a ring secured to the tank and surrounding the opening, a casing extending through the said opening and having a flange seating on the ring, a plate resting on said flange and provided with an aperture, an expansible liquid container in said casing having an apertured head secured to said plate, said head having a tubular projection in line with the aperture in the head and extending through the aperture in said plate, a cap secured to the ring and having an opening surrounding the tubular projection above the plate, float operated means for operating said expansible con-



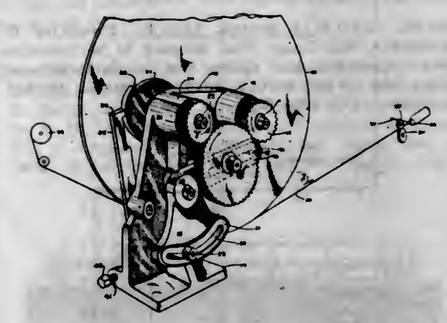
tainer, a gauge, and means establishing a connection between said gauge and tubular projection operable by liquid displacement for indicating the contents of the tank.

1,680,486. SUCTION BOX. ROBERT H. TAYLOR, Jr., Worcester, Mass., assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 13, 1928. Serial No. 246,606. 6 Claims. (Cl. 92—51.)

1. As an article of manufacture, a suction box for the purpose described comprising two pipe sections spaced apart so that the larger one constitutes the bottom of the suction box, and a pair of strips along the top and sides for separating the edges of the two pipe sections and constituting the top of the suction box.

1,680,487. FILLING AND WEIGHING MACHINE. WILLIAM L. TAYLOR, Battle Creek, Mich., assignor to Johnson Automatic Sealer Co., Ltd., Battle Creek, Mich., a Partnership Association Limited. Filed Feb. 7, 1923. Serial No. 617,564. 13 Claims. (Cl. 221—118.)

1. In a machine of the character described, the combination of a receptacle supported above the machine and having a substantially horizontal inner surface, means for depositing material on said surface at a point removed from one extremity thereof, a hopper at said extremity of the surface, means for feeding the material along the surface into said hopper, and a horizontally disposed rotating, cylindrical element for feeding the material out of the hopper into a portable container.



13. In an apparatus of the character described, a device for feeding material in opposite directions, a pair of longitudinally spaced rollers receiving material from said feeding device, mechanism for driving said rollers, and means operatively connecting the rollers with said material feeding device.

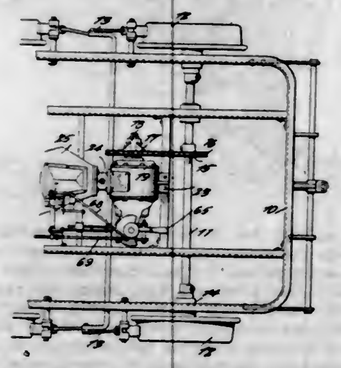
1,680,488. BELT BUCKLE. GEORGE W. TROOP, Geneva, Ohio. Filed Aug. 13, 1923. Serial No. 657,080. 3 Claims. (Cl. 24—191.)

1. A belt buckle comprising a flanged front plate, a clamping member pivoted to the flanges, a loop element pivoted to said clamping member for actuating the latter, the said loop element being movable toward and from said front plate and itself comprising a plate and a transverse bar connected with the plate at its ends and spaced from said plate intermediate the ends, the said bar being bent outwardly from the loop plate in a direction toward the said front plate, and the transverse bar being sufficiently spaced from the outer end of the front plate when the buckle is in closed position, to permit a belt being inserted through the space between the said bar and said outer end, and the space between the bar and the loop plate.

1,680,489. ADJUSTABLE MEASURING AND CUTTING DEVICE FOR COIL-WINDING MACHINES. STEN WADSTEN, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 4, 1927. Serial No. 165,857. 6 Claims. (Cl. 153—65.)

1. A machine for producing coiled filaments for incandescent electric lamps of different wattages comprising means for feeding a wire, a measuring drum movable through contact with said wire, means for coiling the wire after passing said drum, a cutter disposed in operable relation with said coiled wire, means associated with said drum for actuating the cutter upon a predetermined movement of said drum to sever a coiled filament for a given wattage and means for changing the relative movement between said cutter and drum to cut a coiled filament for a different wattage lamp.

1,680,490. ENDOSCOPE. REINHOLD H. WAPPLER, Yonkers, N. Y. Filed June 25, 1923. Serial No. 647,439. 15 Claims. (Cl. 128—7.)

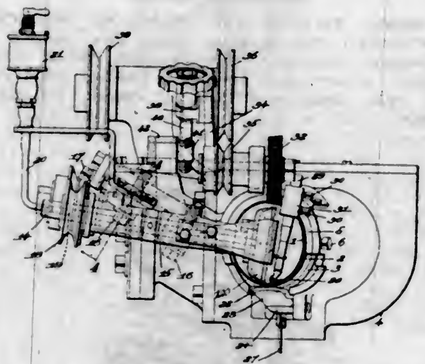


1. An endoscope comprising an optical tube and an optical system located within said tube and including a lens, said optical system being so arranged that the optical axis of the tube extends through the lens and through a field of vision in the form of a disk, this disk being so positioned that its axis crosses the optical axis of the tube and extends through said lens, said disk at one point along its periphery extending approximately to a line drawn straight as a prolongation of the optical axis of the tube.

1,680,491. ILLUMINATING SURGICAL TELESCOPE. REINHOLD H. WAPPLER, Yonkers, and FREDERICK CHARLES WAPPLER, New York, N. Y. Filed Oct. 18, 1926. Serial No. 142,286. Renewed Dec. 8, 1927. 12 Claims. (Cl. 128—6.)

1. A telescope of the character described having at its end a lamp-accommodating extension of reduced cross-section but lying wholly within the space bounded by the extended peripheral surface of said end, and an objective in said end, said objective being constructed and arranged to render visible through the telescope a field of vision alongside of the extension and whose innermost limit lies within said space, and said objective having its exposed surface perpendicular to the line defining said limit, whereby the latter will be unaffected by the medium in said field.

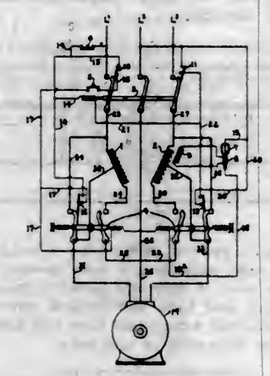
1,680,492. RAILWAY MOTOR TRUCK. FRIDTHJOF W. ANDERSON, Eau Claire, Wis., assignor to Northwestern Motor Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed Sept. 9, 1926. Serial No. 134,461. 6 Claims. (Cl. 105—62.)



1. In a motor car, a truck having traction wheels, an engine on the truck having driving and reversing gear transmission, a drive shaft rotated through the transmission, a housing into which the drive shaft extends and in which it is rotatable, a shaft rotatable in the housing, means for transmitting power from the second mentioned shaft to the traction wheels, means for controlling the direction of rotation imparted to the traction wheels from the second mentioned shaft, clutch controlled mechanism for the transmission, brake operating means associated with the engine, means for operating the clutch, means for operating the brake, means for shifting the direction controlling means, and a manually operated control whereby the clutch, the brake and the direction controlling means are operated simultaneously.

1,680,493. METHOD OF REMOVING PIPING AND UNSOUND METAL FROM INGOTS. SAMUEL S. BALL, Bethlehem, Pa. Filed Apr. 24, 1922. Serial No. 556,241. 4 Claims. (Cl. 29—160.4.)

1. The method of freeing the body of an ingot of piping and segregations in the top thereof which includes the step of applying forces to the ingot entirely in a direction truly axial of the latter and when the latter is in a plastic state to effect the flattening of the upper end of the ingot, and the step of applying forces entirely in an axial direction to the margins of the ingot top to force the sound marginal metal into the body of the ingot and to displace the centrally located unsound metal.

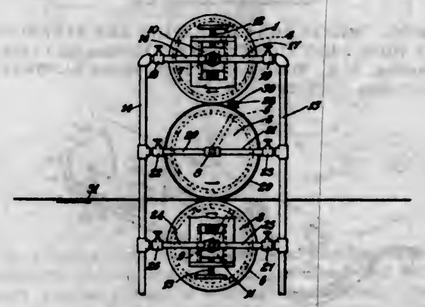


1,680,494. MACHINE FOR REMOVING SURPLUS STOCK FROM SHOES. HARRIE A. BALLARD, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 4, 1923. Serial No. 655,699. 24 Claims. (Cl. 12—82.)

1. In a machine for removing surplus material from shoes, a rotary delivery tube, and a cutter operating at the mouth of the tube and arranged to throw into the tube the material removed from the shoe.

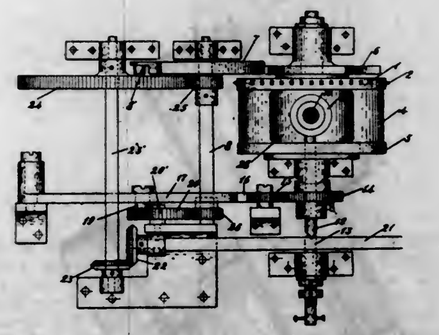
1,680,495. MOTOR CONTROLLER. THOMAS E. BARNUM, Wauwatosa, and HENRY N. WADE, Shorewood, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 18, 1920. Serial No. 417,693. 17 Claims. (Cl. 172—289.)

1. In a motor controller the combination with means for establishing different power connections selectively of means for timing establishment of certain of said connections by said former means, said latter means including



a normally closed electro-thermal relay energized inductively by the main current and responsive subject to a time element.

1,680,496. SURFACING TOOL. HUGH BAUER, San Francisco, Calif. Filed Nov. 12, 1927. Serial No. 232,857. 10 Claims. (Cl. 72—136.)



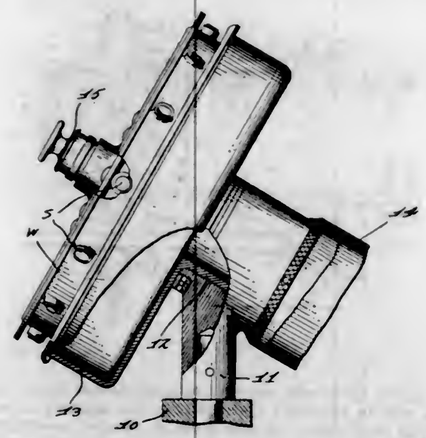
1. A surfacing tool comprising a body; a wire mounted in spaced relation to one edge of the body; and means for stretching the wire taut.

1,680,497. IMPREGNATED FABRIC AND PROCESS OF MAKING THE SAME. HERMAN E. BROWN, Kingston, N. Y., and JORDAN HOMER STOVER, Nutley, N. J., assignors, by mesne assignments, to Respro Inc., Providence, R. I., a Corporation of Rhode Island. Filed Sept. 7, 1922. Serial No. 586,806. 9 Claims. (Cl. 91—70.)

1. The herein described process, which consists in applying to a fabric composed of unspun unwoven natural fibres, a binding material in the form of a dough like semi-solid plastic at the time of application, having such high cohesiveness and adhesiveness as to be capable of penetrating around and between the natural fibres, and forcing said binding material by pressure into the fabric and around and upon the individual fibres so as to coat the individual fibres throughout the fabric without completely filling the interfibre spaces and causing the fibres to adhere at points of contact and intersection by the cohesion of their individual coatings.

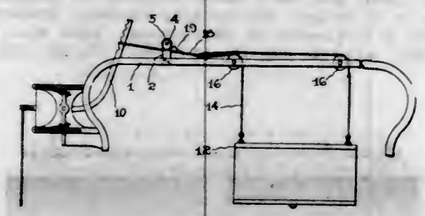
1,680,498. PANORAMIC-MOVING-PICTURE APPARATUS. CORRADO CERQUA, Brooklyn, N. Y., assignor to Filoteo Alberini, New York, N. Y. Filed July 18, 1924. Serial No. 726,812. 24 Claims. (Cl. 88—16.)

1. In a panoramic camera, the combination, with a casing and an angularly movable objective mounted in said casing, of a film, a feeding member therefor interlocking therewith coaxial with the axis of rotation of said objective, means adapted to cause intermittent partial rotation of said feeding member in one direction, means associated therewith adapted to alternately cause swinging motion of said objective from one extreme of its angular travel to the other, and an operating member controlling the operation of said feeding member and swinging means.



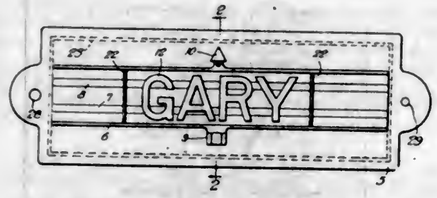
1,680,499. WROUGHT-METAL CONNECTION FOR THREADED-PIPE SECTIONS. JAMES CLARK, FRANK N. SMITH, and JAMES MEESE, Bradford, Pa., assignors to S. R. Dresser Manufacturing Company, Bradford, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1924. Serial No. 696,811. 13 Claims. (Cl. 285—132.)

1. A wrought metal connection for threaded pipes, comprising among its members a wrought metal cylindrical member provided at its outer end with an out-



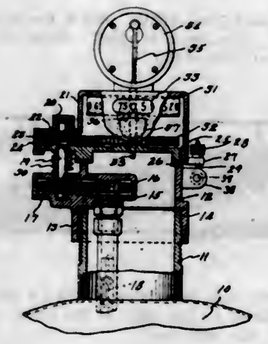
wardly flared marginal portion, forming a packing recess between it and the unthreaded exterior of a pipe section to be connected therewith, said cylindrical member being provided within the same at a distance from said marginal portion and packing recess with a wrought metal collar fitting the interior of said cylindrical member, united permanently thereto by welding, and internally threaded to receive the terminal threaded portion of the said pipe section.

1,680,500. TEMPLATE. WILLIAM A. COTES, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Aug. 20, 1927. Serial No. 214,419. 10 Claims. (Cl. 101—114.)



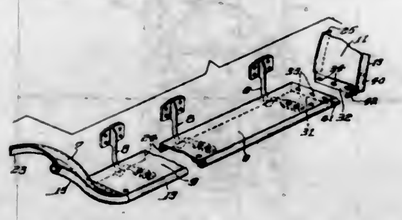
1. In an apparatus of the character described, the combination with a work piece and a source of vacuum, of a flexible template held in place on said work piece by said vacuum.

1,680,501. LOOM HARNESS MECHANISM. MICHAEL CONINGSWOOD, Clifton, N. J. Filed Nov. 26, 1926. Serial No. 150,806. 9 Claims. (Cl. 139—84.)



1. In a device of the character described the combination of a harness-frame, a jack, a connecting medium operatively connecting the harness frame and the jack, a cam block on the connecting medium and a pulley adapted to engage the cam block whereby in the longitudinal movement of the connecting medium the pulley will be engaged by the cam block producing a transverse movement of said cam block and connecting medium so that the harness-frame is moved farther than it would be with straight line motion of the connecting medium.

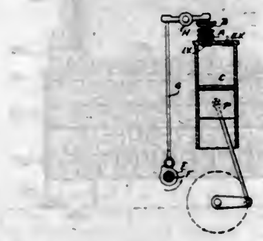
1,680,502. MAGNETIC PATTERN. FINIS R. CRAIG and JOHN J. OLING, Harvey, Ill., assignors to Production Pattern Company, Harvey, Ill., a Corporation of Illinois. Filed Dec. 11, 1926. Serial No. 154,177. 9 Claims. (Cl. 22—158.)



1. A magnetic pattern device for forming an impression in a mold comprising a body portion having a pair of spaced bars of magnetic metal thereon, a magnet for charging said bars, and pattern parts of magnetic metal extending across said bars and held in place by the magnetic attraction of said bars.

1,680,503. COMBINED SPEEDOMETER AND MOTOMETER. JOHN M. CURLEE, Kirkwood, Mo. Filed Apr. 20, 1925. Serial No. 24,642. 14 Claims. (Cl. 116—114.)

1. An attachment for a motor vehicle radiator having a filler neck, said attachment consisting of a fitting engageable with the filler neck, a speedometer indicator supported by the fitting and a motometer also included in the attachment and supported by the fitting, said speedometer indicator and motometer being thus located at substantially the same point for simultaneous observation.

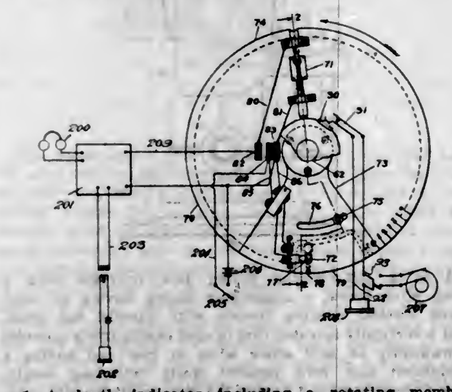


1,680,504. MEANS FOR INCREASING THE STRENGTH OF SHEET-METAL ARTICLES. HERMAN Z. CUTLER, Camden, N. J. Filed Nov. 23, 1923. Serial No. 676,513. 13 Claims. (Cl. 280—153.)

1. In a device of the class described the combination with a guard structure, of a protector for the edge thereof, formed of sheet material shaped to form a rigid metal

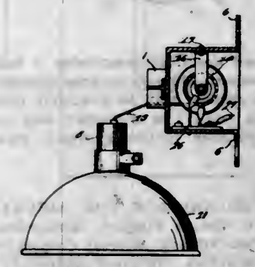
reinforcing tube having a longitudinally disposed portion folded to provide a pocket to receive the free edge of said guard structure and extended to underlap said guard structure and rigidly secured thereto.

1,680,505. INTERNAL-COMBUSTION ENGINE. FRANCIS DE LAUTOUR, Wellington, New Zealand. Filed Jan. 28, 1926, Serial No. 84,356, and in New Zealand Jan. 29, 1925. 10 Claims. (Cl. 123—1.)



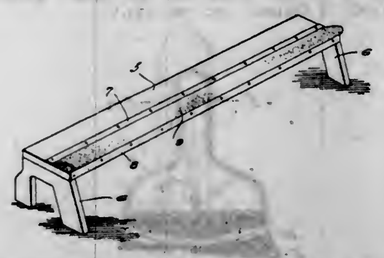
1. The method of operating an internal combustion engine which comprises introducing a swirling charge, expanding the charge by increasing the volume of the space into which it has been introduced, and then compressing said charge.

1,680,506. METHOD OF PURIFYING WATER. RALPH B. DERR, Oakmont, Pa., assignor, by mesne assignments, to National Aluminate Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 20, 1927. Serial No. 220,889. 6 Claims. (Cl. 210—23.)



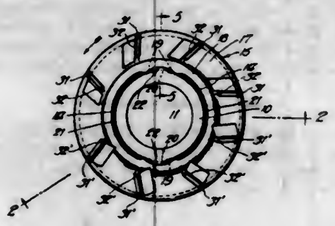
1. The method of purifying water containing less than about fifty parts per million of magnesium sulphate, comprising mixing with the water a water-softening compound and sodium aluminate, and activating the formation of a coagulant from the sodium aluminate by adding to the water a material capable of producing magnesium ions and sulphate ions.

1,680,507. APPARATUS FOR MEASURING DISTANCE. HERBERT GROVE DORSEY, Gloucester, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Nov. 12, 1925. Serial No. 68,695. 8 Claims. (Cl. 177—386.)



1. A depth indicator including a rotating member, means for driving the same at a constant and known speed, a sound reducer, a sound receiver, circular scales, two visual indicators carried by said rotating member and moving in cooperation with the scales, means whereby rotation of the rotating member causes periodic operation of the sound producer at a definite position of the indicators with reference to the scales, one of said indicators for deep sounding, the other of said indicators capable of producing a line of light on the scale in response to the operation of the sound receiver for shallow sounding, an audible indicating means operative in response to the operation of the sound receiver to cooperate with the deep sounding indicator and means to change the position of one of said indicators with reference to the scales whereby the sound signal will be produced when said indicator is in a different position.

1,680,508. ILLUMINATING LAMP FOR AUTOS. VIRGIL S. DOWNING, Jackson, Miss. Filed July 27, 1927. Serial No. 208,852. 3 Claims. (Cl. 240—8.18.)

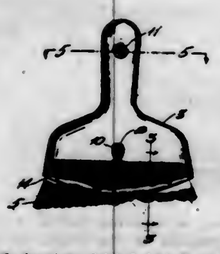


2. In a device of the character described, a channel shaped bracket adapted to be attached to a support with two parallel flanges extending horizontally and having a central opening in its vertical leg, arms depending from the upper flange of the bracket, a drum rotatably supported thereby, a conductor wound about the drum and adapted to be withdrawn therefrom, an extensible illuminating lamp attached to the conductor and normally supported in the opening, and means operative upon withdrawal of the conductor to rewind the latter upon manual release of the illuminating lamp, collector rings carried by the drum and having electrical connection with the conductor, brushes engaging the collector rings, a switch carried by the bracket and electrically connected with the brushes, a source of electrical energy having electrical connection with the conductor and switch.

1,680,509. KNEE CUSHION FOR CHURCH PEWS. DANIEL FRANCES DUCY, Decatur, Ill. Filed Jan. 15, 1927. Serial No. 161,343. 1 Claim. (Cl. 155—166.)

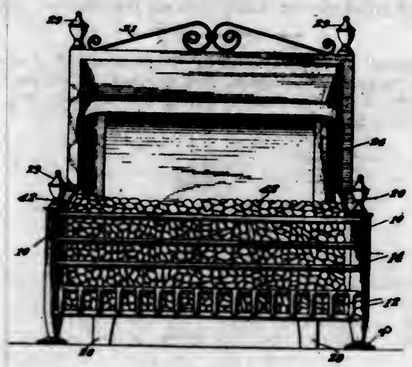
In combination, a kneeling bench, a strip of metal of a length equivalent to the length of the bench and of a width materially less than that of the bench rigidly secured to the top of the bench adjacent the forward edge thereof, a depending flange formed on the forward edge of the strip for rigid attachment to the forward longitudinal edge of the bench, and a cushion arranged on the upper face of the strip of metal, the top surface of the cushion being inclined downwardly in a rearward direction, so that the feet will rest upon the floor while kneeling upon the cushion.

1,680,510. VALVE-SEAT REAMER. WILLIAM H. EVANS, Chicago, Ill., assignor to Evans Flexible Reamer Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1925. Serial No. 71,682. 13 Claims. (Cl. 29—103.)



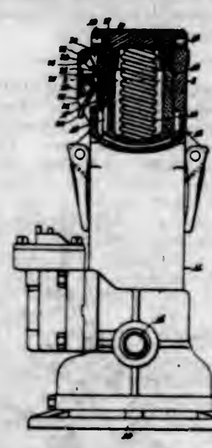
1. A cutter head described comprising a hollow arbor and a cutter member yieldingly secured thereto, whereby the entire cutter member may be angularly displaced out of normal position relative to said arbor, said cutter member having an annular portion provided with integral outstruck teeth.

1,680,511. UNDERCARRIAGE FOR AIRCRAFT. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands, assignor to Atlantic Aircraft Corporation, a Corporation of New Jersey. Original application filed May 25, 1923, Serial No. 641,324. Divided and this application filed Sept. 10, 1925. Serial No. 55,444. 10 Claims. (Cl. 244—2.)



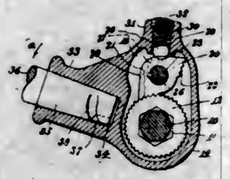
1. An undercarringe for an airplane having a full floating axle capable of yielding in all directions to absorb landing, rebound and side load shocks.

1,680,512. BRISTLE-HOLDING DEVICE FOR BRUSHES AND BROOMS. LAWRENCE E. GOELLER, Circleville, Ohio. Filed Jan. 30, 1928. Serial No. 250,495. 3 Claims. (Cl. 15—171.)



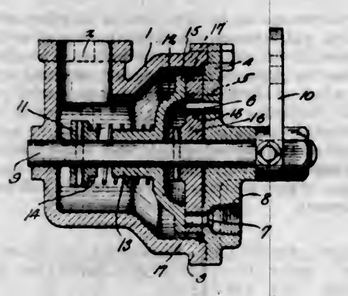
1. In a brush having folded bristles, means clamping the bristles in position comprising a pair of clamping members, tension members extending through the clamping members, supporting means for the bristles between the clamping members consisting of a suitably formed band member extending through the bristle fold, means supporting the band between the clamping members consisting of a loop on the band member adapted to receive a tension element.

1,680,513. FIREPLACE. GEORGE W. GUE, Chicago, Ill. Filed Jan. 9, 1925. Serial No. 1,435. 6 Claims. (Cl. 219—45.)



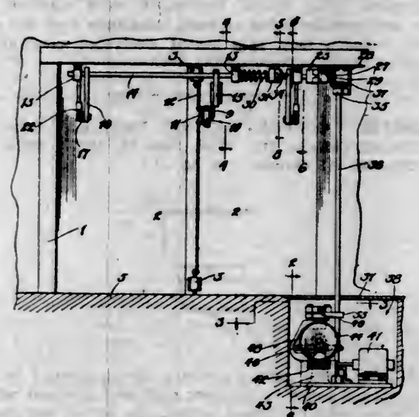
1. A fire place unit comprising an illuminated imitation grate, a source of radiant heat above said grate, a continuously curved reflector below said source set to reflect radiant heat out over the top of said grate, a reflecting hood above said source, said hood comprising a first portion adjacent the source set to reflect directly out over said grate and a second potion remote from said source set to reflect back onto the reflector below said source, and a second hood spaced over said first hood to define an air passage.

1,680,514. LIFTING JACK. FRANK L. GORMLEY, Brookline, Mass., assignor to The Buda Company, Harvey, Ill., a Corporation of Illinois. Filed Feb. 6, 1926. Serial No. 86,418. 12 Claims. (Cl. 254—103.)



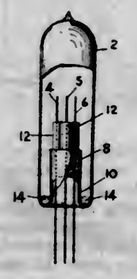
1. In a self-lowering lifting jack provided with a steep pitch screw, a supporting casing having an elongated vertical opening therein with parallel flat sides, and a vertically movable ram in said casing freely movable downwardly on said screw when at rest and having a peripheral slot with parallel walls extending lengthwise thereof, said slot having the same width as said opening; a flatsided key freely movable in said casing opening in a radial path and in contact with the side walls thereof; an actuating lever pivoted at its upper end to said casing and depending from its pivot adapted to move said key outwardly from said slot; and means in the same plane with the key for automatically returning said key into said slot when said lever is released.

1,680,515. RATCHET MECHANISM FOR LIFTING JACKS. FRANK L. GORMLEY, Brookline, Mass., assignor to The Buda Company, Harvey, Ill., a Corporation. Filed Dec. 21, 1926. Serial No. 156,109. 15 Claims. (Cl. 192—43.1.)



1. The combination with the driving shaft of a lifting jack; an actuating ratchet therefor secured thereto; a casing surrounding said ratchet and movable about the axis of said shaft; a double ended pawl pivotally mounted in said casing and having a plurality of teeth at opposite ends adapted to engage the ratchet teeth, one set of teeth being for lifting and the other set for lowering the load supported by said jack; and means within said casing for retaining only the lifting set of teeth in engagement with the ratchet or both sets of teeth disengaged from the ratchet teeth.

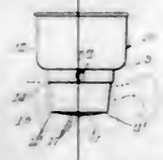
1,680,516. ENGINE VALVE. LAWRENCE R. GRAMES, Wellsville, N. Y., assignor of one-half to John N. Bryson and R. B. Murray, Wellsville, N. Y. Filed Oct. 13, 1926. Serial No. 141,862. 1 Claim. (Cl. 261—50.)



The combination with a casing having an outlet and an open side spaced therefrom, of a cover plate for closing the open side, a shaft journaled therein and in the casing, means for rotating the shaft, there being an annular series of apertures in the cover plate, said series being concentric with the shaft, said plate having a fuel port opening therethrough, a valve disk rotatable with the shaft having an annular series of apertures movable into and out of register with the air and fuel ports in the cover plate, cooperating means upon the cover plate and disk for limiting the back and forth rotation of the disk relative to the cover plate, a slidable valve on the shaft having its marginal portion normally bearing against and closing the apertures in the disk, and yielding means carried by the shaft and engaging the slidable valve for holding said valve pressed normally against the disk, said slidable valve being shiftable by suction through the registering apertures in the disk and cover plate to admit fuel to the casing when the valve is subjected to suction from the outlet of the casing.

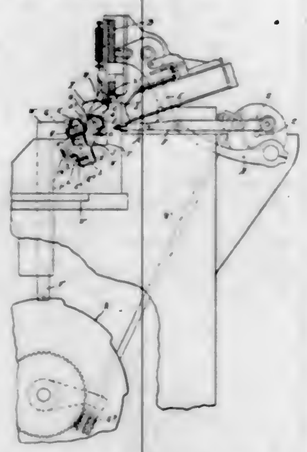
1,680,517. GARAGE-DOOR-OPERATING MECHANISM. JOSEPH B. HARRIS, Washington, D. C. Filed Mar. 22, 1927. Serial No. 177,442. 2 Claims. (Cl. 268—63.)

1. A door operating device, comprising an operating shaft, operating arms mounted on said shaft, connections between said arms and the doors to be operated, a rotary source of power for operating said doors, means operable by said source of power, for changing the rotary motion into a reciprocating motion, and applying said reciprocating motion to the operating shaft, and reciprocating said shaft to produce the opening and closing operation of the doors, means operated by the last named means for controlling the opening and closing movement of said doors in a predetermined manner, and a manually operable clutch carried by the operating shaft having disengageable connection with the first named means and operable to selectively permit independent manual operation of said doors relative to said means and the source of power.



1,680,518. PROTECTIVE DEVICE. WILLIAM HENRY TOWNE HOLDEN, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 25, 1921. Serial No. 487,537. 2 Claims. (Cl. 250—27.5.)

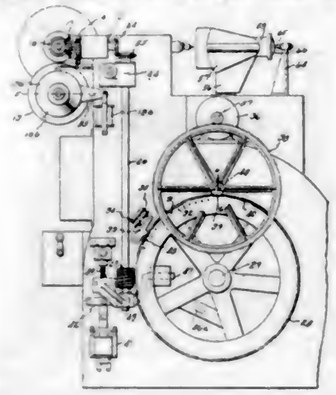
1. A protector for electric circuits comprising a gas tight envelope having a plurality of symmetrical electrodes sealed through one end thereof and extending thereinto in substantially parallel closely spaced relation, insulating sleeves about said electrodes adjacent the point at which the electrodes are sealed through the envelope, a filling of rare gas within said envelope at a



reduced pressure and a quantity of mercury contained therein, said electrodes being of such size and of such material as to be heated to an electron emitting temperature when the break down voltage is exceeded, said electrodes being spaced sufficiently close together and the gas pressure being of such magnitude that the electron emission from said heated electrodes substantially reduces the impedance of the device.

1,680,519. COFFEE-MAKING DEVICE. JOHN D. HOUCK, Chicago, Ill. Filed June 25, 1927. Serial No. 201,359. 11 Claims. (Cl. 53—3.)

1. In a coffee making device, a casing adapted to contain ground coffee in its lower part, and provided with a perforated slightly dished bottom, the bottom adapted to have a sheet of filtering material supported thereon, and a spreader adapted to be removably held above said bottom.

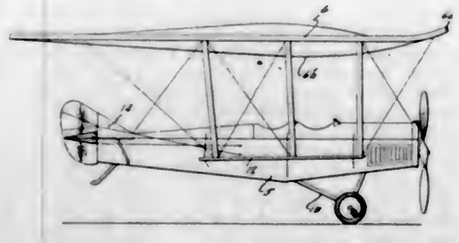


1,680,520. WORK HOLDER FOR BRUSH MACHINES. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 2, 1924. Serial No. 735,466. 5 Claims. (Cl. 300—11.)

1. In a brush machine, a work holder mounted for rotative adjustment about transverse axes, means for adjusting said holder step-by-step about one of said axes through a plurality of revolutions, and means operating automatically between successive revolutions in timed relation to said first mentioned means for adjusting said holder step-by-step about the other of said transverse axes.

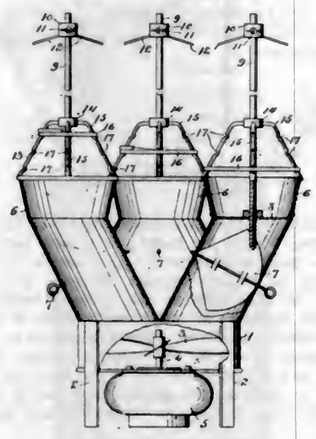
1,680,521. UNIVERSAL BRUSH MACHINE. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 19, 1925. Serial No. 10,291. 14 Claims. (Cl. 300—11.)

1. In combination, tuft setting mechanism, a work holder for presenting brush backs thereto, driving mechanism for said work holder timed relative to the tuft setting mechanism and including cams for imparting step-by-step movements to said work holder, and means



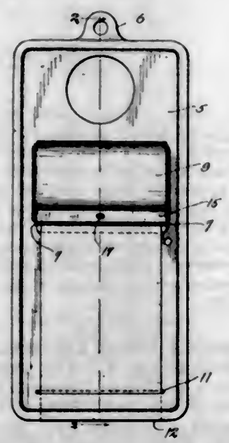
adjustably controlled from said cams to return the work holder to its initial position after a predetermined number of steps.

1,680,522. METHOD OF AND MILL FOR ROLLING STRIPS AND SHEETS. LLOYD JONES, Millville, N. J., assignor to Acme Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1924. Serial No. 687,337. 5 Claims. (Cl. 29—18.)



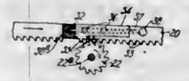
1. The method herein described of manufacturing strips or sheets, which consists in subjecting a slab to the action of a plurality of pairs of horizontal rolls whereby the slab is reduced in thickness and elongated, effecting a reduction in the width of the slab, superposing one rolled portion on another, subjecting such superposed portions to the action of a plurality of pairs of horizontal rolls to reduce such portions to the desired gauge, and subjecting the edges of the superposed portions to the action of rolls whereby the edges of such portions are brought into and maintained in alinement.

1,680,523. AEROPLANE. ORSEMUS L. R. JONES, Detroit, Mich. Filed Jan. 16, 1925. Serial No. 2,828. 5 Claims. (Cl. 244—12.)



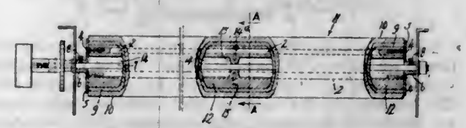
5. In an aeroplane, the combination with a plane having a wide central portion and pointed front and rear extremities provided with a central keel extending the entire length of the plane and inclined frour a lowered central portion upwardly to the front and rear extremities of the plane, of a body arranged beneath the plane with its longitudinal axis in vertical alignment with the central keel of the plane, and connecting members arranged between the sides of the body and the plane, the body being formed with a flat bottom throughout its entire length and serving as an auxiliary supporting surface in contact with the air currents.

1,680,524. CLOTHES DRIER. SAMUEL KILLMNICK, Picher, Okla. Filed July 25, 1927. Serial No. 208,280. 7 Claims. (Cl. 34—26.)



1. In a clothes drier, a tube, means for forcing air therethrough, means for supporting a garment at and in central alinement with the discharge end of said tube, means at the said discharge end having an outer surface converging from said discharge end and having external notches at different transverse diameters thereof and adapted to be embraced by and to hold distended over said discharge end the adjacent end of the garment, and a resilient transversely divided ring adapted to embrace the outer side of the garment and adapted to be seated in any of said notches and to hold the garment against said surface at different diameters thereof.

1,680,525. KITCHEN MEMO PAD. CLARA M. KIZER, Omaha, Nebr. Filed Nov. 19, 1927. Serial No. 234,514. 1 Claim. (Cl. 281—6.)



A roll holder including a base, a curved roll supporting member mounted on the base, a pivoted guard formed of substantially wide material, supported on the roll holder at the upper edge thereof, said roll holder having an opening, said guard having a boss to be fitted in the opening to lock the guard in position and said base having a slot to receive ppaer supported by the roll holder.

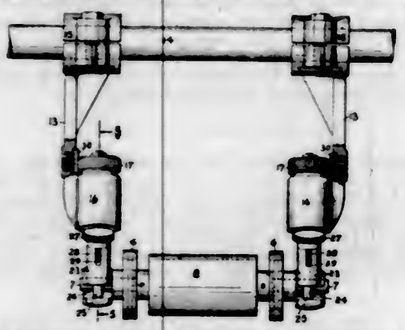
1,680,526. TYPEWRITING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 15, 1924. Serial No. 726,075. 14 Claims. (Cl. 197—176.)

1. In a typewriting machine, the combination of a power-driven carriage, a carriage-feeding mechanism including a carriage-rack engaging a pinion controlled by ecapement-devices for step-by-step letter-space-feeding distances, and means movable within the rack to automatically effect a letter-space movement of the carriage independently of the escapement-devices.

1,680,527. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 17, 1923, Serial No. 657,870, now Patent No. 1,597,321, dated Aug. 24, 1926. Divided and this application filed Oct. 10, 1925. Serial No. 61,658. 9 Claims. (Cl. 197—147.)

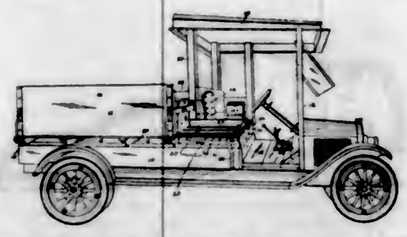
1. A platen having a substantially hard cylindrical outer shell forming a suitable surface to give clear-cut type-impressions, and a relatively resilient plastic core to deaden the impact, to absorb the vibration and to lessen the noise incidental to the type striking the platen surface, including a preassembled re-enforcing framework around which the core is moulded to form a hollow center and a re-enforced rib midway between the ends thereof to support the middle portion of the platen.

1,680,528. DISPLAY FORM. JOSEPH A. LALONDE, Montreal, Quebec, Canada. Filed July 29, 1926. Serial No. 125,758. 1 Claim. (Cl. 223—18.2.)



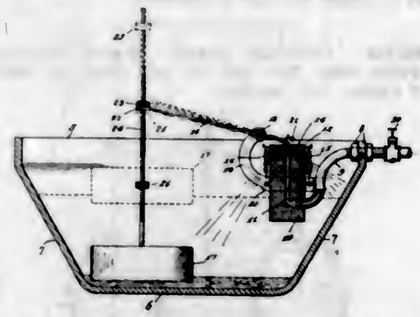
A pneumatic hollow display form having a single resilient wall of unequal thickness at predetermined locations in its construction, thereby causing the form to variably expand in the forcing of a fluid under pressure into the form.

1,680,529. METHOD OF TREATING WOOD. GEORGE A. RICHTER, WALLACE B. VAN ARSDEL, and JOHN G. GOSSELINK, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 8, 1927. Serial No. 182,173. 9 Claims. (Cl. 99—12.)



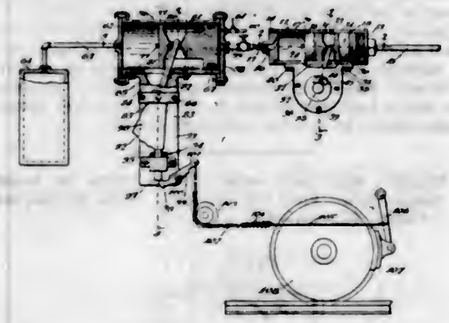
9. A method of staining wood, which comprises heating wood to a temperature above 100° C., thereby vaporizing its free moisture content and expelling and displacing its air content with steam; confining and ammoniating such wood, while hot, with gaseous ammonia under pressure, thereby resulting in a partial condensation of the steam in situ in such wood, and the penetration of the ammonia into and the staining of the wood; and removing such stained wood from confinement while in heated condition.

1,680,530. INKING DEVICE FOR PRINTING AND EMBOSSING MACHINES. WALTER C. FELLOWS, Philadelphia, Pa., assignor to C. R. Carver Company, a Corporation of Pennsylvania. Filed Dec. 11, 1926. Serial No. 154,085. 9 Claims. (Cl. 101—360.)



1. In a printing press, an ink fountain, a printing die, means for shifting the latter into and out of ink receiving position, and an inking roller for transferring ink from the fountain to the printing die, combined with means for operating the inking roller consisting of a rockshaft, two arms extending therefrom in the same direction and spaced apart a greater distance than the length of the inking roller and each provided with supporting means for the inking roller including an adjustable part screw threaded into the lower part of the arms, a spring actuated stem therefor restricted as to its movement in one direction while being yieldingly supported in the other direction, and a head secured to the stem and forming a bearing support for a shaft carrying the inking roller, whereby the inking roller is limited in its movement away from the rockshaft while being yieldingly movable in a direction toward the rockshaft.

1,680,531. TRUCK. FRANK H. FIELD, Jamestown, N. Y. Filed Sept. 13, 1926. Serial No. 135,262. 4 Claims. (Cl. 296—1.)

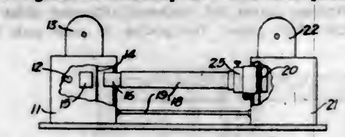


1. In a vehicle the combination of a driver's seat, a body comprising a main part and a delivery platform forming an extension thereof at the side of said driver's seat, and a vertically removable barrier separating said delivery platform from the main part of the body.

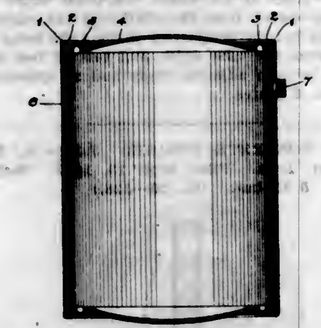
1,680,532. AIR MOISTENER. LOUIS A. FLEURY, Indianapolis, Ind. Filed Mar. 28, 1927. Serial No. 178,961. 2 Claims. (Cl. 137—104.)

2. An air moistener comprising a fluid receptacle, means for supplying fluid to the receptacle, a valve body through which the fluid is adapted to pass, means for opening and closing the passage through the valve body, a lever connected to said opening and closing means, means upon which the lever is fulcrumed, a stem to which the lever is slidably connected, adjustable means on the stem adapted when moved by the stem to engage and move the lever, and a float connected to the stem for actuating the lever to operate said opening and closing means as the fluid in the receptacle is diminished and replenished.

1,680,533. AIR-BRAKE APPARATUS. CRUTHERS I. FRANTZ, Los Angeles, Calif. Filed July 11, 1927. Serial No. 204,595. 14 Claims. (Cl. 303—32.)



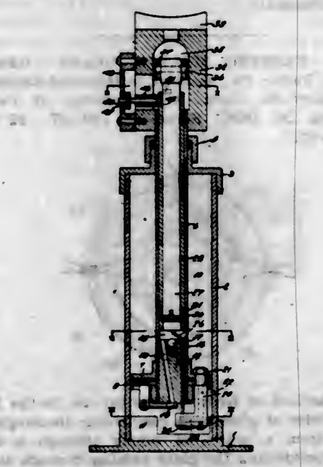
7. In an air brake, a control valve having a cylinder and a sliding piston with a passage for air therethrough controlled by valves, an air brake cylinder having a brake piston with a passage for air therethrough controlled by a second set of valves, a storage reservoir connected to the brake piston, a release valve operated by a control valve, means actuated by the brake piston in the brake cylinder to apply brakes by movement of the brake piston, due to the air in the reservoir, said means maintaining the brakes applied independent of any change in the pressure of air in said reservoir.



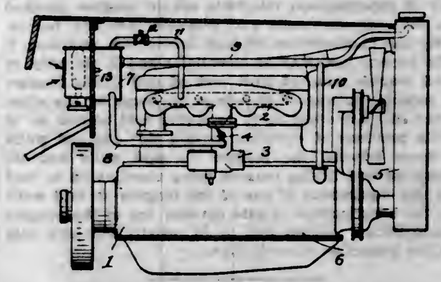
1,680,534. DOUBLE PRISM-REGISTERING DEVICE. FRANK E. GARBUTT and RALPH G. FRAR, Los Angeles, Calif., assignors to Famous Players-Lasky Corporation, a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,283. 5 Claims. (Cl. 88—24.)

1. In a device of the character described: a first element having an image thereon; a second element; and optical means for throwing on any portion of said second element an enlarged reproduction of any portion of the

image on said first element, said means comprising a plurality of prisms between said elements, means for changing the angular relationship of one of said prisms to another of said prisms, and means permitting said prisms to be rotated without changing their angular relation to each other.

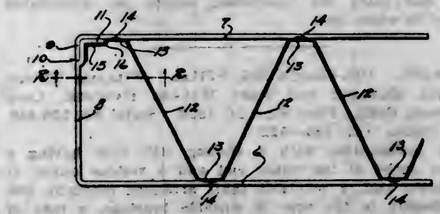


1,680,535. WELDED SHEET-METAL CONTAINER. HARTWELL H. GARY, Birmingham, Ala. Filed Nov. 19, 1925. Serial No. 70,193. 2 Claims. (Cl. 220—67.)



1. A welded sheet metal container, composed of a tubular shell, and heads, each having an outwardly disposed marginal flange adapted to fit snugly within an end of the tubular shell, and a weld joint connecting the edge only of said flange to the container, each head having a deep bead which is interposed between, and is adapted to form an expansion joint connecting the flanged margin of the bead with its central panel, and lies closely adjacent to said flange.

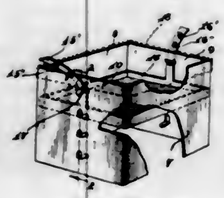
1,680,536. HYDRAULIC JACK. THEODORE GENSMER, Portland, Oreg. Filed Mar. 30, 1925. Serial No. 19,298. 4 Claims. (Cl. 188—9.)



1. A jack of the class described, consisting in the combination of a cylinder, a plunger within the cylinder having a tubular rod extending axially outward of the cylinder and forming a pump cylinder, said rod having a plug in its lower end formed with passages affording communication between the chamber in the cylinder above said plunger and the interior of said rod and from the interior of said rod to the cylinder chamber below said plunger, respectively valves for each of said passages admitting of the passage of liquid from above the plunger to below the plunger only, an angularly shaped fitting secured to said plunger formed with a passage affording a by-pass from below the plunger to the space above the plunger, a valve normally closing the passage of liquid upwardly in said by-pass, a trip-rod engaged with said by-pass valve and extending through said plug to the interior of said tubular rod, two concentric pistons operatively mounted in said tubular rod extending outwardly of said cylinder, a head on said tubular rod above said cylinder having a chambered opening therein, a lever extending through said head having a link connection with said head and operatively connected to the inner said piston, said lever being formed with a cylindrical end, an extension-handle rotatively connected to said cylindrical lever-end provided with a stop adapted to limit the downward stroke of said lever-handle in one of its rotary positions wherein said pistons will not engage said trip-rod, and means for connecting said pistons together to act in unison consisting in a pin slidable in said outer piston and receivable in a recess in said inner piston.

1,680,537. SALVAGE GAS GENERATOR FOR INTERNAL-COMBUSTION ENGINES. WALTER W. GROOMS, Cleveland, Ohio. Filed June 22, 1925. Serial No. 38,614. 3 Claims. (Cl. 123—25.)

1. The combination with an internal combustion engine having a fuel inlet and a cooling system, of means for delivering a fuel mixture to the inlet comprising a carburetor communicating with the inlet, a mixing chamber communicating with the carburetor, an ozoniser, means for admitting air to the ozoniser and from the ozoniser to the mixing chamber, and pipes connecting the mixing chamber to the upper portion of the water cooling system above the level of the liquid therein and to the crank case of the engine.

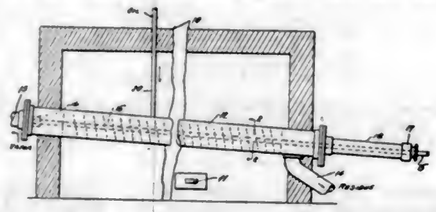


1,680,538. METAL-DOOR CONSTRUCTION. ARTHUR R. GROSS, St. Paul, Minn., assignor to Gross Metal Products Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 18, 1927. Serial No. 198,488. 5 Claims. (Cl. 189—46.)

1. A sheet metal unit comprising a front plate and a back plate laterally spaced the one from the other, said plates having edge portions extending laterally toward

each other to substantially edgewise abutting engagement, said front plate having a laterally and inwardly offset main angle member that spans the joint between said plates and fits in the corner of the back plate, and a truss rigidly secured to the back plate and having abutting engagement with the edge of the respective flange of the main angle member, said truss having a laterally and inwardly offset secondary angle member that fits within the main angle member.

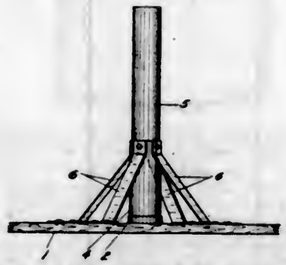
1,680,539. BOX. ALI HADI, Springwells, Mich., assignor of two-thirds to Ted Gruska and John Gruska, and one-third to Walter Ray, Fordson, Mich. Filed July 24, 1926. Serial No. 124,765. 1 Claim. (Cl. 206—56.)



A box, comprising: side and end walls; a bottom slidably positioned between said walls; lifting tongues projecting upwardly from opposite sides of said bottom and projected through slits formed in opposite walls; a plurality of superimposed relatively spaced tongues punched from said opposite walls and pressible inwardly for engaging the undersurface of said bottom for retaining it in its various positions of elevation; and a plurality of spaced tongues punched from each of said lifting tongues and pressible outwardly therefrom for engaging the edges of said slits for assisting in retaining said bottom in its various positions of elevation in said side and end walls, the space between the tongues on said walls and the tongues on said lifting tongues being coordinated so that upon the engagement of one of the tongues on said walls with the undersurface of said bottom, one of the tongues on said lifting tongues will be in registration with said slits for projection therethrough.

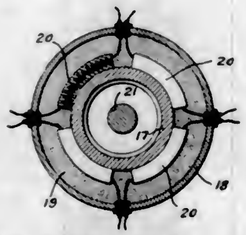
1,680,540. METHOD OF TREATING AND UTILIZING THE BLACK LIQUOR OBTAINED IN THE MANUFACTURE OF SODA AND SULPHATE CELLULOSE. ERIK HÄGGLUND, Abo, Finland. Filed June 18, 1927, Serial No. 199,873, and in Sweden June 21, 1926. 2 Claims. (Cl. 23—46.)

1. The method of treating and utilizing the black liquor obtained in the manufacture of soda and sulphate cellulose which consists in subjecting said liquor to a heat and pressure treatment adapted to precipitate the main portion of organic substances therein as carbonaceous and pitchy material, then separating the liquor from the precipitate, evaporating said liquor to dryness, subjecting the dry residue to fractional lixivation so as to obtain therefrom an acetate solution, separating said acetate solution from the dry residue, causticizing the residue and using the causticized residue as causticizing agent in white lye.



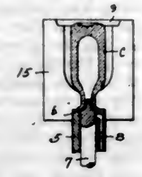
1,680,541. OIL-CRACKING STILL. WILLIAM THORNHILL HANCOCK and JOHN WALKER HANCOCK, Long Beach, Calif. Filed Sept. 20, 1926. Serial No. 136,443. 1 Claim. (Cl. 196—122.)

In combination with a sloping still tube having a vapor outlet at its higher end and a residue outlet at its lower end, a rotatable shaft arranged centrally longitudinally in the tube in suitable bearings, a tube of reduced diameter extending centrally from one end of the still tube, a stuffing box at the end of said smaller tube, and the shaft extending out through said stuffing, a plurality of ball confining disks set rigidly on said shaft and longitudinally spaced from each other, said disks lying in parallel planes making acute angles with the shaft, pairs of ball carrying plates set between adjacent disks in a radial longitudinal plane, the plates of each pair being



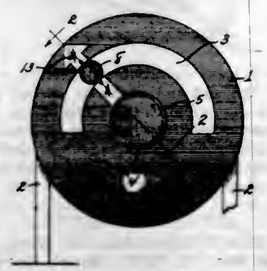
at opposite sides of the shaft, the inner edges of the plates being spaced from the shaft and the outer edges of the plates and the peripheries of the disks being slightly spaced from the tube walls, and sets of free balls in the spaces between adjacent disks and at opposite sides of the pairs of plates.

1,680,542. CONCRETE FORMER. JAMES A. HINTER, Davenport, Iowa. Filed Sept. 15, 1927. Serial No. 219,638. 5 Claims. (Cl. 25—128.)



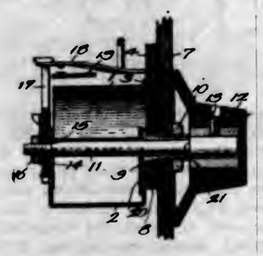
2. A concrete former comprising a cup shaped member to be secured to a concrete form board, and a tube connected to the cup, and having braces secured thereto remote from the cup, said braces extending away from the tube a distance to be secured to the form board and brace the tube to keep it from being pushed out of position accidentally.

1,680,543. FEEDING MOLTEN GLASS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 20, 1926. Serial No. 130,527. 12 Claims. (Cl. 49—55.)



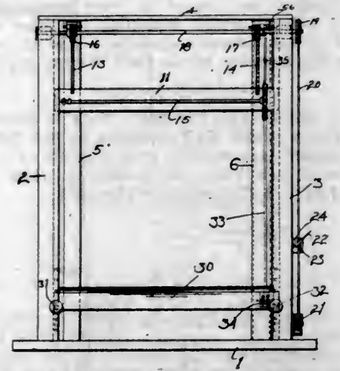
9. The method of feeding glass for use in the fabrication of articles of glassware, comprising discharging molten glass from a source of supply through a delivery outlet, and subjecting the glass passing through said outlet to a plurality of independently regulable temperature regulating influences respectively applied at different places located in the same plane and spaced about the central line of flow of the discharging glass.

1,680,544. METHOD OF BLOWING GLASSWARE. HENRY W. INGLE, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 6, 1923. Serial No. 678,914. 5 Claims. (Cl. 49—80.)



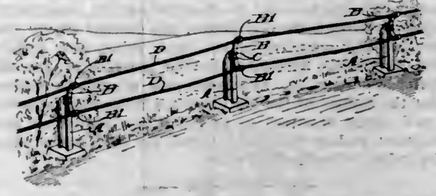
1. The process of making hollow glassware that comprises forming a parison in an inverted parison mold, removing the parison mold while leaving the parison supported at the parison-forming position, closing an inverted finishing mold around the said parison, reverting the said finishing mold containing said parison, and expanding said parison to fill the said finishing mold.

1,680,545. ROAD SIGN. NELSON S. JEWETT, Tulsa, Okla. Filed Jan. 22, 1927. Serial No. 162,861. 4 Claims. (Cl. 88—1.)



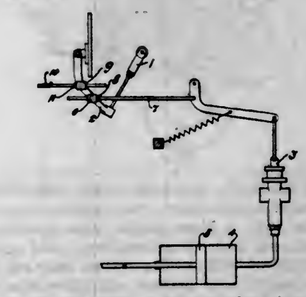
4. A road sign comprising a body, a centrally arranged reflector on the body, a second reflector adjustably mounted on the body so that it can be moved in an arc which is concentric with the first reflector and means for fastening the second reflector in adjusted position.

1,680,546. ELECTROSTATIC CONDENSER. FRANK O. JOHNSON, Chicago, Ill., assignor to Reliance Die & Stamping Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1926. Serial No. 123,990. 3 Claims. (Cl. 175—41.5.)



1. An electrostatic condenser including a bearing sleeve and a rotatable shaft journaled in the sleeve, said shaft having a shoulder in thrusting engagement with said sleeve exerted in one direction, the condenser having a condenser plate having one portion coupled with the shaft and another portion also in thrusting engagement with said sleeve exerted in a direction opposite to the thrusting engagement of the shoulder, one of said condenser plate portions being resilient to force the aforesaid thrusting engagements.

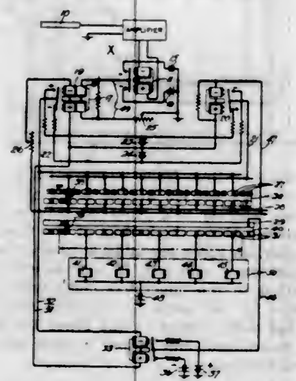
1,680,547. CURTAIN-TESTING FRAME. WALTER H. JUAY, Sausalito, Calif. Filed Mar. 16, 1927, Serial No. 175,754. Renewed Jan. 11, 1928. 3 Claims. (Cl. 73—51.)



1. A curtain testing frame comprising a rectangular frame, a cross-bar carried at the lower portion of said frame, means whereby said cross-bar may be adjusted to various positions above the bottom of the frame, a pulley carried thereby, an upper bar slidable in said frame, means to raise and lower said bar to any desired position, a tape connected to the upper bar and passing under the pulley carried by the lower bar whereby the position of the upper bar with respect to the lower bar may be immediately determined, and means to hold the upper bar in a desired position.

1,680,548. HIGHWAY GUARD. PAUL L. KEISER, Douglassville, Pa. Filed Dec. 13, 1927. Serial No. 239,805. 4 Claims. (Cl. 256—1.)

1. A highway guard comprising a row of spaced posts, bow springs secured to the posts with their free ends extending outward from the posts towards the highway and a cable supported on the free ends of the bow springs.

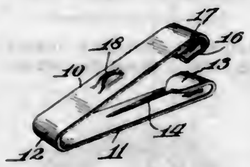


1,680,549. VACUUM BRAKE. WILLIAM O. KENNINGTON, London, England. Filed Nov. 16, 1927, Serial No. 233,606, and in Great Britain Sept. 11, 1926. 2 Claims. (Cl. 192—3.)

2. In combination, means for controlling the fuel supply of a motor, means for controlling a brake, manually

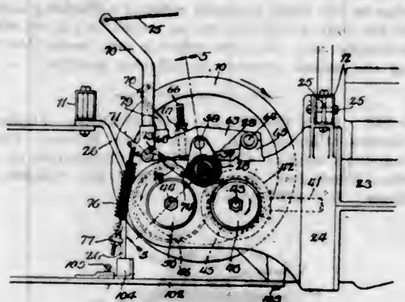
operable mechanism operable in two directions, in one direction actuating the fuel supply means and in the other diretion actuating the brake control means, said brake control means including a floating lever, a tension link connected to one arm of the lever for applying the brake and resilient means connecting the other arm of the lever to the manually operable means to react on the latter in proportion to the force of brake application.

1,680,550. SIGNALING SYSTEM. MARK B. KERR, Rosebank, Staten Island, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1926. Serial No. 117,047. 5 Claims. (Cl. 178—88.)



1. In a signaling system, the combination of two unbiased polar relays, each having a local energizing winding, an armature, and current supply contacts cooperating with the armature, a continually rotating distributor, an energizing circuit for the local winding of each relay extending through the distributor, the current supply contacts and the armature of the other relay, said circuits being alternately completed by the rotation of the distributor whereby the armatures are caused to vibrate under the control of the distributor, a line winding on one of said relays arranged to prevent the vibration of said armatures, and an energizing circuit for said line winding independent of said distributor.

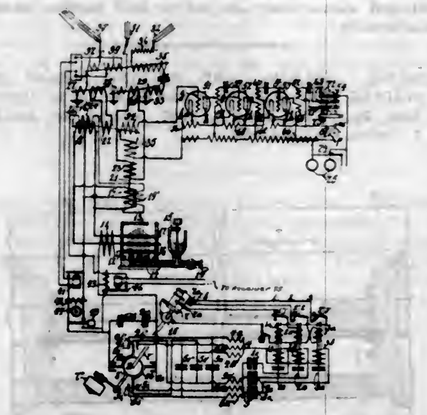
1,680,551. CHAIN HOOK. FRANK B. KING, Wakefield, Mass. Filed Dec. 8, 1927. Serial No. 238,525. 1 Claim. (Cl. 24—232.)



A securing device for anti-skid chains, comprising two elongated separable members, each having open hooks at its opposite ends, a hinge pintle engaged with one of said members and projecting therefrom, said pintle including a cylindrical body portion and an enlarged head at the outer end of the body portion, the other member having an elongated keyhole-shaped orifice including a larger portion formed to receive the pintle and its head, and a smaller portion formed to receive only the body portion of the pintle, the reduced portion of the orifice being countersunk at one end, to form an arcuate shoulder adapted to engage the pintle head and confine the pintle in said reduced portion, and a spring interposed between the members and normally pressing the same apart, said spring yieldingly confining the arcuate shoulder in engagement with the pintle head, the arrangement being such that the members may be pivotally connected by first inserting the pintle in the larger portion of the orifice, and then moving it into the smaller portion, thereby causing the pintle head to prevent separation of the members, and establishing a pivotal connection therebetween, the members being separable when the pintle is moved into the enlarged portion of the orifice, the hooks forming closed eyes arranged in different planes, one eye being divisible by a swinging movement, and the other by a sliding movement.

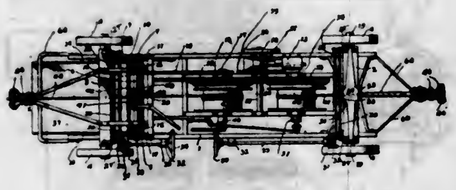
1,680,552. LINGERIE PIN. MARY E. KINTZ, Los Angeles, Calif. Filed Mar. 5, 1925, Serial No. 13,409, and in Germany Mar. 22, 1924. 6 Claims. (Cl. 24—73.)

6. A lingerie clasp comprising a pair of resilient arms connected at one end and normally spaced apart, a pin projecting inwardly from the free end of one of said arms so as to occupy a position between said arms, a keeper beneath which the free end of said pin may be engaged and means on the free ends of said arms for retaining the same in closed position.



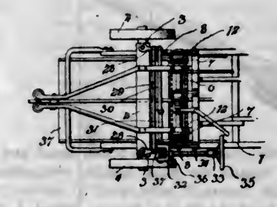
1,680,553. TRACTOR. ALVARO S. KROTZ, Janesville, Wis. Filed Nov. 10, 1922. Serial No. 600,154. 50 Claims. (Cl. 180—17.)

1. In a tractor of the class described having driving wheels located upon opposite sides thereof, and an engine for driving the tractor; two friction driving members driven in opposite directions about parallel transverse axes from said engine; two driving shafts supported to permit lateral displacement thereof at their inner ends and the outer ends of which are operatively connected with said driving wheels; two friction driven members carried one by the inner end of each shaft aforesaid; and means for laterally shifting the inner ends of said shafts and thereby moving said driven members into and out of engagement with said driving members.



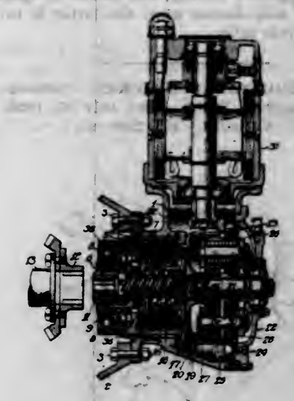
19. In a tractor of the class described having a transversely extending main frame, two reversible end frames detachably secured one to each end of said main frame and each of which is provided with two driving wheels; and means including sprocket chains through which both wheels at each side of the tractor may be driven in either the outside or inside position of said wheels.

1,680,554. SIGNALING BY HIGH-FREQUENCY CURRENTS. AUGUST J. KLONECK, New York, N. Y. Filed Apr. 18, 1921. Serial No. 462,322. 4 Claims. (Cl. 250—9.)



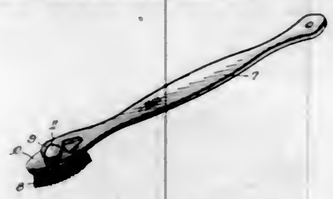
1. In a signaling system the combination, of a plurality of transformers, including a plurality of coils, a plurality of radiation circuits including coils upon certain of said transformers, of transmitting circuits having coils on certain of said transformers, the ratios of turns between said transmitting circuits and each of said radiation circuits being different from the other, means for adding resistance to certain of said radiation circuits adapted for making the resistance of said radiation circuits proportional to the ratios of turns of said coil sets between the transmitting circuits and said radiation circuits, all for the purpose set forth.

1,680,555. EXCAVATOR. ROBERT LAIR, Kingston, Wash. Filed June 15, 1926. Serial No. 116,178. 1 Claim. (Cl. 37—125.)



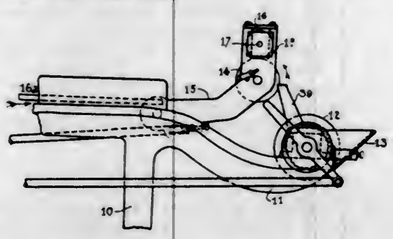
An excavating machine comprising a wheel-supported frame, means on the frame for effecting travel of the same, a scoop pivotally mounted between its ends adjacent its bottom upon the frame at one end thereof, a shaft mounted on the frame over the scoop, power means on the frame to rotate the shaft, a drum loose on the said shaft, means for locking the drum to the shaft, means to prevent reverse movement of the drum when unlocked from the shaft, and a cable secured to the drum and attached to the rear end of the scoop and arranged to unwind from the drum when the drum is unlocked from the shaft.

1,680,556. STEERING MECHANISM. ROBERT LAIR, Kingston, Wash. Original application filed June 15, 1926, Serial No. 116,178. Divided and this application filed Apr. 25, 1927. Serial No. 186,422. 1 Claim. (Cl. 280—93.)



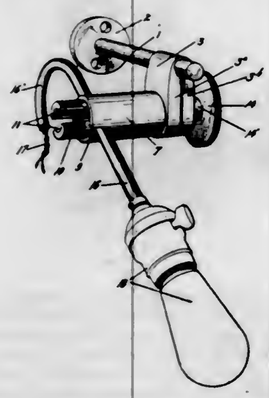
An excavating machine comprising a frame, spindles mounted vertically upon the frame, wheels carried by the lower ends of the spindles, cranks extending radially from the spindles and having sliding connection therewith, a connecting bar pivoted to and extending between said cranks, one crank being extended past the connecting bar, a link pivoted at its outer end to the free end of the extended crank and extending therefrom parallel with the connecting bar, a threaded rod pivoted to the end of the link, a steering shaft, a stationary bracket supporting one end of said steering shaft and the outer end of the threaded rod, and intermeshing pinions upon the shaft and the rod respectively within and held by said bracket, the pinion on the threaded rod having a threaded bore meshing with said rod.

1,680,557. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Mar. 29, 1926. Serial No. 98,153. 13 Claims. (Cl. 123—179.)



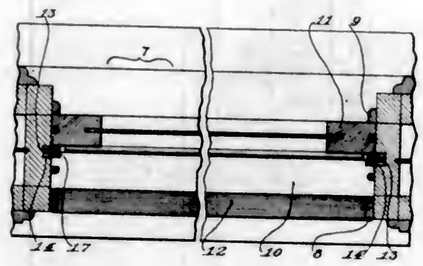
1. In an engine starter, a drive including a driving member mounted for longitudinal movement to engage a member of the engine to be started and for rotary movement to crank such engine member, a control member cooperating with the driving member for controlling its longitudinal and rotary movements, an actuating member, a friction clutch forming the driving connection between the control member and the actuating member, and means governed by the driving member for increasing the friction of such clutch in the cranking operation.

1,680,558. TOOTHBRUSH. GUY LIONEL LOISELLE, Evanston, Ill. Filed Oct. 28, 1927. Serial No. 229,300. 2 Claims. (Cl. 15—172.)



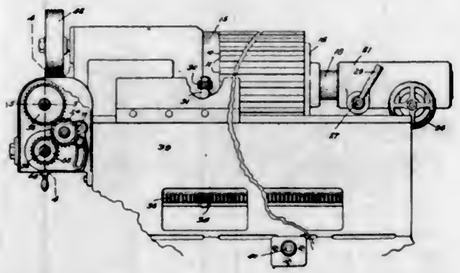
1. A toothbrush comprising a brush head and a handle therefor, and means on said handle comprising spring jaws having an internal head and a central polygonal boss on said head having a groove adapted to receive said head whereby said head may be detachably secured to said handle and its position in said handle changed without removal therefrom.

1,680,559. INKING MEANS FOR PRINTING MACHINES. FRANK WILLIAM MANTON, Toronto, Ontario, Canada. Filed July 7, 1927. Serial No. 204,043. 10 Claims. (Cl. 101—345.)



1. In a printing press, a movable ductor lowering to engage the fountain roller and rising into the path of the inking plate of said press, a vibrator adjacent said ductor and supported thereby, and means of spacing said vibrator from said ductor when the latter is in contact with said fountain roller.

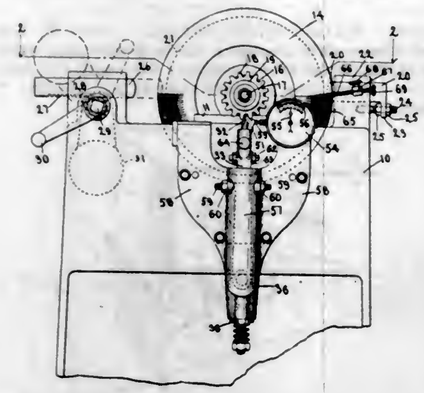
1,680,560. ADJUSTABLE BRACKET. GEORGE A. MCDONALD, Pasadena, Calif. Filed July 15, 1926. Serial No. 122,569. 6 Claims. (Cl. 248—3.)



1. An adjustable bracket including a rod, a split member adjustably mounted thereon, a sleeve having an interfitting connection at its end with one side of said split member, a holding member telescoping through said sleeve and said split member, a spring in said sleeve operating to normally force said holding member outwardly, said holding member being slotted along its opposite sides and said sleeve being slotted in its end, and a hand nut and screw means for drawing said members together in clamping relationship, said holding member and said sleeve being adapted to hold another member in said slots.

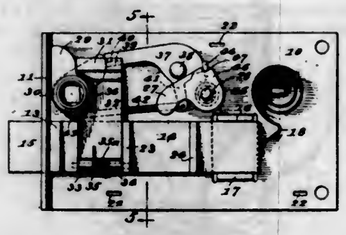
1,680,561. HOLDING AND GUIDING MEANS FOR SLIDING PARTITIONS. CHARLES MCVEETY, Cheltenham, Pa. Filed June 4, 1927. Serial No. 196,446. 7 Claims. (Cl. 20—69.)

1. Means for mounting a pair of sliding partitions comprising a holder formed with substantially parallel sides and a fitting groove between the sides, a guide having extension ears on both sides of a tongue, the tongue being adapted to be sprung in position within said groove, mounting strips substantially right angular in form having one side secured to a partition, and the other side integral therewith arranged in a multithickness formation to fit within and be tensioned by one of said ears.



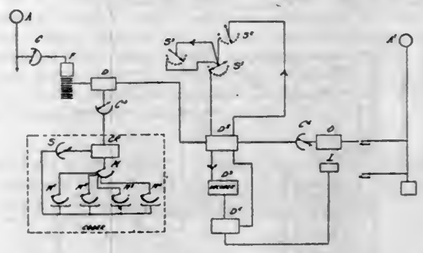
1,680,562. GEAR-GENERATING MACHINE. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Aug. 2, 1922, Serial No. 579,140. Renewed May 16, 1928. 12 Claims. (Cl. 90—3.)

1. A gear generating machine comprising a rotatable cutter head of a diameter many times greater than the thickness of the gear to be cut, a series of separate cutting elements mounted on said head parallel to the axis thereof and having cutting edges arranged in the outlines of rack teeth, all equidistant from the axis of the cutter and spaced longitudinally thereof equally to the tooth spacing of a rack conjugate to the gear to be cut, a work carriage movable parallel to the axis of the cutter, a work spindle rotatably mounted in the carriage, a stationary rack parallel to the cutter axis, a gear on the spindle in mesh with said rack, and mechanism for applying rotary motion to the spindle.



10. In a gear generating machine, a work carriage, a rotatable spindle in the carriage, a driving shaft, intermeshing gear elements on said shaft and spindle for rotating the latter, means by which rotation of the spindle causes translation of the carriage, oppositely rotating driving members loosely mounted on said shaft, a clutch splined to the shaft between said members constructed and arranged to be put into mesh alternately with each, and a clutch shifter including an arm arranged in the path of said carriage and adapted to be moved by the latter for moving the clutch from one of said driving members toward the other.

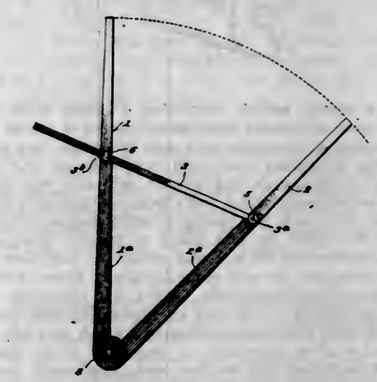
1,680,563. MACHINE FOR INSPECTING INVOLUTE CURVES. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Mar. 21, 1927. Serial No. 177,007. 17 Claims. (Cl. 78—51.)



8. In a machine of the character described, a base, a lever, supporting means for the lever on said base engaging the lever in a frictionless manner at the pivot axis thereof, and a feeler or contact member carried by said lever and being adjustable thereon toward and away from said pivot support.

1,680,564. LATCH. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn. Filed May 8, 1926. Serial No. 107,542. 8 Claims. (Cl. 292—169.)

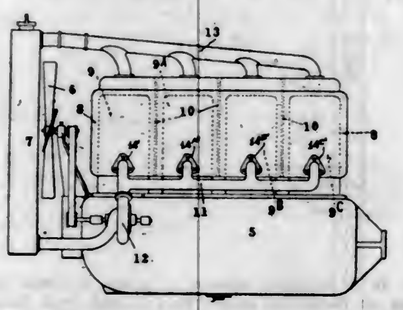
1. In a latch, a latch bolt, retracting means for said bolt including inside and outside manually operable means, a retracting member interposed between said outside retracting means and the bolt and connected to said bolt, and means associated with said inside retracting means adapted upon manipulation of the latter in a non-bolt-retracting direction to remove said retracting member from operative relation with said outside retracting means.



1,680,565. MULTIOFFICE TELEPHONE SYSTEM. JOHN E. OSTLINE, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 9, 1923, Serial No. 630,726. Renewed Jan. 5, 1928. 69 Claims. (Cl. 179—27.)

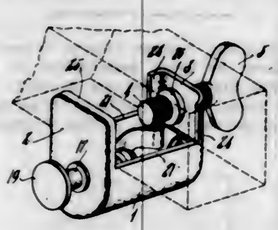
28. In a telephone system, a group of trunk lines, means for connecting calling lines to said trunk lines at one end, finder switches having access to said trunk lines at the other end, and an automatic consecution controller for rendering simultaneously busy trunk lines selectable by said finders one at a time.

60. In a telephone system, trunk lines incoming to a manual office from another office, a plurality of cord circuits, means for transmitting telephone numbers over said trunk lines to an operator in said manual office from said other office, and means responsive to the act performed by the operator to complete the connection indicated by a received number for connecting the cord circuit in use by the operator with the one of said incoming trunk lines over which the number was received.



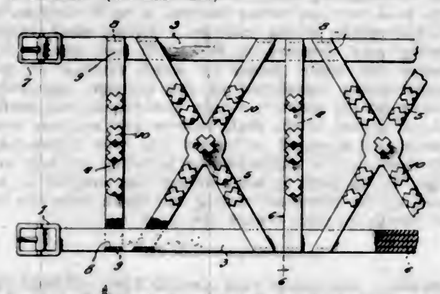
1,680,566. CALIPER. GORDON PARKER, Colorado Springs, Colo., assignor, by mesne assignments, to the People of the United States. Filed Oct. 1, 1927. Serial No. 223,400. 1 Claim. (Cl. 33—178.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

The herein described caliper comprising two arms pivoted at one of their ends, a cross member with calibrations thereon pivoted to one arm intermediate its



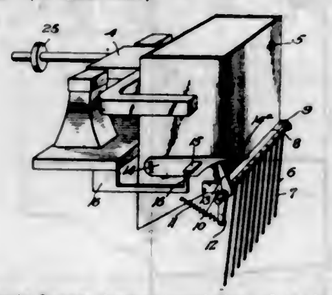
length, means pivotally and slidably connecting said member to the other arm intermediate its length, the pivot points for said cross member being equi-distant from the pivot point for the arms so as to form in different adjustments an isosceles triangle, whereby when the caliper is placed at right angles to the object to be measured and the said arms and said cross member are in contact with said object the diameter of said object will be indicated by said connecting means on the calibrations on said cross member.

1,680,567. INTERNAL-COMBUSTION ENGINE. MARSH PITZMAN, St. Louis, Mo. Filed Feb. 8, 1922. Serial No. 534,883. 7 Claims. (Cl. 123—173.)



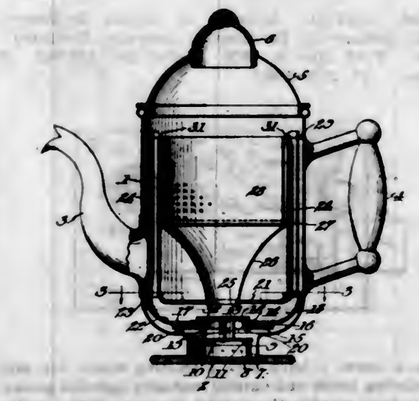
1. An internal combustion engine comprising a plurality of cylinders, water jackets for each of said cylinders, said jackets being separated at their discharge ends, and controlling means for the water circulating in said jackets including diaphragms provided with different sizes of openings and situated at the inlet ends of said jackets.

1,680,568. ELECTRIC SWITCH. JOSEPH POLLAK, Boston, Mass. Filed Jan. 2, 1926. Serial No. 78,840. 4 Claims. (Cl. 200—163.)



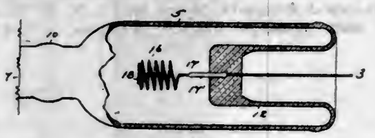
4. An electric switch comprising a casing made of a single piece of pressed sheet metal having a curved central portion with tangent side wall extensions, end walls, and lugs projecting from said end walls at the same side of the casing as, and beyond, said side wall extensions, the before described parts being all integrally joined together and each lug having integral flanges extending toward the other lug and joined in integral union with the end portions of the side wall extensions, and one of the lugs having also an end flange integrally joined with its side flanges and projecting toward the other lug, said other lug having a hole and an integral lip surrounding said hole and forming an extension thereof, said hole and lip being screw threaded, a clamping screw passing through said hole and meshing with the threads thereof, electrical contact members mounted within the casing on one of said end walls, and a complemental contact plunger passing through the opposite end wall of the casing and being movable therein, adapted to bridge across said contact members.

1,680,569. ANTISKID DEVICE. JOSEPH D. RICHIE, Casper, Wyo. Filed Dec. 8, 1926. Serial No. 153,422. 2 Claims. (Cl. 152—14.)



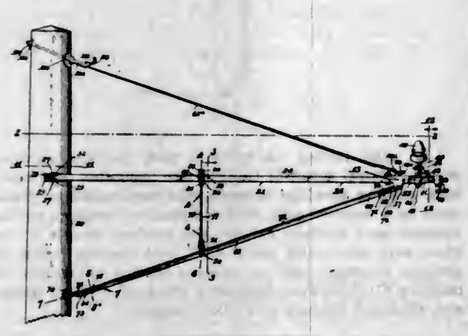
1. An anti-skid device for soft tread tires, the same comprising side straps notched in their outer edges, and cross straps having loops at their ends to receive the side straps which are passed therethrough, the outer ends of the loops being seated in the notches of the side straps and retained in place thereby.

1,680,570. SCALE-HOPPER BOTTOM. DAVID W. RIPLEY, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif., a Corporation of California. Filed June 27, 1927. Serial No. 201,948. 7 Claims. (Cl. 221—144.)



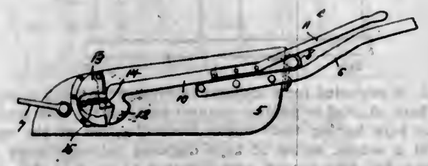
1. A scale hopper bottom consisting of a plurality of tines arranged parallel on a common plane, spaced apart, and attached at one end to a member adapted to rotate, said tines being constructed of material which adapt the tines to vibrate.

1,680,571. PERCOLATOR. JOHN N. ROUTSOS, Atlanta, Ga. Filed July 9, 1927. Serial No. 204,587. 5 Claims. (Cl. 53—3.)



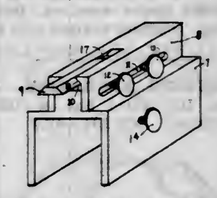
1. A percolator, comprising a foraminous strainer, a pressure chamber, tubular members connecting the strainer at top and bottom, a steam generating chamber arranged below the pressure chamber, and a triple valve interposed between the pressure chamber, the steam generating chamber and the bottom connection between the strainer and pressure chamber to control the flow of liquid through the percolator.

1,680,572. LUMINESCENT TUBE. ROY H. RUNDLE, Burlingame, Calif. Filed May 31, 1927. Serial No. 195,324. 2 Claims. (Cl. 176—126.)



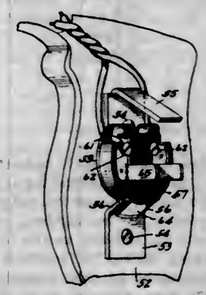
1. A luminescent tube having an electrode composed of tungsten filament in the form of a helix, the end of said helix being bent into an annulus.

1,680,573. MAST ARM. JOSEPH J. SHICKLUNA, Buffalo, N. Y. Filed Nov. 24, 1923. Serial No. 676,723. 13 Claims. (Cl. 189—38.)



1. In combination with a mast, a mast arm including a reach having a hook at its upper side, an overhead support formed of wire detachably connected to said hook and extending upwardly and inwardly therefrom, said overhead support having a hook at its inner end, a securing fitting having an opening therein through which the hook of said overhead support is passed, and means for securing said securing fitting to said mast.

1,680,574. SELF-DUMPING ATTACHMENT FOR ROAD SCRAPERS. HENRY T. SHIPLEY, Lakewood, Wis. Filed Feb. 21, 1927. Serial No. 169,908. 6 Claims. (Cl. 37—138.)



1. A self dumping attachment for road scrapers comprising an arm, means for pivoting the arm to the rear portion of the scraper, spring pressed means for supporting the forward free end of the arm, road engaging means on the free end of said arm.

1,680,575. HINGE-SPACING GAUGE HEAD. WILLIAM CLAYTON STARBUCK, Van Nuys, Calif. Filed May 24, 1926. Serial No. 111,446. 1 Claim. (Cl. 33—197.)

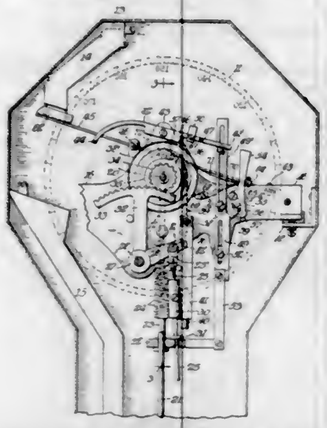
In a hinge spacing gauge, a head comprising: a housing member, gauge members separately movable in said housing member and having portions adapted to be projected from said housing member,—one of said portions being provided with a jamb-engaging upper surface and each of said portions being provided with a door-engaging lower surface.

1,680,576. ELECTRIC-FIXTURE SUPPORT. WHITMAN SYMMES, San Francisco, Calif. Filed Oct. 23, 1922. Serial No. 596,321. 7 Claims. (Cl. 173—330.)

1. A detachable electric lighting fixture adapted to be applied to a receptacle plate having a recess therein and an aperture above the recess and having a receptacle secured to the plate and disposed behind the recess, comprising a lighting fixture bracket having a back, a plug secured to said back and projecting therefrom, projecting lugs adjacent the plug, said plug and lugs adapted to engage said recess and a projecting tongue on the back adapted to engage in said aperture.

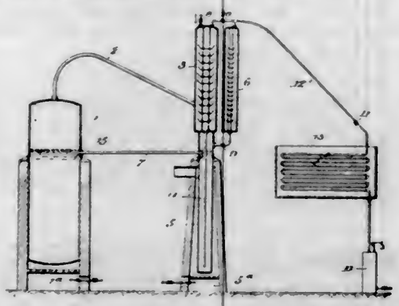
1,680,577. ALLOY. FELIX VISINTAINER, New York, N. Y. Filed June 2, 1926. Serial No. 113,334. 4 Claims. (Cl. 75—1.)

1. An alloy consisting of the following ingredients in substantially the proportions specified: copper 85 to 89%; aluminum 9 to 13%; iron .25 to .65%; silicon .30 to .70%; tin .07 to .12%.



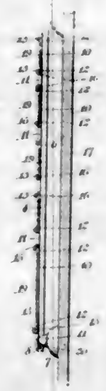
1,680,578. SOCKET-WRENCH SET. CLARENCE E. WAKEFIELD, JOSEPH P. FLEMING, and JOSEPH F. OLIVER, Worcester, Mass., assignors to Wakefield All-Steel Wrench Company, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1927. Serial No. 180,255. 2 Claims. (Cl. 206—16.)

1. A tray or container for the sidewise reception on its bottom of a row of interchangeable socket members of different lengths of a socket wrench set, with portions of



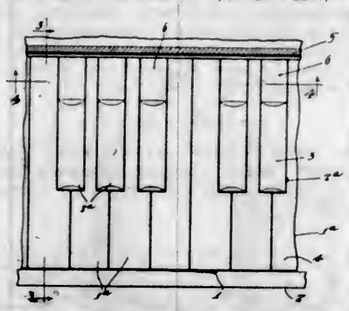
the material of said bottom struck up from the plane thereof at different distances from one side wall of said tray, each such portion being of sufficient length to span a pair of adjacent socket members, thereby to confine said pair of socket members against said side wall.

1,680,579. WEIGHING MECHANISM. JOHN B. WATLING, Chicago, Ill. Filed Aug. 4, 1923. Serial No. 655,574. 10 Claims. (Cl. 194—47.)



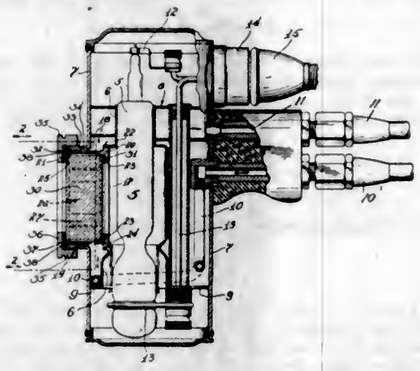
1. A coin-controlled weighing scale comprising weighing mechanism having a platform, indicating mechanism having the extent of its initial movement determined by the position of said weighing mechanism, coin-controlled means for locking said mechanism, means for holding said coin controlled locking means in released position and actuated by the movement of said weighing mechanism when the weight has been removed from the scale or reduced subsequent to the completion of the initial movement of said indicating means for permitting said coin-controlled locking means to lock said indicating means against further movement in either direction, said weighing mechanism including a part adapted to be shifted with a sliding movement to release said coin-controlled locking means at the termination of the weighing operation.

1,680,580. METHOD OF DISTILLING HYDROCARBONS. FRANK E. WELLMAN, Kansas City, Kans., assignor to Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed June 3, 1922. Serial No. 565,634. 3 Claims. (Cl. 196—48.)



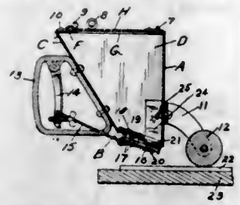
1. The method of treating hydrocarbon oil to produce a lighter hydrocarbon of the same series, which consists in distilling the heavier hydrocarbon in one zone at high cracking temperature and pressure, fractionating all the vapors produced in said first zone in a second zone, conducting off and condensing the vapors from said second or fractionating zone while refluxing to and redistilling the heavier fractions in a third zone at a temperature lower than that in the first cracking zone, separately fractionating in a fourth zone the vapors produced by redistillation in said third zone, conducting off and condensing the light vapors from said fourth zone, returning the heavier fractions from the fourth zone into the third zone, and returning all the heavier fractions from the third zone in liquid phase into the first zone.

1,680,581. SIGN. AUGUSTUS J. ZANGERLE, Buffalo, and WILLIAM J. ZANGERLE, Mount Morris, N. Y. Filed Oct. 31, 1927. Serial No. 229,827. 4 Claims. (Cl. 40—64.)



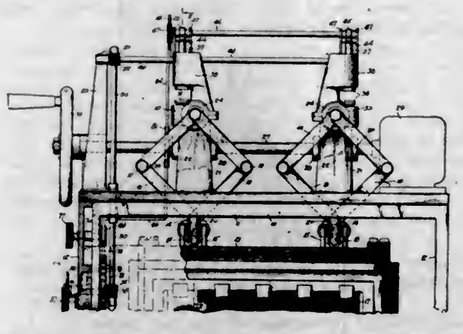
1. A sign having an integral body portion provided with a vertical series of transversely elongated card openings, spacing openings between said card openings, transverse bars between said card and spacing openings having integral card retainer flanges, the retainer flanges of the cross bars above and below each card opening being oppositely arranged, and an element bearing characters removably fitted between oppositely arranged retainer flanges and displayed through said card openings.

1,680,582. CHROMATIC-SCALE KEYBOARD. WILLIAM I. ZIDELL, Los Angeles, Calif. Filed July 5, 1927. Serial No. 203,359. 3 Claims. (Cl. 84—423.)



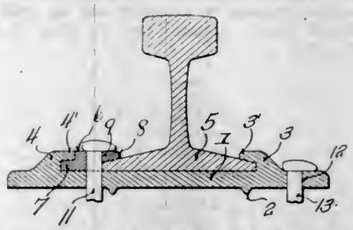
2. A keyboard for a musical instrument, having a series of keys adapted to produce natural notes on the instrument, said keys having their upper faces disposed at the same level a second series of keys disposed intermediately between the first named keys adapted to produce flat and sharp notes, said second series of keys having their upper faces disposed at a higher level than the keys of the first series, said second series of keys having depressed faces at their rear ends and on their upper sides located on the same level as the upper faces of the first named series.

1,680,583. THERAPEUTIC LAMP. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Jan. 13, 1927. Serial No. 160,802. 11 Claims. (Cl. 174—177.)



1. A therapeutic lamp housing comprising a casing for enclosing a lamp and having a window therethrough for the passage of rays generated by the lamp, a lens closing the window in the casing, and fluid connections for circulating a cooling fluid about the lens against its edge only.

1,680,584. DISTRIBUTOR FOR CONDIMENTS AND THE LIKE. ANDREW ANGELL, Minneapolis, Minn. Filed Mar. 3, 1927. Serial No. 172,444. 7 Claims. (Cl. 107—47.)

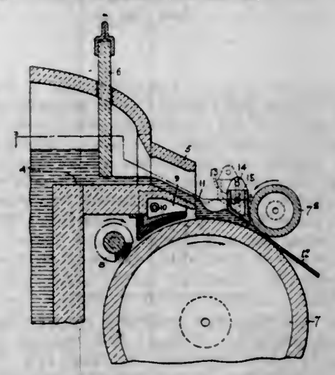


1. A baker's device for distributing condiment and the like of the character described comprising a container having closely arranged perforations in its base, a plate normally closing the perforations, a handle for moving and guiding the device, and means associated with the handle for moving the plate to expose the perforations.

1,680,585. SCREEN-DECENTERING DEVICE. HART O. BERG, Paris, France, assignor to Bassani Processes, Incorporated, New York, N. Y., a Corporation of New York. Filed June 7, 1927. Serial No. 197,189. 14 Claims. (Cl. 95—81.)

1. In combination, a screen and a holder therefor, and screen adjusting mechanism comprising a rotary member, and means adjustable within said member and operatively connected with the holder for effecting circular displacement of the screen about the geometric centers of the transparent elements of the screen grating.

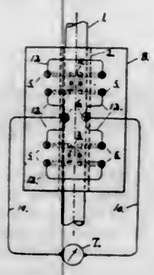
1,680,586. COMBINATION TIE-PLATE AND RAIL ANCHOR. LEWIS J. BERG, Broadhead, Wis. Filed Mar. 4, 1926. Serial No. 92,222. 1 Claim. (Cl. 238—304.)



A combination tie plate and rail anchor comprising a plate adapted to rest upon a cross tie, and having a flat upper surface adapted to receive the base of a rail, said plate having a pair of spaced ribs each equipped with an inwardly directed flange, both of such flanges being located above the upper surface of the outer edge of the rail base with one of the flanges overhanging a marginal edge of the rail base, a tapered wedge interlocking with the other of said flanges, and having a flange overhanging the base of the rail, said wedge and said plate having aligning apertures adapted to recieve spikes, the apertures of the plate being elongated to permit adjustment of the wedge to accommodate variation in the width of rail bases and located adjacent the edge of the base of the rail, whereby the stems of the spikes contact with the edge of the base of the rail, the heads of the spikes overhanging the base of the rail and contacting with said wedge.

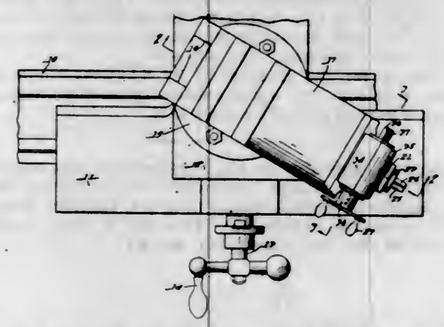
1,680,587. PROCESS FOR THE MANUFACTURE OF 2-HYDROXY-3-BROMO-5-PYRIDIN ARSONIC ACID. ARTHUR BINZ and CURT RÄTH, Berlin, Germany. Filed Dec. 17, 1926, Serial No. 155,559, and in Germany Dec. 21, 1925. 1 Claim. (Cl. 260—14.)

Process for the manufacture of 2-hydroxy-3-bromo-5-pyridin arsonic acid which consists in reacting bromine upon 2-hydroxy-5-pyridin arsonic acid.



1,680,588. METHOD OF AND APPARATUS FOR FORMING SHEET GLASS. JOTHAM F. BLACK, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Feb. 2, 1926. Serial No. 85,470. 10 Claims. (Cl. 49—8.)

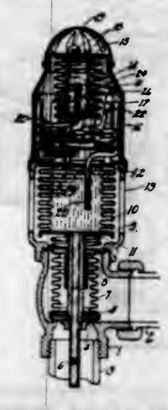
7. Sheet-glass forming apparatus comprising means for delivering a relatively narrow stream of glass, a supporting surface for said glass, movable in the direction of



the line of travel of the glass, a forming roll disposed above said surface, and a spreading block mounted to the rear of the forming roll and at a height to engage the stream and effect spreading action thereof, the said block having its glass contacting surface inclined to gradually reduce the thickness of the stream.

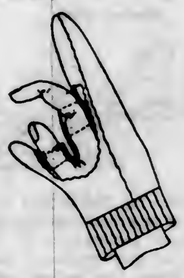
1,680,589. THERMOELECTRIC STRESS METER. WILHELM BOCK, Passaic, N. J. Filed Aug. 20, 1925, Serial No. 51,467, and in Germany Oct. 22, 1924. 5 Claims. (Cl. 73—51.)

1. A thermoelectric device for determining the intensity of stress in solid materials comprising a first junction adjacent the material to be tested, a second junction insulated therefrom, and means for indicating the temperature difference between said first and second junction.



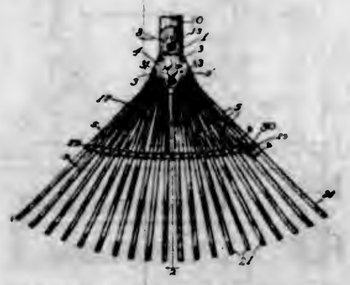
1,680,590. MANUAL-FEEDING MECHANISM FOR MACHINE TOOLS. CONSTANT BOUILLON, Torrington, Conn., assignor to The Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed June 3, 1926. Serial No. 113,575. 1 Claim. (Cl. 82—24.)

In a machine tool, an adjustable slide, a feed screw therefor, a cross shaft in said slide positively connected to said feed screw and a detachable feed handle, said feed screw and said cross shaft each having provision to detachably receive said handle, and a graduated collar effective to show the exact angular position of said feed screw mounted directly upon said feed screw and freely rotatable thereon, said shaft being provided with a shoulder, a binding nut, and a washer keyed thereto, whereby said collar may be clamped in any desired position on said feed screw.



1,680,591. AUTOMATIC CONTROL VALVE. GEORGE H. BUGENHAGEN, Minot, N. Dak. Filed Mar. 24, 1927. Serial No. 177,986. 3 Claims. (Cl. 236—41.)

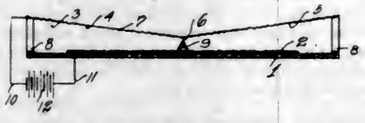
1. The combination in an automatic control valve, a hollow valve stem generating tube, a power motor consisting of a flexible metallic bellows, seated within said bellows a volatile liquid, free end of said bellows connected to valve stem, with a flexible metallic reservoir positioned above and apart from said power motor bellows, a governing valve positioned within said reserve and operative by means outside of the said reservoir, the reservoir



connected to motor bellows by a spiral heat eliminating duct and condensation return, leading from valve seat in reservoir to motor bellows and a secondary duct leading from motor bellows into the top of the reservoir.

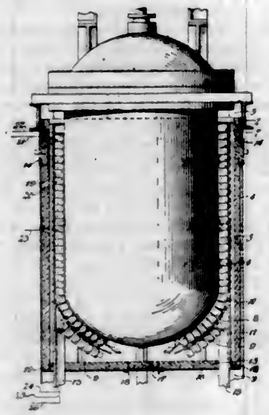
1,680,592. MITTEN. RAYMOND A. CHILES, Spokane, Wash. Filed May 25, 1927. Serial No. 194,167. 1 Claim. (Cl. 2—158.)

A mitten having a finger-slit and a thumb-slit and linings for the mitten and its thumb portion, and said linings having slits therein for use with the finger slit and thumb slit, but spaced therefrom.



1,680,593. BROOM RAKE. FLOYD E. CONLEY, Jackson, Mich., assignor to The American Fork & Hoe Company, a Corporation of Ohio. Filed Nov. 11, 1926. Serial No. 147,655. 7 Claims. (Cl. 55—10.)

1. In a broom rake, the combination with a handle, of a plurality of flat metal strips forming rake tines divergingly extending therefrom and each secured at an



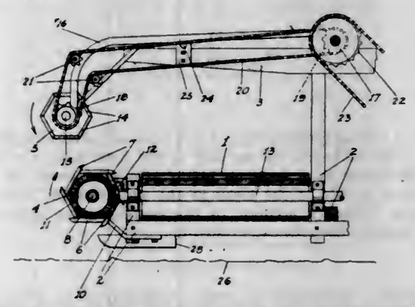
end thereto, each having its other end bent to form a ground engaging tip, reinforcing means joining the tines together intermediate their ends, said tines being twisted at substantially right angles intermediate the reinforcing means and the handle.

1,680,594. RAT TRAP. THOMAS F. CONNOLLY and LLOYD RANDLE, Colfax, Wash.; said Lloyd Randle assignor to Clarence E. Randle, Pullman, Wash. Filed Jan. 19, 1927. Serial No. 162,149. 1 Claim. (Cl. 43—98.)

The combination with a bottom having a bottom plate, and side walls having upper edges declining from the respective ends toward the longitudinal centers of said walls, of a reticulated top having its opposite edges secured to said declining edges, and electrical connections to said bottom plate and top for the purpose described.

1,680,595. CURRENT INDUCTION. ARCHIBALD H. DAVIS, Jr., Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 26, 1925. Serial No. 64,806. 19 Claims. (Cl. 219—47.)

7. An electrical induction apparatus comprising an electrically conductive body to be heated, a primary circuit composed of a plurality of current conductive elements forming a coil encircling said body, said elements being connected in parallel, and an additional current conductive element encircling said body and connected in series to said parallel connected elements, said additional element being in inductive relation to an end section of said coil for regulating the relative flow of current in said parallel connected elements.

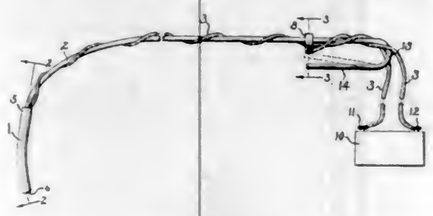


1,680,596. FISHING TOOL FOR OIL WELLS. FRED D. DAVIS, Duncan, Okla. Filed May 23, 1927. Serial No. 193,585. 3 Claims. (Cl. 294—100.)

1. In a fishing tool, and in combination, a mandrel stem equipped at its lower end with an annulus and provided in spaced relation above the annulus with an abutment, spring jaws carried by and pendent from a head loose on the mandrel stem and disposed within said annulus, a flanged casing member carried on said head, upwardly tapered dogs arranged at opposite sides of the mandrel stem and in said casing member and between the flange thereof and

the stem, a coiled expansion spring surrounding the stem and interposed between the head and said dogs, and a second coiled expansion spring surrounding the stem and interposed between the dogs and the said abutment on the stem.

1,680,597. HEADER ATTACHMENT FOR SIDE-DELIVERY HAY LOADERS. JOHN A. DYKE, Cedarville, Calif. Filed Dec. 7, 1925. Serial No. 73,869. 5 Claims. (Cl. 56—354.)

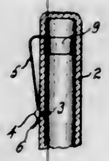


1. A hay gathering and loading device including with a frame and a draper mounted at the front end thereof, a pair of vertically spaced driven rollers mounted ahead of the draper, the upper periphery of the lower roller being substantially on a level with the draper, and continuous extensions projecting tangentially from the periphery of the lower roller at circumferentially spaced intervals.

1,680,598. ALLOY AND ITS USES. WILLIAM PORTER DREAPER, Hampstead Heath, England. Filed July 30, 1926, Serial No. 126,088, and in Great Britain Aug. 5, 1925. Renewed Feb. 16, 1928. 2 Claims. (Cl. 75—1.)

1. An alloy for use in the manufacture of jets for artificial silk filaments consisting of a mixture of gold and platinum, the latter metal being present in the proportion of from twenty two to twenty six per cent of the weight of the alloy produced.

1,680,599. PICKER MAGNET. WILLIAM R. EDSON, Southbridge, Mass. Filed Jan. 6, 1927. Serial No. 159,365. 4 Claims. (Cl. 175—367.)

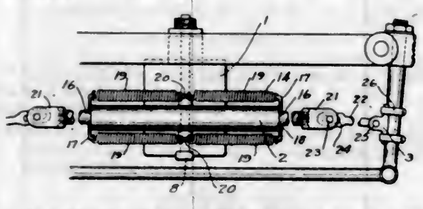


1. An electro-magnetic tool comprising a pliable core formed of a single rod of soft flexible magnetic wire, a conductor coil wrapped around a portion of said core, an electric circuit means connected with the conductor coil, one end of the core having a bent portion lying substantially parallel with the body of the core, and an exposed electrical contact point in the circuit associated with the body of the core and aligned with and spaced from the end of the bent portion of the core whereby the electrical circuit may be completed by pressing the end of the bent portion of the core against the exposed electrical contact point to energize the conductor coil and magnetize the portion of the core surrounded by the coil.

1,680,600. WHEEL-RIM CONTRACTING AND EXPANDING TOOL. HERBERT L. EDDY, Hamilton, Kans. Filed Oct. 7, 1926. Serial No. 140,095. 2 Claims. (Cl. 157—1.)

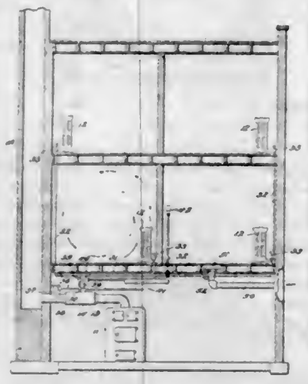
1. A rim tool comprising a lever, links of different lengths and each connected at one end to the lever near one end of the latter by a common pivot, attaching elements secured to a side of the lever at the ends thereof, and attaching elements secured to the corresponding sides of the links at the free ends thereof.

1,680,601. RETAINING CLIP. FREDERICK D. ELLIOTT, Seattle, Wash. Filed May 3, 1927. Serial No. 188,520. 3 Claims. (Cl. 24—11.)



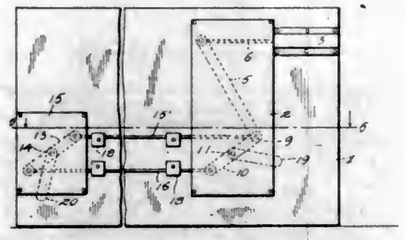
1. The combination with a cap having an exterior head, of a clip arm of resilient material having one end anchored to the cap, and a slotted head at the free end of the clip for co-action with the exterior head for clasping a supporting flexible material.

1,680,602. DRAWER PULL. EDWARD H. ELLISON, Jamestown, N. Y. Filed May 14, 1925. Serial No. 30,386. 1 Claim. (Cl. 16—125.)



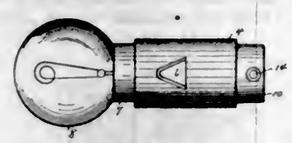
A drawer pull consisting of a handle drawn from a wrought metal rod, keys projecting from the legs of said handle, escutcheon plates, each plate having an aperture through the center thereof, and diametrically arranged recesses in the walls of said aperture, said parts being so formed and arranged that when said plates are slipped over said legs, said keys project through said apertures beyond said recesses, whereby said keys can be ended over to secure said escutcheons to said legs.

1,680,603. STEERING DEVICE. CHARLES A. ERNST, Rainier, Wash., assignor of one-half to Frank McDonald, Rainier, Wash. Filed Jan. 3, 1927. Serial No. 158,491. 3 Claims. (Cl. 280—94.)



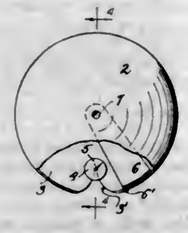
1. In a steering device, a slidable rod, a sleeve in which the said rod is mounted, a bracket for supporting the said sleeve, transverse connections adjacent the ends of the said rod, springs attached to these connections at one end and to a central stationary member at the opposite end, rods pivotally attached to the ends of the said slidable rod and suitable connections for attaching the ends of the said latter rods to the steering knuckle arms of a motor vehicle.

1,680,604. HUMIDIFYING APPARATUS. JAMES ARAD ERWIN, Oak Park, Ill. Filed Jan. 21, 1924. Serial No. 687,645. 5 Claims. (Cl. 126—113.)



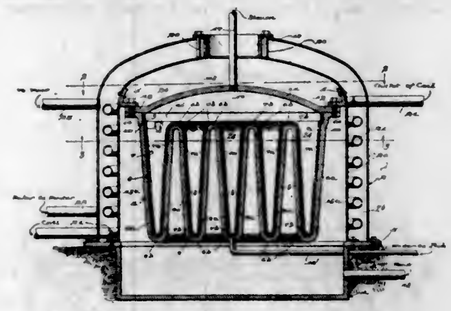
1. A humidifying apparatus including in combination, a heating plant having a flue for waste products of combustion, a steam or vapor generating tank, a conduit for conducting steam from said tank to a space to be himidified, and means for automatically delivering steam from said tank into said waste products flue when the pressure in said tank exceeds a pre-determined amount.

1,680,605. AUTOMATIC RAILWAY-CROSSING SIGNAL. ADOLPH FRANZEN, near Howard, S. Dak. Filed June 29, 1927. Serial No. 202,299. 2 Claims. (Cl. 246—293.)



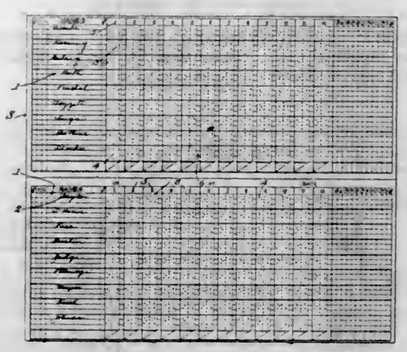
1. An automatic railway crossing signal comprising a support, a signal arm slidably mounted thereon and means for moving the latter into operative or signalling position when the train reaches a predetermined distance from the crossing, said means comprising a trip arm, and actuating lever pivoted to the support, a link between one end of said lever and the signal arm and a flexible connection between the other end of the actuating lever and the trip arm.

1,680,606. ELECTRIC-LIGHTING FIXTURE. GUY FREAD, Enid, Okla., assignor of one-half to John Manley, Enid, Okla. Filed Feb. 4, 1926. Serial No. 86,055. 1 Claim. (Cl. 173—328.)



In an electric light fixture of the class described, the combination with a tubular housing having a tapered bore and means for securing a light base therein; of a tapering block member fitted in said housing and projecting from the rear end thereof, said block member having a central bore, a removable core fitting in the rear end of the bore of said block member having longitudinal said core in position, a guide sleeve fitted in the forward end of the bore of said block member having longitudinal slots therein opposed diametrically, an elongated contact member slidably mounted in said guide sleeve, lateral lugs on said contact member projecting in said slots and spring means between the rear end of said contact member and said core, as and for the purpose described.

1,680,607. TACK LIFTER. WALTER E. GABY, Los Angeles, Calif. Filed June 18, 1927. Serial No. 199,638. 2 Claims. (Cl. 254—18.)

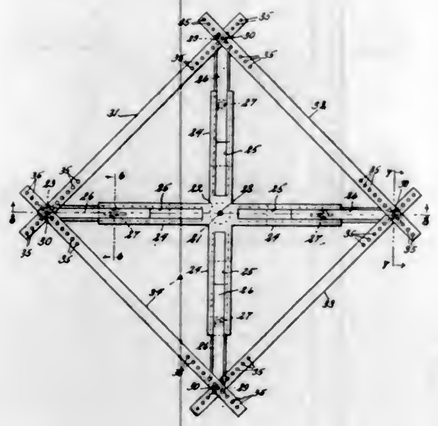


1. A device for lifting and collecting tacks comprising a receptacle composed of a pair of concave plates conjoined at their peripheries, each of said plates having a slot extending inwardly from the periphery thereof.

1,680,608. FLASH BOILER. ALLIE GLENN GARBUTT, Valdosta, Ga. Filed Aug. 3, 1925. Serial No. 47,957. 5 Claims. (Cl. 122—39.)

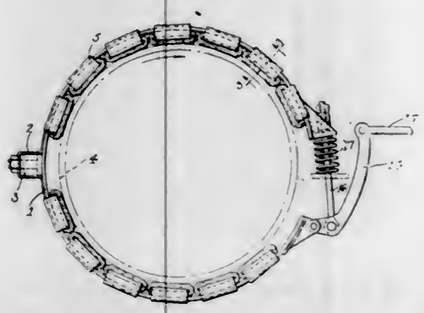
1. A flash boiler of the character described having a steam producer comprising a plurality of concentric annular sections, connections between the alternate ends of adjacent sections forming a producer zigzag in cross section, said sections and said connections being made up of closely spaced walls defining a sinuous water space through which the water travels spread out into a thin film and in the form of rising and falling sheets.

1,680,609. BASEBALL SCORE CARD. JAMES GRUNDY, Paterson, N. J. Filed Feb. 18, 1927. Serial No. 169,255. 1 Claim. (Cl. 283—49.)



A base ball scoring sheet provided with areas appropriately designated for the entry of names of players, and having, for each of said areas, a plurality of spaces marked to indicate successive game innings, there being in each of said spaces, a group of marks so placed as to represent the stations of a company of baseball players on a base ball diamond, the marks in each group being spaced far enough apart so that conventional signs may be inscribed near any mark, by a scorer, and so that the marks may be joined by a line which will be of sufficient length to be plainly discernible between any two adjacent marks.

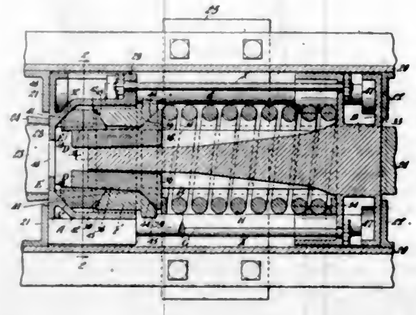
1,680,610. BATIK-FRAME SUPPORT. MARY Y. HARMON, Laguna Beach, Calif. Filed Sept. 16, 1926. Serial No. 135,896. 2 Claims. (Cl. 45—24.)



1. A batik frame construction including a post, an oscillatable head mounted on said post with a pin extending upward therefrom, a frame supporting body with a cen-

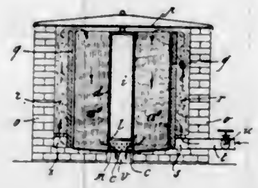
tral hole adapted to fit and turn on said pin and said body having four rigid radially extending arms equidistant from each other, outer arms slidably dove-tailed in connection with said rigid arms and so as to be in alinement therewith, means for securing said slidable outer arms on

said rigid arms when adjusted in position, an upwardly extending pin in the outer end of each outer sliding arm, and four batik frame bars with a series of holes near each of their ends adapted to fit on the outer ends of said arms, said frame bars overlapping each other at their ends and forming a rectangular frame.



1,680,611. QUICK-RELINING BRAKE. LEE HARVEY, Los Angeles, Calif. Filed Sept. 8, 1927. Serial No. 218,148. 7 Claims. (Cl. 188—259.)

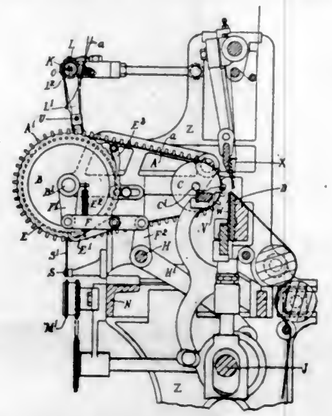
5. In a brake for the brake drum of an automobile, the combination of a plurality of brake-shoes, each brake-shoe having a liner in the form of an endless band supported on the shoe, with one loop of the band disposed behind the other loop with respect to the direction of rotation of the brake drum.



1,680,612. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 26, 1923, Serial No. 664,867. Renewed Dec. 27, 1927. 2 Claims. (Cl. 213—36.)

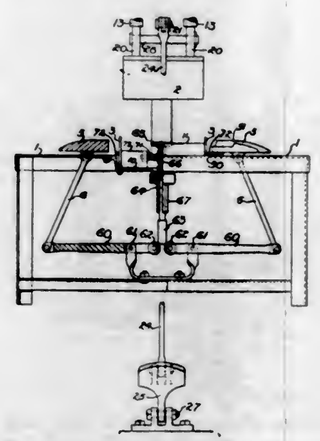
1. In a friction shock absorbing mechanism, the combination with a tapered central friction element; of a series of friction shoes co-operable with said element; a spring resistance; a plurality of wedge blocks having engagement with the shoes; and a wedge pressure transmitting means having wedging engagement with said

blocks; a wedge ring co-operating with said blocks, said blocks and ring having co-acting sets of faces which are disposed at a relatively blunt non-wedging angle with reference to the longitudinal axis of the mechanism.



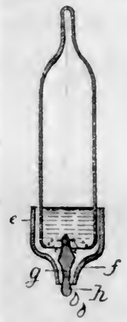
1,680,613. CARBONIZING APPARATUS. HENRI HENNEBUTTE and EDOUARD GOUTAL, Paris, France. Filed Dec. 28, 1923, Serial No. 683,259, and in France Jan. 3, 1923. 1 Claim. (Cl. 202—9.)

A drying and carbonizing apparatus of the type described comprising in combination, a metal cylinder, a second metal cylinder concentrically disposed therein, the cylinders forming an annular carbonizing chamber between them, an inturned flange on the first mentioned cylinder for closing one end of said chamber, perforations extending through the wall of said second metal cylinder over substantially the whole length thereof, a detachable cover for the ends of said cylinders opposite said flange for use during the carbonizing operation, an annular abutment on the interior of said second metal cylinder adjacent to but spaced from the end thereof that is adjacent said flange, a complementary detachable tube adapted to be inserted in said second metal cylinder and to prevent substantial passage of gas through the perforations between said abutment and the end of the cylinder remote therefrom, and a detachable flanged plug adapted to close one end of said second metal cylinder.



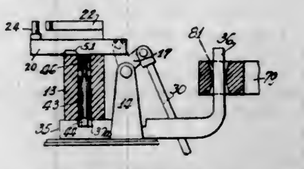
1,680,614. WARP-KNITTING MACHINE. EDGAR HERBERT HILL and HENRY HAWKINS, Nottingham, England. Filed July 28, 1924, Serial No. 728,731, and in Great Britain Aug. 3, 1923. 5 Claims. (Cl. 66—84.)

1. The combination, with a pair of endless conveyers provided with yarn holding fingers, and means for moving the conveyers step by step; of mechanism for looping two separate threads of yarn around the said fingers to form two series of parallel weft threads, said mechanism comprising a guide rail, a yarn carriage slidable on the guide rail and provided with a thread laying arm, means for sliding the carriage and arm longitudinally of the guide rail and crosswise of the conveyers, and means for



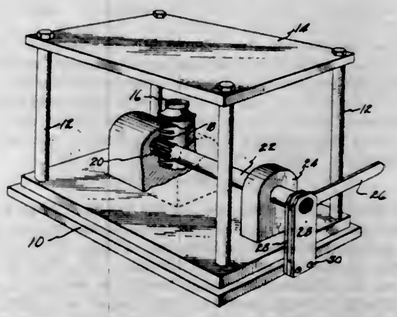
rocking the said arm laterally at intervals to loop each yarn thread alternately over one finger of one conveyer and over two fingers of the other.

1,680,615. CARTON-FOLDING MACHINE. AUGUST HOBA, Seattle, Wash. Filed Nov. 1, 1927. Serial No. 230,265. 10 Claims. (Cl. 93—51.)



1. In a machine for folding cartons of the type having end flaps of which one has a slit and the other a locking tongue adapted to enter the said slit, a reciprocating plunger about which the carton sides are folded, a stationary finger at each end of the carton adapted to engage the inner face of the end flap which contains the tongue-receiving slit at a point just below said slit to hold the same outwardly, folding wings engaging the outer faces of the end flaps, and means for swinging them upwardly and inwardly to fold the end flaps, means for similarly swinging the back side section of the carton and its attached end truck flaps, the end flap folding wings having an inward projection positioned to engage the slitted end flaps just above the slits therein to act in conjunction with the above named fingers to open said slits for the reception of the locking tongues.

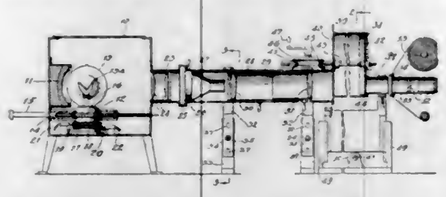
1,680,616. SEALED PACKAGE. FRIEDRICH WILHELM HORST, Neckargemund, Germany. Filed June 4, 1923, Serial No. 643,292, and in Austria June 6, 1922. 6 Claims. (Cl. 23—240.)



1. A fire sealed glass container having an integral frangible re-entrant bottom and containing a very carefully measured quantity of a solute sufficient when mixed with a definite quantity of a solvent to form a normal solution.

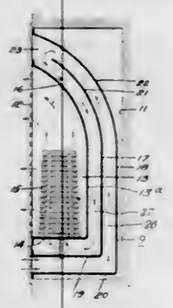
1,680,617. LOCK FOR INTERLOCKING LEVERS. SAMUEL P. HULL, Yonkers, JOHN J. CORCORAN, Albany, and EDWARD A. EVERETT, New York, N. Y. Filed Dec. 4, 1925, Serial No. 73,283. Renewed Jan. 14, 1928. 12 Claims. (Cl. 246—146.)

1. In an electric lock for interlocking levers, the combination of a part operatively connected with said lever, an electrically controlled lock for restricting the movement of said part and a member operatively connected with the latch of said lever for mechanically controlling the operation of said lock.



1,680,618. LOCKING MECHANISM. EARL S. HUTTON, Detroit, Mich., assignor of one-third to Alan H. Pearson, Detroit, Mich. Filed Aug. 3, 1925, Serial No. 48,008. Renewed May 31, 1928. 15 Claims. (Cl. 192—8.)

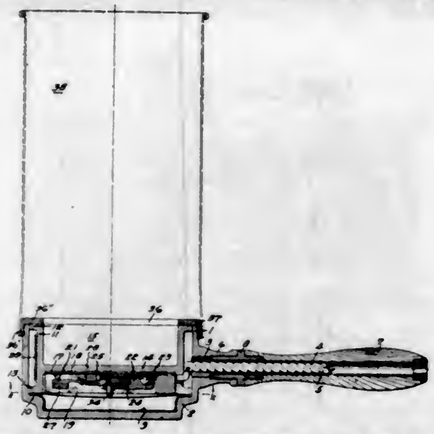
1. In locking mechanism, a rotatable shaft, a disk fixed to the shaft, a casing surrounding the disk, said disk having a cut-out adjacent to the casing, a crank



mounted upon the shaft to rotate the same, said crank coupled with the shaft through the disk by a part engaged in the cut-out of the disk and adapted to be wedged between the disk and the casing upon application of an impulse of rotation to the disk from the shaft.

1,680,619. METHOD AND APPARATUS FOR PRODUCING COLORED PROJECTED PICTURES. WILLIAM L. ISBILLS, Elizabeth, N. J. Filed June 13, 1923. Serial No. 645,051. 22 Claims. (Cl. 88—16.4.)

1. The method of projecting the subjects of a positive photographic film onto a screen in pleasing color effects, which consists in adjusting projecting lenses relatively to and in the path of light emanating from an illuminating source, in such manner and due to their chromatic aberration as to project contrasting color light rays from said illuminating source through said lenses, and placing a film in the path of the contrasting color light rays projecting from said lenses whereby the subjects on said film will be projected onto a screen in colors.



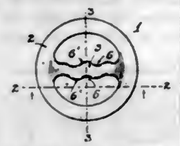
1,680,620. ELECTRIC HEATER. ARTHUR J. KERCHER, Berkeley, and WILLIAM WESLEY HICKS, San Francisco, Calif. Original application filed Mar. 10, 1924, Serial No. 698,089. Divided and this application filed Aug. 26, 1925. Serial No. 52,513. 7 Claims. (Cl. 126—86.)

1. An electrical heater comprising an electrical heating element, and means defining a passageway extending behind said heating element and extended forwardly over the top thereof, the upper end of said passageway being in communication with a source of relatively cool air, and means for inducing a downward flow of air in said passageway.

1,680,621. ELECTRIC HEATING UNIT. ARTHUR J. KERCHER, Berkeley, Calif., assignor of one-half to William Wesley Hicks, San Francisco, Calif. Filed Oct. 6, 1925. Serial No. 60,741. 9 Claims. (Cl. 219—41.)

9. In an electric immersion heater, a handle, a casing secured to said handle, a cup shaped body disposed within said casing, the bottom of said body defining a chamber between the same and a portion of the casing, an expansible cell disposed within said chamber, means for clamping the periphery of said cell between portions of said casing and body, electrical heating means disposed between the casing and body and in good thermal

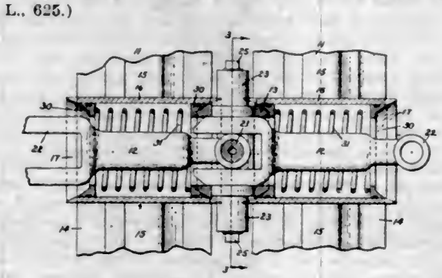
contact with the body, and means for sealing the space between said casing and body, said means serving to force said body against said cell.



1,680,622. ELECTRIC WATER HEATER. ARTHUR J. KERCHER, Berkeley, and WILLIAM WESLEY HICKS, San Francisco, Calif. Filed June 28, 1926. Serial No. 118,909. 7 Claims. (Cl. 219—38.)

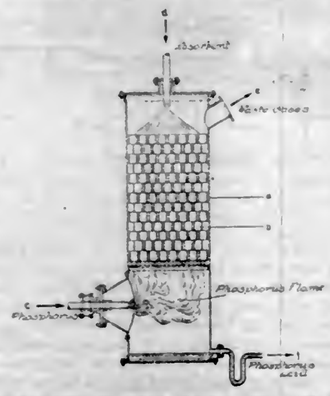
1. In a hot liquid supply system, a water tank, a cool water supply pipe connected to said tank whereby the tank is normally filled with water, a hot water pipe communicating with the upper portion of said tank, electrical heating means associated with the tank and adapted to store hot water in the upper portion of the tank by thermal circulation, and means for controlling supplying of current to the heating means in accordance with the amount of stored heated water in the tank.

1,680,623. BACKING DEVICE FOR THE BUTTONS OF GARMENTS. MAUDE I. F. KINNEY, Peoria, Ill. Filed May 19, 1927. Serial No. 192,528. 6 Claims. (Cl. 24—90.)



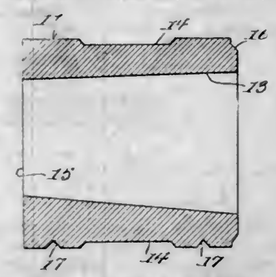
1. In combination with a support to which to attach a button, of a button at one side of the support, and a backing device at the other side, both adapted to be sewn together upon such support, said device comprising a ring portion having a curvilinear bridging portion

extending diametrically across it at one side, and at its other side being concave in general form from its outer periphery toward its inner edge and having concentric



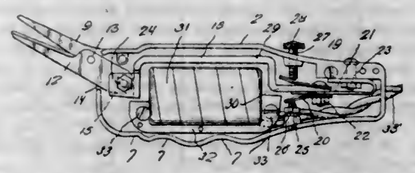
shoulders therein adapted to engage upon the support, said bridging portion lying outward from the plane of said ring and at that side opposite the concave side.

1,680,624. FLEXIBLE TRACK FOR TRACK-LAYING VEHICLES. HARRY A. KNOX and BERTIE F. BAKER, Davenport, Iowa. Filed Oct. 9, 1924. Serial No. 742,670. 20 Claims. (Cl. 305—10.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)



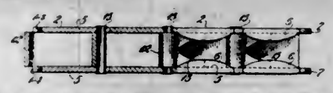
1. An endless track for track laying vehicles embodying a sectional tubular trackway, each section formed with opposite rimmed slots, a shoe secured to each section, spacers forming a ball joint with adjacent sections, a link chain without the trackway, cross pins carried by said spacer for universally connecting adjoining links, one of said pins projecting from opposite sides of the spacer to constitute driving pins for the track, said driving pin cooperating with the slots in the tubular sections for limiting lateral bending and axial rotation of said tubular sections.

1,680,625. PROCESS OF PRODUCING PHOSPHORIC ACID. HERMANN LANG, Bitterfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Filed Oct. 20, 1925, Serial No. 63,791, and in Germany Oct. 23, 1924. 2 Claims. (Cl. 23—165.)



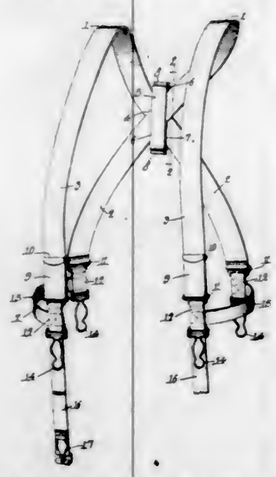
1. In the art of making phosphoric acid by burning phosphorus that improvement which comprises directing the phosphorus flame into an absorption tower, and absorbing therein the resulting pentoxide with a hot diluted solution of phosphoric acid.

1,680,626. VENTILATED BUILDING BLOCK. WILLIAM MEYER, Gladbrook, Iowa. Filed Sept. 10, 1926. Serial No. 134,703. 1 Claim. (Cl. 72—6.)



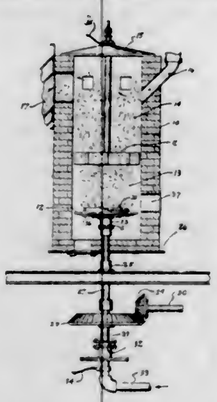
A building block comprising a rectangular body of cement formed throughout its length with a series of upright or vertically elongated openings having horizontal top walls and having their bottom walls inclined downwardly and outwardly with the highest point of the bottom walls at the inside of the block, the body having its top, bottom and ends formed with recesses throughout the length thereof to define air passages when the blocks are arranged in courses, the recesses communicating with one another for defining circumferential passages entirely about the individual block, the bottoms and ends of the blocks being additionally formed outwardly of said recesses with grooves adapted to receive cementitious material for effecting binding of the blocks together.

1,680,627. ELECTRICALLY-OPERATED SCISSORS. JAMES F. MINOS and OSCAR W. FREEMAN, Galesburg, Ill. Filed Apr. 2, 1925. Serial No. 20,101. 1 Claim. (Cl. 30—13.)



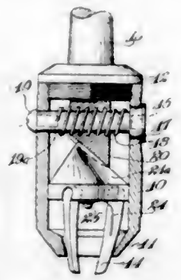
A blade operating connection for electrically operating scissors comprising a reciprocating armature arrangement in a casing and adapted for actuation by an electric magnet carried therein, said armature having an extension formed thereon, a pin arranged transversely on the extension and a pivotally mounted blade having its inner end arranged in overlapping relation with respect to said extension and having a slot formed therein adapted to receive said pin and extending substantially at right angles to the direction of movement thereof.

1,680,628. FLEXIBLE BRACELET. ALMYR L. NEWMAN, Warwick, and OSCAR R. MITCHELL, Cranston, R. I., assignors, by mesne assignments, to A. L. Newman Company, Cranston, R. I., a Corporation of Rhode Island. Filed Nov. 6, 1923. Serial No. 673,059. 4 Claims. (Cl. 59—80.)



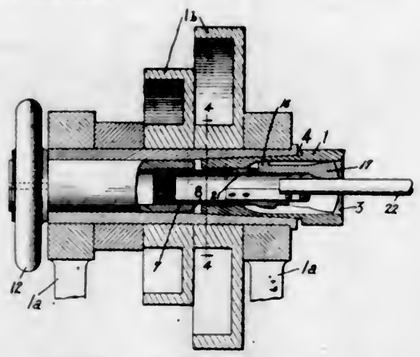
1. An article of jewelry comprising a series of box-like link-members each having a top and opposite parallel sides, the sides of the link being provided with curved ears pierced with openings, said ears made integral with and projecting from one end of the link and recesses at the opposite end of the link, to adapt the links to be assembled with ears of one link received in the recesses of the next adjacent link, an integral tab formed into a loop at the recessed end of the link, and a pin inserted through the openings in the ears and through the loop to hingedly connect the links in the chain.

1,680,629. SUSPENDERS. ROBERT R. NORWOOD, Mineral Wells, Tex. Filed Aug. 6, 1927. Serial No. 211,185. 1 Claim. (Cl. 241—12.)



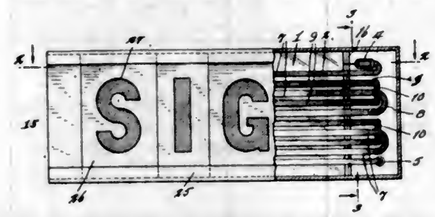
A pair of suspenders made up of straps including rear arms and forward arms, the rear arms being crossed, means for connecting the rear arms together loosely and freely for relative sliding movement at their place of crossing, the forward arms being fashioned into adjustable loops, means for holding each loop at an adjusted length, front breeches-engaging members carried by the loops, the space between the front breeches-engaging members being open, rear breeches-engaging members directly connected to the rear arms, the space between the rear breeches-engaging members being open, circumferential ties permanently secured at their extreme ends to the front and rear breeches-engaging members, and means interposed in the ties for holding them adjustably at a fixed length, thereby to determine a fixed maximum distance between the front breeches-engaging member, and one rear breeches-engaging member.

1,680,630. COMBINED ELECTRODE AND STIRRING DEVICE. STANLEY A. W. OKELL, Cranford, N. J., assignor to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1927. Serial No. 158,501. 9 Claims. (Cl. 266—1.5.)



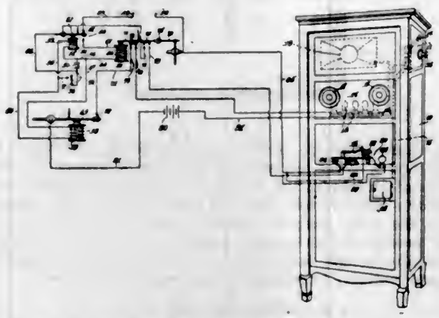
1. In a material stirring device, a receptacle providing a chamber in which to place the material to be treated, a rotatable disc-shaped member mounted in the lower part of the chamber and presenting a face in supporting engagement with material in the chamber, flange members formed on the upper face of the disc-shaped member, said flange members having gas discharge openings in their rear faces, and means for rotating the member to cause the discharging gas to stir the engaged material.

1,680,631. DRILL CHUCK. GEORGE J. PALAITH, Chicago, Ill. Filed Oct. 9, 1926. Serial No. 140,645. 6 Claims. (Cl. 279—58.)



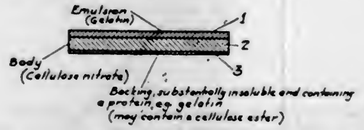
2. A drill chuck comprising a housing having a reduced issue end, a group of jaws longitudinally movable in said housing and adapted to be contracted when advanced to engage the reduced issue end of the housing, a manually-operable and transversely disposed worm journalled in the opposite end of the housing, a cam threaded on said worm and adapted to be propelled thereby, said housing having means to prevent said cam from turning, and a block adapted to be moved by the cam to engage and actuate the jaws longitudinally into the issue end of said housing.

1,680,632. SPRING COLLAR FOR LATHES AND SCREW MACHINES. GEORGE J. PALAITH, Cicero, Ill. Filed Mar. 28, 1927. Serial No. 179,089. 2 Claims. (Cl. 279—53.)



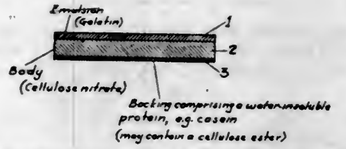
1. In a spring collar for lathes and screw machines, a housing comprising a head and a tapered and interiorly beveled shank, the mouth of said head being beveled, a lug integral with said shank, a threaded longitudinally recessed sleeve having one enlarged slotted end, the recess in said sleeve receiving the said lug, jaws arranged in the slotted end of said sleeve for frictional engagement with the beveled mouth of said head, heels integral with said jaws and formed with beveled faces for engagement with the interiorly beveled portion of said shank, and supporting springs for said jaws connecting the same and said sleeve.

1,680,638. ILLUMINATING APPLIANCE. THOMAS K. PETERS, Los Angeles, Calif., assignor to The Color Ray Holding Corporation, Denver, Colo., a Corporation of Colorado. Filed Jan. 20, 1928. Serial No. 248,163. 10 Claims. (Cl. 40—130.)



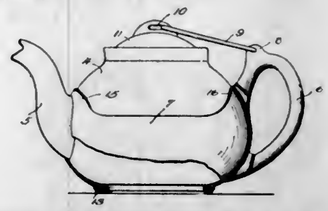
1. In an illuminating appliance of the class described, a background composed of luminous tubing, the main portions of which are arranged in spaced relation so that the area of the background is well covered by bands of light emitted from the tube portions, and a relatively opaque screen located in front of the background and provided with relatively translucent patterned areas constituting a design illuminated by the background, said translucent areas being disposed in front of said tubes and relatively close thereto, whereby to provide, when the tubes are made luminous, a pattern composed of bands or stripes of light visually distinguished over said areas.

1,680,634. RADIO SLOT MACHINE. JOSEPH PINTO, Philadelphia, Pa. Filed Aug. 9, 1927. Serial No. 211,699. 14 Claims. (Cl. 194—83.)



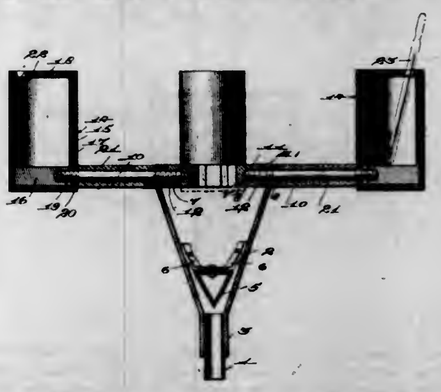
1. In a device of the character described, a rotary coin carrying disc, a swinging catch adapted to be engaged by the coin therein, a switch-closing spring retracted lever to shift with movement of the catch and a lever movable with the disc and engaging the lever to reset the lever in switch disconnecting position.

1,680,635. PHOTOGRAPHIC FILM. FRANK FORSTER RENWICK, Parlin, N. J., assignor, by mesne assignments, to Du Pont-Pathe Film Manufacturing Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 20, 1925. Serial No. 51,507. 9 Claims. (Cl. 95—9.)



1. A photographic film including a body layer comprising cellulose nitrate, and a layer comprising a cellulose ester and a protein.

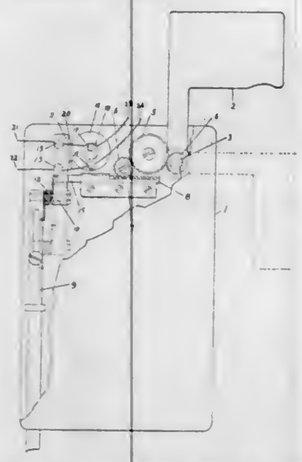
1,680,636. PHOTOGRAPHIC FILM. FRANK FORSTER RENWICK, Parlin, N. J., assignor, by mesne assignments, to Du Pont-Pathe Film Manufacturing Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 20, 1925. Serial No. 51,508. 6 Claims. (Cl. 95—9.)



1. A cinematographic non-static photographic film having a body of cellulose nitrate and a non-scratching substantially smooth backing electrically positive with respect to the body and composed of a water-insoluble protein substantially free from grains and free from pigmentary and other granular materials.

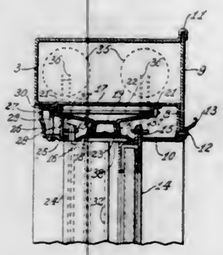
1,680,637. HOLDER FOR TEAPOTS AND OTHER CONTAINERS. LOUIS J. ROUSSELOT, New York, N. Y. Filed Mar. 18, 1927. Serial No. 176,405. 4 Claims. (Cl. 53—3.)

1. A holder for a teapot having a spout comprising a shell shaped to conform to the lower portion of the teapot, and an upwardly extending resilient portion to engage the upper part of the teapot and having an opening adjacent said portion and a handle mounted on the shell at the rear thereof, said shell being adapted to permit the insertion of the teapot into the shell by the passage of the spout of the teapot through the opening of the shell so that the part of the shell around said opening encircles the spout, and to clampingly engage the teapot by means of said rear and said resilient portion.



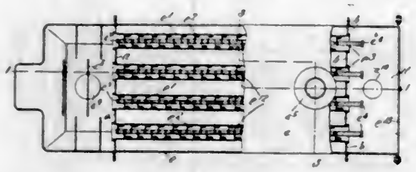
1,680,638. HEAT-CONDUCTIVITY APPARATUS. FRANCIS M. ROWAN, Bessemer, Ala. Filed Jan. 9, 1926. Serial No. 80,379. 7 Claims. (Cl. 73—51.)

1. A test device for ascertaining the heat conductivity of substances, a shell, means for heating the shell, a plurality of radially disposed heat conducting elements



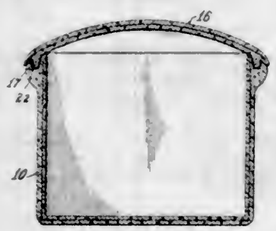
attached to the shell and having different degrees of heat conductivity and all being subjected to and heated uniformly by said heating means, and means associated with the heat conducting elements for indicating the temperature thereof.

1,680,639. METER FOR TAXICABS. FRANK H. RUEHMEIER, Latonia, Ky. Filed Mar. 2, 1927. Serial No. 172,132. 4 Claims. (Cl. 235—30.)



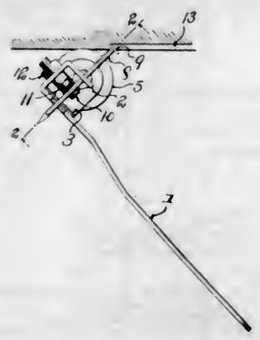
1. A device of the character specified, comprising in combination with a meter having a movable member for placing said meter into or out of operative setting, a motor vehicle seat and the motor ignition circuit of said vehicle, contacts in said circuit, a rod movably mounted relative to said contacts, means carried by said rod and arranged to short circuit the ignition current, tension means arranged normally to press said short circuit means toward said contacts, means actuated by the weight of an occupant on said seat for moving said rod to bring said contact means into contact with said contacts, and means actuated by the movement of said member to registering position for forcing said short circuiting means away from said contacts.

1,680,640. METAL WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed Dec. 10, 1926. Serial No. 153,776. 23 Claims. (Cl. 189—72.)



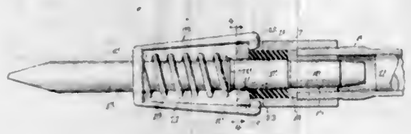
1. A metal window frame having a sash therein provided with a rib, a jamb having a part engaging the edge of said sash along said rib, a stop engaging the opposite side of said rib along said sash, and means for adjusting the engaging part of said jamb towards said sash.

1,680,641. CONDENSER. EDOARDO MICHELE SALERNI, Paris, France, assignor to E. M. S. Industrial Processes Limited, London, England, a Corporation of England. Filed Oct. 31, 1925, Serial No. 66,053, and in Great Britain Nov. 10, 1924. 8 Claims. (Cl. 257—236.)



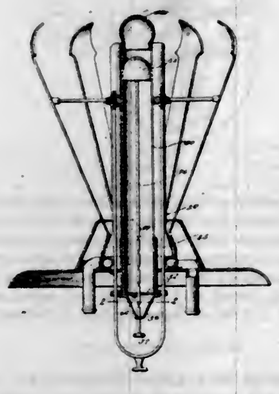
1. Heat interchange apparatus comprising an outer casing, a plurality of elongated conduits of flattened construction disposed within the casing and spaced from each other and from the walls of the outer casing, and means in said conduits for causing a medium admitted thereto to pursue a sinuous path from end to end thereof.

1,680,642. BURIAL VAULT AND METHOD OF SEALING THE SAME. JOHN J. SCHEEL, Detroit, Mich. Filed Sept. 12, 1927. Serial No. 218,908. 6 Claims. (Cl. 72—7.)



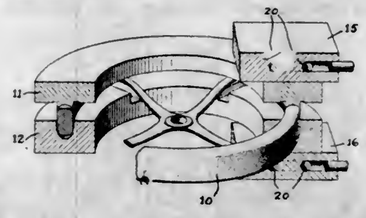
2. A construction of the class described comprising a body and a cover therefor, there being a groove in the edges of said body, the borders of said groove being outwardly sloping in form and the inner border being higher than the outer one; a tongue on said cover fitting into said groove, the underside of said cover conforming substantially to the borders of said groove; and a seal of plastic material in said groove around said tongue.

1,680,643. BRICKLAYER'S TOOL. PETER J. SCHNEIDER, Eau Claire, Wis. Filed Apr. 14, 1927. Serial No. 183,719. 4 Claims. (Cl. 72—138.)



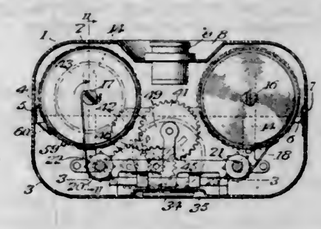
2. A routing tool comprising a carriage-like body portion provided with a supporting wheel and a manipulating handle and having an apertured ear, a bearing portion carried by said body portion, a locking plunger slidably mounted within said bearing portion and having an aperture therethrough, a clamping nut threaded upon said plunger, a routing instrumentality having an elongated shank passing through the apertured ear and through the aperture in said locking plunger, said instrumentality having an enlarged head.

1,680,644. CHISEL AND PISTON RETAINER. ERNEST H. SHAFF, Grand Haven, Mich., assignor to Wm. H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Oct. 1, 1924. Serial No. 741,090. 2 Claims. (Cl. 121—32.)



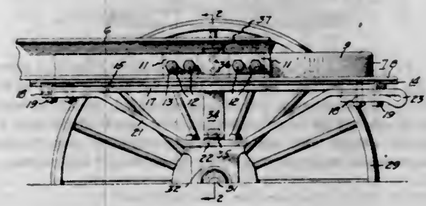
1. A retainer of the character described comprising in combination with a tool cylinder and a working tool, a supporting member screw-threaded upon the exterior of the cylinder, a bushing within the cylinder interposed between the forward end of the cylinder and the shank of the working tool, said shank having a shoulder adapted to engage the forward end of said bushing to limit the rearward movement of the cutting tool, and means located forwardly of said supporting member adapted yieldably to limit the forward movement of the cutting tool, said means acting to hold the cutting tool normally seated against said bushing.

1,680,645. OIL SPRAY. CARL EUGENE SIMS, Eastland, Tex. Original application filed Mar. 15, 1923, Serial No. 625,360. Divided and this application filed June 7, 1924, Serial No. 718,609. Renewed Dec. 6, 1927. 1 Claim. (Cl. 128—244.)



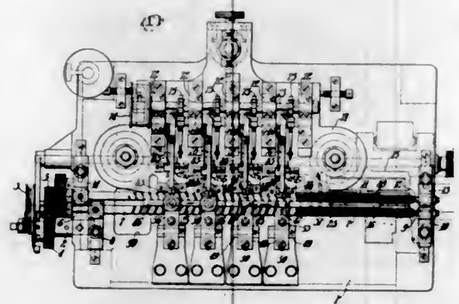
An oil spray including a barrel, a plunger operating in said barrel, a plunger rod connected with the plunger and extending exteriorly of the barrel, said plunger rod having a series of annular notches and a laterally flexible spring detent carried by the barrel and cooperable with the notches.

1,680,646. MOLDED ARTICLE AND METHOD OF MAKING THE SAME. GRANT E. SMITH, Poughkeepsie, N. Y. Filed Sept. 26, 1922, Serial No. 590,604. Renewed Apr. 30, 1927. 26 Claims. (Cl. 18—59.)



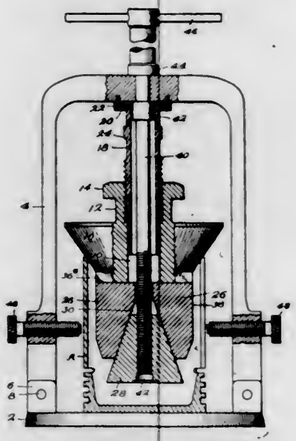
1. A molded article formed of sections of light permeable material separately coated with adhesive and assembled with portions of adjacent sections in interfitting relation, and then reshaped under pressure.

1,680,647. CAMERA. WALTER E. STARK, New York, and SAMUEL H. DRAKE, Groton, N. Y. Filed Sept. 18, 1924, Serial No. 738,447. Renewed Nov. 4, 1927. 16 Claims. (Cl. 95—31.)



1. In a camera adapted to use film, a pair of light-excluding shield plates overlying the face of the film directed toward the camera lens, means operable exteriorly of the camera to move said plates toward or from each other to vary the size of the exposure aperture therebetween, and automatic yieldable locking means interposed between a fixed part and a part movable with the shield plates to hold the shield plates in their adjusted positions.

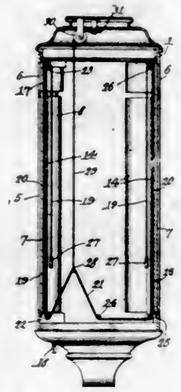
1,680,648. DIRIGIBLE-WHEEL MOUNTING. LOWELL H. THOEN, Stockton, Calif., assignor to Western Harvester Co., Stockton, Calif., a Corporation of California. Filed May 16, 1927. Serial No. 191,695. 6 Claims. (Cl. 280—125.)



4. A dirigible wheel mounting comprising an angle iron of circular contour, a pair of supporting straps secured to said angle iron, a wheel mounted on said straps, braces secured to said straps and to said angle iron, lugs on said braces overlying said angle iron, a second angle iron confined for rotation movement between said lugs and said first angle iron, and a frame secured to said second angle iron.

1,680,649. STRAIGHTENING MACHINE FOR NEEDLES AND THE LIKE. WILLIAM TIVENDALE, Clydebank, Scotland, assignor to the Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 3, 1926, Serial No. 113,441, and in Great Britain June 19, 1925. 22 Claims. (Cl. 153—39.)

1. A straightening machine having a plurality of hammers arranged to act upon a needle at different stations, means for feeding non-rotating needles past said hammers during effective needle-straightening operations of the hammers, and means for turning each needle through 180° around its axis between the hammering stations.



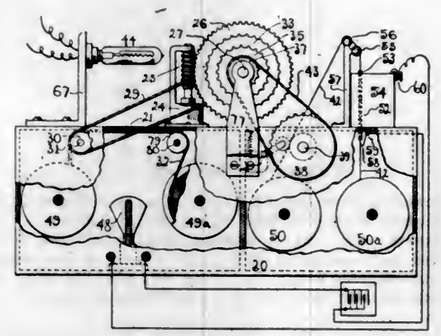
1,680,650. PISTON EXPANDER. FRANK A. TRAVIS, Kansas City, Mo. Filed Sept. 12, 1927. Serial No. 218,938. 5 Claims. (Cl. 153—80.)

1. In a piston expander, means including a conical member for firmly holding a piston, threaded means upon which said conical member is adjustably mounted, elements operably supported by said conical member and adapted to be inserted within the piston, and mechanism for forcing said elements outwardly to effect expansion of the piston.

1,680,651. LIQUID REGISTER. WILLIAM EDWARD TRAYLOR, Fort Smith, Ark. Filed Oct. 9, 1925. Serial No. 61,515. 1 Claim. (Cl. 235—86.)

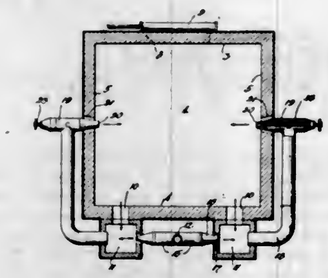
A mechanical movement including a frame, horizontal lower guides on the frame, horizontal upper guides on the frame, a first flexible element extended between the lower guides, thence upwardly to form side portions which are extended downwardly about the upper guides to define free depending ends located between the side portions, weights on the depending ends of the first flexible element, an upwardly extended operating device connected to the first flexible element at a point between the lower guides and mounted slidably upon the upper portion of the frame, a horizontally disposed second flexible element extended in opposite directions across the side portions of the first

flexible element at right angles thereto, the second flexible element being extended between the side portions of the first flexible element, means for supporting the second flexible element in position, and means for moving the second flexible element endwise with respect to the side portions of the first flexible element.



1,680,652. LUGGAGE-LOCKING DEVICE. OSSIP JOSEPH WALINSKY, New York, N. Y., assignor to White Luggage Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 7, 1925. Serial No. 73,605. 1 Claim. (Cl. 70—115.)

The combination with a receptacle having an expanded opening, of means for closing said opening including a member slidable laterally across said opening, a lock secured to said receptacle adjacent to one end of said opening, and a hasp movably secured to said member whereby said member may be moved across said opening and being engageable with said lock to prevent movement of said member.

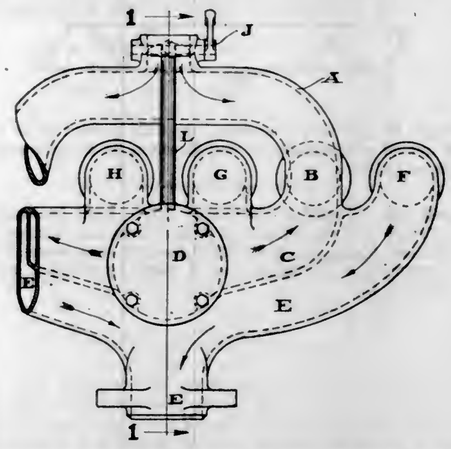


1,680,653. RECORDING AND REPRODUCING OF SOUND WAVES. JACK L. WALKER, Dallas, Tex. Filed Feb. 21, 1922. Serial No. 538,393. 7 Claims. (Cl. 179—100.)

1. The method of recording sound waves which consists in controlling an electric current by variations in a sound record film and controlling the electroplating upon a copper wire in accordance with the variations recorded upon said sound record film and producing longitudinal travel of both said copper wire and said sound record film at an extremely slow rate of speed for increasing the amount of metal deposited by said electroplating on said copper wire

and restricting the area of exposure of said sound record film and said copper wire for transferring a portion of a sound variation at a time.

1,680,654. FURNACE. WILLIAM F. WEATHERS, Detroit, Mich. Filed Apr. 16, 1926. Serial No. 102,376. 3 Claims. (Cl. 263—15.)

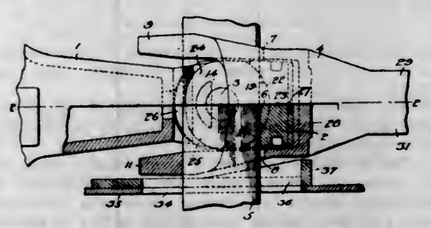


1. A furnace of the class described comprising a heating chamber, oil burners for heating said chamber, air heating chambers communicating with said heating chamber, hot air outlet pipes communicating with said air heating chambers and said burners to supply air thereto, and cold air inlet pipes communicating with said air heating chambers to supply air thereto, the cold air inlet pipes having their outlets aligned with and spaced from the inlets of the hot air outlet pipes so that the supply of cold air traverses said air heating chambers.

1,680,655. VAPORIZER. GEORGE R. WELCH, Detroit, Mich. Filed July 24, 1924. Serial No. 727,891. 1 Claim. (Cl. 123—122.)

In a vaporizer for an internal combustion engine, the combination with an exhaust manifold of an inlet manifold forming a loop and having a dependent fuel and air mixture passage forming an unrestricted return path located in heat conducting relationship with said exhaust

manifold, a mixture entrance to said inlet manifold, a throttle valve therein, a bypass around said throttle discharging into said dependent passage, whereby when the



throttle is closed the explosive mixture necessary to operate the engine at idling speed is drawn through said dependent passage and vaporized therein.

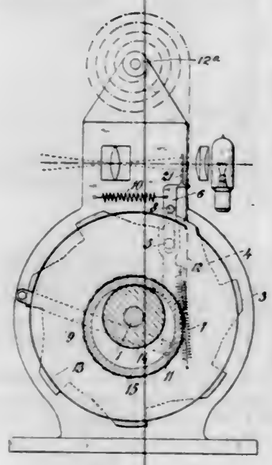
1,680,656. STORAGE OF DRY CELLS AND BATTERIES. EDMUND B. WHEELER, Midland Park, and JAMES C. WRIGHT, Millburn, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 7, 1924. Serial No. 718,559. 8 Claims. (Cl. 136—1.)

1. The method of preserving cells for chemical storage of electrical energy for long periods of time which comprises subjecting the cells to be preserved to cold storage temperatures below 10° C.

1,680,657. DRAFT RIGGING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Jan. 30, 1925. Serial No. 5,762. 23 Claims. (Cl. 213—71.)

1. In a railway draft rigging, the combination with a yoke having a transverse web portion connecting the forward ends thereof, of a coupler stem, and a crowned portion on the rear end thereof adapted to engage the web portion of the yoke and rock up and down thereon to a limited extent.

1,680,658. ROTATABLE SIGN. SHERMAN S. BENSON, York, Nebr. Filed Sept. 9, 1927. Serial No. 218,509. 5 Claims. (Cl. 40—39.)



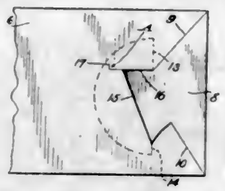
1. In a sign of the class described, an elongated hollow body portion, said body portion having an opening formed in the front surface thereof adjacent to one end of the

body portion, the rear surface of the body portion having an opening adjacent to the other end of the body portion to permit air to pass through the body portion, and

means for pivotally supporting the body portion so as to be rotaed continuously in one direction by a continuous current of air.

1,680,659. CINEMATOGRAPHIC TOY. ANNA BEKESCH, Vienna, Austria, assignor to Viktor Gross and Alexander Mayer, Vienna, Austria. Filed Nov. 21, 1925, Serial No. 70,673, and in Austria Dec. 4, 1924. 6 Claims. (Cl. 88—18.4.)

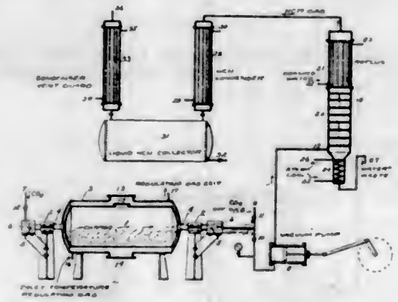
1. In a toy cinematograph, the combination with a driving shaft, of a film take-up spool supported on said shaft so as to be driven thereby, a film feeder operating independently of said spool, and means on said shaft for actuating the film feeder by direct cooperation with the same.



1,680,660. PARATHYROID PRODUCT. LOUIS BERMAN, New York, N. Y. Filed Aug. 11, 1925. Serial No. 49,643. 7 Claims. (Cl. 167—7.)

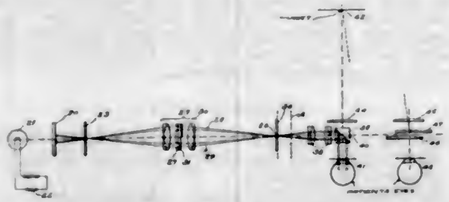
1. The method of treating comminuted parathyroid glands which comprises extracting with an aqueous solution of meta-phosphoric acid.

4. The method of producing a parathyroid product from the parathyroid glands which comprises extracting the comminuted glands with water containing meta-phosphoric acid and treating the aqueous extract to separate proteins therefrom, such treatment including neutralization of the solution with sodium hydroxide and filtering off of the precipitate, rendering the solution alkaline and forming a phosphate gel, filtering the liquid from the gel and neutralizing the filtrate.



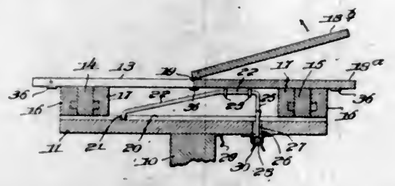
1,680,661. DOUBLE LOCK BOX. LAWRENCE H. BIRRELL, Salt Lake City, Utah, assignor of one-half to Alexander N. Rosenbaum, Los Angeles, Calif. Filed Mar. 4, 1926. Serial No. 92,252. 1 Claim. (Cl. 229—35.)

A foldable box blank including a rectangular body portion, said body portion having horizontal slits disposed in parallel relation with the side edges thereof, said body portion having substantially short locking slits at one of the respective ends of each of the first mentioned slits and extended at right angles thereto, said body portion having obliquely disposed slits merging into the first mentioned slits at points intermediate the ends thereof, end members extending from the ends of the blank, tongues



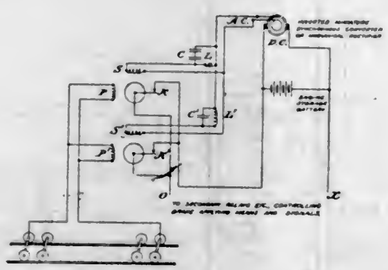
extending from the side edges of the end members, said tongues having inclined edges defining shoulders, and corners, said tongues adapted to be positioned in the first mentioned slits, the upper corners of the tongues being disposed within the locking slits when the slides and ends are bent upwardly in the formation of a box.

1,680,662. PROCESS FOR PRODUCING HYDROCYANIC ACID. MORTIMER JAY BROWN, Niagara Falls, and EARLE ATHERTON HARDING, La Salle, N. Y., assignors to Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1925. Serial No. 63,247. 12 Claims. (Cl. 23—151.)



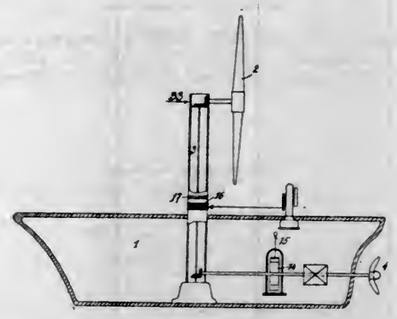
1. Process of producing hydrocyanic acid from cyanide containing material consisting in mixing the cyanide containing material with an acid salt and water, agitating the mixture, subjecting the mixture to a pressure sufficiently below atmospheric pressure to cause boiling of the water at a temperature below that at which the hydrocyanic acid would polymerize and allowing the vapors from the boiling water to sweep the evolved hydrocyanic acid from the reaction mass.

1,680,663. DYNAMIC OPTOMETER AND EYE-TESTING APPARATUS. BEN J. CAMPBELL, Hoboken, N. J. Filed May 15, 1923. Serial No. 639,041. 15 Claims. (Cl. 88—20.)



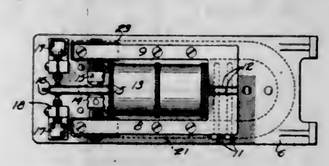
2. An eye testing instrument comprising means whereby one eye may view a distant chart and the other eye a local object or image, and measurable means associated with the vision of the distant chart whereby the apparent relative position of the local and distant objects or images may be varied, and the muscular condition and relation of the visual axes of the eyes measured.

1,680,664. EXTENSION TABLE. LINDELL CLEVELAND, Arlington, Mass. Filed July 24, 1924, Serial No. 727,877. Renewed Nov. 26, 1927. 5 Claims. (Cl. 45—112.)



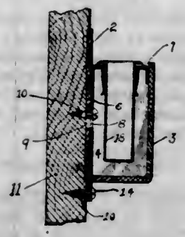
1. An extension table provided with means to house an extension leaf; a two-part hinged leaf arranged to be housed in said means; means to elevate said two-part leaf from its housed position, said last means comprising pivotally fixed guide tracks for said leaf and embracing said guide tracks; and eyes fast with said leaf whereby said leaf may be slidingly guided along said tracks.

1,680,665. AUTOMATIC TRAIN-CONTROL APPARATUS. PATRICK J. CLIFFORD, Falls, Pa., assignor, by mesne assignments, to Train Control Corporation of America, a Corporation of Delaware. Filed Feb. 20, 1923, Serial No. 620,287. Renewed Nov. 12, 1927. 2 Claims. (Cl. 246—37.)



1. In combination in train control apparatus means for imposing alternating current upon the traffic rails including a track relay for each block which is de-energized when said block is occupied, an alternating current circuit which is closed by the dropping of said relay and by the picked up relay of the unoccupied block in advance, said circuit including a resistance extending across between the rails at each end of the block and with which the ends of the circuit conductor connect through the back contact of the relay of the occupied block and the front contact of the unoccupied block in advance, said conductor deriving its current through a transformer from the transmission line, primary relay means on the engine in a conductor receiving current from the traffic rail system due to the drop in potential between its points of contact therewith, and train control means on the vehicle controlled by said relay for maintaining or indicating a proceed condition while said primary relay is energized, and for causing a stop or indicating restrictive condition ahead when said primary relay is de-energized.

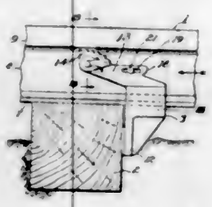
1,680,666. SHIP, BOAT, AND OTHER VEHICLES PROVIDED WITH AERIAL TURBINES. LOUIS CONSTANTIN, Paris, and GASTON DALOZ, Becon-les-Bruyeres, France. Filed Oct. 6, 1923, Serial No. 666,968, and in France Oct. 9, 1922. 4 Claims. (Cl. 115—3.)



1. In a device of the type described moved by aerial turbines driving propellers, a brake placed upon the transmission, means for operating the same by foot from the helming post, a driven system for orienting the aerial turbines, means for locking the said system, means for connecting or disconnecting at will the said system.

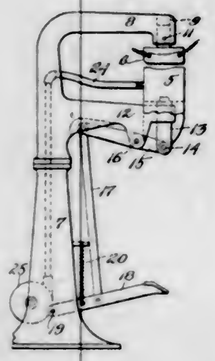
1,680,667. ELECTROMAGNETIC DEVICE. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1922. Serial No. 592,028. 7 Claims. (Cl. 175—336.)

1. An electromagnet device comprising an energizing coil, pole pieces therefor, an armature and a magnetic circuit including said armature and pole pieces composed of a material comprising nickel and iron of such low coercivity that the armature operates at a precise current value substantially independent of its previous magnetic condition.



1,680,668. WALL POCKET. RUDOLPH DE BOER, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Aug. 15, 1927. Serial No. 212,968. 8 Claims. (Cl. 224—29.)

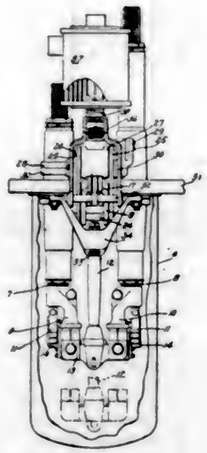
1. In a device of the class described, a container having a rear wall provided with bayonet slots for securing the container to a wall, an insert member detachably fitting



within the container and having a back and top portion, said back portion having bayonet slots adapted to register with the slots in the container and said top portion having an opening therein, and a receptacle adapted to be removably held within said opening of the insert member.

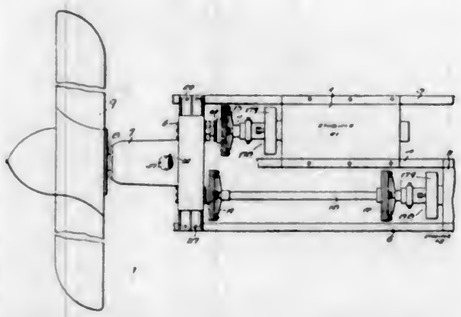
1,680,669. RAIL ANCHOR. JOHN A. DIENNER, Chicago, and ALEXANDER C. MAREE, Villa Park, Ill. Filed Apr. 17, 1924. Serial No. 707,044. 18 Claims. (Cl. 238—317.)

1. In a rail anchor, a jaw portion adapted to fit over the flange of the rail, a stop arm for engaging a tie extending down from said jaw portion, an arm extending above said jaw portion and lying along the web of the rail and a rail engaging cam pivoted to the upper end of the latter arm.



1,680,670. ART OF MAKING BOOTS AND SHOES. ALFRED WARREN DONOVAN, Rockland, Mass. Original application filed Nov. 22, 1921, Serial No. 516,978, Patent No. 1,527,540, dated Feb. 24, 1925. Divided and this application filed Feb. 14, 1925. Serial No. 9,317. 4 Claims. (Cl. 12—146.)

1. The above described method of making boot and shoe uppers which consists in first bending a flat lining blank at its middle around a supporting saddle form and maintaining it in position thereon by air pressure, and thereafter, while the lining blank is thus held to said saddle form by air pressure, applying and securing thereto a flat outside leather top piece blank.

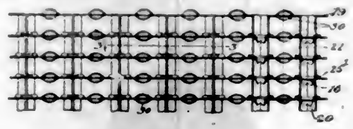


1,680,671. APPARATUS FOR INTERRUPTING ELECTRIC ARCS. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,792. 8 Claims. (Cl. 200—150.)

4. In combination with an oil circuit breaker, comprising an enclosed tank, a venting device therefor comprising an entrance chamber communicating with said tank through an opening in the top thereof, and having a vertical apertured wall, one or more vertical spaced partitions having

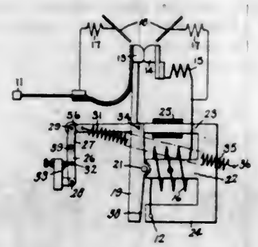
apertured areas and disposed to provide a tortuous path for outflowing gases, and an outlet from the apertures in the last partition to the atmosphere.

1,680,672. GEARING. THOMAS L. FAWICK, Racine, Wis. Filed Oct. 15, 1923. Serial No. 668,502. 19 Claims. (Cl. 74—7.)



2. In combination, a first driven member, a reversing element associated with the said first driven member, a pair of elements for actuating the said first driven member, a pair of power driven members for driving said elements, one of said driven emembers having a limited degree of flexibility, and means for moving the element associated with the said flexible member laterally from said first driven member and into engagement with the reversing element.

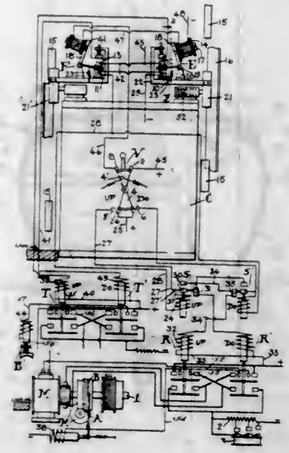
1,680,673. CORE FOR RADIATORS. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Nov. 7, 1925. Serial No. 67,529. 3 Claims. (Cl. 257—130.)



1. A radiator core having a plurality of water tubes and a plurality of air passages intercalated with said water

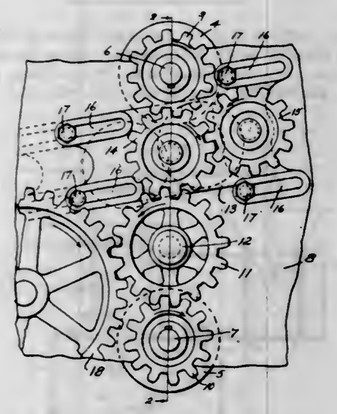
tubes, said core comprising a plurality of units arranged adjacent to each other and each unit being constructed of a sheet of metal which is bent to form a plurality of pleats and a plurality of webs, the walls of each pleat being spaced apart but connected with each other at one pair of corresponding longitudinal outer edges while their transverse edges at the ends thereof abut against one another to form a tube section, and each of said webs connecting the opposite longitudinal inner edge of one wall of a tube

section with the corresponding longitudinal inner edge of the wall of an adjacent tube section, the outer ends of the tube section of one unit being provided with laterally projecting ribs which engage the webs around the inner ends of the tube sections of an adjacent unit and also provided with outwardly bulging parts fitting into the ends of adjacent tube sections, the tube sections of the several units communicating to form said water tubes and the webs of adjacent units being spaced apart to form said air passages.



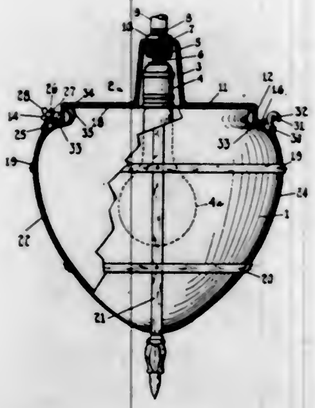
1,680,674. ELECTRIC SWITCH. ALAN STEWART FITZGERALD, London, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1924, Serial No. 736,390, and in Great Britain Sept. 22, 1923. 12 Claims. (Cl. 200—94.)

2. In an overload circuit breaker, the combination of cooperating circuit controlling contacts, means for biasing the contacts into circuit closing engagement, means comprising a single winding energized in accordance with the current in the circuit controlled by the circuit breaker and a magnetic structure therefor including a movable magnetic member arranged to assist said biasing means for holding said contacts in circuit closing position when the current in the circuit is below a predetermined value and to oppose said biasing means to effect the opening of said contacts when the current in the circuit is above said value, and means responsive to the rate of change of flux in said structure for determining the value of current in the circuit at which said movable magnetic member is operated to open said contacts.



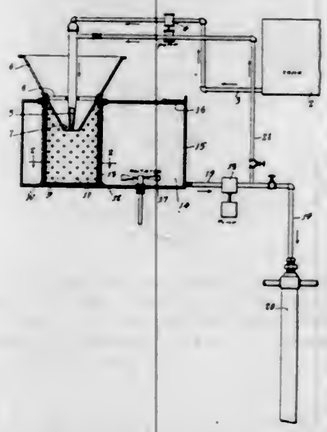
1,680,675. MAGNETIC SYSTEM TO CONTROL THE STOP AND LEVELING OF ELEVATORS. ARTHUR S. GALE, Yonkers, N. Y. Filed Dec. 21, 1925. Serial No. 76,695. 57 Claims. (Cl. 187—29.)

56. A system of control for elevators, comprising in combination, a car, motive means to move said car at different rates of speed, control means consisting of a car start switch, contactors to effect automatic slowdown, additional contactors to effect automatic stop, and actuating means for said contactors comprising electro-



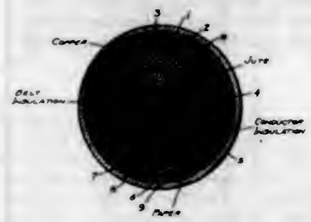
responsive means part on the car and part in the hoistway brought into and out of attractive relation by car movement.

1,680,676. MEANS FOR REVERSING ROLLERS AND THE LIKE RELATIVE TO EACH OTHER. HARRY GEARING, Los Angeles, Calif., assignor to Nebraska Printing Company, Lincoln, Nebr. Filed Sept. 20, 1926. Serial No. 136,496. 2 Claims. (Cl. 74—58.)



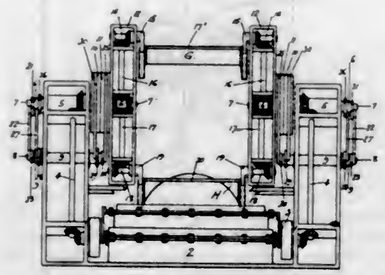
1. In printing machinery, in combination, a frame member, spaced rollers supported in said frame member, means for reversing the direction of rotation of said rollers relative to each other, said means including three gears, one of said gears being in mesh with the other two gears, a carrier member having bolt receiving loops for adjustably mounting it on said frame member, said carrier member being movable crosswise of the line of said three gears, said carrier member having an extra gear and said one or intermediate gear mounted thereon in mesh with each other and moving therewith, said carrier member being movable to move said one gear out of mesh with one of said other two gears and to move said extra gear into mesh with said other gear, whereby all four gears are moved into mesh with each other.

1,680,677. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed Feb. 10, 1925. Serial No. 8,100. 2 Claims. (Cl. 240—128.)



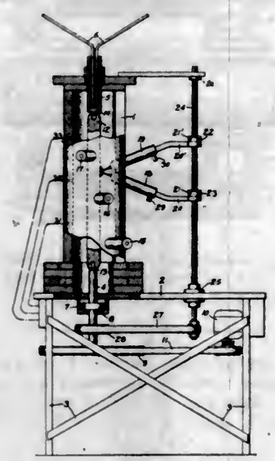
1. A lighting fixture comprising a globe holder with a substantially horizontal main portion and depending peripheral flange on said portion; a globe to fit within said globe holder; a carriage, which supports said globe when in both open and closed positions, comprised of metal straps, surrounding said globe; a hook to secure said metal carriage to the peripheral flange, one member of the hook being on the flange and the other member of the hook being on the carriage; adjustable means for securing the metal carriage to the globe holder, substantially as shown and described.

1,680,678. METHOD AND APPARATUS FOR HYDRATING CEMENT AND THE LIKE. ERLE PALMER HALLIBURTON, Los Angeles, Calif. Filed Aug. 9, 1926. Serial No. 128,300. 8 Claims. (Cl. 83—73.)



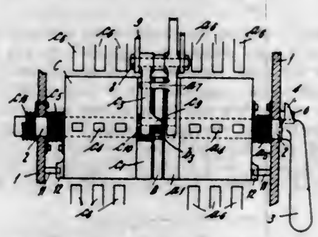
1. A method of producing a fluent mixture of cement and liquid, which comprises producing a high velocity stream or current of such liquid for creating a region of reduced pressure in a mixing chamber, depositing cement adjacent to said chamber for permitting such stream or current of liquid to advance the cement in response to the action and in the presence of such reduced pressure, passing the materials to an enlarged chamber, and discharging materials therefrom in small streams.

1,680,679. HIGH-TENSION UNDERGROUND CABLE. WILLIAM C. HAYMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1927. Serial No. 228,646. 4 Claims. (Cl. 173—266.)



1. In a cable, the combination of a number of separately-insulated conductors, a belt of insulation which surrounds the conductors and binds them together, and fillers for the spaces between the conductor coverings and the belt insulation, each of which comprises side members which are made of paper and a central member located between the side members and which is made of jute.

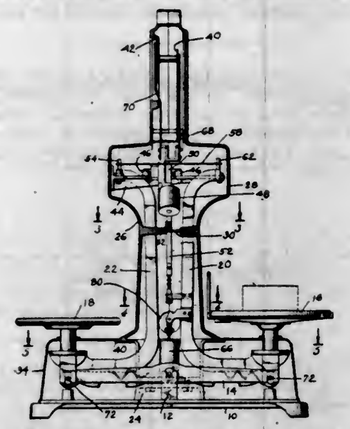
1,680,680. BUOYING AND DRIVING MECHANISM FOR FLYING MACHINES. GUSTAV HEDÉN, New York, N. Y. Filed Feb. 7, 1927. Serial No. 166,426. 3 Claims. (Cl. 244—25.)



1. A flying machine, comprising a body having at each side separate parallel transmission frames rotatably mounted therein, said transmission frames being rotatable in a vertical plane and having at each end horizontal rotatable and oscillatable shafts mounted separately therein in pairs on a common longitudinal axis, said shafts having partially elastic parallel wing arms rigidly affixed thereto, flexible wings with taut or stiff front edges and loose rear edges mounted between each two wing arms at same ends of said transmission frames, means for rotating the transmission frames in unison and means for oscillating the wing arms in said transmission frames in such manner that their oscillation is in the opposite direction to that of the rotation of said transmission frames in their descent but in the same direction in their ascent.

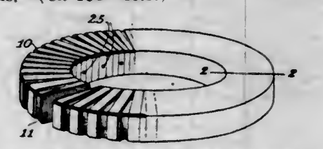
1,680,681. PROCESS OF TREATING SILICA ARTICLES. EUGENE HERZOG, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 21, 1926. Serial No. 82,824. 4 Claims. (Cl. 49—78.1.)

3. The method of fabricating a massive silica article which consists in heating said article to an ambient temperature of about 1000° C., locally fusing the surface of said article while the article as a whole remains unfused and annealing said article before cooling occurs.



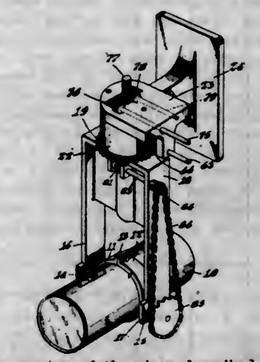
1,680,682. SWITCH GEAR FOR STARTING AND CONTROLLING ELECTRIC MOTORS. JOHN ARTHUR HIRST, Chester, England. Filed July 18, 1924, Serial No. 726,846, and in Great Britain July 24, 1923. Renewed June 21, 1928. 11 Claims. (Cl. 200—5.)

1. In electric switchgear in combination;—two movable switch parts; fixed contacts with which one of the switch parts contacts when in its initial position; fixed contacts with which the said switch part contacts when in its secondary position; fixed contacts with which the other switch part contacts when in its secondary position; means tending to move both switch parts into their initial positions; operating mechanism adapted to move the two said switch parts in opposition to the said means from their initial positions to their secondary positions; a detent device adapted to hold the second mentioned switch part in its secondary position; and means adapted to release the said detent device; substantially as described.



1,680,683. WEIGHING SCALE. JOSEPH HOPKINSON, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Mar. 19, 1926, Serial No. 95,816, and in Great Britain Dec. 23, 1925. 6 Claims. (Cl. 265—61.)

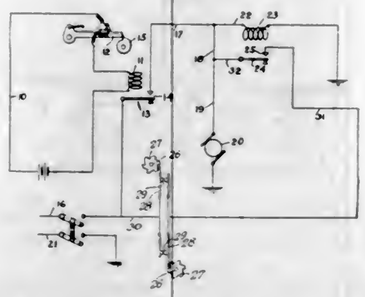
1. In an automatic scale, in combination, a lever pivoted intermediate its ends, platforms pivotally supported by said lever, check members extending upwardly from said platforms, check stays cooperating with the upper ends of said check members, a pendulum connected



to one of said check members, and a chart at right angles to said lever, said chart being immediately above and said pendulum immediately below said check stays.

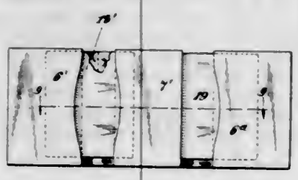
1,680,684. ROD PACKING. ARTHUR C. JUDD, New York, N. Y. Filed July 18, 1922. Serial No. 575,868. 4 Claims. (Cl. 154—45.5.)

4. Rod-packing comprising tubing composed of turns of thin soft metal, capable of being bent to ring form on a short radius of curvature without collapse or deformation of its cross sectional shape and without stretching of the metal on the outer face of the ring or thickening of the metal on the inner surface; said tubing containing plastic lubricant, having means permitting the lubricant to escape slowly when the packing is in use, said turns of thin soft metal having at their adjoining edges integral means cooperating with each other to prevent formation of openings between turns when the tubing is bent to ring form.



1,680,685. LIGHT PROJECTOR. HERBERT F. KING, Newtonville, Mass. Filed Apr. 27, 1925. Serial No. 26,314. 19 Claims. (Cl. 240—61.)

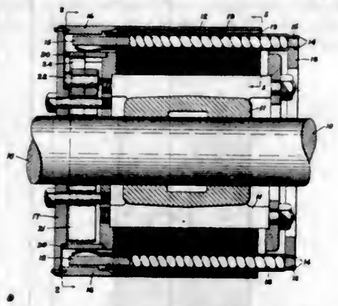
2. An apparatus of the class described having, in combination, a light projector, mechanism for tipping the light



projector and means for actuating said mechanism and for controlling the direction and extent of the tipping movement including a pin wheel and a pair of disks provided with a plurality of pins for rotating the pin wheel.

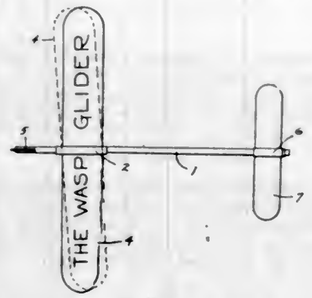
1,680,686. CONTROLLING SYSTEM FOR MOTOR-DRIVEN CLOCKS. SAUL KEILIEN, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Sept. 14, 1925. Serial No. 56,107. 7 Claims. (Cl. 58—24.)

1. A secondary clock operating system comprising, in combination, a controlling circuit, a motor, a circuit for starting said motor, a third circuit for operating said motor, and contacts controlled by said motor for terminating the operation of said motor after a predetermined duration of operation of said motor.



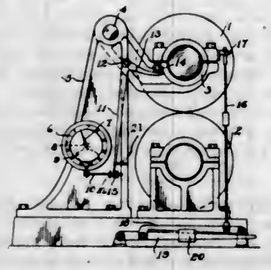
1,680,687. BILL FOLD. CHARLES L'ENFANT, New York, N. Y. Filed Apr. 16, 1926. Serial No. 102,409. 4 Claims. (Cl. 150—38.)

3. A foldable case comprising an outer wall and two inner wall sections longitudinally spaced apart and attached along their outer end and bottom edges to said outer wall, each of said inner wall sections having a pocket open at the inner opposed ends of said wall sections, a flexible sheet of material attached to the lower edge of said outer wall and fixed upon the inner side walls of said pockets and bridging the space between the open ends of the pockets, and a flexible part attached to said sheet of material between the open ends of said pockets and having unsecured portions extending in opposite directions from the point of attachment thereof and into the respective pockets for free movement longitudinally between and relatively to the pocket walls when the case is folded.



1,680,688. INDUCTION MOTOR. HOWARD MAXWELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1923. Serial No. 670,577. 14 Claims. (Cl. 172—280.)

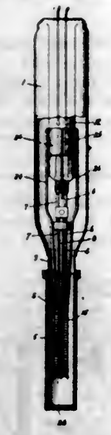
3. In an induction motor of the squirrel-cage type, the combination of a rotor having conductor slots therein, conductors in said slots forming a high and a lower resistance winding, end-rings, and means independent of



said windings cooperating with said high resistance winding to move said low resistance winding into and out of operative connection with said end-rings.

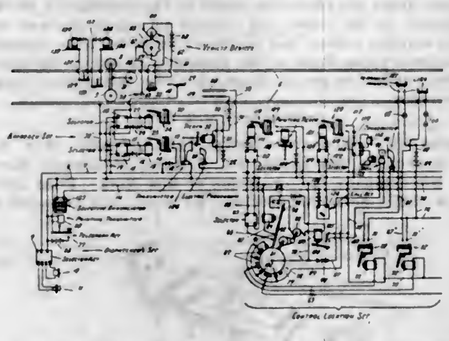
1,680,689. TOY GLIDER. MILTON P. MILLER, Dubuque, Iowa, assignor to George D. Wanner & Company, Dayton, Ohio. Filed Dec. 17, 1925, Serial No. 75,966. Renewed Dec. 7, 1927. 1 Claim. (Cl. 46—50.)

A toy glider, adapted for being sailed through the air, consisting of a body member and plane attached thereto near one of its ends, suitable for receiving inscriptions, a frame fixed to the opposite end of said bar, having a downwardly curved bar and loops at one end thereof, and a plane adapted for support in said last-named frame, with one of its edges positioned selectively in one or other of said loops, said plane conforming to the shape of said curved bar when positioned in the upper loop.



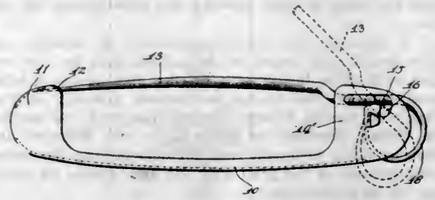
1,680,690. CALIBRATING INSTRUMENT FOR PAPER-MAKING MACHINES. LLOYD T. MURPHY, Franklin, Ohio. Filed Apr. 11, 1927. Serial No. 182,749. 5 Claims. (Cl. 33—147.)

1. A calibrating instrument for a paper making machine including in combination with a part of the machine, as a press roll, movable responsively to the variable



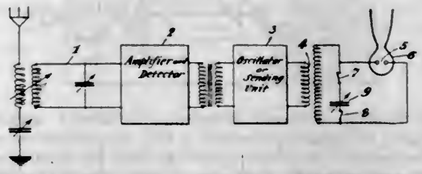
thickness of the paper running on the machine, a dial associated with the instrument for registering the variations of said movement, and a lever pivoted on a fixed part of the machine and having a short arm operatively connected to said part and a relatively long arm operatively connected to the instrument for compounding and indicating the extent of said movement on said dial.

1,680,691. ELECTRON-DISCHARGE DEVICE. HENRY J. NOLTE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Feb. 7, 1921, Serial No. 443,005. Divided and this application filed Sept. 18, 1923. Serial No. 663,470. 4 Claims. (Cl. 250—27.5.)



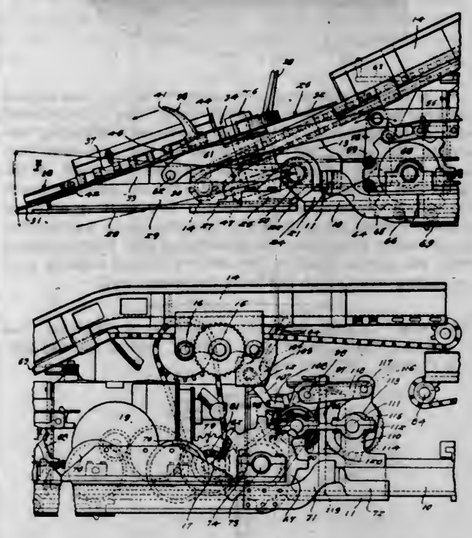
1. The method of removing occluded gas during the exhaustion of an electron discharge device comprising a filamentary cathode adapted to be heated to incandescence and an anode, which consists in first heating the anode, by heat radiated from the cathode, to a temperature sufficiently high to drive off a large portion of the occluded gas in the metal parts of the device, and then bombarding the anode by means of electrons emitted from the cathode.

1,680,692. TRAIN-DISPATCHING APPARATUS. ROBERT L. PAGE, Greenville, Miss. Filed Sept. 8, 1925. Serial No. 55,099. 40 Claims. (Cl. 246—4.)



1. A train dispatching system comprising a telephone circuit including a dispatcher's receiver, and train-controlled means at the approach to each of a plurality of control locations of the track operable when a train passes to transmit distinctive telephonic sound waves to said circuit.

1,680,693. SAFETY PIN. ARNOLD PHILIPP, Chicago, Ill. Filed Apr. 2, 1927. Serial No. 180,385. 6 Claims. (Cl. 24—162.)

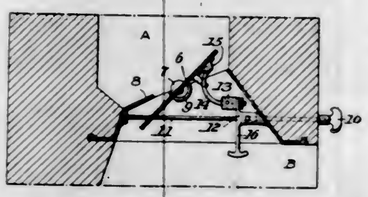


1. In a safety pin, a back portion, a pin or needle portion, a point receiving clasp at one end of said back portion, means at the opposite end of said back portion for automatically guiding and directing said pin into said clasp and a spring joining said pin to said back portion normally urging said pin toward said clasp.

1,680,694. SOUND-REPRODUCING METHOD AND APPARATUS. GEORGE RAMSEY, Brooklyn, N. Y. Filed Apr. 21, 1924. Serial No. 707,863. 16 Claims. (Cl. 250—20.)

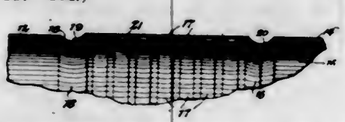
1. The method of reproducing sound which comprises producing an electrial spark by a superaudible frequency current and modulating the spark current with an audible frequency current.

1,680,695. CONVEYER. CHARLES W. SHANABERGER, Johnstown, Pa., assignor to J. C. Platz, trustee, Pittsburgh, Pa. Filed Feb. 20, 1926. Serial No. 89,743. 13 Claims. (Cl. 198—8.)



1. In a portable loading conveyer, a bed, a shoe pivoted to the forward end of the bed and including forwardly converging plates, a conveyer mounted upon the bed and

having a forwardly declining end projecting between the plates of the shoe, loading mechanism for the conveyer carried by the shoe, and a drive for the loading mechanism including a shaft forming the pivotal axis for the shoe.



6. A drive for the tractor elements of loading machines including a conveyer and loading shoe for the conveyer, said drive including a ratchet disk having driving connection with the tractor mechanism, a slowly reciprocating arm having a pawl for coaction with the ratchet disk during operation of the arm in one direction and means coacting with said pawl for determining the period of engagement of the pawl with the disk during its movement in such direction.

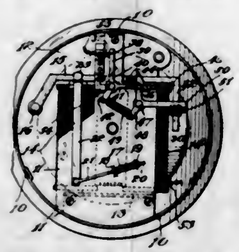
1,680,696. DAMPER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry & Manufacturing Company, Steubenville, Ohio, a Corporation of Ohio. Filed Oct. 5, 1927. Serial No. 224,174. 5 Claims. (Cl. 126—288.)

1. Damper structure comprising a tiltably mounted damper, an operating member, a link, and jointed connections between the ends of the link and the damper and said member, respectively, one of said connections being in the form of a universal joint.

1,680,697. HOLLOW BODY. FRANKLIN G. SLAGEL, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 5, 1927. Serial No. 203,304. 2 Claims. (Cl. 137—104.)

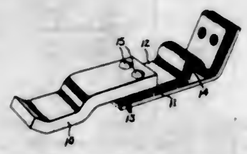
1. A hollow elongated body comprising two cup-shaped sections of sheet metal each of which has a cylindrical side wall, the walls of the two sections telescoping one within the other, the inner wall having a partial stop bead extending circumferentially around this wall at the inner end of the same and a plurality of complete beads extending circumferentially around this wall at different distances from the end thereof, and the outer wall having an inwardly projecting circumferential stop bead engaging with the partial bead of the inner wall and a blank part extending over other beads of the inner wall.

1,680,698. HAIR WAVER. BEULAH E. SLATER, Los Angeles, Calif. Filed Aug. 9, 1927. Serial No. 211,720. 3 Claims. (Cl. 132—39.)



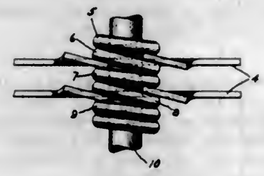
1. In a hair waver, an elongated rigid member, rounded on one side and flattened on the other and having its edges tapered toward its ends, substantially as described.

1,680,699. STAMP MOUNTING AND LABEL. ALBERT K. SMITH, Jr., Los Angeles, Calif., assignor to Chipron Stamp Company, Los Angeles, Calif., a Corporation of California. Filed June 7, 1927. Serial No. 197,041. 2 Claims. (Cl. 40—16.)



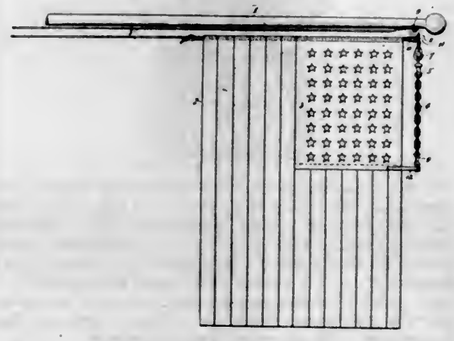
1. A mount of the character described having on the face thereof a shallow groove with a flat bottom, a transparent sheet having its edges underturned to provide an envelope of substantially the same thickness as the depth of said groove, and an insertable label in said envelope, said envelope being adhesively secured to the bottom of said groove.

1,680,700. ELECTRICALLY-OPERATED CLOCK. MARK A. STANDOW, Newark, N. J. Filed Aug. 21, 1925. Serial No. 51,574. 1 Claim. (Cl. 58—41.)



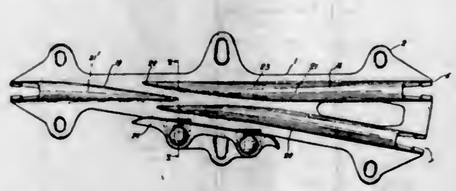
An electric driving mechanism for a clock train comprising a frame, a magnetic coil, an armature pivoted at one side of the coil, extending across said coil and having a tripping finger at its free end and a transverse finger on the side thereof, a stirrup secured on the armature, a spring to yieldingly influence one end of the stirrup, a pawl carried by the other end of the stirrup, a ratchet actuated by the pawl and connected to the clock train, a fixed contact on the frame, a movable contact pivoted on the frame with an arm to engage the fixed contact and a lever under the transverse finger of the armature, a catch pivoted on the frame and adapted to engage the arm of the movable contact and having an extension to be tripped by the tripping finger of the armature, an ear on the movable contact, an ear on the catch, and a spring connecting the ears.

1,680,701. CONTACT-CONNECTER SHUNT. RAY L. STANCLIFF, Wesleyville, Pa., assignor to General Electric Company, a Corporation of New York. Filed Apr. 4, 1927. Serial No. 180,745. 4 Claims. (Cl. 200—166.)



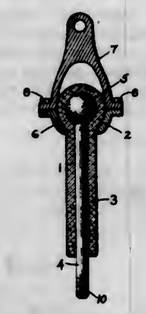
1. An electric connecter shunt formed of superimposed laminations folded over in the middle with the folded-over middle portions of the inner laminations nesting within the outer laminations to form the end of the shunt.

1,680,702. ELECTRIC CONDENSER. OSCAR STEINER, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1926. Serial No. 123,422. 4 Claims. (Cl. 175—41.5.)



1. In an electric condenser, a spring having a number of convolutions coiled about an axis, a plurality of spaced metal plates, each of which is held in place between the different convolutions of the spring.

1,680,703. FLAG ATTACHMENT. CORNELIUS SULLIVAN, Boston, Mass. Filed May 7, 1928. Serial No. 275,770. 1 Claim. (Cl. 116—173.)



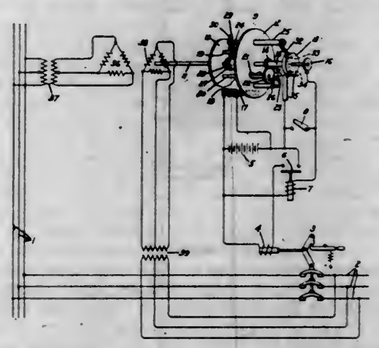
A chain attached to the pull in cord of a flag at top by swivel and yoke connection and at bottom by swivel, the same being attached to projecting piece at the bottom of the field of the flag.

1,680,704. TROLLEY FROG. PAUL G. SWARS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1927. Serial No. 169,513. 13 Claims. (Cl. 191—38.)

1. A trolley frog comprising two runners having high guiding portions the top wearing surfaces of which converge toward each other and then diverge from each other in the same plane.

1,680,705. METHOD OF MAKING INSULATORS. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 29, 1922. Serial No. 604,075. 2 Claims. (Cl. 173—318.)

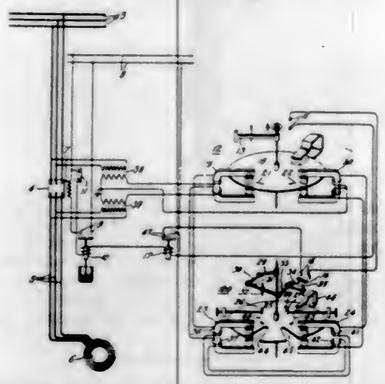
1. The method of making electric insulators comprising the forming of an insulating member of fused quartz with a bore and forming therein by fusion of metallic pin.



2. The method of making electric strain insulators comprising the forming of an insulating member of fused quartz with a bore therein enlarged to provide an internal shoulder, and forming in said bore a metallic tension member.

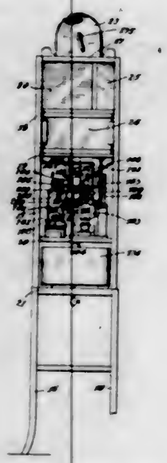
1,680,706. BRACELET. CHARLES R. TOST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed June 9, 1927. Serial No. 197,657. 3 Claims. (Cl. 24—230.)

1. A bracelet comprising male and female links having tongue and groove parts telescoping together along a line extending crosswise of the bracelet, and a spring pressing said parts against each other transversely of said line for frictionally maintaining the links in interengagement.



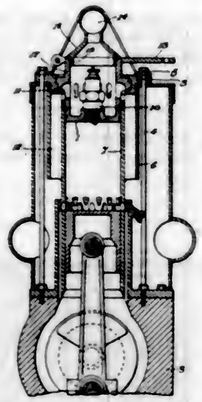
1,680,707. SYNCHRONIZING DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,714. 12 Claims. (Cl. 171—118.)

2. A synchronizing device comprising a shaft, a driving member fixed to said shaft, a pair of contact members rotatable about said shaft, and means interposed between



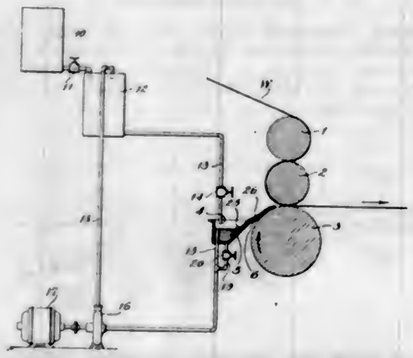
said driving member and said contact members for maintaining between the contacts of said contact members a space relation which is dependent on the speed of said shaft.

1,680,708. RELAY. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Nov. 24, 1926, Serial No. 150,606. Divided and this application filed Apr. 30, 1927. Serial No. 188,008. 5 Claims. (Cl. 200—91.)



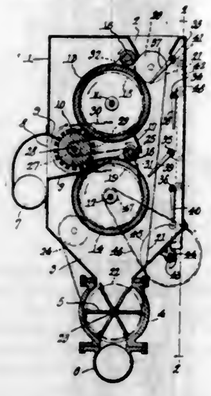
1. A differential relay comprising relatively movable cooperating contacts, a member movable between two positions, electro-magnetic means for moving the member arranged to exert opposing torques thereon, and contact controlling mechanism arranged to be actuated on movement of the member due to an unbalance of the torques exerted thereon for effecting a momentary closure of the contacts as the member moves through an intermediate position.

1,680,709. COIN-CONTROLLED PHOTOGRAPHIC MACHINE. GUSTAV A. SVASBERG, Fort Lee, N. J., assignor of one-half to Andrew A. Hayek, Fort Lee, N. J. Filed Sept. 18, 1926. Serial No. 136,229. 19 Claims. (Cl. 95—1.4.)



1. In a photographic machine the combination of a casing, a camera journaled upon said casing and free to move angularly in relation thereto, brake mechanism carried by said casing and connected with said camera, for holding said camera in different angular positions of adjustment, a plate supporter connected with said camera for supporting a plate within said camera during the exposure of said plate, mechanism connected with said plate supporter for causing said plate supporter to release said photographic plate after the exposure thereof, and a plate holder for receiving said photographic plate and holding it in position to be developed and washed.

1,680,710. CYLINDER OF INTERNAL-COMBUSTION ENGINES. ARTHUR WILLIAM WALL, Sheldon, near Birmingham, England, assignor of three-fourths to John White, Handsworth, Birmingham, England. Filed Feb. 17, 1925, Serial No. 9,721, and in Great Britain Mar. 5, 1924. 7 Claims. (Cl. 123—48.)

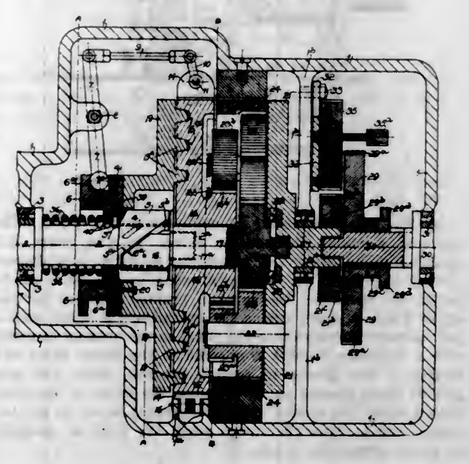


1. In a two-stroke internal combustion engine, the combination with the working piston and the cylinder having inlet and outlet ports immediately above the dead center position of said piston, of a screw-threaded piston forming the closed end of said cylinder and movable in the direction of its longitudinal axis, means for rotating said piston thereby causing its axial movement, and in connection with said piston means for causing a continual flow of a gaseous cooling medium over said cylinder.

1,680,711. ART OF STRIPING PAPER. EDWARD B. WESTON, Dayton, Ohio, and WILLIAM G. CLARK, Terre Haute, Ind., assignors to The Weston Paper and Mfg. Co., Dayton, Ohio, a Corporation of Ohio. Filed July 3, 1926. Serial No. 120,337. 4 Claims. (Cl. 91—38.)

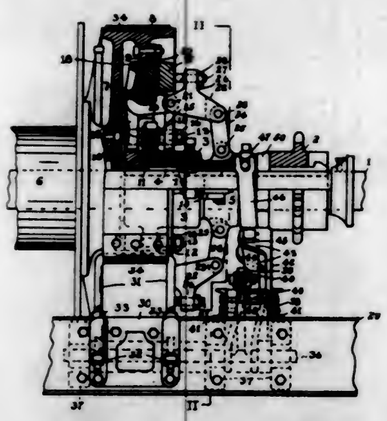
1. A striping attachment for paper-making machines, adapted to cooperate with one of a pair of plain faced web-finishing rollers of the machine, said attachement comprising a color trough having a lip arranged adjacent and at a tangent to the periphery of the lowermost of said pair of rollers, and a plurality of wick-strands each having intermediate portion supported by the lip of said trough, and the other end resting upon the periphery of said last-named roller to be straightened by the drag thereof, the arrangement being such that spaced lines of color will be applied to the said roller by the said wick-strands to be immediately transferred to the paper web passing between the said pair of finishing rollers.

1,680,712. COTTON-SEPARATING MACHINE. RALPH E. WILSON, Dallas, Tex. Filed Nov. 22, 1926. Serial No. 149,940. 9 Claims. (Cl. 19—37.)



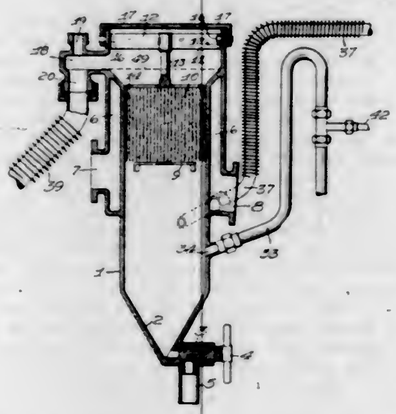
1. The combination with a toothed cylinder mounted for rotation and a stripper roller thereabove and adjacent thereto, of means for feeding cotton by gravity to the cylinder, a plurality of movable racks, and means for positively actuating the racks for cooperation with the cylinder to intermittently retard the gravitation of the cotton and presenting it to the cylinder.

1,680,713. BOTTLE-CLEANING BRUSH. EDWARD H. WITTENBERG, La Crosse, Wis. Filed June 30, 1925, Serial No. 40,578. Renewed Jan. 6, 1928. 6 Claims. (Cl. 15—26.)



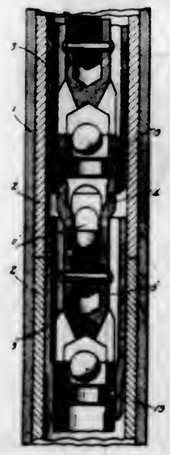
1. A bottle cleaner comprising a rotary rod, a brush connected with the lower end of said rod for turning with the same, a hollow collar loose upon said rod and constituting a bearing adapted to rest upon the upper end of a bottle neck, said collar including an inner cup having a head to rest upon the bottle neck and an upstanding wall and an outer cup removable from the inner cup and having a head supported upon the upper edge of the wall of the inner cup and a depending wall extending downwardly about the inner cup, an abutment carried by said rod between the heads of said cups and adjustable longitudinally of the rod, and means adapted to impart rotary movement to said rod.

1,680,714. VARIABLE-SPEED GEAR. RICHARD COBDEN WORTHINGTON and HERBERT MILNER, Blackpool, England. Filed June 9, 1925, Serial No. 36,063, and in Great Britain June 19, 1924. 5 Claims. (Cl. 74—34.)



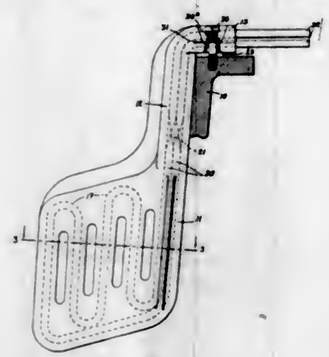
1. Power transmission gearing, comprising a driving shaft provided with a slidable clutch member; a second clutch member provided with a toothed wheel; a disc revolubly disposed around said second clutch member, and with which said first mentioned clutch member is adapted to engage; a toothed wheel formed on said disc; a plate to which a driven shaft is connected; toothed wheels carried by said plate, in mesh with the wheel of said second clutch member; other toothed wheels carried by said plate in mesh with the wheel of said disc, and a one-way internally toothed wheel in mesh with the first-mentioned toothed wheels carried by said plate; means whereby said slidable clutch member may engage said disc under spring influence which also tends to maintain said clutch members in engagement; a brake disposed around said disc and so connnected with said slidable clutch member that when the clutch members are in full engagement the "drive" is "solid" said slidable clutch member being in engagement with the disc which is free to rotate, and when the torque effort or load becomes greater than the power, disengagement or partial disengagement of the clutch members ensue, and the consequential movement of said sliding clutch member causes its withdrawal from said disc, and causes the braking thereof to effect gear reduction; and on the continued increasing of the torque effort or load relative to the power, said disc is unbraked and a further gear reduction takes place; and when the power overcomes the torque effort or load the "drive" automatically returns to second gear and thence to "solid".

1,680,715. COORDINATED BRAKE AND CLUTCH MECHANISM. CLYDE S. WRIGHT and JOSEPH R. MAHAN, Toledo, Ohio, assignors to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 5, 1927. Serial No. 181,055. 4 Claims. (Cl. 192—17.)



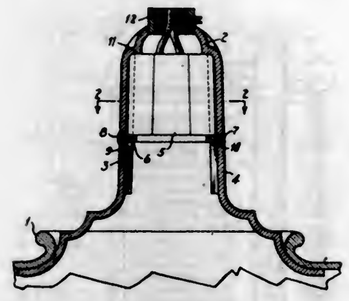
1. The combination of a shaft, a brake drum loose thereon, a clutch mechanism driven by the shaft and adapted to be connected to the brake drum and disconnected therefrom, a lever connected to the said mechanism for operating the same, a braking element for the brake drum, a shaft, means for operating the same, means for operatively connecting the shaft to the braking element, and a rotatable member connected to the latter shaft and having a cam groove to receive the said lever, the said groove being shaped so as to cause the lever to open the clutch when the second shaft is operated so as to set the brake, and to close the clutch when the shaft is operated so as to release the brake.

1,680,716. OIL PURIFIER. DAVID F. ZOOK, Evanston, Ill. Filed Nov. 5, 1926. Serial No. 146,460. 11 Claims. (Cl. 123—196.)



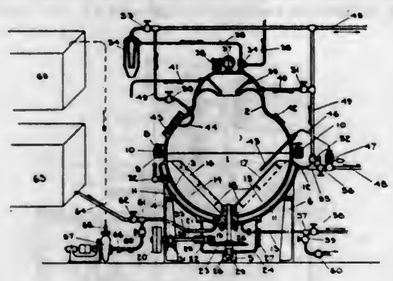
1. In an oil purifying device for internal combustion engines, a chamber having a settling well, means for pumping oil from the crank case into said chamber, whereby a portion of the foreign matter is permitted to settle, means for conducting a clearer portion of the oil to the points of lubrication, means in said chamber for filtering another portion of the oil, and means for conducting the filtered portion of the oil to the crank case.

1,680,717. RECIPROCATING PUMP WITH INDIVIDUAL JOINTS BETWEEN PLUNGERS. JOHN A. ZUALIN, Los Angeles, and WILLARD L. BOROUGH, Fullerton, Calif.; said Borough assignor to said Zublin. Filed Feb. 13, 1924. Serial No. 692,514. 9 Claims. (Cl. 103—194.)



1. A reciprocating pump comprising: a plurality of plungers disposed endwise to each other; and means for loosely connecting said plungers together, said means functioning additionally as a valve cage.

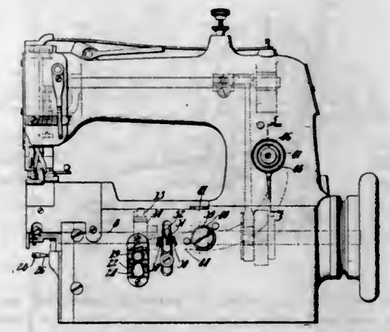
1,680,718. ELECTRIC HEATER. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1927. Serial No. 203,297. 7 Claims. (Cl. 219—41.)



1. An immersion heater for type-metal pots comprising an enlarged body portion and an upwardly extending neck portion and electric heating means for said body portion extending upward into said neck portion whereby the metal is softened around said neck portion to provide a vent at the top for expansion of molten metal at the bottom of said pot.

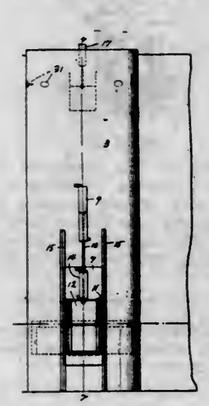
1,680,719. SCREWLESS GLOBE HOLDER. GEORGE AINSWORTH, Great Neck, N. Y. Filed Mar. 3, 1927. Serial No. 172,234. 6 Claims. (Cl. 240—128.)

1. A globe support, comprising a porcelain socket having angular sides, a U-shaped yoke stamped to conform to said angular sides, the ends of the arms of the yoke being extended horizontally, and means to hold said socket between the arms of the yoke and in engagement with said angular configuration.



1,680,720. APPARATUS FOR PASTEURIZING AND DEODORIZING CREAM. FREDERICK LOUIS ARMITAGE, Devonport, near Auckland, New Zealand. Filed July 17, 1925, Serial No. 44,210, and in New Zealand Aug. 2, 1924. 1 Claim. (Cl. 99—15.)

In an apparatus for simultaneously Pasteurizing and deodorizing cream, a container having a top section and a bottom section detachably connected together, froth-repelling means carried within said top section at the top thereof, and scraping means rotatable within the bottom section and in contact with the wall thereof.

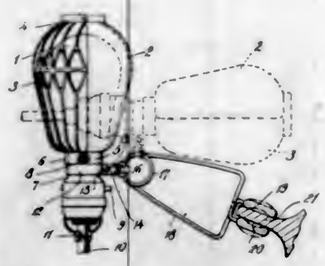


1,680,721. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. RUDOLPH BECKER, Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 4, 1926. Serial No. 85,842. 6 Claims. (Cl. 112—23.)

1. In a thread-nipper mechanism for sewing machines, the combination with coacting thread-nipping members, one of which is active and the other of which is adjustable toward and away from the active member, of an

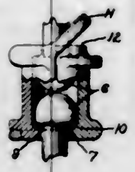
operating cam for actuating the active nipper member having a graduated eccentric nipper-closing portion and an abrupt nipper-opening portion.

1,680,722. FISH ELEVATOR. ARTHUR A. BENNETT and CECIL H. BENNETT, Reedsport, Oreg. Filed Nov. 23, 1926. Serial No. 150,253. 5 Claims. (Cl. 61—21.)



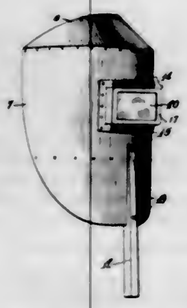
1. In a fish elevator, a vertical hollow casing adapted to receive fish therein and having an opening in the bottom portion thereof and an opening in the top portion thereof, a float-supported grate within said casing for the purpose of confining fish near the surface of the water within said casing, a gate structure associated with the upper opening, a plate associated with the opening in the bottom portion of the casing, said plate having an opening, means for raising and lowering the plate, and a gate structure associated with the opening in said plate.

1,680,723. PORTABLE GARAGE LIGHT. LOUIS BLOOM and GEORGE A. COHAN, New York, N. Y., assignors to Grip-Lite Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 183,279. 1 Claim. (Cl. 240—52.)



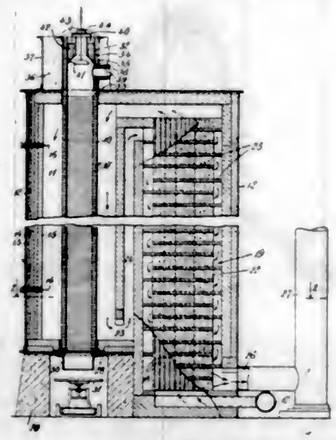
A portable lamp comprising a support provided with a spring coil adjacent one end, a clamp comprising a blank provided with a substantially centrally disposed opening and having its end portions bent to form grooves for the reception of the end portions of said coil, adjustably

mounted on said coil, a screw mounted in the opening in said clamp, a collar having a substantially U-shaped portion provided with an opening through which the screw



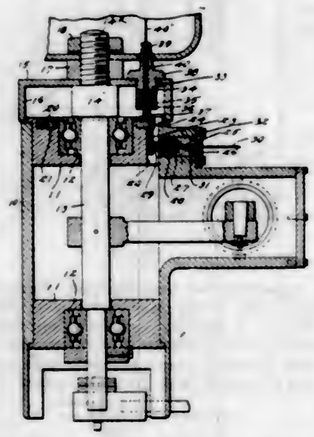
passes whereby the collar is pivotally mounted on said screw, and said collar also having a portion for yieldably engaging a lamp socket.

1,680,724. CONNECTER FOR STRAIN INSULATORS. GEORGE W. BOWER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1921. Serial No. 512,135. 2 Claims. (Cl. 287—113.)



1. A connection for link insulators comprising two heated parts and a coupling consisting of two semicylindrical members, each of said members having internal shoulders for engaging said headed parts and having an attached flexible clip bendable over an end of the other member for securing said members in fixed relation to each other.

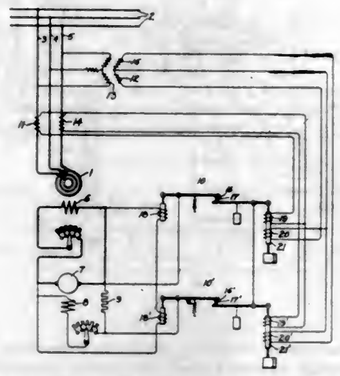
1,680,725. WELDER'S SHIELD. FREDERICK M. BOWERS, Chester, Pa. Filed Dec. 2, 1926. Serial No. 152,121. 2 Claims. (Cl. 2—11.)



1. A welder's shield comprising a body part of arcuate outline having a sight opening therein, said body part being of a length to extend perpendicularly from the forehead to below the chin, an upper guard extending inwardly from the top of the body part to protect the head, a lower guard secured within and to the body part between the bottom thereof and the sight opening, said lower guard projecting inwardly to extend beneath the chin of the welder and act as a reinforcement to the lower portion of the body part, and a projecting handle attached to the lower portion of the body part.

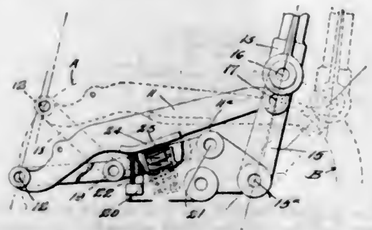
1,680,726. BUILT-UP VERTICAL ZINC RETORT. FRANK G. BREYER and EARL H. BUNCE, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 5, 1927. Serial No. 172,951. 16 Claims. (Cl. 263—29.)

1. An externally heated vertical reducing chamber for the reduction of zinciferous material supported and tied in at its lower end only and built up of a multiplicity of pieces of temperature-resistant material assembled into a substantially zinc-vapor-tight chamber.



1,680,727. DIRIGIBLE HEADLIGHT. JAMES H. BURNFIEL, South Akron, Ohio. Filed Dec. 1, 1927. Serial No. 237,033. 6 Claims. (Cl. 240—61.)

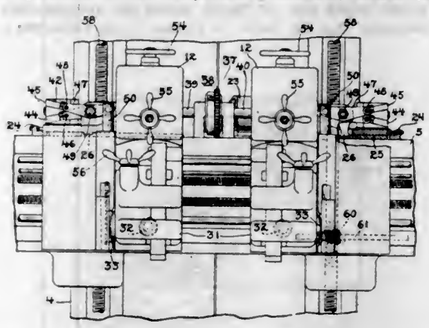
1. In a headlight mounting, a tubular housing, upper and lower supports within and held against rotation with relation to the housing, a headlight supporting shaft rotatable in said supports, a cap for the casing carried by and held against rotation with relation to the shaft, an arcuate contact carried by the upper support and insulated from the casing and having a flange opposing the



casing wall, a brush support directed through the casing wall and having a brush engaging said flange and a second brush support directed through the upper wall of the cap and having a brush engaging the arcuate contact.

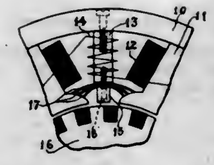
1,680,728. REGULATING SYSTEM. EBERHARD COURTIN, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed June 10, 1927. Serial No. 197,981, and in Germany July 5, 1926. 8 Claims. (Cl. 171—119.)

1. In combination, a generator, an excitation circuit therefor, and means responsive to the voltage and current of said generator for varying the energization of said excitation circuit to limit the generator current during abnormal conditions of generator operation to different predetermined values of current above the normal rated value for different predetermined values of generator voltage.



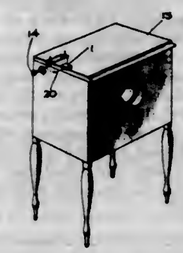
1,680,729. MECHANICAL MOVEMENT FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 16, 1925. Serial No. 62,921. 12 Claims. (Cl. 74—5.)

5. A mechanical movement comprising a frame, a lever fulcrumed on the frame, an actuator connected to one end of the lever, motion transmitting mechanism comprising a link pivoted to the frame and to the other end of the lever and means for causing the power end of the lever to have a crank like movement and cause the lever to serve as a pull link.



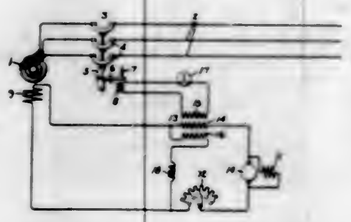
1,680,730. CONTROL SYSTEM. ROBERT C. DEALE and ROSWELL H. RAURCH, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 12, 1924. Serial No. 706,110. 25 Claims. (Cl. 90—52.)

1. In a control system for automatically feeding and clamping a tool support for a machine tool, the combination with a reciprocating member, a main motor for operating the reciprocating member, a cutting tool, and a feed motor for feeding and for traversing the cutting tool, of means for operating the feed motor in accordance with the operation of the reciprocating member, means com-



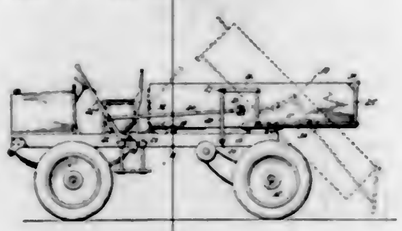
prising a motor for clamping the tool in a set position, and means for operating the clamp motor prior to each feeding movement and immediately after each feeding movement.

1,680,731. MAGNETIC SHUNT FOR DYNAMO-ELECTRIC MACHINES. ROBERT C. DEALE, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 2, 1926. Serial No. 99,309. 7 Claims. (Cl. 171—252.)



5. The combination with a dynamoelectric machine of a magnetic shunt comprising magnetic material of limited cross sectional area positioned between and adapted to engage magnetic pole pieces of opposite polarity, the cross sectional area and permeability of said material being such that it is substantially saturated by the flux due to residual magnetism in said pole pieces.

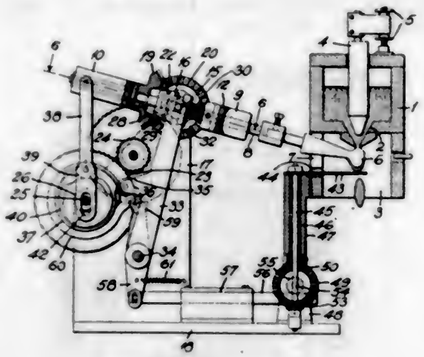
1,680,732. CONTROL APPARATUS. DONALD R. DE TAR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 16, 1927. Serial No. 175,949. 5 Claims. (Cl. 200—54.)



1. The combination of a cabinet comprising a removable cover, a support member mounted on said cover, an electrical switch provided with a control lever and with means tending to maintain said control lever in its open position, and means arranged to be moved between said support and said control lever for moving said lever into its closed position.

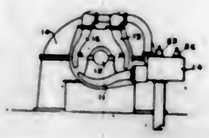
1,680,733. ELECTRICAL SYSTEM AND APPARATUS. RICHARD DIETZE, Pankow, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 13, 1927, Serial No. 160,988, and in Germany Feb. 24, 1926. 8 Claims. (Cl. 175—294.)

1. In an electrical circuit energized by composite excitation comprising a direct and an alternating current component, an inductive device connected in said circuit and having an impedance which permits both of said components of current to flow therethrough with substantially equal facility, and additional means including a winding inductively associated with said inductive device and connected across said circuit in a circuit having an impedance sufficient substantially to prevent a flow of said alternating current component while permitting said direct current component to flow substantially unimpeded therethrough for preventing magnetization of said inductive device by said direct current component.



1,680,734. DUMPING TRUCK. NORMAN S. DUNAWAY, Houston, Tex. Filed Jan. 26, 1926. Serial No. 83,884. 1 Claim. (Cl. 298—22.)

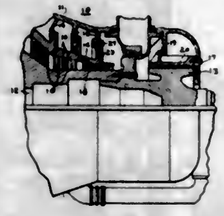
In a dumping truck, the combination with a rearwardly moving tilting body and a tail gate pivoted at the upper end of the body to have an outward swinging movement at its lower end, of tail-gate operating means comprising bell-crank levers pivoted on the sides of the body at the upper ends thereof and each having a forwardly projecting horizontal member and a vertically projecting vertical member, rods connecting the lower ends of the vertical members of the bell-crank levers to the lower end of the tail-gate, and vertical links pivotally connected to the forward ends of the horizontal members of said bell-crank levers and to the chassis, whereby when the body is moved rearward on the chassis and tilted the bell-crank levers and links connecting the same to said chassis will limit the tilting movement.



1,680,735. GLASS-FEEDING METHOD AND APPARATUS. SIDNEY S. GROTTA, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 31, 1924. Serial No. 729,305. 20 Claims. (Cl. 49—55.)

1. A glass feeding apparatus comprising a container having an outlet for discharging glass downwardly, a gathering element disposed beneath said outlet in angular relation to the axial line of the outlet for supporting the glass discharged through the outlet in successive suspended masses, means for moving said implement to periodically interrupt the flow of glass from the outlet, and means for severing mold charges from said suspended masses.

16. The method of feeding glass which comprises flowing glass through an outlet from a container, intercepting the flow by a rotatable gathering element, rotating the gather, moving the said gathering element upward and in line with said outlet, thereby obstructing said outlet and interrupting the flow of glass, permitting the glass to sag from the gathering element, and shearing a mold charge from the depending mass of glass.

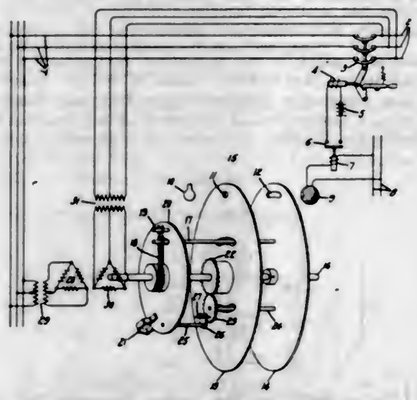


1,680,736. TURBINE VALVE MECHANISM. FRANCIS HODGKINSON and ROBERT C. ALLEN, Swarthmore, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,266. 19 Claims. (Cl. 137—158.)

1. In a governing device for elastic fluid motors having a primary and one or more other valves for the admission of elastic fluid thereto, the combination of speed-responsive means for closing the primary valve and for directly operating all of the valves in opening direction, a separate servo-motor controlled by said speed responsive means for closing each of the valves other than the primary valve and means for fixing the sequence in which the valves open and close.

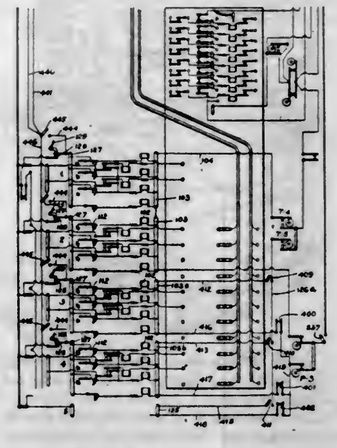
1,680,737. ELASTIC-FLUID TURBINE. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1924. Serial No. 758,403. 2 Claims. (Cl. 253—69.)

1. In a turbine, the combination of a casing provided with an annular shoulder having an outwardly facing cylindrical surface and a blade-carrying element provided with an annular shoulder having an inwardly facing cylindrical surface engaging over the first cylindrical surface, said cylindrical surface each being of substantially uniform radius throughout and said shoulders being so formed that



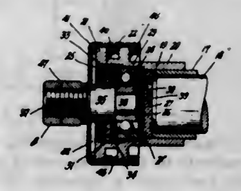
the blade carrying element may have its shoulder brought into position and removed from the casing shoulder by axial movement of the blade-carrying element.

1,680,738. SEAL FOR ELECTRIC DEVICES. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,831. 6 Claims. (Cl. 250—27.5.)



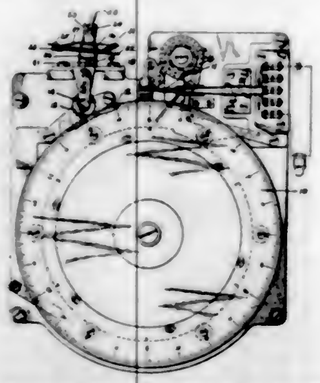
1. A gas-tight seal for electrical devices comprising a plurality of cylindrical layers of glass and a plurality of cylindrical layers of metal, the glass layers being spaced from one another by the metal layers, each layer of glass making a gas-tight joint with the adjoining metal surface.

1,680,739. SYNCHRONIZING DEVICE. LUKE F. KENNEDY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1926, Serial No. 106,995. Renewed Apr. 21, 1928. 12 Claims. (Cl. 171—118.)



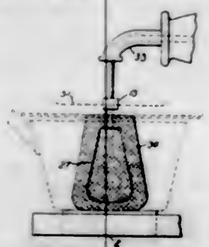
1. The combination of a plurality of alternating current circuits, means for interconnecting said circuits, and means comprising a light responsive device for causing said interconnecting means to be energized at an instant of time preceding phase coincidence in the voltages of said circuits by a time interval which is substantially constant over a predetermined range in the difference between the frequencies of said circuits.

1,680,740. PRINTING TABULATOR. CLAIR D. LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Mar. 26, 1924. Serial No. 701,941. 19 Claims. (Cl. 235—58.)



1. A tabulating machine of the printing type having in combination with provisions for preparing lists of individual items derived from perforated records and for printing the totals of said items, automatically operable means for suppressing the listing of individual items in certain columns, said means having provisions for automatically permitting the machine to print totals of the items in said columns, the listing of which has been automatically suppressed.

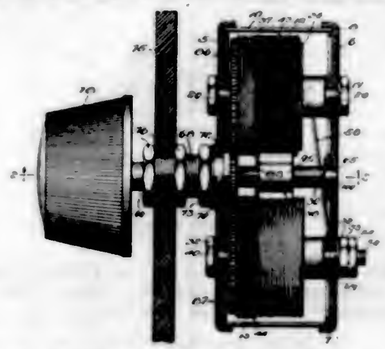
1,680,741. BEARING STRUCTURE FOR VACUUM-CLEANER BRUSHES AND THE LIKE. HENRY T. LANG, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Feb. 8, 1927. Serial No. 166,771. 3 Claims. (Cl. 308—186.)



1. A bearing structure for vacuum cleaner brushes and the like, said structure comprising a tubular member having a flanged end provided with an annular groove, a cup-shaped member surrounding said flanged end in coaxial close running spaced relation thereto, said annular groove forming therewith an annular chamber, said cup-shaped member being spaced from the end of the tubular member to provide a second chamber between said end and the first chamber, a stud which extends axially into said tubular member through the second chamber and cup-shaped member, a bearing in said tubular member, said bearing having a radially inner rotatable member secured to the stud and a radially outer member seated in the tubular member, and means for securing said bearing member therein.

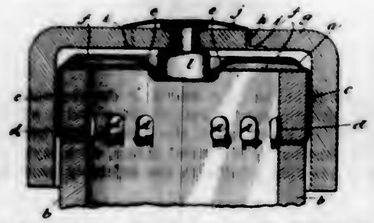
1,680,742. DRIVING DEVICE FOR PROGRAM CLOCKS. CLINTON E. LARRABEE, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Oct. 28, 1924. Serial No. 746,295. 2 Claims. (Cl. 74—14.)

1. In a device of the class described, in combination, a clock driving shaft, a program device, means for periodically imparting movement derived from continuous movement of the driving shaft to said program device in steps of definite magnitude, said means comprising a fixed ratchet, a member connected to drive the program device and having a pawl cooperating with said ratchet, a member driven by the clock driving shaft with provisions for controlling the coaction of the pawl and ratchet, and a spring connecting the said members and adapted to advance the first mentioned member upon the release of the pawl from the ratchet.



1,680,743. ELECTRIC HEATING DEVICE. FREDERIC WILLIAM LEEVERS, London, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 29, 1925, Serial No. 59,298, and in Great Britain Oct. 15, 1924. 3 Claims. (Cl. 219—41.)

2. An electric heating device comprising a tubular support, switch contacts in the lower end of said support, a plug rotatably and slidably mounted in said support, switch contacts carried by said plug arranged to engage the switch contacts in said support, an arm secured to said plug, an electric immersion heater carried on the end of said arm electrically connected to the switch contacts carried by said plug, and means for securing said plug in a raised position until it has been rotated in said support to bring its switch contacts into alignment with the contacts on said support.



1,680,744. RHEOSTAT. ALFRED F. C. LOTZ, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1925. Serial No. 62,522. 5 Claims. (Cl. 201—59.)

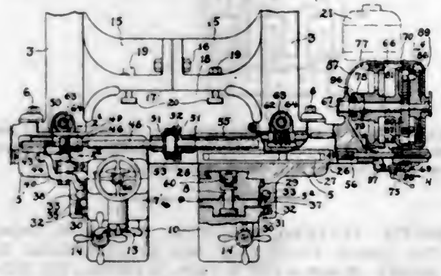
1. In a resistance device, the combination of a drum, a contact on said drum, a resistance conductor connected to said contact and adapted for winding upon and unwinding from the drum, and means of relatively high conductivity

along the effective terminal portion of said resistance conductor for decreasing the resistance of said terminal portion beyond the normal resistance of said conductor.

1,680,745. BOX-LOCKING DEVICE. HARRY D. MORTON, New York, N. Y. Filed June 13, 1924. Serial No. 719,764. 11 Claims. (Cl. 229—47.)

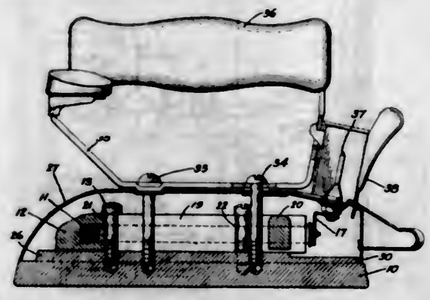
1. A self-locking telescoping box, comprising a body member and a cover member, locking means projecting inwardly from the cover member and co-acting locking means attached to said body member, a portion of the latter locking means spanning two edges of the body member and extending across a portion of adjacent walls thereof and over a portion of the intervening space therebetween.

1,680,746. METHOD OF MOLDING BOTTLES IN SINGLE-MOLD MACHINES. KARL E. PEILER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 6, 1923. Serial No. 678,900. 5 Claims. (Cl. 49—18.)



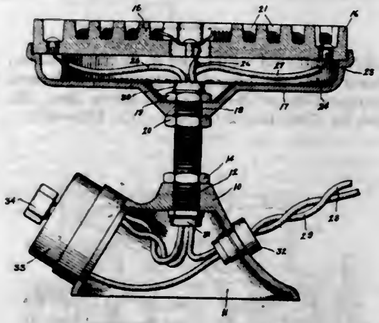
1. The process of making hollow glassware that comprises depositing a charge of molten glass in a cavity of a finish blow mold, compacting the glass in the lower end of said cavity to form the neck finish of the ware, applying blowing pressure to said charge and directing cooling air through the charge receiving end of said mold while it is open to chill the exposed portion of said mold charge.

5. The process of making hollow glassware that comprises depositing a charge of molten glass in the mold



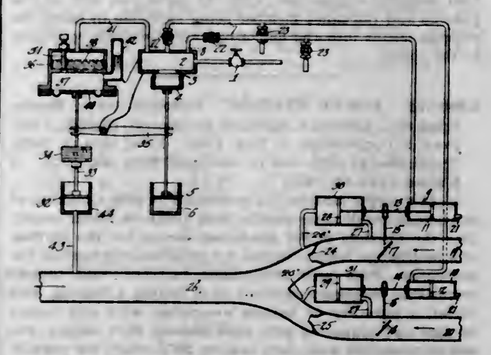
cavity of an inverted blow mold through the open bottom portion thereof, compacting the mold charge in the lower portion of said cavity by fluid pressure applied above the glass, expanding the mold charge into contact with the walls of said cavity by fluid pressure applied below the glass and simultaneously applying cooling air through the open bottom portion of said molds to chill the exposed portion of the glass during the expanding operation, moving said mold to a neck-up position, applying a bottom closure to the open end of said mold, allowing the glass to sag under the action of gravity and expanding the glass to final form in said mold.

1,680,747. TOOL FEEDING AND CLAMPING MECHANISM FOR PLANERS. CLIFFORD F. RANDOLPH, ROSWELL H. RAUSCH, and NICHOLAS MARCALUS, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 16, 1923. Serial No. 675,203. 33 Claims. (Cl. 90—52.)



3. In a metal planing machine, the combination of a support, a member thereon, means for rigidly securing the member to the support, a feed gear operatively connected to the member, a rotary element, a motor for rotating the element alternately in opposite directions, means providing a driving connection between the feed gear and element, a cam operative to disconnect the driving connection at a predetermined point of the rotation in one direction, continued rotation of the motor operating on the first named means thereafter to secure the member to the support, rotation of the motor in the opposite direction being adapted to operate the first said means to release the member and thereafter rotate the feed gear in the opposite direction, a stop operative to stall the rotation of the feed gear and motor in the last mentioned direction, and means for adjusting the last named stop whereby to vary the amount of rotation imparted to the feed gear.

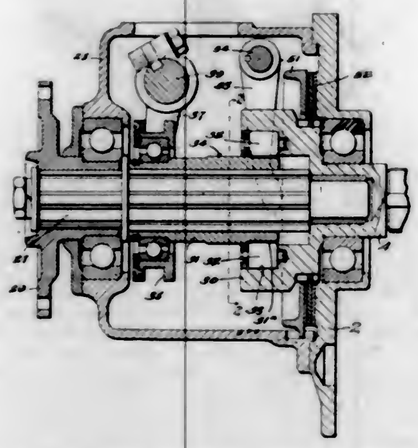
1,680,748. ELECTRICALLY-HEATED DEVICE. JACOB L. SHROYER, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Sept. 28, 1925. Serial No. 58,972. 9 Claims. (Cl. 219—25.)



5. An electric flatiron comprising a sole plate, an encased heating unit having substantially the same shape as said sole plate, a metallic member in which said unit is cast providing a zone of thick metal surrounding said unit, and means for securing said member to said sole plate in good heat conducting relation therewith.

1,680,749. ELECTRIC HEATER. JACOB L. SHROYER, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Dec. 22, 1925. Serial No. 77,102. 1 Claim. (Cl. 219—37.)

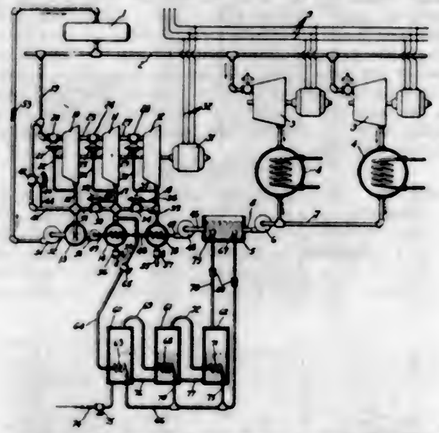
An electric heater comprising a hollow base provided with central and side apertures, a tubular member threaded in said central aperture so as to be vertically adjustable relatively to said hollow base, a circular supporting member provided with a peripheral upwardly turned flange and a central aperture, said tubular member being threaded to said circular supporting member in said aperture, a lock nut threaded on said tubular member for engagement with said circular supporting member, a disk-shaped heat refractory support resting on said flange in spaced relation with said supporting member, a heating resistance conductor mounted on said heat refractory support, connecting leads extending through a side aperture in said base upward through said tubular support and through the space between said heat refractory support and said supporting member to said resistance conductor and a switch for said heating conductor mounted on said base member and included in said leads.



1,680,750. REGULATOR. CHARLES H. SMOOT, Maplewood, N. J. Filed Oct. 22, 1926. Serial No. 143,414. 9 Claims. (Cl. 137—78.)

1. In a regulator, the combination with apparatus to be controlled for variable quantities with set requirements, a master controller adapted to respond to said requirements, local control means for regulating different elements of supply, separate means leading from the master controller

to each of the local controls whereby the master controller causes the local controls to respond to the requirements according to set ratios, each local control being checked in its response to the set requirements by counteracting means responsive to the element being so controlled, and compensator mechanism connected to the master controller whereby the master controller upon each change of requirement makes a corresponding initial change in the setting of the several local controls to meet the change in requirement and after a prescribed time allows the said setting of the local controls to become normal for the new requirements.

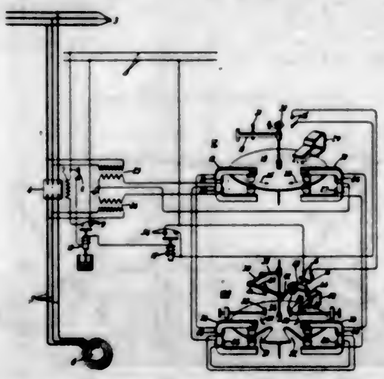


1,680,751. CLUTCH. CHARLES B. SPARE, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 19, 1924. Serial No. 750,945. 2 Claims. (Cl. 192—38.)

1. A transmission mechanism comprising shafts arranged in axial alinement, one of which drives the other, a clutch between the shafts including wedging means arranged to come into positive engagement gradually, said wedging means including outer and inner elements, the outer element having a radially extending passage, a roller in the passage and the inner element having a cam for gradually moving the roller radially in the passage into final wedging engagement with the outer end wall of the passage and the inner member being shiftable to carry the wedging means into and out of operative position relatively to the roller.

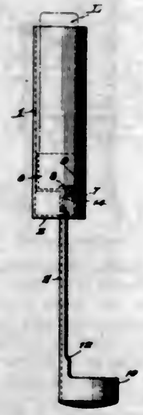
1,680,752. POWER STATION. THEODOR STEIN, Berlin-Friedenau, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 5, 1925, Serial No. 13,409, and in Germany Mar. 22, 1924. 3 Claims. (Cl. 60—95.)

1. In a power station, the combination with a number of multistage condensing elastic fluid turbines which constitute the primary power producing means for the station, of a multistage heater turbine for progressively heating the condensate from said first-named turbines, said turbine comprising successive sections each having a heating fluid outlet, a plurality of heaters associated with said heater turbine and connected with said heating fluid outlets, and means connected with each heating fluid outlet for regulating each heater turbine section in accordance with the demand for heating fluid therefrom, said means comprising a conduit interposed between each section, a supply conduit for the initial section, a regulating valve in each of said conduits and in the supply conduit, and a regulator responsive to a condition of the heating fluid connected with each of said valves to operate the same, whereby each section is controlled by a separate regulator, each regulator being connected with the heating fluid outlet of the



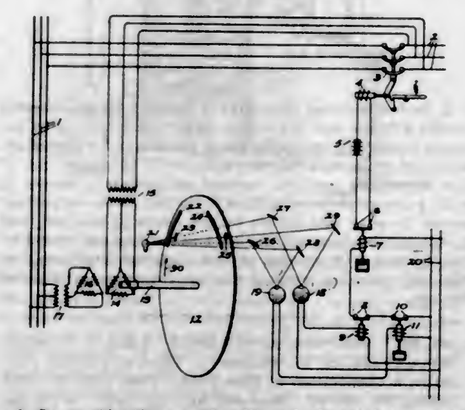
section which it controls whereby the control of said section is effected thereby in response to changes in the condition of the heating fluid from said section.

1,680,753. PLAYGROUND CHUTE. RICHARD W. THORNTON, Denver, Colo. Filed July 19, 1926, Serial No. 123,393. Renewed June 9, 1928. 3 Claims. (Cl. 272—56.5.)



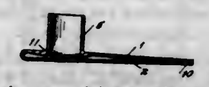
1. In an article of the class described, a chute having a flat bottom and parallel sides extending vertically therefrom, the sides having their upper edges formed into cylindrical rolls whose axes lie in the plane of the sides.

1,680,754. SYNCHRONIZING DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1926, Serial No. 150,606. Renewed Apr. 21, 1928. 7 Claims. (Cl. 171—118.)



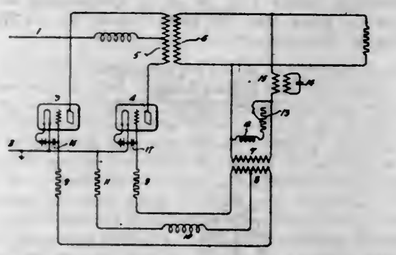
1. In combination, two alternating current circuits, switching means for connecting the circuits, and means connected to be energized in accordance with the difference between the effects of the sum of and the difference between the electromotive forces of the circuits for starting the closing operation of the switching means only at a definite predetermined phase difference of the electromotive forces when the difference between the frequencies of the electromotive forces is less than a predetermined value.

1,680,755. LIP-STICK HOLDER. RALPH W. WILSON, New York, N. Y., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Dec. 24, 1926. Serial No. 156,917. 2 Claims. (Cl. 206—56.)



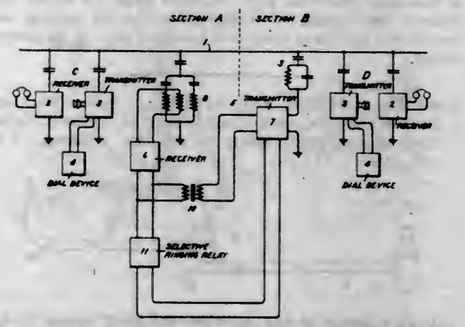
2. In a lip stick holder, a tubular body having a closed bottom formed with a slot which latter extends through a side of the holder, a lip stick carrier slidable in the body, a loop extending through an opening provided therefor in the bottom of the carrier and having one leg secured to said bottom and its other leg extending upwardly to engage and hold the lip stick, a closure slidable on the body and having an arm formed to engage a side of the body, said arm being movable through said slot and having an offset perforated to receive the loop whereby to hingedly connect the arm to the carrier.

1,680,756. SYNCHRONIZING DEVICE. FRED H. WINTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 26, 1926, Serial No. 150,869. Renewed Apr. 21, 1928. 14 Claims. (Cl. 171—118.)



1. In combination, a plurality of alternating current circuits, means for connecting said circuits and means comprising a light responsive device for starting the closing operation of the connecting means at a predetermined phase difference of the electromotive forces of the circuits when the difference between the frequencies of the electromotive forces is less than a predetermined value for a predetermined time.

1,680,757. FLUTTER VALVE. MAX YABLICK, Newark, N. J., assignor to Mine Safety Appliance Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1924. Serial No. 747,437. 6 Claims. (Cl. 251—122.)

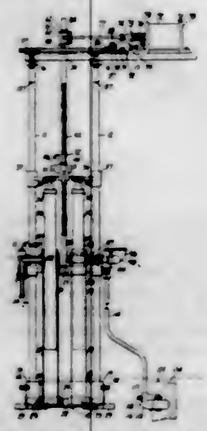


1. A flutter valve comprising a pair of walls, one of said walls including a vibrating, sound-intensifying portion and the other wall being provided with a neck at an angle thereto and the base of said neck being adapted to engage with the first-named wall to form a valve-closing mechanism and means at the base of said neck for guarding the wall having the sound-intensifying portion against excessive inward indention by suction.

1,680,758. SYSTEM OF DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,571. 5 Claims. (Cl. 175—363.)

1. The combination in a system of electrical distribution of a source of direct current, a winding connected to said source through an electric valve, a consumption circuit associated with said winding, and means comprising a reactance saturable in response to a predetermined condition of said circuit and connected between said valve and said circuit for controlling the action of said valve to supply current impulses to said winding.

1,680,759. CARRIER-CURRENT SYSTEM. EDWARD AUSTIN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 2, 1925. Serial No. 27,604. 4 Claims. (Cl. 179—15.)



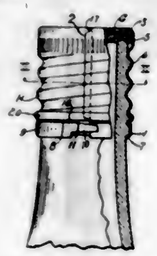
1. In a system for carrier current communication or the like, a plurality of remote stations, a transmitter at each station for supplying a certain frequency to the system, a

receiver at each station responsive to another frequency, a main receiver connected to the system at a point between said stations and which is responsive to the frequency of said transmitters, a main transmitter connected to the system at a point between said stations to supply to the remote receivers said other frequency, a plurality of connections between said main receiver and said main transmitter whereby the operation of said main transmitter may be controlled from any remote station, one of said connections including a selective ringing circuit, and means at each remote station for initiating the operation of the main transmitter and controlling the ringing circuit.

1,680,760. PROCESS FOR THE PREPARATION OF ETHYLIDENE DIACETATE. MAURICE ERNEST BOUVIER and LUCIEN HUGONIOT, Lyon, France, assignors to Societe Chimique des Usines du Rhone, Paris, France. Filed Aug. 18, 1925, Serial No. 51,038, and in France June 13, 1925. 5 Claims. (Cl. 260—106.)

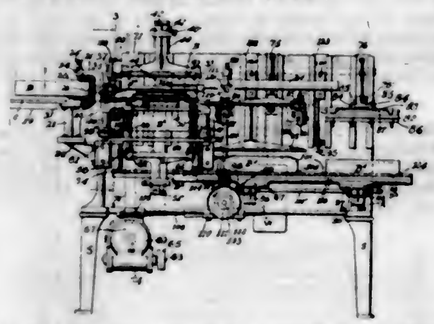
1. A process of preparing ethylidene diacetate by absorption of acetylene in acetic acid in the presence of a mercury salt, which consists in carrying out the reaction at a temperature below the boiling point of the liquid in the presence of a strong acid and of acetic anhydride in such quantity that, when the absorption is completed, there still remains some acetic anhydride in the liquid.

1,680,761. LUBRICATING MECHANISM. THOMAS BRADY, East Orange, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1925. Serial No. 31,574. 3 Claims. (Cl. 184—21.)



1. A lubricating device comprising, a plurality of lubricant reservoirs open to the atmosphere at their upper ends, a lubricant outlet in each reservoir near the upper end thereof, and volumetric displacing means for causing the overflow of lubricant from each reservoir into its respective outlet.

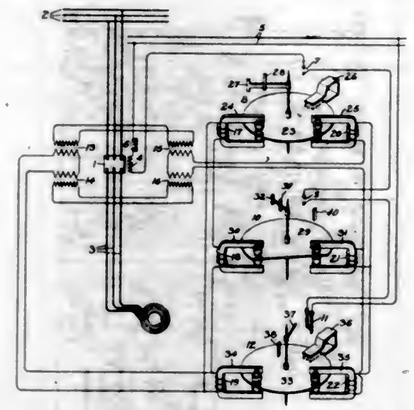
1,680,762. DOUCHE AND SYRINGE. JAMES WILLIAM BUTLER and LAWRENCE WILLIAM BUTLER, Burbank, Calif. Filed May 11, 1927. Serial No. 190,530. 4 Claims. (Cl. 128—248.)



1. In a device of the character disclosed, means of attachment with a source of liquid supply, means adapted to hold a medicated liquid, means of communcation between the first and second named means whereby liquid received in the first named means is directed to the second named means, and movable means in said second named means adapted to be acted upon by the liquid from the source of liquid supply to thereby cause flow of any medicated liquid within said second named means.

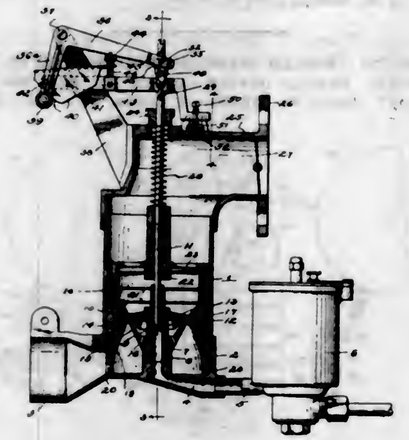
1,680,763. RECEPTACLE CLOSURE. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Oct. 29, 1921, Serial No. 511,392. Divided and this application filed June 30, 1924. Serial No. 723,146. 3 Claims. (Cl. 215—43.)

1. A receptacle closure comprising a cover part and a one-piece screw threaded skirt part, the skirt part having a side seam therein, the lower portion of the skirt part being adapted to be bent inwardly to constitute a holding means to retain the closure in sealing position upon a receptacle, and said skirt part having a vertical slit extending upwardly from the bottom edge thereof and having a finger grip continuing from one wall of said slit by which to tear off the lower portion of the skirt part, said wall of the skirt part being spaced from the seam for the purpose set forth.



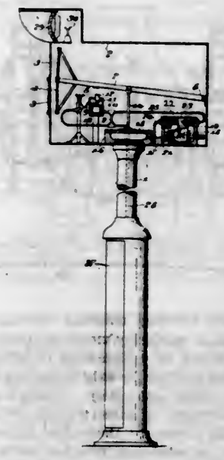
1,680,764. BOX-COVERING APPARATUS. ROBERT G. CLARK, Brooklyn, N. Y. Filed Nov. 16, 1926. Serial No. 148,658. 65 Claims. (Cl. 93—54.)

1. In box covering apparatus, a support for an adhesive coated wrapper and box one in register one relative to the other, supporting means to which the box and wrapper are delivered from said support adapted to be moved out of box supporting position, vertical reciprocatory means to exert a downward moving force to the box on the supporting means to move said means to box releasing position, and means relative to which the box and wrapper are moved by the downward movement of said reciprocatory means to fold and press the wrapper against the sides and ends of the box.



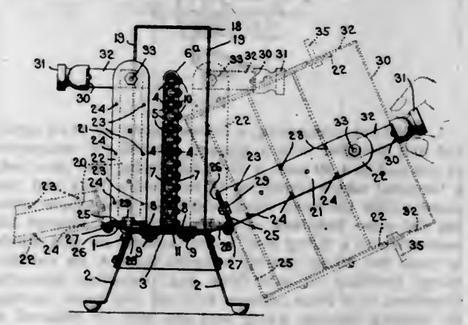
1,680,765. CONTROL APPARATUS. AMOS C. CONNELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 23, 1926, Serial No. 90,082. Renewed Apr. 21, 1928. 9 Claims. (Cl. 171—118.)

1. The combination of two alternating currents systems, and means for controlling the interconnection of said systems comprising a control circuit, a relay operable to complete a connection of said circuit only when the difference between the phases of said systems does ot exceed predetermined limits which include phase coincidence, a relay



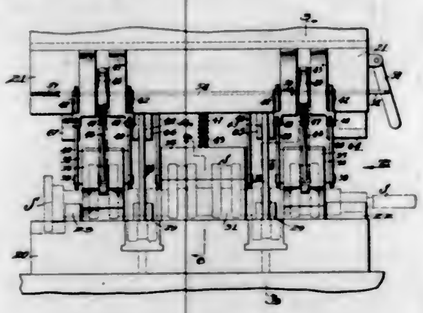
operable to complete said circuit within said limits and at a time preceding phase coincidence, and a relay operable within said range to interrupt said circuit prior to said time when the difference between the system frequencies is less than a predetermined value.

1,680,766. CARBURETOR. JOHN W. COTTINGHAM, Columbus, Ohio. Filed June 26, 1925. Serial No. 39,706. 2 Claims. (Cl. 261—44.)



1. In a carburetor for an internal combustion engine, a casing, a fuel inlet nozzle within said casing and including an annular atomizing head, a stem for controlling fuel flow through said nozzle, a piston responsive to engine suction movably mounted within said casing, an operating member movable in unison with said piston, a bell crank lever journaled exteriorly of said casing and connected with said operating member, a fulcrum lever for raising and lowering said stem, said lever including a cam surface, and means provided in connection with said bell crank lever cooperative with said cam surface to rock said fulcrum arm and effect thereby changes in the operating position of said valve stem.

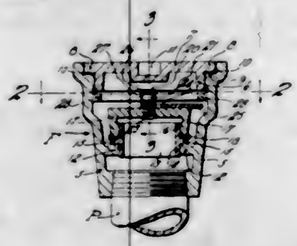
1,680,767. RAILWAY-CROSSING SIGNAL. GUSTAF DALÉN, Stockholm, Sweden, assignor to American Gas-accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 11, 1922, Serial No. 593,697, and in Sweden Oct. 14, 1921. 4 Claims. (Cl. 246—130.)



4. A railway crossing signal device, comprising, in combination, signal discs, an oscillatable lever for supporting said discs, a gas burner located behind the said discs, a conduit having a passageway through which gas is adapted to be supplied to the said burner, a casing one side of which is closed by a movable diaphragm the movements of which are adapted to be caused by variations of gas pressure within the said casing, an electrically controlled valve for controlling the flow of gas from the passageway in said conduit into said casing, a valve for controlling the flow of gas through said conduit, means for normally holding the said last mentioned valve in closed position, a connection between the said diaphragm and the said oscillatable lever whereby the variations of the gas pressure in the said casing cause oscillatory movements of the said lever, and means whereby the said movements effect opening and closing movements of the second named valve.

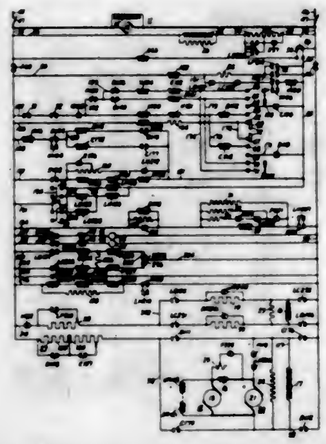
1,680,768. ELECTRIC TOASTER. WILLIAM H. DALTON, Salem Mass. Filed July 1, 1924. Serial No. 723,486 4 Claims. (Cl. 53—5.)

1. In a toaster, the combination with a frame, of a heating element thereon, a swinging support mounted on the frame and a bread-holding element swivelled to said support to turn about an axis that is situated at right angles to the axis of the swinging support.



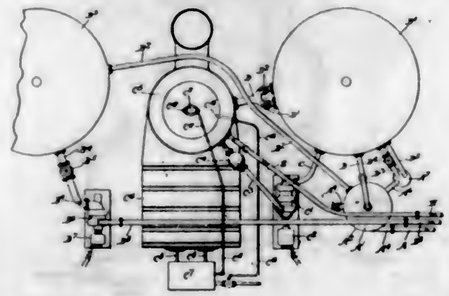
1,680,769. CRANK-SHAFT-TWISTING MACHINE. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1926. Serial No. 93,741. 32 Claims. (Cl. 29—6.)

19. A crankshaft twisting machine having, in combination, a twisting die, a vertically movable actuating member, and a retaining device by which said twisting die is normally held in raised position by said actuating member, said retaining device being manually releasable before the crank twisting movement of said twisting die by said actuating member, and means to thereafter automatically restone said device to retaining relation with said die before the return movement of said actuating member.



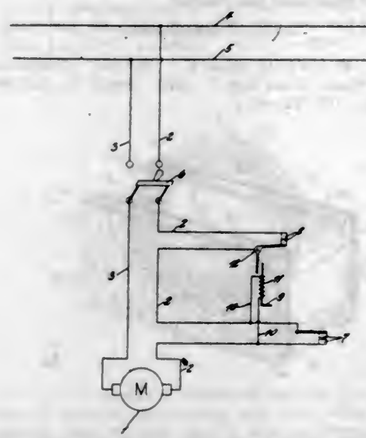
23. A crankshaft twisting machine having, in combination, means to hold a flat forged crankshaft with the cranks disposed substantially in a vertical plane, an actuating head, and an upper twisting die connected by a yielding compressible link and by a lost-motion positive link to said head, said twisting die receiving a twisting movement through said links as said head descends.

1,680,770. FILL BOX. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1927. Serial No. 161,632. 2 Claims. (Cl. 220—86.)



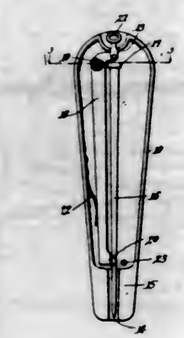
1. A fill box, comprising, a hollow body open at its upper end and provided with a passage adapted for connection at one end to a fill pipe, a cover for closing said open end, a threaded nipple connected to the hollow body and disposed within the same below said cover, said nipple forming the other terminus of said passage and adapted for connection to a filling hose, a cap threaded on said nipple to close the filling opening afforded thereby, an annular flange provided on said body and projecting inwardly therefrom in a plane between said cap and cover, leaving an opening through which said cap may be removed, a locking member slidably mounted on said cap and adapted to be projected outwardly beyond the periphery thereof into underlying relation with said flange to prevent the cap from being lifted through said opening, and means whereby said member may be locked to said cap in its projected position.

1,680,771. CONTROL SYSTEM FOR ELEVATORS. LEE I. DAVIS, New York, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 9, 1926. Serial No. 93,451. 21 Claims. (Cl. 172—152.)



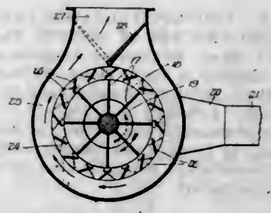
1. In combination; an elevator car; a hoisting motor therefor; a generator for supplying current to said motor, said generator having a field winding; means for causing said motor to level the car with a desired landing in stopping, regardless of whether it underruns or overruns the landing; and means for causing the application of less voltage to said field winding upon the operation of the first named means to cause the motor to bring the car to the landing upon an underrun than upon the operation of the first named means to cause the motor to return the car to the landing after an overrun.

1,680,772. BOILER WASHING AND REFILLING DEVICE. MURILLO DOWNER, Chicago, Ill. Filed Mar. 19, 1927. Serial No. 176,684. 7 Claims. (Cl. 122—396.)



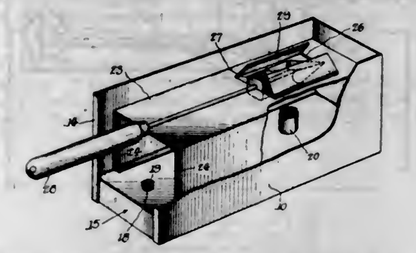
1. In locomotive handling equipment, a blow-off and refill plant which includes an inlet connection adapted to be connected to a locomotive boiler, a separating means associated with said inlet connection adapted to separate impurities from the inflowing steam and water, a refill receptacle, means for directing thereto the inflowing steam from the separating means, a boiler, a water line from the refill tank to the boiler, a refill line extending from said boiler to the point of use, a return line from the boiler to the refill tank and a thermostatically operated valve associated therewith and adapted to permit flow from the boiler to the refill tank when the boiler water reaches a predetermined temperature.

1,680,773. POWER CIRCUIT FOR ELECTRIC MACHINES. VIRGIL E. DUEMLER, Maplewood, and GEORGE R. KOELN, St. Louis, Mo., assignors, by mesne assignments, to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 19, 1925. Serial No. 3,405. 4 Claims. (Cl. 171—97.)



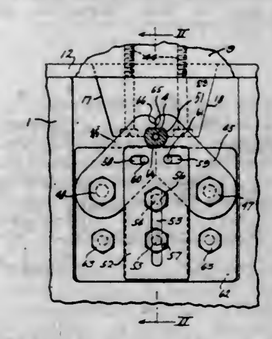
1. The combination with an electric machine, of a power circuit therefor, an automatic primary switch for said circuit, a secondary switch movable manually to closed and automatically to open position, a shunt circuit connected across the automatic primary switch, said shunt circuit including a resistance element, and a thermostatic element in association with the resistance element for opening said secondary switch.

1,680,774. ICE PICK. JAMES NOBLE EDELIN, Washington, D. C. Filed Apr. 14, 1926. Serial No. 102,029. 9 Claims. (Cl. 83—62.)



1. An ice pick comprising a hollow handle member closed along its sides and provided with openings in its opposite ends, a protractile pick member freely slidable within said handle member and adapted to be projected from the handle member ready for use or retracted within the handle when not in use, a pivotally mounted lever housed within said handle portion and having an operating portion extending through the upper end of the handle member, and spring means engaging said lever for yieldingly urging it against said pick member to hold it in retracted position.

1,680,775. REVERSIBLE BLOWER APPARATUS. PAUL FABER, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed May 31, 1927, Serial No. 195,266, and in Germany June 9, 1926. 10 Claims. (Cl. 230—116.)

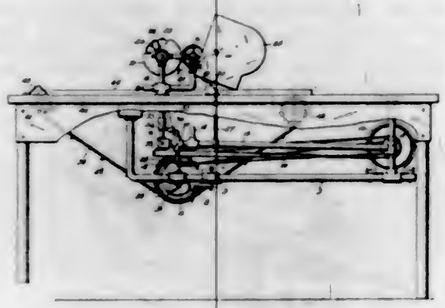


1. Blower apparatus comprising the combination with a reversible prime mover, of a reversible rotary blower, and means for varying the entry direction of air to the blower.

1,680,776. SOLDERING FURNACE. ERNEST DAVID FAHLBERG, Madison, Wis., assignor to E. D. Fahlberg Mfg. Company, Madison, Wis., a Corporation of Wisconsin. Filed Sept. 29, 1924, Serial No. 740,462. Renewed Jan. 21, 1928. 8 Claims. (Cl. 126—239.)

3. A soldering furnace having, in combination, a body in the form of a box, a fuel container forming the bottom of said box, a burner on said container, a removable tool holder and burner hood in said box, and means for closing said box.

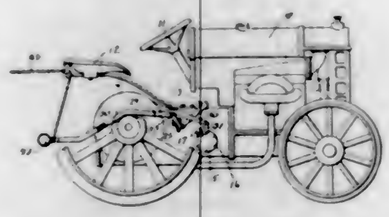
1,680,777. VALVE-STEM-LOCKING MEANS FOR INNER-TUBE MOLDS AND THE LIKE. WALTER L. FAIRCHILD, New York, N. Y. Filed May 10, 1926. Serial No. 107,902. 3 Claims. (Cl. 18—43.)



1. Apparatus of the character described comprising, a plurality of mold sections adapted when placed in mating relation to form an annular vulcanizing chamber fitted to

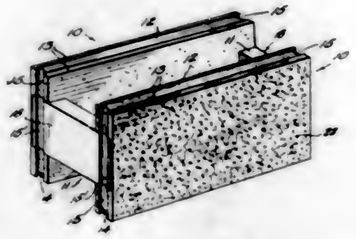
receive a tube to be vulcanized, a recess formed in one of said sections and having a cavity fashioned to receive a valve stem of said tube, a locking block adapted to fit into said recess for locking the valve stem in the cavity, and means for ensuring the proper seating of the valve stem in said cavity.

1,680,778. PRODUCT VALUABLE AS DISPERSING AGENT AND PROCESS OF MAKING SAME. FRIEDRICH FELIX, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 23, 1927, Serial No. 193,738, and in Switzerland May 29, 1926. 4 Claims. (Cl. 260—2.)



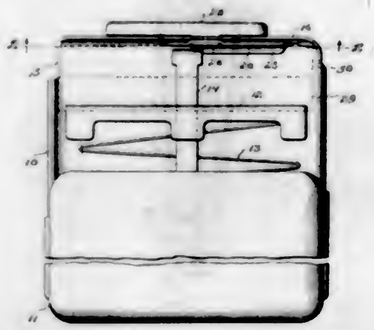
1. The herein described process for the manufacture of a new product, by treating the resinous residue, which is obtained as by-product at the rectification of benzaldehyde, with sulfonating agents.

1,680,779. BREAD-SPLITTING MACHINE. JOHN C. FREEMAN, Jeffersonville, Ind. Filed Jan. 25, 1926. Serial No. 83,552. 18 Claims. (Cl. 107—8.)



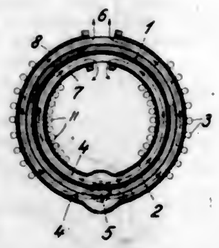
1. In a bread splitting machine, means for making an incision, conveyor means traveling in the direction of the incision-making means, means for automatically raising and lowering the incision-making means at predetermined intervals, lock means for preventing the lowering of the incision-making means at inopportune times, said lock means being set in the path of the object carried on the conveyor and adapted by contact with the latter to be automatically released.

1,680,780. LEVER ATTACHMENT FOR REMOTE CLUTCH CONTROLS. DAYTON H. GILSON, Rushville, Ind. Filed Apr. 12, 1923. Serial No. 631,569. 8 Claims. (Cl. 180—77.)



1. The combination of a tractor having a clutch operating foot pedal lever swingingly supported, a bar construction pivotally supported by said lever and having an end normally positioned above the swinging support of the lever when the clutch lever is in its uppermost position, a link pivotally connected to said bar construction intermediate the ends thereof and pivotally supported by the tractor beneath the swinging support of the clutch lever, said link being relatively movable towards and away from the foot pedal portion of the clutch lever in the swinging movement of the clutch lever, and a single control line connected to the bar construction for starting and stopping the tractor through uni-directional pull thereof.

1,680,781. BUILDING BLOCK. SEVERIN GANGMARK, Seattle, Wash. Filed Aug. 7, 1926. Serial No. 127,790. 6 Claims. (Cl. 72—44.)

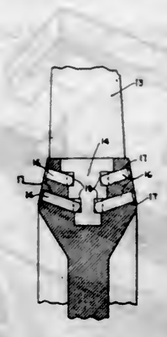


1. A building-block comprising two spaced apart concrete slab sections, wooden bridge plates having their ends embedded in the respective sections to receive fastenings for securing the adjacent blocks of a course thereof together, the outer surface of a plate being in a plane with the outer extremity of the slab sections at each end of the block, grooves provided in the ends of the slab sections and extending across the respective plates, and tongues and grooves provided along the upper and lower longitudinal edges of the respective slabs.

1,680,782. CIGARETTE CASE. ERNEST GREGORY, New Haven, Conn., assignor to The Lyons Manufacturing Company, Hamden, Conn., a Corporation of Connecticut. Filed May 12, 1927. Serial No. 190,848. 5 Claims. (Cl. 206—41.)

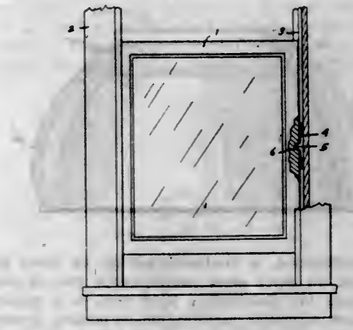
4. In combination with a cigarette case having one wall with a slot therethrough; an ejector mechanism, comprising an ejector plate having a side wall that terminates at one end in a finger and a plurality of offset portions at one side thereof, and a foot portion that projects laterally from the bottom of the side wall in a direction opposite to the offset portions, a pressure case upon that side of the wall opposite to the ejector plate having inwardly turned portions that project through the said slot and terminate in wing portions within one of said offset portions; and a spring within the pressure case having contact at one end with a portion of said wall.

1,680,783. HIGH-FREQUENCY APPARATUS. FRITZ GUTZMANN, Charlottenburg, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Aug. 26, 1926, Serial No. 131,576, and in Germany Sept. 19, 1925. 3 Claims. (Cl. 175—356.)



1. In high frequency apparatus, an iron core, a cooling chamber spacedly surrounding said core, influx and efflux ports in said chamber, and a winding surrounding said chamber.

1,680,784. CONTROL SYSTEM FOR ELEVATORS. HERBERT L. HEART, New York, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 9, 1926. Serial No. 93,453. 13 Claims. (Cl. 172—152.)

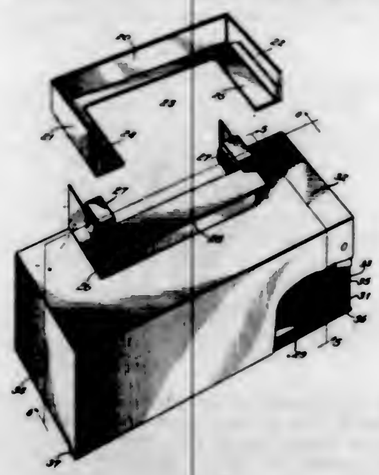


1. In combination, an elevator car, a hoisting motor therefor, a generator for supplying current to the motor, means for causing the motor to bring the car to a level with a desired landing in stopping, regardless of whether it underruns or overruns said landing, and means controlled by the first named means for establishing a field strength for the generator of less value for the operation of returning the car to said landing after an overrun than for the operation of bringing the car to said landing upon an underrun.

1,680,785. TURBINE. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 15, 1927. Serial No. 240,236. 2 Claims. (Cl. 253—77.)

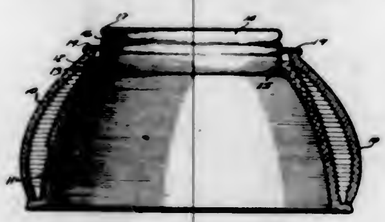
1. In an apparatus of the type described, the combination with a rotor having a circumferential groove for retaining the blading therein, said groove having an enlarged portion to permit the blades to be inserted and removed, of a blade root having recesses therein and inserted in the enlarged portion of said groove and pins having their inner ends disposed against the recessed portions of the blade root, said pins being compressed in said rotor.

1,680,786. WINDOW-SASH HOLDER. LUTHER H. HOOD and JACOB J. CULWELL, Houston, Tex. Filed Nov. 22, 1924. Serial No. 751,646. 2 Claims. (Cl. 292—76.)



1. A sash holder formed of a strip of flexible material substantially arcuate in contour and whose ends are free and curved slightly outwardly, or reversely with respect to the general arcuate contour of the holder thus forming end bearing faces, said holder having a central transverse crease forming a projection on the side of the holder opposite from said faces.

1,680,787. UNIVERSAL ADAPTER. BRYSON D. HORTON, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed May 20, 1927. Serial No. 193,043. 12 Claims. (Cl. 247—2.)



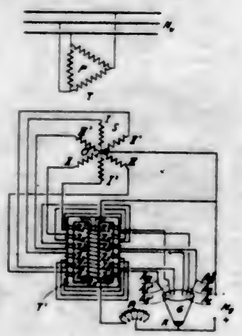
1. In combination with switch boxes having openings in the ends thereof, the opening in one box being formed by the omission of substantially the entire wall and the open-

ing in the other box being formed by cutting away but a portion of said end wall, there being adapter devices associable with each of said boxes, convertible hood means for

so altering the openings in the ends of said boxes that an adapter intended for said first box may be associated with said second defined box and vice versa.

1,680,788. METAL COLLAR FOR LUMINAIRES. WILLIAM A. INGLER, Newark, Ohio, assignor, by mesne assignments, to Holophane Company, Inc., New York, N. Y., a Corporation of New York. Filed July 24, 1926. Serial No. 124,632. 8 Claims. (Cl. 240—128.)

1. In combination, a luminaire having an inner glass envelope and an outer glass envelope, the two envelopes having prisms for distributing light rays in a predetermined manner, a tubular metallic support passing upwardly through the luminaire, the upper end of the support being threaded and the lower end having a flange for engaging the lower surface of the inner glass envelope, a disk carried outside the support, screw threaded means cooperative with the support for forcing the disk against the top of the outer envelope, and means for insuring a predetermined alignment of the glass envelopes.

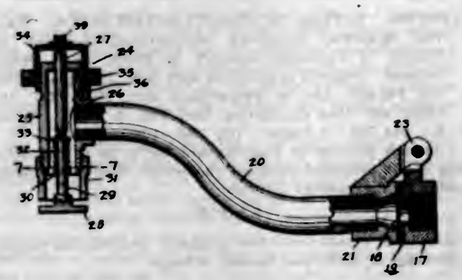


1,680,789. WRENCH. HERMAN W. JACOBSON, Fonda, Iowa, assignor of one-third to Francis M. Tice, Fonda, Iowa. Filed Dec. 1, 1926. Serial No. 151,982. 2 Claims. (Cl. 81—124.1.)

1. In a wrench of the class described, a body including a shank provided with a longitudinal bore extending therethrough, one end of the shank being provided with a removable socket, a plunger including a rigid stem extending through and beyond said bore, one end extending into said socket and being screw threaded, a washer carried by said screw threaded stem, a head on the opposite end of the stem, a spring disposed around said plunger and bearing at one end against the head, and at its opposite end against

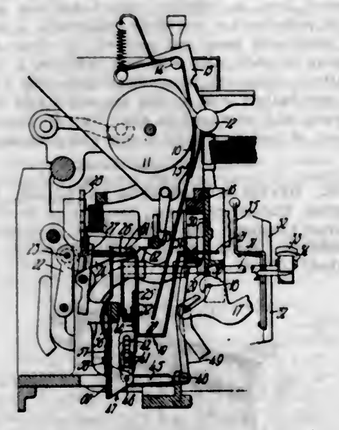
the adjacent portion of the shank, and a removable collar for disposition on the stem between the washer and the adjacent extremity of the shank.

1,680,790. SYSTEM FOR REGULATING THE DIRECT-CURRENT VOLTAGE IN METAL-VAPOR-RECTIFIER INSTALLATIONS. JULIUS JONAS, Meierhof, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Filed Oct. 8, 1920, Serial No. 415,672, and in Switzerland Oct. 14, 1919. 18 Claims. (Cl. 175—363.)



1. In a rectifier system, a plurality of parallel rectifying paths, each path comprising a transformer winding and a serially connected rectifying element, common positive and negative terminals for said rectifier paths, said transformer windings constituting a polyphase alternating-current system supplying currents of different phases to said paths, means for interlinking the currents in said rectifying paths to cause overlapping of the currents rectified in the individual phases, and means for controlling the degree of interlinkage to vary the extent of the overlapping.

1,680,791. PROCESS FOR PRODUCING FAST DYEINGS ON THE FIBER. THEODOR KIRCHEISEN, Dessau in Anhalt, and JOHANNES GÜTLER, Offenbach-on-the-Main, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 21, 1927, Serial No. 162,673, and in Germany Jan. 23, 1926. 6 Claims. (Cl. 8—5.)

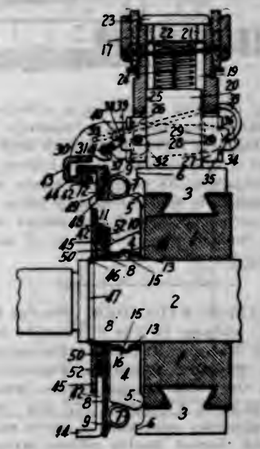


1. A process for producing fast dyeings on the fiber which consists in diazotizing a diazotizable amine on the fiber in presence of a compound to be coupled.

1,680,792. COFFEE URN. ANTHONY KLEINLERCHER, Brooklyn, N. Y., assignor to Aaron M. Sloss, New York, N. Y. Filed Jan. 13, 1927. Serial No. 160,868. 7 Claims. (Cl. 53—3.)

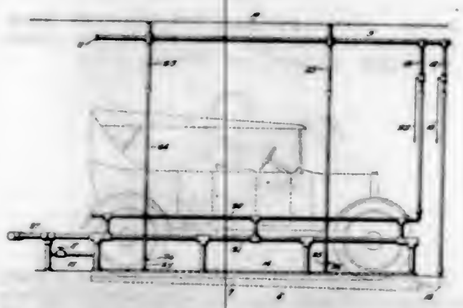
1. In a coffee urn, a body containing an infusion receptacle at the top of which the ground coffee is held, means for supplying liquid to the top of the body, a distributer head in the top of the body supplied by said means, and a member in connection with said distributer operable to cause the delivery of either a velocity spray laterally for cleansing or a distributed fall of liquid upon the coffee.

1,680,793. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 21, 1925. Serial No. 44,996. 7 Claims. (Cl. 197—135.)



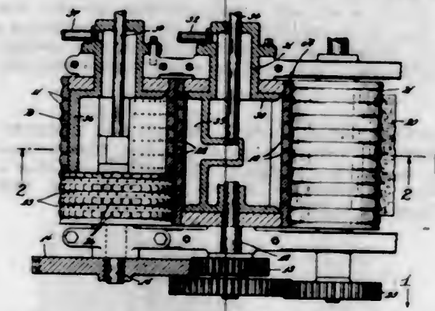
4. In a typewriting machine, the combination with a platen and a universal bar, of a universal bar frame fastened to said bar and arranged with a U-shaped pocket to the rear of said bar for receiving a lower free portion of a card fed downwardly in front of said platen, said pocket having a width, front to rear, exceeding the distance moved by said universal bar, and means outside of said pocket for maintaining said card with its lower portion extending freely in said pocket so that the card will remain stationary upon vibration of said pocket.

1,680,794. AUXILIARY CHAIR FOR VEHICLES ARDIS C. LAWLER, Ardmore, Okla. Filed Jan. 17, 1927. Serial No. 161,606. 2 Claims. (Cl. 155—10.)



1. An auxiliary chair for vehicles comprising a frame including a seat and suspending yokes having lower bars secured across the under face of the end portions of said seat and upstanding front and rear arms, the front arms having their upper portions directed rearwardly and secured to the rear arms to provide side arms for the chair, the rear arms having their upper portions formed into rearwardly extending hangers, a pad for said seat including a cover sheet having its marginal portions secured against the under face of said seat, envelopes entirely enclosing the portions of the front and rear arms of the yokes constituting the side arms of the chair, said envelopes being formed with openings in their upper rear corners through which the rear arms of said yokes project and having inner and outer walls the lower ends of which are secured to said seat, a strap extending upwardly from the front of the seat intermediate its width and having a loop at its upper end, and straps carried by said envelopes and releasably joined with one passed through said loop.

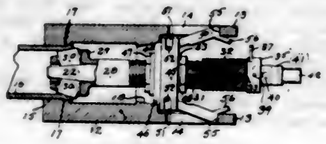
1,680,795. BRUSH-LIFTING DEVICE FOR ELECTRIC MOTORS. GEORGE H. LELAND, Dayton, Ohio, assignor of one-half to The Leland Electric Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 18, 1926. Serial No. 95,579. 28 Claims. (Cl. 172—279.)



1. In a motor comprising a commutator and a brush holder having a stationary guideway, a brush supported in said guideway for movement therein toward and from said commutator, a device movably mounted at one side of said guideway to move said brush laterally in said guideway and hold the same against movement toward said commutator, and centrifugally controlled means to actuate said device.

1,680,796. VEHICLE WASHER. EDWARD H. LOSTETTER, Cincinnati, Ohio, assignor to Thomas F. Costello, Cincinnati, Ohio. Filed Dec. 21, 1922. Serial No. 608,207. 1 Claim. (Cl. 141—1.)

A vehicle washer including a drainage pit with vehicle runways extending alongside of the pit and having ducts leading therefrom into the pit, water pipes arranged in proximity to the pit to project water against a vehicle mounted on said runways, and means arranged adjacent a pit end to guide the vehicle on to said runways.



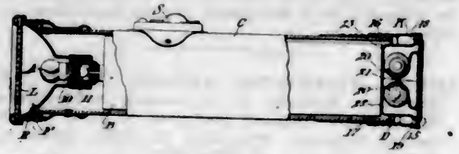
1,680,797. PAPER-CRINKLING APPARATUS. WILLIAM A. LORENZ, West Hartford, Conn., assignor to The Otaka Fabric Company, Hartford, Conn. Filed July 16, 1927. Serial No. 206,255. 6 Claims. (Cl. 92—69.)

1. In a paper crinkling apparatus, a cylinder, a second cylinder adjacent thereto adapted to receive a web therefrom and rotating at a slower speed than said first cylinder, one at least of said cylinders being hollow and having perforations throughout its periphery, means whereby air may be exhausted from said cylinder to cause the web to adhere to the periphery thereof, and means whereby air may be blown through the perforations of said cylinder to strip the web therefrom.

1,680,798. FLARING EXPANDER. GRAVES R. MAUPIN, Moberly, Mo., assignor to The J. Faessler Manufacturing Company, Moberly, Mo., a Copartnership composed of John W. Faessler, Christinia Faessler, Louis E. Faessler, and Graves R. Maupin. Filed Mar. 25, 1927. Serial No. 178,330. 2 Claims. (Cl. 153—82.)

1. A flaring expander comprising a sleeve and having a cage on one end thereof, flaring rollers carried by said cage and adapted to be projected radially therethrough, a mandrel located in said sleeve and adapted at its rear end to receive a rotating means so that said mandrel can be rotated, a tapered tip detachably carried by the forward end of said mandrel, said tip contacting with said rollers, means carried by said sleeve for feeding said mandrel forward, means carried by said mandrel and adapted to operatively engage with said feeding means whereby said feeding means is operated when the mandrel is rotated, a thrust collar adjustably and rotatably mounted on said sleeve, said thrust collar adapted to prevent

said cage from moving longitudinally when the device is in operation, and means for removably securing said thrust collar in a hand hole.



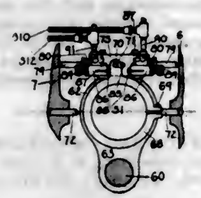
1,680,799. ESTERS OF UNSATURATED ACIDS. WALTER MINNICH, Montreux, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Original application filed Nov. 10, 1924, Serial No. 749,045, and in Switzerland Nov. 19, 1923. Divided and this application filed Feb. 3, 1928. Serial No. 251,753. 1 Claim. (Cl. 260—106.)

As new articles of manufactnre useful in therapeutics the herein described esters of cholesterol with unsaturated acids of the general formula:

R.COOH

wherein R stands for a low aliphatic hydrocarbon-radical carrying at least one double linkage.

1,680,800. FLASH LIGHT. CHARLES OSEAN, Woodcliff, N. J., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 24, 1922. Serial No. 546,380. 8 Claims. (Cl. 240—10.5.)

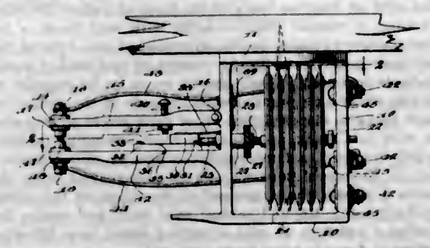


6. A flashlight comprising the combination of an incandescent lamp, a reflector, means whereby said lamp and said reflector are relatively adjustable, a battery in circuit with said lamp and movable to effect a relative adjustment of said lamp and said reflector, a casing for said battery, receptacle means bearing against the bottom end of said battery, and an end cap adjustably coupled to said casing and arranged so that its adjustment causes movement of said receptacle means and said battery.

1,680,801. DECORATING METAL ARTICLES. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 8, 1927. Serial No. 238,508. 5 Claims. (Cl. 41—34.)

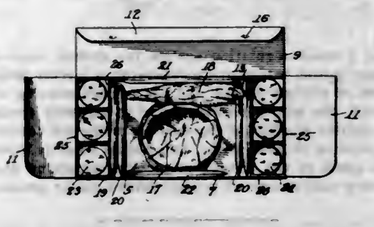
1. As a new article of manufacture, a container having a surface ornamentation produced by loosely securing around its outer walls a covering made up of a plurality of independent sections, certain of which have their edges in abutting relation and forming when in place a surface design.

1,680,802. BEVEL-GEAR GENERATOR. JULIAN L. PERKINS, West Springfield, Mass., assignor, by mesne assignments, to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 11, 1925. Serial No. 36,431. 170 Claims. (Cl. 90—1.)



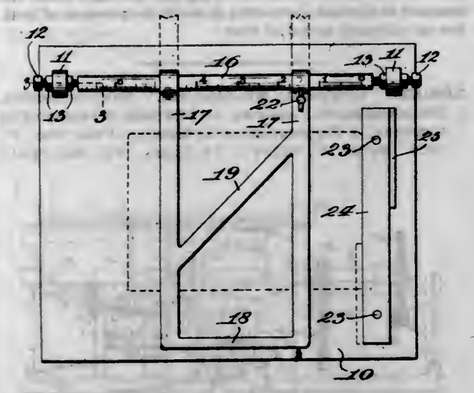
1. In a bevel-gear generator, an oscillatory cutter-head, a cutter having a lateral cutting part, means to move said cutter in an unsymmetrical circuitous path in a plane in said cutter-head, the portion of said path through which said cutter moves during the actual cutting operation being substantially straight, and automatic means intermittently to oscillate said cutter-head to make up the difference between the width of said cutting part and that of a slot to be cut thereby.

20. In a bevel-gear generator, a cutter having a lateral cutting part, means to move said cutter in an unsymmetrical circuitous path in a plane, the portion of said path through which said cutter moves during the actual cutting operation being substantially straight, means intermittently to rock said cutter, first in one direction and then in the other direction, to make up the difference between the width of said cutting part and that of the slot to be cut thereby, and means intermittently partially to rotate said cutter on an axis, first in one direction and then in the other direction, to accommodate said cutting part to the side angles of said slot, said cutter being rocked and partially rotated in opposite directions relatively, means to support the work in operative position relative to said cutter, and means to roll the work into and out of engagement with said cutting part.



142. The combination, in a bevel-gear generator, with a bearing member, of a sleeve journaled in said member, a nut secured to said sleeve at the outer terminal thereof, work-holding members also secured to said sleeve, a clutch-member mounted on and secured to said sleeve outside of said bearing member, a second clutch-member mounted on said sleeve, said clutch-members having interengaging teeth, and said first clutch-member also having peripheral teeth, a spring arranged to force said second clutch-member toward said first clutch-member, cam-rings on and between said clutch-members outside of said interengaging teeth, one of said cam-rings having peripheral teeth, a segmental-gear mounted on said cam-rings and carrying a pawl to engage the cam-ring peripheral teeth, and also carrying a pawl to engage said clutch-member peripheral teeth, a guide band arranged over said first clutch-member, and having a recess therein to permit one of said pawls to snap into engagement with said clutch-member peripheral teeth, a rack intermeshing with said segmental-gear, and means intermittently to actuate said rack.

1,680,803. REGULATOR. RAY MILLER PETERSIME, Gettysburg, Ohio. Filed Dec. 8, 1925. Serial No. 74,202. 20 Claims. (Cl. 200—140.)



1. A regulator comprising a stationary arm, a movable arm, contacts arranged on said arms, a slidable member, means for automatically sliding said member, and means arranged in the path of said slidable member for forcing the same into and out of engagement with said movable arm for separating said contacts when engaging said means and for permitting engagement of said contacts when disengaging said means.

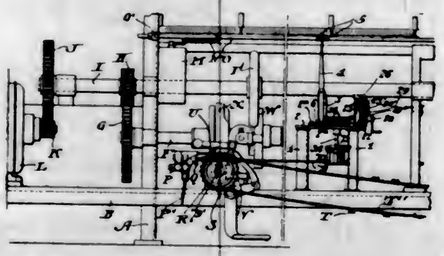
1,680,804. EYE-DRESSING PACKET. ERNEST REMLEY, East Orange, N. J., assignor to Hygienic Fibre Company, Incorporated, Versailles, Conn., a Corporation of Massachusetts. Filed Mar. 31, 1926. Serial No. 98,685. 3 Claims. (Cl. 206—63.2.)

2. A first aid eye-packet comprising a box having a movable cover, upstanding partitions forming with the box walls a large compartment extending throughout the major portion of said box and also forming smaller compartments in at least one end portion of the box, vials arranged within the smaller compartments, an eye cup wrapped in an enclosing material and having its width and depth reduced immediate its top and bottom and located within the large compartment, and an absorbent upstanding pad wrapped in paper and lining each wall of the large compartment to protect said eye cup, at least one of said pads being arranged between said eye cup and each vial to also protect the vials, the front wall of said box being cut low across the central portion of the large compartment to facilitate identification and withdrawal of its contents.

1,680,805. TILE MAKING AND CUTTING GAUGE. HENRY SCHMIDT, Santa Monica, Calif. Filed Oct. 1, 1927. Serial No. 223,256. 7 Claims. (Cl. 33—76.)

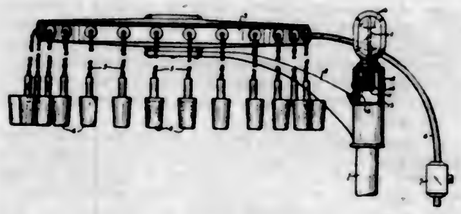
1. A tile marking and cutting gauge comprising a base, a rod supported thereupon, a gauge block arranged on the base at right angles to said rod, a frame mounted for sliding and swinging movement upon said rod and which frame includes a pair of spaced approximately parallel straight edges that lie parallel with said gauge block when said frame rests upon said base, and a diagonally arranged straight edge between said parallel straight edges.

1,680,806. REGULATING SYSTEM FOR MAINTAINING ELECTRIC CONVERTERS AT A CONSTANT SPEED. KARL SCHMIDT, Berlin-Sudende, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Original application filed Jan. 15, 1924, Serial No. 686,432, and in Germany Feb. 17, 1923. Divided and this application filed June 6, 1925. Serial No. 35,501. 10 Claims. (Cl. 171—229.)



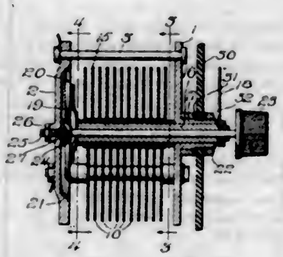
1. In a speed regulating system for electric converters, a driving motor, a regulating generator, a circuit including a source of electric energy and the exciter winding of the generator, the said generator being operatively connected to the exciter winding of the driving motor for controlling the excitation of said motor, and means directly governed by the speed of the driving motor for energizing and de-energizing said circuit at predetermined motor speeds.

1,680,807. CATALYST COMPACT AND PROCESS OF MAKING SAME. WILLIAM SCHULTZE, Syracuse, N. Y., assignor to Atmospheric Nitrogen Corporation, Solvay, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,817. 10 Claims. (Cl. 23—234.)



1. A catalyst compact, porous with reference to the gases to be catalyzed, said compact being constituted of hard granules of a non-readily cohering catalyst material substantially free from extraneous adhesive agents, said granules being maintained in fixed relation, by an autogenous bond, characteristic of a pressure induced surface coaction of the granules themselves as distinguished from a union due to extraneous matter, said relation being so fixed that it is maintained during and retained after the compact is exposed to reacting gases in the presence of heat, for an extended period of time.

1,680,808. CONTROL MECHANISM. CONRAD SCHÜTZ, Philadelphia, Pa., assignor to Liberman Manufacturing Company, a Corporation of Delaware. Filed Dec. 27, 1923. Serial No. 682,991. 14 Claims. (Cl. 192—139.)

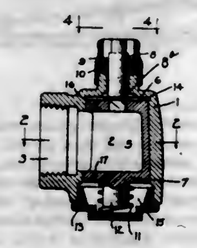


2. An automatic control for fabricating machines, comprising a power controller, a shift element for operating the same, a lever adapted to operate and to be operated by the shift element, a reciprocating mechanism adapted to actuate and to be actuated by the lever, an actuating cam for cooperating with the reciprocating mechanism, said reciprocating mechanism having an element adapted to move into and out of the path of the cam, and means comprising a disc rotating synchronously with the machine and provided with peripheral surfaces and recesses and means including latching and releasing devices cooperating with said peripheral surfaces and recesses for rendering the cam actuation ineffective during predetermined periods.

1,680,809. HAIR-CURLING APPARATUS. WILLIAM GENTRY SHELTON, New York, N. Y. Filed Aug. 7, 1926. Serial No. 127,761. 4 Claims. (Cl. 219—24.)

1. In a hair-curling apparatus, an electrical heating element whereby the curled hair is heated, and a temperature indicator comprising a second electrical heating element electrically connected to the first mentioned heating element, and a heat-responsive indicator associated with said second heating element to indicate a predetermined temperature condition at the curled hair.

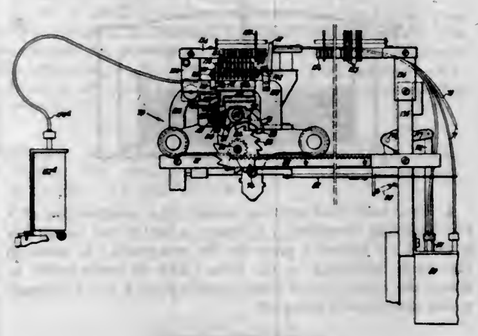
1,680,810. VARIABLE CONDENSER. HAROLD H. SHOTWELL, Chicago, Ill., assignor to The Operadio Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1924. Serial No. 722,655. 2 Claims. (Cl. 74—7.)



1. In combination, a supporting frame having a wall provided with an annular track in the form of a short frustum of a cone, a tubular shaft co-axial with said track, a resilient device yieldable in the direction of the axis of the shaft fixed to the latter in the vicinity of said wall, a group of wheels mounted on said device so as to be capable of rotating about axis parallel with the axis of the shaft, the wheels being so disposed that all of them are in rolling contact with said track, an actuating shaft extending through the tubular shaft, a frusto-conical wheel on said actuating shaft in the space between and in engagement with the aforesaid wheels, the larger end of the wheel on the actuating shaft being directed toward said wall, and means for exerting a pressure on said actuating wheel in a direction tending to force it away from said wall.

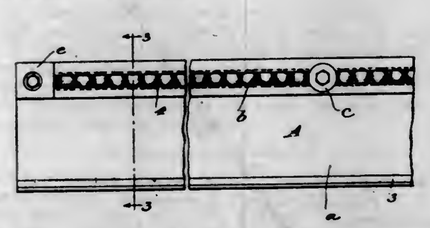
1,680,811. FUNERAL CAR. ROBERT SILVER, Knightstown, Ind. Filed Mar. 10, 1927. Serial No. 174,354. 8 Claims. (Cl. 296—16.)

1. The combination of a vehicle body, doors mounted in each side of the body and adapted to provide an unobstructed opening through which a casket may be loaded, and rollers mounted in the floor of said body and having their axes positioned obliquely with respect to said vehicle body for guiding a casket from an angular to a longitudinal position and rollers mounted in the floor of the body with their axes transverse of the vehicle for guiding the casket longitudinally of the vehicle, substantially as set forth.



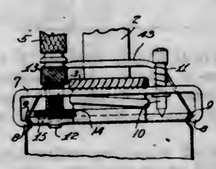
1,680,812. VALVE. WILLIAM E. SLOAN, Chicago, Ill. Filed Feb. 12, 1923. Serial No. 618,435. 4 Claims. (Cl. 251—98.)

1. A valve comprising a casing, a single rotating closing piece therein, end pieces connected with said closing piece and having conical shaped faces, said closing piece being eccentric with relation to said end pieces, conical seats for said end pieces and closing piece, the space between said end pieces beyond the closing piece being unobstructed, a stem connected with one end piece centrally thereof, both ends of said stem being noncircular, the end pieces and closing piece adapted to be moved inwardly to be disengaged from their seats so that they can be rotated to open the valve.



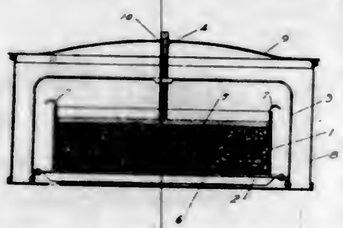
1,680,813. COMBINED TYPEWRITING AND CARD-PERFORATING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 20, 1926. Serial No. 103,220. 41 Claims. (Cl. 164—113.)

1. The combination with a typewriter having a letter-feeding carriage, a card-perforator having a hole-spacing carriage, a denominational tabulating mechanism on said typewriter controlled by a plurality of denominational keys, and electric coupling means whereby said typewriter and card-perforator may be jointly operated, and whereby the perforator-carriage is caused to move in unison with the typewriter-carriage during the type-key operations, of means whereby operation of said denominational keys to



position the typewriter-carriage may also cause said perforator-carriage to be co-relatively but dissentaneously positioned.

1,680,814. BALL-BEARING RAIL. MICHAEL SNEE, Los Angeles, Calif. Filed Feb. 27, 1928. Serial No. 257,531. 3 Claims. (Cl. 238—16.)



1. In a rail, rollers within said rail and projecting outwardly from a surface thereof, and means between certain of said rollers for spacing said rollers apart comprising a disc formed with a shank threaded to said rail in the zone of said rollers.

1,680,815. AIR VENT AND PRESSURE FITTING FOR LIQUID CONTAINERS. GEORGE P. SORENSEN, Chicago, Ill. Filed Oct. 29, 1923. Serial No. 671,331. 7 Claims. (Cl. 221—23.)

1. In combination with a portable receptacle the top wall of which is provided with a discharge opening near the outer edge thereof and an air vent laterally spaced from said discharge opening, a yoke provided with means for engaging the receptacle and a threaded nipple carried by threads in the yoke for adjustment toward and from the top wall of the receptacle in registration with the vent.

1,680,816. UTENSIL FOR FORMING MEAT LOAVES. RALPH D. SPAULDING, Linesville, Pa. Filed July 6, 1926. Serial No. 120,614. 2 Claims. (Cl. 100—57.)

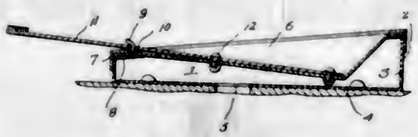
1. In a meat loaf cooking utensil, the combination of a loaf-receiving receptacle; a frame in which the receptacle is placed; a pressure plate in the receptacle; a screw in the frame operating on the plate; and an outer boiler in which the receptacle is placed comprising a cover through which the screw is operated.

1,680,817. GOLF CLUB. DAVID SPITTAL, Chambly Basin, Quebec, Canada. Filed Dec. 28, 1927, Serial No. 243,075, and in Canada Aug. 11, 1927. 2 Claims. (Cl. 273—80.)

1. A golf club consisting of a head and a combined steel and hickory shaft, the steel shaft extending up the hickory shaft for substantially half of its length, means securing the foot of the steel shaft to the head of the club, the hickory shaft extending through the steel shaft and the head to the sole of the head, means locking the ends of the steel and wood shafts to the head at the sole and reinforcement means uniting the top of the steel shaft portion to the hickory shaft.

1,680,818. ANTIRACHITIC PRODUCT AND PROCESS. HARRY STEENBOCK, Madison, Wis., assignor to Wisconsin Alumni Research Foundation, a Corporation. Filed June 30, 1924. Serial No. 723,171. 8 Claims. (Cl. 99—11.)

1. The process of imparting antirachitic properties to organic substances of dietary value (for example carbohydrate foods, fats, oils, protein foods, or composite foods), which comprises subjecting the same to the action of ultraviolet rays, such as are produced by a quartz mercury vapour lamp, for a period sufficient to effect antirachitic activation but so limited as to avoid subsequent substantial injury of the antirachitic principle.

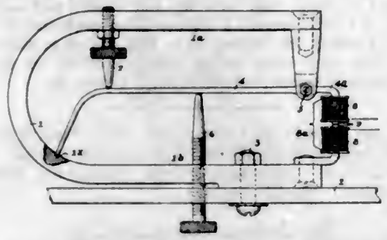


5. Naturally deficient (in the antirachitic factor) food substance antirachitically activated in accordance with the process set forth in claim 1.

1,680,819. PRINTING DEVICE. ULRICH F. L. STEINDORFF, New York, N. Y. Filed Mar. 5, 1924. Serial No 696,938. 3 Claims. (Cl. 101—368.)

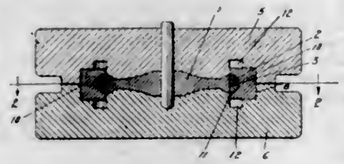
1. A manually operated stamping device of the kind described comprising a flat stamping plate adapted to be manually shifted about to different stamping positions having an impression surface and a plurality of manipulating projections extending outwardly from the peripheral edge of said plate for lifting the latter from the impression receiving surface and shifting it to different stamping positions, said projections being of less thickness than the plate and being accessibly disposed above and at a distance from said impression receiving surface when the device is in use.

1,680,820. STRIKER DEVICE FOR PLAYER PIANOS. CHARLES T. STEPHENS, Chicago Heights, Ill., assignor to George S. Angus, Chicago Heights, Ill. Filed Feb. 2, 1925. Serial No. 6,382. 4 Claims. (Cl. 84—65.)



1. A striker device for player pianos comprising a tapered casing deeper at one end than at the other separate from the pneumatic element and open at the top, said casing adapted to be fastened to the pneumatic element and provided in its bottom with an opening which communicates therewith, a cover for said casing having an opening therethrough, a flexible diaphragm confined at its edges by said cover so as to close said opening, and a striker arm projecting part way across the opening in the cover and attached to said diaphragm.

1,680,821. BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,849. 4 Claims. (Cl. 14—36.)



1. A bascule bridge comprising a main span, trunnions upon which it is mounted, a counterweight separate from said main span, separate trunnions upon which said counterweight is mounted, a link connecting said counterweight with said main span, mechanism for moving the parts so that the counterweight counterbalances the main span while it is being opened and closed, said counterweight located between the end of the top chord of the main span and the trunnions of the counterweight when the bridge is closed.

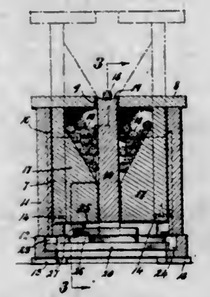
1,680,822. SOUND REPRODUCER. GASTON STROBINO, Paterson, N. J. Filed Oct. 29, 1926. Serial No. 144,986. 11 Claims. (Cl. 179—115.)

1. In a sound reproducing apparatus, a system to be vibrated including an elastic flexible vibrating structure and means for exerting variable elastic flexing pressure on said structure at either of two points thereof in substantially a common plane of flexure, in combination with coactive electromagnet and armature elements arranged one on a part of said system which is moved on flexing of said structure and the other on another part of said system.

1,680,823. PROCESS OF MANUFACTURING COMPOSITE RUBBER WHEELS OR OTHER ARTICLES. EARL S. TEED, Akron, Ohio, assignor to The Textile Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 2, 1927. Serial No. 230,476. 6 Claims. (Cl. 18—59.)

5. The process of vulcanizing a composite rubber article comprising portions of rubber of diverse hardness, comprising forming the sections of the article from appropriate uncured compounds and vulcanizing the article, permitting the rubber to overflow at the regions where said rubber compounds are contiguous, and confining the rubber at all other points about the article.

1,680,824. SICKLE. GEORGE K. THOMPSON, Maplewood, N. J. Filed Oct. 31, 1927. Serial No. 229,811. 1 Claim. (Cl. 30—9.)

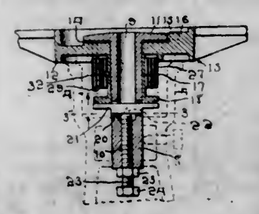


The combination of a sickle having a curved holder and a handle therefor, said holder comprising a pair of parallel plates provided with a series of openings spaced at definite intervals from each other, the openings in each plate being alined with those of the opposite plate, a series of separate cutting instruments removably mounted between the plates of said curved holder, and means extending through said openings for clamping said cutting instruments to said holder to form a continuous cutting edge conforming to the curvature of the holder.

1,680,825. METHOD OF PULVERIZING AND ALLOYING NICKEL. WILLIAM R. VEAZEY, Cleveland Heights, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 9, 1923. Serial No. 656,547. 5 Claims. (Cl. 75—1.)

1. In a method of the character described, the step which consists in heating together metallic nickel and magnesium at a temperature below the melting point of the former but above that of the latter until sufficient magnesium is absorbed by the nickel to render same readily pulverizable.

1,680,826. CIGARETTE BOX. DOMENICO VIOLA, Philadelphia, Pa. Filed June 13, 1927. Serial No. 199,109. 3 Claims. (Cl. 312—77.)



1. In a dispensing device for individual cigarettes or the like and comprising a stationary outer casing and base with a relatively telescopic inner shell embodying filler blocks affording storage for cigarettes, and a member slidable laterally of the aforesaid base and adapted to frictionally engage in apertures in the walls thereof to effect locking of the inner shell thereto.

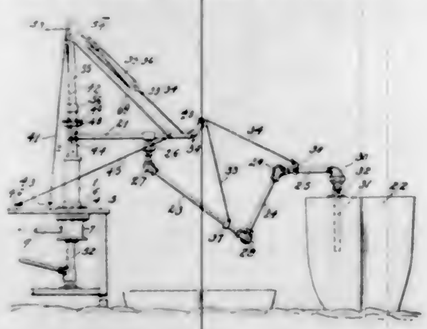
1,680,827. YEAST STIMULANTS AND PROCESS OF USING THEM. THEODORE B. WAGNER, Brooklyn, N. Y. Filed June 2, 1923, Serial No. 643,065. Renewed Jan. 13, 1928. 2 Claims. (Cl. 99—10.)

1. As a new article of manufacture for use in connection with yeast containing dough, a yeast stimulant consisting of a mixture of amylaceous material and the dried solubles contained in corn steepwater.

1,680,828. STOOL FOR SERVICE COUNTERS. JOSEPH S. WALTON, Los Angeles, Calif. Filed May 27, 1926. Serial No. 112,160. 6 Claims. (Cl. 155—95.)

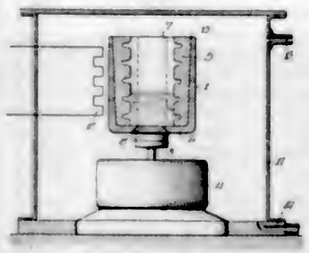
1. In combination, a spindle having a head at one end, a sleeve movable axially on said spindle, a hub rotatable on said spindle intermediate the sleeve and head, means for securing the sleeve in various angular positions with respect to the spindle, a spring connected with the sleeve and the hub and subject to tension variations incident to the varying angular adjustments of the sleeve and spindle, and means coacting with the sleeve securing means to displace the sleeve axially of the spindle whereby to compensate for loose movement between the spindle and hub.

1,680,829. TROLLEY GUARD. GEORGE WEBER, Pittsburgh, Pa. Filed Apr. 20, 1927. Serial No. 185,110. 4 Claims. (Cl. 191—37.)



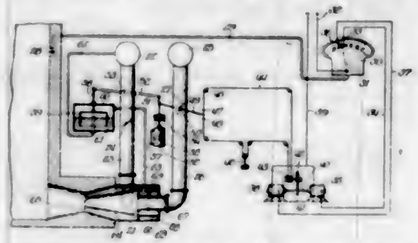
1. In a trolley of the character described, the combination with a trolley pole having a bifurcated free end and a trolley wheel journaled for rotation in the latter, of a pair of guard plates carried by said bifurcated free end and disposed at respective sides of said trolley wheel, said guard plates extending beyond the periphery of the upper portion of said trolley wheel, and a trolley roller rotatably mounted in said pair of guard plates and having its contacting periphery normally disposed below the contacting periphery of said trolley wheel.

1,680,830. METHOD OF MAKING PLOWSHARES. WILLIAM ISIAH WHEELER, Scottville, Ill. Filed Mar. 28, 1923. Serial No. 628,282. 1 Claim. (Cl. 29—14.)



A method for pointing a plow share consisting in providing an initially formed plow share point having a bar portion having its rear end formed to provide a fork, and a lower share portion integrally connected thereto, fitting the share proper to the bar portion and share portion and within the fork, and then fusing the abutting edge portions together.

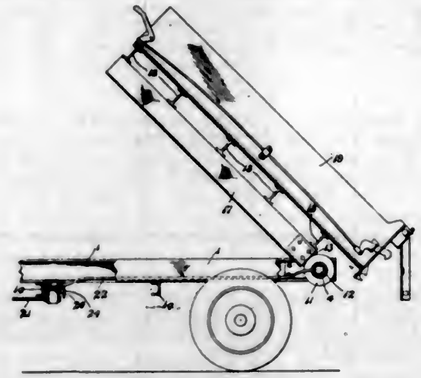
1,680,831. FLUID-CONVEYING APPARATUS. WALTER CARMAN WHITE, Pittsburgh, Pa. Filed June 24, 1924. Serial No. 722,000. 7 Claims. (Cl. 137—78.)



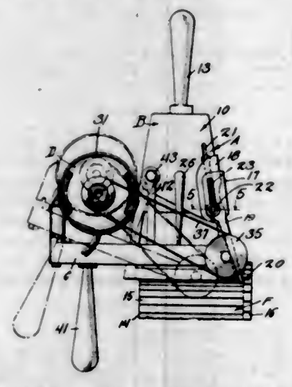
1. In a fluid conveying apparatus, a centrally apertured vertical guide-sleeve; means for securing same to a stationary foundation; a base-cap positioned below said guide-sleeve and adapted to close the lower end thereof; a tubular mast guided by said sleeve for rotative and longitudinal movement; packing means positioned at the lower end of said mast; adjustable supporting means adapted to lower said base-cap and expose said packing below said guide-sleeve; a tubular boom connected to said mast; a supply line connected to said base-cap; said base cap, mast and boom being jointly adapted to convey therethrough fluids carried by said supply-line.

1,680,832. CERAMIC PRODUCT AND PROCESS OF PRODUCING THE SAME. LAURENCE R. WILDER, New York, N. Y. Filed Oct. 4, 1926. Serial No. 139,304. 6 Claims. (Cl. 25—156.)

1. The method of manufacturing a porcelain member having a predetermined outer shape, which comprises the steps of pouring a moldable, relatively fluid mixture containing the substantive ingredients of the porcelain into a mold having an interior surface substantially corresponding to the final shape of the porcelain member, and subjecting the fluid mass to centrifugal action by rotating said mold at sufficient speed to cause the substantive ingredients of the mixture to mass adjacent the surface of the mold under substantial segregation from the fluid contents of the molding mixture, removing said fluid contents, and firing the semi-final porcelain product so molded.



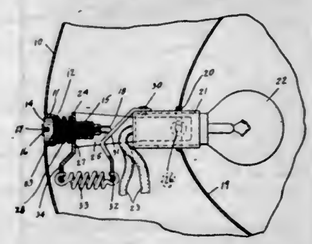
1,680,833. METHOD AND APPARATUS FOR THE CONTROL OF COMBUSTION. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed May 17, 1924. Serial No. 713,967. 2 Claims. (Cl. 236—1.)



1. Apparatus for the control of gaseous combustion comprising a burner, gas and air passages leading to the burner, a valve controlling the air passage, automatic valve control means responsive to unbalanced gas and air pressures, and additional automatic valve control means responsive to variations in the carbon dioxide content of the products of combustion from the burner.

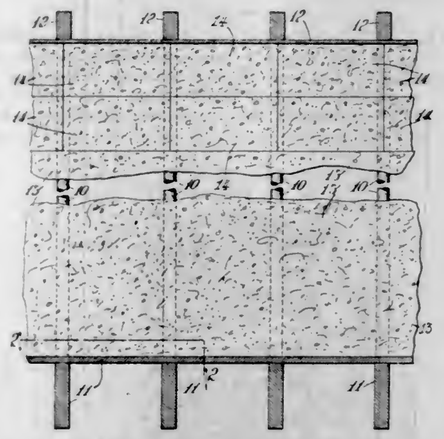
1,680,834. DUMPING-BODY HOIST. EDWARD L. WOOD, Detroit, Mich. Filed Oct. 18, 1926. Serial No. 142,244. 9 Claims. (Cl. 298—22.)

2. In combination with a chassis truck frame, a shaft carried between the sides of the frame, a cylinder located around the shaft for the major portion of its length, the shaft at each end extending beyond the ends of the cylinder, heads closing the ends of the cylinder, lifting arms projecting from the cylinder adapted when the cylinder is turned to tilt a dumping body mounted on said truck frame, and means for hydraulically turning the cylinder about said shaft and lifting said arms.



1,680,835. UNDERCUTTING TOOL FOR COMMUTATORS. ELBA O. ADKINS, Huntington, W. Va., assignor of one-half to The Huntington Auto Supply Company, Huntington, W. Va., a Corporation of West Virginia. Filed Mar. 10, 1926. Serial No. 93,815. Renewed June 20, 1927. 8 Claims. (Cl. 90—12.)

1. A portable tool for undercutting the mica strips of commutators comprising a supporting frame for engaging and resting solely upon the commutator, a swinging frame carried by the supporting frame, an operating motor, a drive shaft rotatably carried by the swinging frame and operated from said motor, a rotary tool secured to the shaft for engaging the mica strips and a manipulating handle secured to the swinging frame.

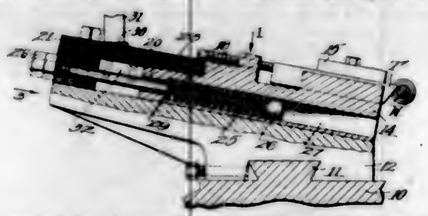


1,680,836. LAMP-FOCUSING DEVICE. EDWARD C. ALBRIGHT, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed June 11, 1927. Serial No. 198,228. 3 Claims. (Cl. 240—44.)

1. In a focusing lamp including an apertured reflector, an apertured casing in spaced relation therewith, and a lamp bulb socket mounted in the reflector aperture for universal movement thereon, and extending toward the casing, the combination of a U-shaped strap having its midportion positioned between the socket and the casing and its arms extending towards the socket and hingedly connected therewith, a cam forming strap having one end rigid with the socket and extending rearwardly between the arms of the U-shaped strap, resilient means interposed between the straps and normally constraining the socket and cam toward one position, a tubular threaded device positionable in the casing aperture and having

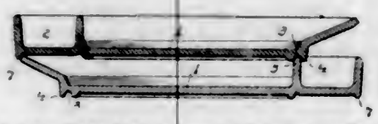
threaded connection at its inner portion with the U-shaped strap midportion and an outer, casing exposed, tool engageable portion, and a second coaxially mounted threaded member receivable by and having threaded connection with the tubular device and having an inner end projecting beyond the same towards and into engagement with said cam and an outer, casing exposed, tool engageable end.

1,680,837. MONOLITHIC WALL AND METHOD OF BUILDING THE SAME. HAROLD S. ASHENHUAST, Chicago, Ill., assignor, by mesne assignments, to Insulex Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1925. Serial No. 9,639. 3 Claims. (Cl. 72—16.)



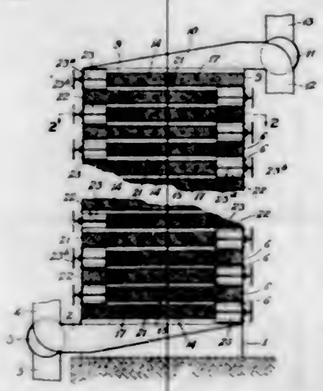
1. A wall comprising a body of cellular material of high insulating value and composed mainly of gypsum, of integral construction at its lower portion and built up of separate blocks at its upper portion.

1,680,838. TOOL CARRIAGE AND SLIDE FOR MACHINE TOOLS. RICHARD A. ASHTON, Seneca Falls, N. Y., assignor to Seneca Falls Machine Co., Seneca Falls, N. Y., a Corporation of Massachusetts. Filed Mar. 18, 1926. Serial No. 95,778. 3 Claims. (Cl. 82—14.)



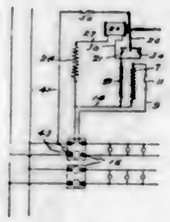
1. In a machine tool, a frame, a tool carriage slidable along said frame, a tool slide mounted on said carriage, a templet bar fixed to said frame, a templet block on said

tool slide engaging a cam face of said templet bar to move said tool slide towards the work, means to yieldingly move said tool slide from the work and to hold said templet block against said templet bar, said slide having a recess



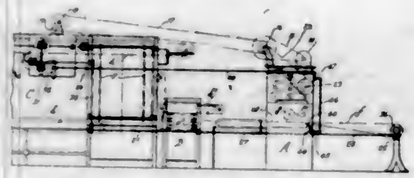
therein and said yielding means comprising a headed rod fixed in said carriage and having its headed end received in said recess, and a spring encircling said rod and compressed between the head of said rod and a shoulder in said recess.

1,680,839. PLATE. WILLIAM H. BAKER, Boston, Mass. Filed Oct. 25, 1926. Serial No. 144,135. 2 Claims. (Cl. 65—15.)



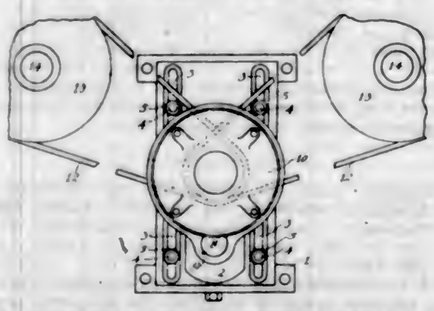
1. A plate formed with a cup in its rim, the bottom of the cup being substantially even with the bottom of the plate, and its top edge even with the periphery of the plate, the undersurface of the plate diametrically opposite its cup being a groove and an elongated lug disposed for engagement with the inner edge of the cup of a like plate beneath.

1,680,840. PROCESS OF SEPARATING AND RECOVERING GASES. OSCAR L. BARNEBEY, Columbus, Ohio, assignor to American Solvent Recovery Corporation, a Corporation of Ohio. Filed July 20, 1920, Serial No. 397,745. Renewed Feb. 27, 1928. 22 Claims. (Cl. 183—4.)



1. The process of separating the constituents of gaseous mixtures which comprises passing the mixture under pressure above that of the atmosphere successively through a plurality of separated layers of solid adsorbent material and interposed spaces, the said adsorbent material being adapted to adsorb a certain constituent or constituents of said mixture and permit other constituents to pass therethrough and the interposed spaces being adapted to permit the gas emerging from one layer of adsorbent material to thoroughly diffuse therein before entering the next layer, and then driving off the adsorbed gas from said material.

1,680,841. ELECTRIC-CIRCUIT TRACER. HENRY B. BARTLETT, West Hartford, Conn. Filed Dec. 10, 1926. Serial No. 153,828. 7 Claims. (Cl. 175—183.)

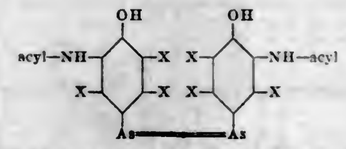


1. A portable electrical circuit tracer comprising a transformer having output and input windings, means for detachably connecting the output winding in series with the load on the circuit to be traced, means for detachably connecting the input winding across the circuit to be traced, and electromagnetic means for making and breaking connection to said input winding.

1,680,842. FEEDING MECHANISM FOR CONFECTIONERY MACHINES. ALONZO LINTON BAUSMAN, Springfield, Mass. Filed June 8, 1927. Serial No. 197,462. 7 Claims. (Cl. 107—7.)

2. In an apparatus, wherein alternately operable mechanisms are provided one for moving a plaque into and subsequently out of confection receiving relation with the conveyer of a confection coating machine and the other for moving the plaque while in said relation; means for driving said conveyer continuously, means for feeding articles to be coated to said conveyer, driving means for the feeding means, and means independent of both said mechanisms for periodically connecting and subsequently disconnecting the feeding means from its driving means, whereby confections may be fed in groups to said conveyer in such a manner that no confections will pass off said conveyer during the operation of the first named mechanism.

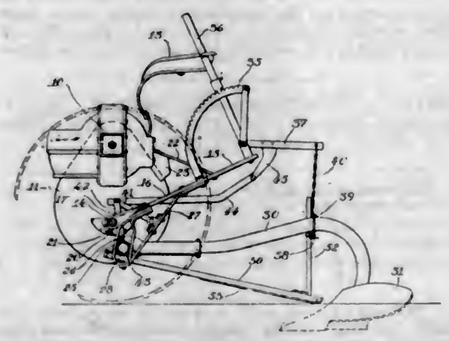
1,680,843. MOTOR MOUNTING. LESLIE J. BECHAUD, Berkeley, Calif., assignor to Bunting Iron Works, Berkeley, Calif., a Corporation of California. Filed Dec. 6, 1926. Serial No. 152,999. 1 Claim. (Cl. 308—11.)



In combination, a prime mover having a driving shaft; driven shafts disposed on opposite sides relatively to said prime mover; separate endless transmission members connecting said driving shaft with said driven shafts; a plate carrying said prime mover; a swivel member eccentric to the driving shaft and about which the prime mover automatically swings freely under differential tension in said transmission members; and a bed plate carrying said prime mover plate and swivel member, said bed plate having means for adjusting it along a line radial to the arcuate movement of the prime mover plate.

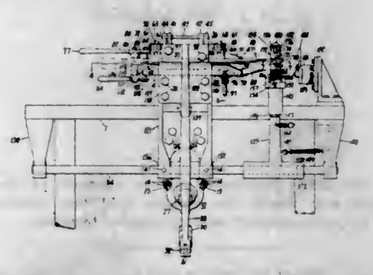
1,680,844. WELDING OF COPPER AND COPPER ALLOYS. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, New York, N. Y., a Corporation of West Virginia. Filed Feb. 21, 1922. Serial No. 538,364. 5 Claims. (Cl. 219—8.)

1. A welding rod consisting predominantly of copper and silicon, the silicon being present in amount between 1.25% and 4%.



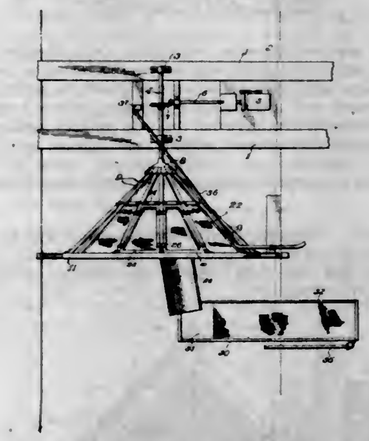
1,680,845. SUBSTITUTED 4.4' DIHYDROXYBISACYLAMINO-ARSENOBENZENES. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, a Corporation of Germany. Filed May 23, 1927, Serial No. 193,744, and in Germany June 28, 1926. 3 Claims. (Cl. 260—15.)

1. As new products substituted 4.4'-dihydroxy-bisacylamino-arsenobenzenes having probably the general formula:



wherein the X's mean hydrogen atoms, of which at least one is replaced by a monovalent substituent, which products are when dry yellowish powders, insoluble in water, easily soluble in dilute caustic alkali solutions and precipitated by acidifying these solutions, being not diazotizable, distinguished by an excellent resistance to the air and by a very good curative power.

1,680,846. TRACTOR ATTACHMENT. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Jan. 20, 1927. Serial No. 162,260. 6 Claims. (Cl. 97—47.)

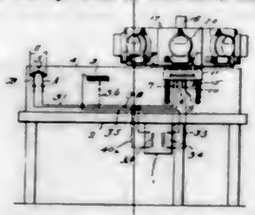


1. In an earth working implement, the combination of a horizontal draft bar, a plurality of spaced drag beams having forward ends connected to the draft bar, earth working means on the rear end of each beam, a transverse spacing bar connecting the rear portions of the beams, a ground engaging skid located between the beams having its forward end secured to the draft bar, and an upright member on the rear end of the skid having its upper portion secured to the spacing bar.

1,680,847. COIL-SPREADING DEVICE. AXEL W. BJORKMAN, Brooklyn, N. Y., assignor to Otis Elevator Company, New York, N. Y. a Corporation of New Jersey. Filed Jan. 4, 1927. Serial No. 158,893. 6 Claims. (Cl. 153—20.)

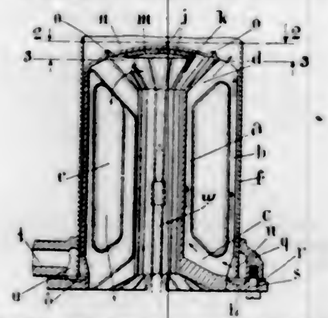
6. A device for spreading coils comprising, motive means, a movable former, a clamp associated with the movable former and arranged to grip a side of the coil to be spread and to act as a guide for a portion of an end of the coil, a stationary former, clamp blocks associated with the stationary former and arranged to grip the other side of the coil to be spread, and a clamp stud associated with the stationary former and arranged to grip said other side of the coil, said movable former being operated by the motive means to cause the coil to be spread into the form of an armature coil that may be withdrawn from the device upon the release of the clamp, the clamp blocks and the clamp stud.

1,680,848. FILTER. ERNEST L. BISHOP, Lindsay, Calif. Filed Aug. 11, 1926. Serial No. 128,672. 3 Claims. (Cl. 210—173.)



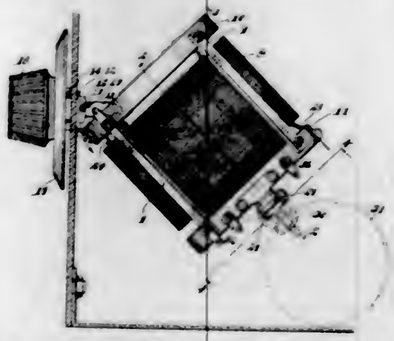
1. An apparatus for the purpose set forth comprising a shaft, a plurality of radially disposed diverging spokes extending from an intermediate point in the length of the shaft, a rim connecting the outer ends of said spokes, radial braces secured to and extending between the end of the shaft and intermediate points of the spokes, girders connecting the spokes at the ends of said braces, and a conical screen carried by the rim, the spokes and the girders.

1,680,849. ELECTRIC-METER-TESTING APPARATUS. HENRY J. BLAKESLEE, Hartford, Conn. Filed May 26, 1927. Serial No. 194,352. 7 Claims. (Cl. 175—183.)



1. An electricity meter testing apparatus comprising a support, a plurality of test circuit terminals movably mounted on said support, a standard meter, an artificial

load and a source of current connected with said test terminals, a carrier adapted to receive a plurality of meters and convey them in succession into a position in

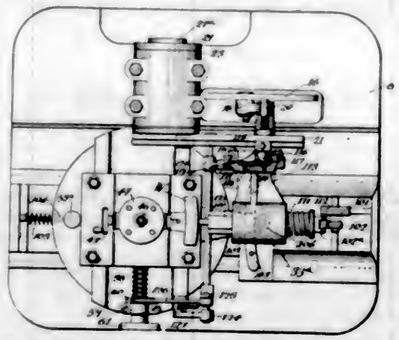


which the meter terminals may be engaged by the test terminals and means for moving said test circuit terminals into engagement with the meter terminals.

1,680,850. HEAT INTERCHANGER. CHARLES VERNON BOYS, Westminster, London, England. Filed Oct. 24, 1924, Serial No. 745,719, and in Great Britain Jan. 3, 1922. 2 Claims. (Cl. 257—222.)

1. A heat interchanger including a sheet of metal folded alternately inwardly and outwardly, so as to form a separating wall between a central uptake, a plurality of downcomers and a plurality of uptakes, means establishing communication between the said central uptake and plurality of downcomers whereby said uptake and downcomers constitute one conduit system, while the said plurality of uptakes constitute a separate conduit system.

1,680,851. CONSTRUCTION FOR RADIO RECEIVING INDUCTANCES. THOMAS H. BRENNAN, Chicago, Ill. Filed Apr. 27, 1925. Serial No. 26,025. 3 Claims. (Cl. 171—119.)

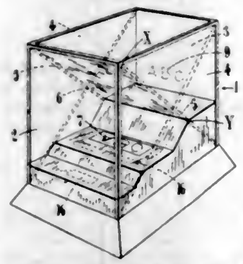


1. In a construction for radio receiving inductances, the combination with a bracket member, of a shaft having rotatable support in said bracket member; an insulation member carried by said shaft; a coil having its winding held by and positioned on said member and otherwise open to atmospheric dielectric; a second coil surrounding the first named coil; means for insulatively supporting the second named coil from said bracket member; an insulation strip hinged to said supporting means; and a third coil having its winding held by said hinge strip and adapted to be swung into various positions of adjustment with respect to said second named coil, substantially as described.

1,680,852. HAT. OCTAVE BROTELLE, Brussels, Belgium. Filed July 8, 1926, Serial No. 121,276, and in Belgium July 13, 1925. 4 Claims. (Cl. 2—181.)

1. A hat having a part thereof, adjacent the head of the wearer, impregnated with a soluble alkaline saponifying agent to render stain-forming ingredients of perspiration inactive after contact with said impregnated part.

1,680,853. MACHINE FOR CUTTING COMPOUND CURVES. RAY W. BROWN, Los Angeles, Calif., assignor to Barney Oldfield Manufacturing Company, Los Angeles, Calif., a Corporation of California. Original application filed Dec. 29, 1922, Serial No. 609,717. Divided and this application filed Mar. 29, 1926. Serial No. 98,289. 11 Claims. (Cl. 90—32.)



1. In a machine for forming curved surfaces having curves in planes at right angles to each other, an oscillating arm, a stationary guide element, a tool holder mounted for reciprocation along said element by the said oscillating arm, and fixed means engageable by and for moving the tool holder in a line at right angles to and as a result of the reciprocating action and a work holder movable in a path transverse to the action of said tool holder, and automatically actuated by the latter.

1,680,854. AUTOMOBILE SIGNAL SWITCH. HUGO J. BUCKNER, Hanford, Calif. Filed July 2, 1926. Serial No. 120,233. 3 Claims. (Cl. 200—59.)

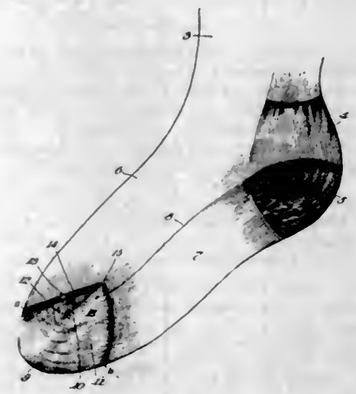
1. The combination with a steering wheel and stationary steering column casing arranged beneath the same, of a pair of reciprocatory rods mounted upon the steering wheel to travel therewith during the turning of the same, said rods having their outer ends arranged near the rim of the steering wheel and having means whereby they may be shifted longitudinally by the hands of the driver without removing the hands from the steering wheel, said rods having contacts carried by their inner ends, a pair of spaced stationary segmental contacts mounted upon said casing and adapted to be engaged by the adjacent contacts of said rods when said rods are moved inwardly, and an insulated cam arranged between the contact segments and projecting radially therefrom, said cam being so arranged with relation to said rods that it is common to both rods and serves to push them outwardly when they are brought into proximity thereto.

1,680,855. ILLUSION DEVICE. WILLIAM ALBERT BURNS, London, England. Filed Jan. 22, 1926. Serial No. 83,148. 4 Claims. (Cl. 40—130.)

1. An illusion device, comprising an inclosure having a glass front, a glass back, and glass sides, a transparency supported within the inclosure, rails carried by the glass sides and inclined with respect to the plane of the transparency, and a transparent mirror carried by the rails to reflect an image of the transparency in a line of vision directed through the glass front and glass back, dummy rails on the glass sides to complete with the mirror supporting rails a pattern indication to avoid directing attention to the mirror supporting rails.

1,680,856. METHOD OF TREATING RUBBER LATEX. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 28, 1925. Serial No. 53,207. 15 Claims. (Cl. 18—50.)

1. Process of manufacturing rubber articles which consists in treating a rubber dispersion with a metallic compound and an organic acid salt capable of reacting to liberate metallic ions in the dispersion to form an uncoagulated composition of increased filterability and depositing rubber from the latex thus obtained directly on a porous form in the shape desired to make the article.



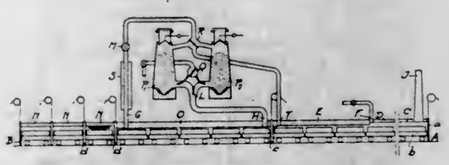
1,680,857. METHOD OF TREATING LATEX AND THE PRODUCTS OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 22, 1925, Serial No. 57,958. Renewed June 19, 1928. 26 Claims. (Cl. 18—50.)

20. In a process for preparing a vulcanized latex, the step of adding to an approximately ammonia-free latex containing sufficient non-nitrogenous carbon disulphide accelerator, zinc oxide, and sulphur to cause the rubber in said latex to become vulcanized to a soft elastic product, sufficient additional sulphur, zinc oxide and tetramethylthiuramdisulphide to cause said rubber to be vulcanizable to a hard rubber at temperatures below approximately 212° F.

1,680,858. PROCESS FOR MANUFACTURING RUBBER ARTICLES FROM LATEX. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 22, 1925. Serial No. 57,959. 13 Claims. (Cl. 18—53.)

1. A process for manufacturing rubber articles from latex which consists in vulcanizing latex in the presence of a salt of a thiol acid, and depositing the rubber from the latex thus obtained directly on a porous form in the shape desired to make the article.

1,680,859. STOCKING. PETER CAPARELI, Philadelphia, Pa. Filed Dec. 14, 1926. Serial No. 154,795. 4 Claims. (Cl. 66—182.)

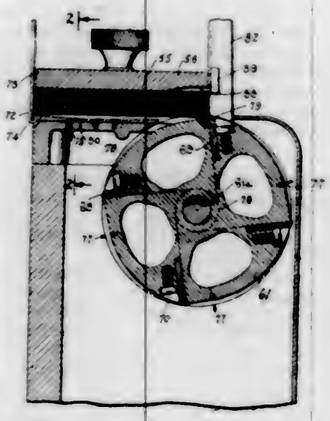


4. A knitted stocking having a toe pocket with a diagonal suture on each side, the distance from the point of the toe pocket to the upper edge of the web forming the upper part of said toe pocket being less than the distance from the point of the toe pocket to the lower edge of the lower web.

1,680,860. TOBACCO SUBSTITUTE WITH THERAPEUTICAL PROPERTIES. FRANK KERR CHISHOLM, Goulburn, Australia. Filed Dec. 2, 1926, Serial No. 152,311, and in Australia Jan. 18, 1926. 3 Claims. (Cl. 167—11.)

1. The manufacture of a tobacco substitute with therapeutical properties which consists in semi-drying natural eucalyptus leaves, bursting the cell structure of the leaves by rolling, macerating them in an aqueous solution containing about 10% of an hygroscopic substance and 10% of a flagrating substance, submitting them to heat within a temperature range of 100° F.—200° F. for a period of approximately three hours, subjecting them to pressure of the order of two tons per square inch in a compacted mass in moulds heated to a point not above 212° F. and curing the pressed mass by ageing.

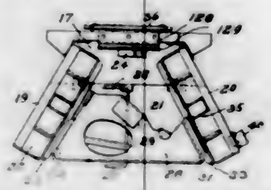
1,680,861. METHOD OF ROASTING AND REDUCING ORES. BROR CHRISTIANSEN, Smedjebacken, Sweden. Filed Mar. 29, 1926, Serial No. 98,347, and in Sweden Apr. 7, 1925. 4 Claims. (Cl. 75—14.)



1. Method of reducing ores, which comprises transporting the ore successively in a substantially horizontal direction through preheating, roasting, prereduction and final reduction zones of a channel furnace, subjecting the ore in the final reduction zone to the reducing action of circulating reducing gases, recarbonizing said gases outside the channel furnace in alternately operative recarbonizing furnaces, drawing off the excess of circulating gases and partially combusting it in the momentarily inoperative recarbonizing furnace by a regulated supply of

air for reheating said recarbonizing furnace, supplying the gases formed by said partial combustion to the prereduction zone of the channel furnace and finally combusting them by an excess of air in the roasting zone.

1,680,862. METHOD OF TREATING RUBBER AND PRODUCT. HAROLD E. CUDE, Floral Park, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 27, 1927. Serial No. 194,847. 16 Claims. (Cl. 18—52.)

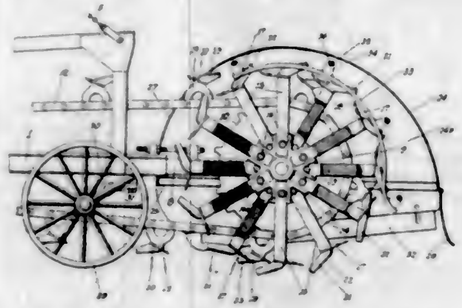


1. The method of treating rubber which comprises, comminuting the rubber, treating it with an organic acid capable of forming a water soluble soap until the mass has assumed a putty-like consistency, and neutralizing the residual acidity with a base capable of forming a water soluble soap.

1,680,863. CARD-FEEDING DEVICE. EUGENE A. FORD, Scarsdale, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Original application filed Nov. 7, 1924, Serial No. 748,347. Divided and this application filed Jan. 12, 1926. Serial No. 80,728. 6 Claims. (Cl. 271—41.)

1. In a machine of the character described, in combination, a card magazine and a rotary feed drum having one or more picker blades, the surface of the drum being cylindrical for a distance behind each picker blade, then gradually decreasing in radius for a distance and then increasing to full diameter at next picker blade.

1,680,864. WARDROBE. JESSE FREEMAN, Pittsburgh, Pa. Filed Feb. 7, 1924. Serial No. 691,098. 3 Claims. (Cl. 312—172.)

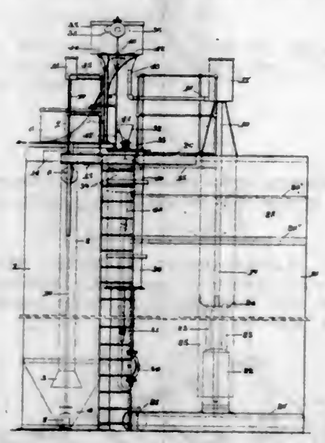


1. The combination in a wardrobe having a container-receiving compartment of relatively small dimensions formed therein, of a container including a support member, a shelf hinged to said member and extending forwardly therefrom, arms hinged to said support engaging said shelf member, said shelf member and said arms being adapted to swing to positions whereby said container fits into said compartment and the movement of said arms is confined by the walls thereof.

1,680,865. METHOD OF NEUTRALIZING ACIDITY OR ALKALINITY OF DECOMPOSED PRODUCT OR PRODUCTS BY GLUTAMIC ACID OR ITS SALTS. MASAO FUJII, Sendagaya-Machi, Toyotamagori, Japan. Filed Aug. 3, 1926, Serial No. 126,925, and in Japan Aug. 7, 1925. 4 Claims. (Cl. 99—11.)

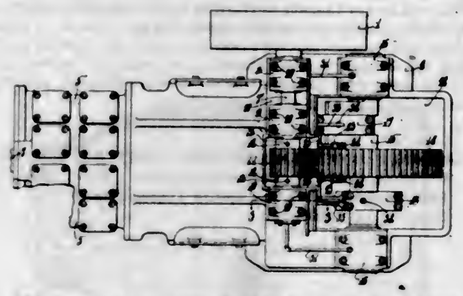
4. In the process of neutralizing products derived from the treatment of proteins and carbohydrates with alkalies, which products contain free alkali, the step which comprises treating the products with an appropriate glutamic acid compound to neutralize the alkali and to form alkali metal salts of glutanic acid.

1,680,866. GROUND-WORKING IMPLEMENT. JOHN E. FUNK, Stockton, Calif., assignor to Funk Soil Pulverizer Company, Stockton, Calif., a Corporation. Filed Sept. 27, 1926. Serial No. 137,884. 6 Claims. (Cl. 97—215.)



1. In a ground working implement, a ground working unit comprising a central member adapted to be rotated, a plurality of radial and circumferentially spaced arms mounted on said member, and transverse ground engaging blades mounted at the outer ends of the arms and disposed substantially at right angles to the radial lines of the arms, said arms having their inception in a common plane but being alternately offset toward their outer ends in a transverse plane, whereby the blades will be disposed in transversely spaced vertical planes.

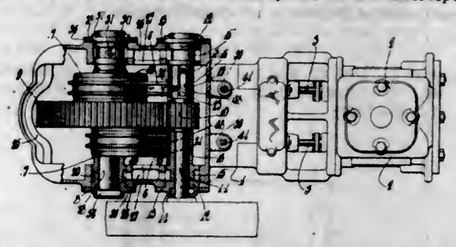
1,680,867. WATER PURIFIER. JEAN-BAPTISTE GAIL and NOËL ADAM, Paris, France. Filed Apr. 11, 1921, Serial No. 460,586, and in France Apr. 15, 1920. 3 Claims. (Cl. 210—18.)



1. A water purifier for effecting a water purification process with the use of lime water and another reagent such as carbonate of soda, comprising in combination, a crude water supply tank, a saturator in which the lime water is prepared, a tank in which the carbonate of soda or other reagent is prepared and a decanting device into which the prepared contents of said saturator and carbonate of soda tank are discharged, conduits connecting said crude water supply tank, said crude water supply tank having orifices controlling said conduits, said orifices having each an interchangeable inlet permitting the delivery of such quantities of water to said several receptacles in the same time, that the quantity delivered to the saturator and carbonate of soda tank will be just sufficient for the preparation of the proper quantity of the reagents to purify the quantity of crude water delivered to said decanting device, said saturator comprising a feeding siphon device, a receiver for receiving periodically a determined quantity of water for conversion into lime water, the frequency of said periods and the amount received at each period being determined by the operation of said siphon device, the latter being located above the saturator and being constructed to entrain a column of air between the successive liquid columns delivered by said siphon, said column of air being carried to the bottom of the saturator by the flow of liquid through said siphon,

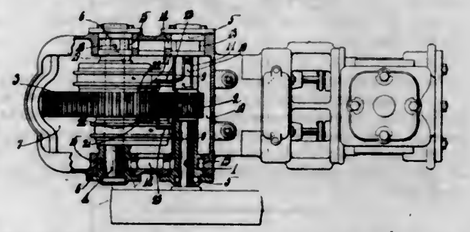
traversing the lime in said saturator and producing the turbulence required for effecting the saturation of the water with the lime, said purifier comprising also a lime tank, a central tube located in the saturator and opening near the bottom of the lime saturator, said tube com-

municating with the lime tank, each charge of lime being slaked in said tank during the utilisation of the preceding charge in the saturator, an annular tray located at the upper part of said tube for receiving the saturated water, and a tube leading to the decanting device for carrying off the saturated water.



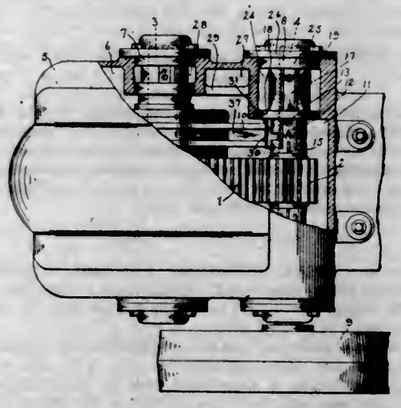
1,680,868. PUMPING MECHANISM. JOHN W. GARDNER, Quincy, Ill., assignor, by mesne assignments, to Gardner-Denver Company, a Corporation of Delaware. Filed May 5, 1923. Serial No. 636,882. 48 Claims. (Cl. 184—13.)

1. In combination, meshing gearing including a pinion and a driven gear, the latter dipping into an oil bath, longitudinally spaced shafts for said gearing, a crosshead including a driving connection operatively connected to said dipping gear and located at one side of the latter, bearings for said shafts on opposite sides of each of said gears including a bearing on the opposite side of said driving connection from said dipping gear, and supplemental means for collecting liquid lubricant carried up by said dipping gear and delivering said collected lubricant to the bearings of both shafts.



1,680,869. LUBRICATING DEVICE. JOHN W. GARDNER, Quincy, Ill., assignor, by mesne assignments, to Gardner-Denver Company, a Corporation of Delaware. Filed Apr. 17, 1924. Serial No. 707,255. 69 Claims. (Cl. 184—13.)

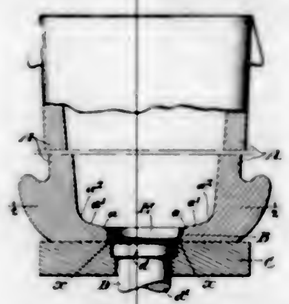
1. The combination with a plurality of shafts, and gearing rotatable by one of the same and including a gear carried by another and dipping in an oil bath and a meshing non-dipping gear, of stationary means for intercept-



ing lubricant as it is projected laterally by said meshing gear and distributing said intercepted lubricant to the bearings of different shafts.

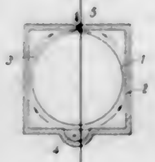
1,680,870. LUBRICATING MECHANISM. JOHN W. GARDNER, Quincy, Ill., assignor, by mesne assignments, to Gardner-Denver Company, a Corporation of Delaware. Filed July 11, 1924. Serial No. 725,521. 32 Claims. (Cl. 184—13.)

1. The combination with an operating device having a plurality of bearings and meshing gearing journaled therein including a pinion and a gear meshing with the latter and rotating in an oil bath, of lubricating means including a trough and a deflector respectively collecting lubricant carried up on the working face and on a side of said gear as the latter rotates in the same direction, and common means for distributing said collected lubricant to said bearings.



1,680,871. LUBRICATING MECHANISM. JOHN W. GARDNER, Quincy, Ill., assignor, by mesne assignments, to Gardner-Denver Company, a Corporation of Delaware. Filed July 13, 1926. Serial No. 122,237. 43 Claims. (Cl. 184—13.)

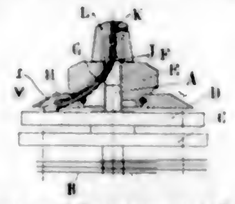
1. In a lubricating mechanism, a gear dipping into a lubricant bath, a non-dipping gear meshing therewith, a plurality of bearings for each of said gears, means collect-



ing lubricant on said non-dipping gear in either direction of rotation of the latter, and means for supplying lubricant collected thereby to all of said bearings.

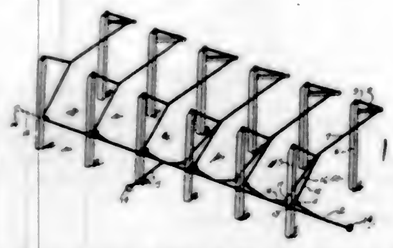
1,680,872. INGOT MOLD. EMIL GATHMANN, Baltimore, Md. Filed Nov. 29, 1927. Serial No. 236,494. 5 Claims. (Cl. 22—139.)

1. An ingot mold open at the top and having a bottom opening, in combination with a stool having an opening through it of smaller diameter than the bottom opening of the mold, and a sealing plug resting on the ledge or shoulder thus provided on the stool surrounding this opening.



1,680,873. METHOD OF STORING AND TRANSPORTING GASES. PAUL NICOLAS LUCAS-GIRARDVILLE, Paris, France. Filed May 18, 1926, Serial No. 110,021, and in France May 20, 1925. 1 Claim. (Cl. 62—1.)

The method of storing a substance whose boiling point is below 0° C., in a condensed state such as a liquid or solid which comprises enclosing said substance in a heat conducting vessel which is in heat conducting contact with a liquid exposed to atmospheric pressure and maintained in a heat insulated vessel, said liquid having a lower boiling point than the said substance whereby the slow and gradual evaporation of the liquid acts to maintain the said substance in its condensed state.

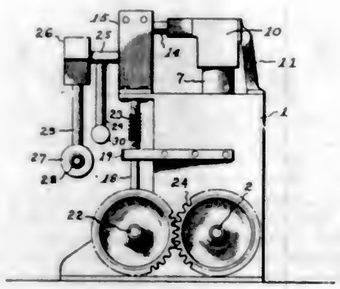


1,680,874. SPEED-REDUCING CONTROL. AUGUSTE EUGENE HENRI GRAVILLON, Paris, France. Filed Oct. 23, 1926, Serial No. 143,771, and in France Nov. 4, 1925. 6 Claims. (Cl. 74—7.)

1. A speed-reducing control for instruments embodying a movable part and a spindle whereto such part is attached, comprising a main knob fixed to said spindle to rotate the same and the movable part at unreduced speed when directly actuated; an auxiliary knob surmounting the main knob; a flexible element attached at one end to the auxiliary knob to be rotated by the same and connected intermediate its ends with the main knob to transmit such rotation thereto; and a friction member on the other end of the transmission element to engage and move

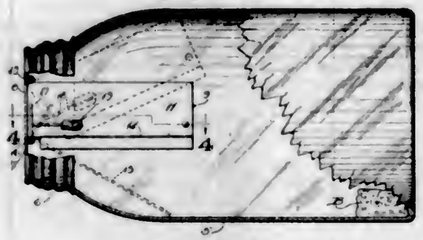
over a stationary part of the instrument and thereby reduce the speed of rotation of the main knob by said transmission element.

1,680,875. RACE STARTING MACHINE. REUBEN GABRIEL GRAY, Canterbury, near Sydney, Australia. Filed Aug. 28, 1925, Serial No. 53,134, and in Australia Sept. 5, 1924. 4 Claims. (Cl. 39—24.)



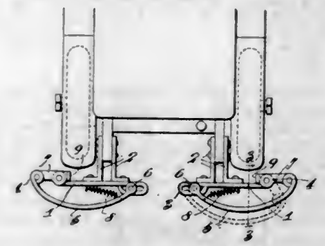
1. Improved race starting machine comprising pairs of posts, the posts of each pair being positioned on opposite sides of the course at each starting position, an arm hinged to one post of each pair and adapted to be maintained normally elevated laterally outwardly thereof, a flexible barrier disposed across the track at each pair of posts with one end connected to the free end of said arm and the other end connected to the opposite post, a branch cord connected to each barrier inwardly of the last named post and led through a pulley thereon and connected outwardly of the posts to a common control cord led through pulleys on each post at that side of the course.

1,680,876. BOTTLE-DISPENSING DEVICE. ALFONSO OLIVERAS GUERRIS, Barcelona, Spain. Filed June 7, 1926, Serial No. 114,356, and in France Aug. 5, 1925. 2 Claims. (Cl. 225—22.)



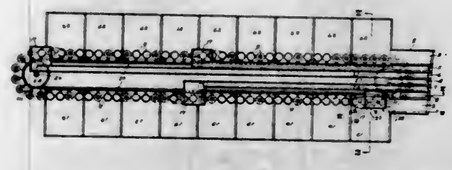
1. An engine of the character described, including a a terminal peripheral valve seat, a nozzle screwed to the conduit and a valve adapted to be loosely housed between the nozzle and the conduit terminal and compressed against the latter by operation of the nozzle to close the same, said valve having side grooving to permit passage of fluid through the nozzle when pressure of the valve is released when operating the nozzle.

1,680,877. FLUID-PRESSURE ENGINE. ROBERT HAMONDS, Cleveland, Ohio. Filed May 1, 1924. Serial No. 710,309. 5 Claims. (Cl. 308—4.)



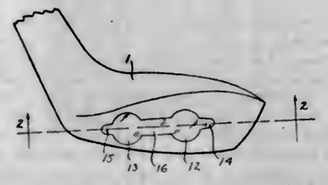
1. An engine of the character described, including a tubular guide sleeve, a cylinder having a free end which projects into the guide sleeve in a spaced relation thereto, and is concentric therewith, a working piston mounted to reciprocate within the cylinder, a tubular guide mounted to reciprocate upon the exterior of the cylinder in the space between the cylinder and the sleeve, and a rigid connection between the tubular guide and the piston.

1,680,878. SELF-SETTING MOUSE AND RAT TRAP. ELBERT HARRIS, Charlottesville, Va. Filed Aug. 11, 1927. Serial No. 212,309. 5 Claims. (Cl. 43—69.)



1. In an animal trap, the combination of a main chamber having an opening therein, and an anteroom including a pivotally mounted part within the said main chamber and having an opening in communication with the first said opening and being provided with a trap-door and with means to normally hold the trap-door closed, said means including the pivot on which said pivotally mounted part of the anteroom is mounted, said trap-door being yieldably mounted for depression by an animal thereon and being operably mounted to swing the said pivotally mounted part of the anteroom upward and thereby provide a large opening through which the animal can pass from the anteroom into said main chamber, the weight of said pivotally mounted part being effective to raise said trap-door to its closed position.

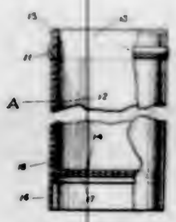
1,680,879. AUTOMOBILE BUMPER. WILLIAM E. HART, San Jose, Calif. Original application filed Oct. 7, 1927, Serial No. 224,662, Patent No. 1,670,963, dated May 22, 1928. Divided and this application filed Mar. 24, 1928. Serial No. 264,382. 3 Claims. (Cl. 293—55.)



1. In bumpers, a rigid bumper bar having a slot loop at one end and a hinge eye at its other end, means to mount the bar on a support, a yieldable bumper member pin connected at one end in the slot loop and a hinge link connected at its other end to the hinge eye, said hinge link having an abutment lug to engage the rigid bar and limit hinge action in one direction, and a spring to hold the parts to normal position with the abutment lug in engagement with the bumper bar.

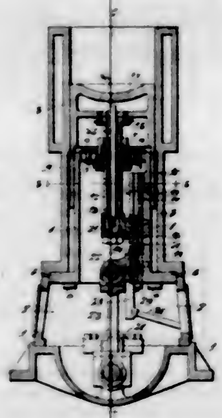
1,680,880. SORTING MACHINE. ROBERT C. HARTRAMPF and OTTO B. HARTRAMPF, Hillsboro, Oreg. Filed Aug. 13, 1927. Serial No. 212,750. 27 Claims. (Cl. 209—75.)

1. In a sorting machine, the combination with its frame, an endless flexible carrier, and carrier driving mechanism, of article-containers operatively communicating at spaced intervals with the carrier and extending outwardly from the side thereof, said containers consisting each of a ring, a plurality of depending clip members pivotally mounted on said ring, and means actuated by the straight travel of the carrier for swinging the clip members on their supporting ring for opening and closing the article-container.



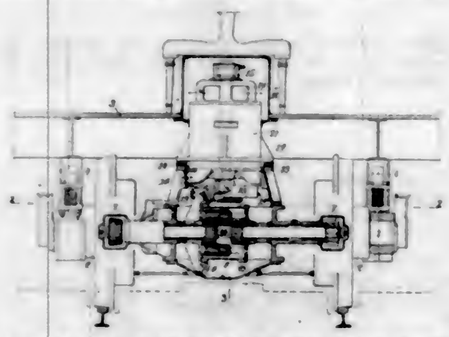
1,680,881. GOLF CLUB. ALLEN HEETER and WILLIAM G. MATTERN, Portsmouth, Ohio, assignors to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed May 23, 1927. Serial No. 193,669. 8 Claims. (Cl. 273—77.)

1. In a golf club, a wooden head having converging cavities and a narrow communicating passageway between said



cavities below the surface of the head, and a weighted member inserted therein in molten condition whereby it is interlocked therein.

1,680,882. LINER AND CAN CONSTRUCTION. CARL HOLLEN, Bemidji, Minn. Filed Aug. 2, 1926. Serial No. 126,486. 6 Claims. (Cl. 220—63.)



1. A can including an outer reinforcing casing having a tubular straight wall construction, a liner formed of aluminum adapted to fit over the upper edge of the can, and a reinforcing bottom disk frictionally supported spaced from the lower edge of the casing and adapted to protect the bottom of said liner.

1,680,883. INTERNAL-COMBUSTION ENGINE. LEONARD V. HOSFORD, Portland, Oreg. Filed Dec. 13, 1926. Serial No. 154,622. 5 Claims. (Cl. 123—176.)

1. In an internal combustion engine wherein is provided a crank case, a crank shaft, a cylinder secured to the crank case, a stationary piston secured within the cylinder, and a reciprocating piston fitted over said stationary piston within the cylinder; a gland on the head of said stationary piston, a piston rod secured to the head of said reciprocating piston and projecting through said gland into the stationary piston, a channeled guideway mounted within said stationary piston, a sliding head having a guide cooperating with said guideway to hold the head in place to slide along said guideway, means connecting said piston rod to said sliding head, and a connecting rod between said sliding head and crank.

1,680,884. DRIVING AXLE OF THE SINGLE TYPE COMPRISING LOOSE VEHICLE WHEELS MOUNTED UPON STATIONARY AXLES. ALBERT HUGUENIN, Paris, France. Filed Apr. 6, 1926, Serial No. 100,188, and in France Apr. 16, 1925. 9 Claims. (Cl. 105—118.)

1. In an actuating device for the single axles of railroad vehicles, the combination of a stationary vehicle axle, a loose wheel mounted at each end of said axle, a vertical motor disposed at the middle of the said axle, and means for imparting the rotation of the said motor to the said loose wheels through the medium of a differential device.

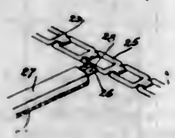
1,680,885. DRAFT CONNECTION. HOWARD I. INGERSOLL, Pound Ridge, N. Y. Filed Feb. 13, 1925. Serial No. 8,860. 9 Claims. (Cl. 213—72.)

1. In draft mechanism, the combination of a coupler having a butt with tapered undercut lugs, and a yoke having cooperating completely frustro-conical undercut lugs for forming a pivotal connection between said coupler and yoke and preventing spread of parts of the latter.

1,680,886. DEVICE FOR MOUNTING GLASSES ON THE DOORS OF VEHICLES. LOUIS JANOIR, St.-Ouen, France. Filed Nov. 22, 1926, Serial No. 150,079, and in France Nov. 27, 1925. 6 Claims. (Cl. 296—48.)

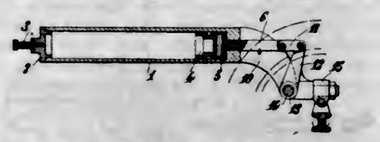
1. In combination with a vehicle door, a device for mounting a sliding sash, comprising side slides for the sash, a joint device connecting each slide, near its upper part, with the door frame, resilient means interposed between the lower part of each slide and the said door frame so as to move the sash, when it is raised inwardly against the carriage body, abutments on the said door frame for limiting the inward movement of the sash when the door is opened, and means transversely holding the slides at their lower part.

1,680,887. COLLAPSIBLE TIRE RIM. MERTON M. KINNEY and GEORGE D. KINNEY, Duluth, Minn. Filed July 10, 1925. Serial No. 42,718. 2 Claims. (Cl. 301—32.)



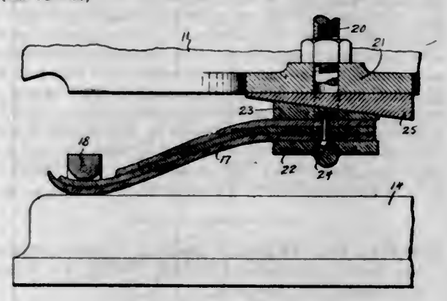
2. A collapsible tire rim for tires comprising sections hinged together, a releasing section including a pair of members hinged to said first mentioned sections, one of said members having a long and short tongue, one positioned inside of the other, said long tongue having an opening therein and the other of said releasing sections having a recess and lug which are adapted to lock the short and long tongue respectively of said releasing sections together in locking position.

1,680,888. BINDING MACHINE. JOHN J. KLUCK, Macklin, Saskatchewan, Canada. Filed Feb. 19, 1926, Serial No. 89,466, and in Canada Jan. 25, 1926. 1 Claim. (Cl. 198—174.)



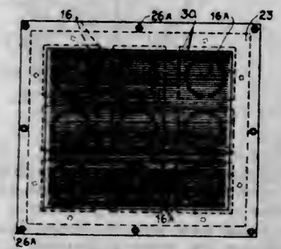
In a binding machine, a platform presenting a lengthwise corrugated grain receiving pan, a lower inclined elevator presenting a lengthwise corrugated pan continuous with the former pan, continuous driven side chains associated with the pans, spaced collectors carried by the side chains and presenting upstanding flanges and downwardly extending spaced fingers complementary to the corrugations and adapted to sweep the corrugations in the movement of the chains.

1,680,889. BINDING MACHINE. JOHN J. KLUCK, Macklin, Saskatchewan, Canada. Filed Feb. 19, 1926, Serial No. 89,467, and in Canada Jan. 25, 1926. 2 Claims. (Cl. 198—168.)



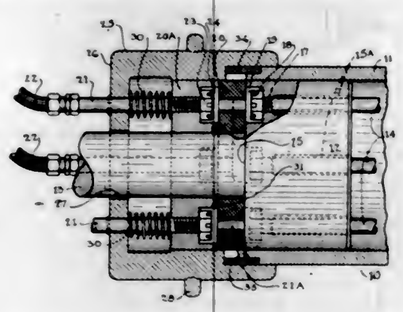
1. A binding machine having a horizontal lying smooth faced platform pan, an inclined smooth faced elevator pan continuous with the platform pan and an endless driven conveyor associated with the pans and presenting side chains and spaced cross slats carried at intervals by the chains, the said cross slats being provided on their under sides each with a strip of resilient material adapted to sweep the upper faces of the pans in the movement of the chains.

1,680,890. PNEUMATIC SUSPENSION DEVICE FOR VEHICLES. EUGENE JULES LAUGAUDIN, Paris, France. Filed June 7, 1926, Serial No. 114,277, and in France June 13, 1925. 3 Claims. (Cl. 267—65.)



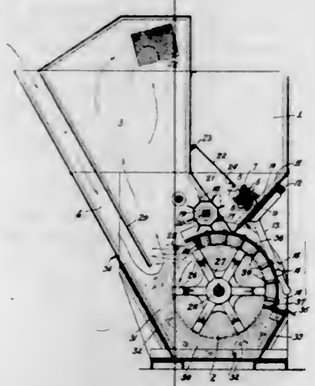
1. A pneumatic suspension device for vehicles, including aircraft comprising a removable and interchangeable cylinder or bottle, supporting means for same, a pump valve fitted to the cylinder enabling the device to work with gas under pressure, a piston rod and means for transmitting to the piston rod displacements of the vehicle wheels caused by road irregularities and the like in combination with a loose piston in said cylinder, a second piston in front of the loose piston and connected to the piston rod, and an oily fluid substance in the space between the two pistons forming a gas tight joint.

1,680,891. PRESS COMPENSATOR. JAMES CAMROD LEDBETTER, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,149. 5 Claims. (Cl. 68—9.)



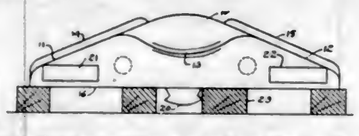
1. A pressing machine comprising in combination, cooperating pressing jaw parts adapted to open and close on the work, a press lever part for attachment with one jaw, a leaf spring interposed between the lever and jaw, anchor means attaching the ends of the spring to one part, anchor means attaching the center of the spring to the other part, and adjusting means cooperating with the spring and one of the parts to vary the distance therebetween and thereby to vary the distance between the lever and jaw to regulate the closing pressure between the jaws.

1,680,892. PULP SUCTION DIE. JAMES FLEMING LOW, Toronto, Ontario, Canada. Filed Mar. 21, 1927. Serial No. 177,086. 6 Claims. (Cl. 92—57.)



3. In pulp suction dies, a grid of closely set bars forming gravity and suction draining passages and having contiguous bars recessed in the upper sides for retaining the solid pulp and forming it into the desired shapes.

1,680,893. VACUUM-CONTROL MECHANISM FOR PULP-MOLDING MACHINES AND THE LIKE. JAMES FLEMING LOW, Toronto, Ontario, Canada. Filed Oct. 31, 1927. Serial No. 230,021. 7 Claims. (Cl. 92—57.)

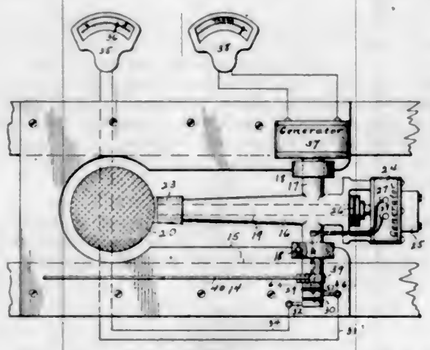


1. In a vacuum control mechanism for pulp molding machines and the like, a rotatable shaft formed with a shoulder to provide a reduced end for journalling in a bearing, a non-rotatable casing mounted adjacent the reduced end of said shaft and forming therewith a cylinder-like compartment, passages in said shaft for connection with a functional part of the machine mounting said shaft and opening into said compartment, a non-rotatable washer slidable in said compartment, a disc of soft material removably secured to one face of said washer and engaging said shoulder, said disc having ports therethrough spaced for registering with said passages and depressed to connect a number of said ports, pipes carried by said washer in alignment with said ports and projecting through the casing for operative connection with apparatus, and compressed springs urging said disc towards said shoulder.

1,680,894. PULVERIZER. HENRY G. LYKKEN, Minneapolis, Minn. Filed Aug. 16, 1924. Serial No. 732,436. 15 Claims. (Cl. 83—11.)

1. In a device of the character disclosed, a crushing device adapted to crush lump material and comprising means for holding the material to be crushed, said means including a rotary breaker having tangentially extending projections provided with radial faces whereby the projections may engage and act upon the lumps of material to break and crush the same, a plate located in spaced relation to the breaker member whereby the material may be pressed against said plate by the projections of the breaker member for crushing the material.

1,680,895. CAR REPLACER. ARMAND LYMBURNER, Verdun, Quebec, Canada, assignor of one-half to Joseph J. Driscoll, Chicago, Ill. Filed June 30, 1927. Serial No. 202,721. 1 Claim. (Cl. 104—265.)

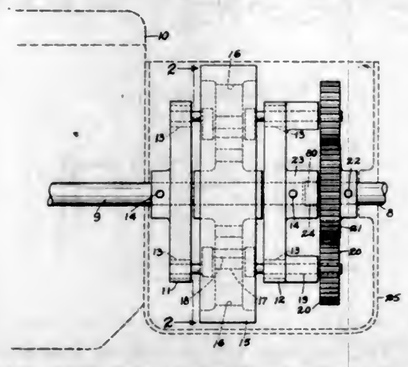


A car replacer, comprising a body having inclined ways and a downwardly tapered front wall from end to end and adapted to fit close to the rail base, rigid blocks extending outwardly from the body towards either end and a central downwardly extending stop member adapted to engage the tie.

1,680,896. MANUFACTURE OF FIBER BOARD. ROBERT A. MARR, Norfolk, Va. Filed Oct. 27, 1922, Serial No. 597,419. Renewed Jan. 19, 1928. 4 Claims. (Cl. 92—61.)

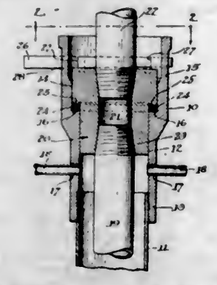
1. A process of making fiber board which comprises running into box sieve, an amount of a liquid pulp containing a large amount of aqueous liquid and a small amount of pulped digested cane material, such amount of liquid pulp containing a predetermined weight of said cane material, removing in the liquid state the major part of the aqueous liquid in such pulp, by suction, encasing the residual semi-dried pulp material in a fabric, and also encasing the same in a fine wire mesh exterior casing, and supporting the package on a rigid perforated plate, and applying a uniform mechanical pressure on the top of said package to squeeze out more of the aqueous liquid, until a rigid wet pulp board is produced, placing such rigid wet board between non-flexible perforated members and clamping the same together, and drying the board while held between said members under sufficient pressure to prevent substantial warping, whereby a rigid flat board structure is produced.

1,680,897. PRACTICE DEVICE FOR GOLFERS. JESSE VANCE MATTESON, Jr., Santa Rosa, Calif. Filed Aug. 22, 1927. Serial No. 214,593. 11 Claims. (Cl. 265—20.)



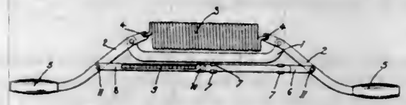
1. A device of the character described, comprising a golf ball mounted for rotation about its own axis, and for bodily travel about an axis at right angles to its own axis, meters for registering the movement of said ball with respect to each of said axes and means operatively connecting said ball with said meters.

1,680,898. PROCESS FOR MAKING BAKED-FOOD PRODUCTS. JEAN MATTI, Pully, Switzerland. Filed Sept. 5, 1925, Serial No. 54,812, and in Switzerland Mar. 30, 1925. 1 Claim. (Cl. 99—10.)



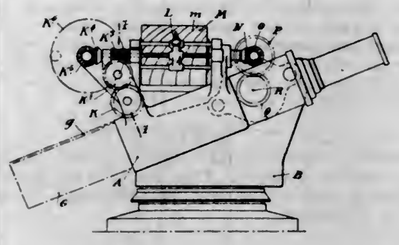
The process of making bread and the like, which comprises placing the dough in a mold, covering the mold, placing the dough in an oven and baking the same, the cover being provided with an opening for permitting the escape of vapors, said opening being plugged as soon as the baking has been completed so as to obtain a hermetically sealed package.

1,680,899. POWER-TRANSMISSION DEVICE. WILLIAM B. MCCALL, Cincinnati, Ohio. Filed Aug. 9, 1927. Serial No. 211,824. 1 Claim. (Cl. 74—34.)



In a device of the class described, the combination with a drive shaft rotatable by means of a power source, a plate fixedly secured upon the drive shaft, a bearing in the plate, an oscillatable slotted member rotatably mounted upon the drive shaft adjacent the plate, a rotatable cam shaft provided with an eccentric and a pinion gear, said shaft being rotatably received in the bearing in the plate and said eccentric being received in the slot in the oscillatable member whereby rotation of said shaft and eccentric serves to oscillate the oscillatable member relative to the plate, a driven shaft in axial alignment with the drive shaft and adapted for independent rotation, a gear fixedly mounted upon the driven shaft and engaging the pinion gear on the cam shaft whereby relative movement of the drive shaft and driven shaft may actuate the gears, cam shaft, and eccentric for oscillating the oscillatable member for compensating for the difference in speed of rotation between the drive shaft and the driven shaft.

1,680,900. CASING HEAD. JOHN W. MCQUAID, Fillmore, Calif. Filed Aug. 9, 1926. Serial No. 128,234. 1 Claim. (Cl. 166—14.)

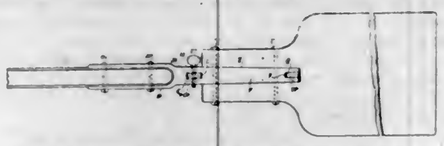


A casing head, comprising a cylindrical head member adapted to be secured to the upper end of a casing, said member having an enlarged bore at its upper end forming an annular, horizontally disposed seat therein; a complementary, cylindrical plug member insertable in the head member, for supporting a tubing centrally of the casing, said plug being adapted to fit closely in the upper, enlarged end of the head member and having a reduced lower end adapted to fit closely in the head below the annular seat, said reduced lower end forming a complementary, annular horizontally disposed shoulder on the plug to engage the seat; a relatively soft packing member interposed between the seat and shoulder; apertures in opposite sides of the upper portion of the head member on each side of its center, said apertures being positioned to extend above and below the normal level of the top face of the plug; and wedge members adapted to extend through each pair of apertures and across the top of the plug on either side of its center, to removably secure the plug in place on the seat.

1,680,901. EXTENSIBLE DEVICE WITH POWER INDICATOR FOR PHYSICAL CULTURE. LUDWIG MEYER, Paris, France. Filed May 18, 1926, Serial No. 109,982, and in Germany May 25, 1925. 4 Claims. (Cl. 265—21.)

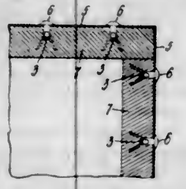
1. A combined physical culture exercising device and power indicator comprising a bar, handle levers pivoted adjacent their inner ends to the ends of the bar and the handle portions being arranged in substantially the plane of the bar, spring means connecting the short ends of the levers normally maintaining the handle portions of the bars in substantial alignment, and adjustable power indicating means operably connected with each of the handle portions of the levers.

1,680,902. SETTING DEVICE FOR TIME FUSES. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Apr. 12, 1927, Serial No. 183,161, and in France May 19, 1926. 16 Claims. (Cl. 89—1.10.)



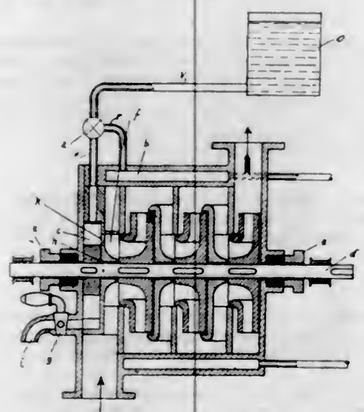
1. In apparatus of the class described, the combination of a body, a member displaceable therein and shaped to fit the nose of a projectile, said member comprising a rotatable part adapted to engage the fuse-setting mechanism of said projectile, and means operatively connecting said body and rotatable part to cause rotation of the latter on displacement of said member.

1,680,903. DIRIGIBLE SPOTLIGHT FOR VEHICLES. LESTER H. MILES, Los Angeles, Calif. Filed May 4, 1926. Serial No. 106,594. 5 Claims. (Cl. 240—61.)



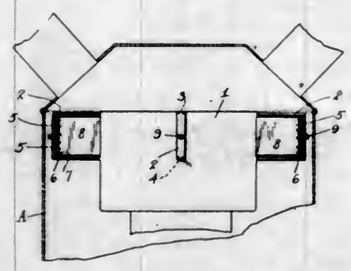
1. In a device of the class described a pair of spot lights, means to pivotally mount said spot lights, an operating member for each of said spot lights, a motor, an eccentric member driven by said motor, links connected to said eccentric member, and means operatively connecting each operating member to one of said links.

1,680,904. BAKER'S PEEL. ROBERT ALBERT MINSTERMAN, Elmira, N. Y. Filed June 29, 1927. Serial No. 202,353. 6 Claims. (Cl. 107—67.)



1. In a baker's peel, a slotted peel board, a plurality of pins extending across said slot, a handle, and a clamp for connecting said peel board to said handle comprising a pair of clamping members adapted to fit within said slot and clamp between them said pins, and means for securing said clamp to said handle.

1,680,905. METHOD OF AND MEANS FOR SEALING RECEPTACLES. GEORGE A. MOWER, London, England, assignor to Judson L. Thomson Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed May 28, 1927, Serial No. 195,119, and in Great Britain June 8, 1926. 3 Claims. (Cl. 217—66.)

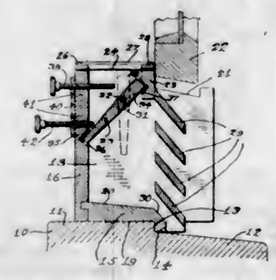


3. A receptacle, a metal band extending over the top and sides of said receptacle, and means for sealing the receptacle comprising a sheet metal disc rigidly embedded in the material of the receptacle in alignment with a hole provided in said metal band and extending partly through said material, and a bifurcated rivet projecting through said hole with its legs spread on opposite sides of said spreader, the diameter of said spreader being approximately the same as the shank portion of the rivet.

1,680,906. CENTRIFUGAL PUMP. FRITZ NEUMANN, Nuremberg, Germany. Filed Nov. 9, 1923, Serial No. 673,815, and in Germany Nov. 13, 1922. 4 Claims. (Cl. 103—113.)

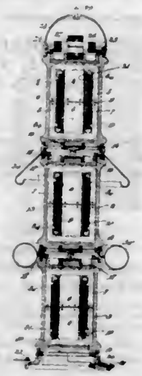
1. The combination with a centrifugal fire engine pump, a water ring sealed air pump for priming said centrifugal pump, a driving motor operatively connected to said pumps for driving said pumps and a container for containing cooling water for said driving motor, of a pipe connected to said water ring pump and said cooling water container, for enabling hot water to be supplied from said container to said water ring pump for forming the liquid ring in the latter, as set forth.

1,680,907. HOT-AIR-FURNACE ATTACHMENT. ELMER R. NEVEL, Lock Haven, Pa. Filed Mar. 6, 1928. Serial No. 259,498. 7 Claims. (Cl. 126—99.)



1. The combination with the radiating drum of a hot air furnace, of a plurality of brackets carried by the drum and extending radially therefrom, a sectional ring encircling the drum and confined within the brackets adjacent the outer ends thereof, a series of radiating fins arranged radially with respect to the drum, the inner edges of the fins engaging the drum, and means for urging the ring inwardly against the outer edges of the fins to maintain the latter rigidly with respect to the drum.

1,680,908. METHOD OF PREPARING ARTIFICIAL PETROLEUM FROM RUBBER SCRAP OR VULCANIZED-RUBBER WASTE. HIROTARO NISHIDA and KEIICHI SHIMADA, Kiriu, Japan. Filed Jan. 28, 1927, Serial No. 164,369, and in Japan Dec. 24, 1925. 3 Claims. (Cl. 260—169.)



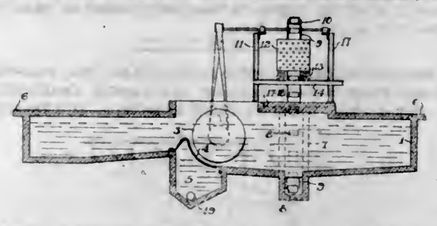
1. A method of preparing a petroleum like material which comprises destructively distilling the hydrocarbons of rubber in the presence of a naturally occurring bleaching earth.

1,680,909. WINDOW VENTILATOR. CHARLES F. PARENT, Torrington, Conn. Filed Mar. 8, 1927. Serial No. 173,671. 2 Claims. (Cl. 98—95.)

1. In a window ventilator, a casing adapted to rest on a window sill below a raised window sash, said casing having an air inlet and an air outlet, and a pivoted shutter in said casing responsive to wind-pressure for automatically swinging inwardly to automatically reduce the air passage therethrough, and means for adjusting the limit of said swing.

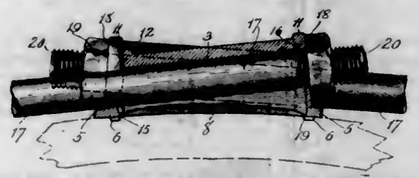
1,680,910. EARTHING CHOKING COIL OR VOLTAGE TRANSFORMER FOR HIGH VOLTAGES. EMIL PFIFFNER, Fribourg, Switzerland. Filed June 9, 1925. Serial No. 35,997. 10 Claims. (Cl. 175—356.)

1. A voltage transformer comprising in combination a plurality of sections, each section having a magnetic circuit provided with an air gap, a primary winding on each section and a compensating winding on each section connected in series with said primary winding, said compensating winding of each section being connected with the windings of the adjacent sections.



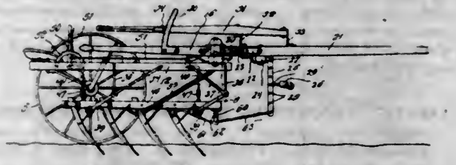
1,680,911. BRAKE SHOE. MALCOLM LOUGHEAD, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed Mar. 17, 1927. Serial No. 175,956. 3 Claims. (Cl. 188—250.)

2. A stamped brake shoe comprising a pair of pressed metal plates secured to one another and fashioned to provide a contiguous brake lining supporting surface, one end of said shoe being formed to receive a pin for pivotally mounting the shoe, said plates being bent laterally in opposite directions to form reenforcing means lying in a surface perpendicular to the plane of the body of the shoe and gradually increasing in area from the free end to the pivotal end of the shoe.



1,680,912. APPARATUS FOR MAKING PULP OR THE LIKE. HOMER D. MARTINDALE, Middletown, Ohio. Filed Feb. 17, 1927. Serial No. 168,912. 6 Claims. (Cl. 92—24.)

1. A pulp reduction apparatus including in combination, a stock beater, a channel extended across the bottom to an adjacent wall of the beater tub and upwardly outside the wall, and acting to receive foreign materials separated by gravity from stock in process of reduction in the beater, and

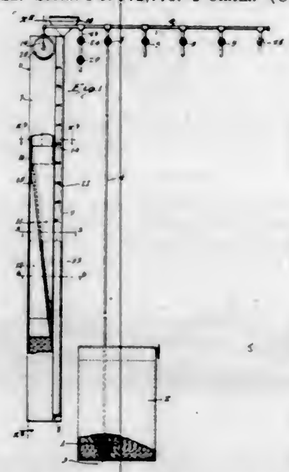


a series of devices, as buckets, operably connected for traversing the channel for removing the accumulation of said material therein.

1,680,913. SILO OR TANK LUG. HUGO C. RASSMANN, Beaver Dam, Wis., assignor to F. Rassmann Manufacturing Company, Beaver Dam, Wis. Filed Sept. 3, 1925. Serial No. 54,303. 2 Claims. (Cl. 217—95.)

1. A lug of the character described made with diagonal grooves having unobstructed side walls, said lug also having end portions which are beveled and have holes, whereby said lug may be cast and said holes formed without the use of cores and whereby the separation of the lug from the mold will be facilitated.

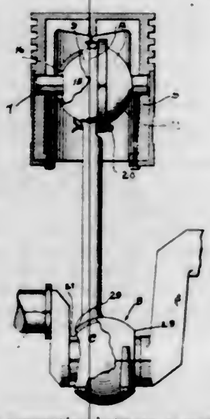
1,680,914. CULTIVATOR. GEORGE W. RAY, Forty Fort, Pa. Filed Mar. 3, 1927. Serial No. 172,413. 5 Claims. (Cl. 97—237.)



1. A cultivator of the class described, comprising a wheeled frame, bracket rods depending from the frame, U-shaped hangers having their extremities pivotally engaged in the bracket rods, beams attached to the bights of the hangers, cultivating elements on the beams, bell crank levers on the frame, means connecting the bell crank levers with the beams, means connecting the bell crank levers together, means for operating the bell crank levers, springs attached to the beams and to the frame so as to urge the cultivating elements on the beams into engagement with the ground and to tend to lift the beams after they have been lifted a predetermined distance.

1,680,915. METHOD OF TREATING RUBBER-FIBER WASTE MATERIAL. REED P. ROSE, Jackson Heights, N. Y., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Jan. 7, 1928. Serial No. 245,276. 6 Claims. (Cl. 18—52.)

6. The method of treating rubber-fiber waste material which comprises mechanically working the broken up material in the presence of about 10 parts of a soap forming fatty acid until the rubber component has assumed a plastic putty-like consistency, adding 12–15 parts of caustic

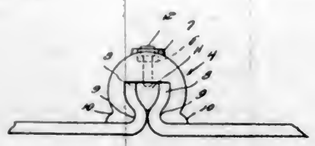


soda in aqueous solution for each 100 parts of rubber and continuing the working, and finally beating the product in an aqueous medium containing an alkali and a protective colloid until the rubber is completely removed from the fiber and in dispersed form.

1,680,916. LIQUID-LEVEL INDICATOR. S Q SHANNON and HERMAN PAGE RANDALL, Los Angeles, Calif. Filed July 5, 1922. Serial No. 572,778. 1 Claim. (Cl. 73—31.)

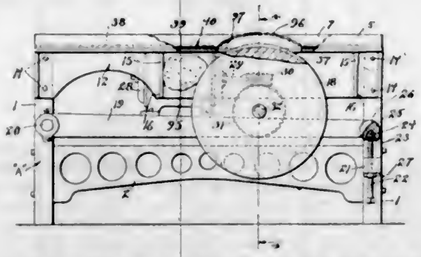
In a gage, two liquid containing chambers interconnected at their lower ends, one constituting an indicating chamber, an inlet through which gas may be admitted for forcing the liquid down the other chamber so as to cause the liquid to rise in the indicating chamber, two relatively movable overlapping members disposed in said non-indicating chamber, said members being reversly tapered so as to leave between them throughout their combined length and in each position a channel of uniform cross-sectional area for occupation by liquid in said column and being reversely movable into different positions, in each of which said cross-sectional area for occupation by liquid is different from each other position of the members, and means for so relatively moving the members.

1,680,917. CONNECTING ROD AND ITS COMPONENT BEARINGS. ALFRED C. SLOAN, Philadelphia, Pa., and STEPHEN M. SLOAN, Vineland, N. J. Filed Sept. 3, 1925. Serial No. 54,341. 6 Claims. (Cl. 74—108.)



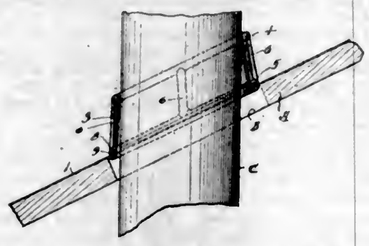
1. A universal connection between a connecting rod and piston, comprising a wrist pin having a spherical member mounted thereon, a similar shaped housing enclosing the spherical member and formed in complemental sections, said sections adapted for threaded engagement and longitudinal adjustment with respect to the wrist pin, and means for locking the sections in adjusted position.

1,680,918. TRACK FOR MINIATURE ELECTRIC TRAINS. WALTER E. THAYER, Lockport, N. Y. Filed Nov. 22, 1927. Serial No. 235,004. 7 Claims. (Cl. 238—10.)



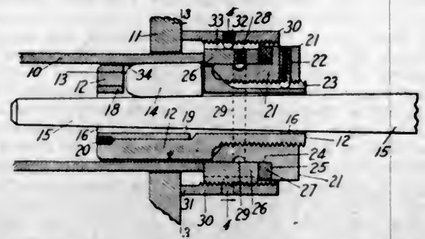
1. In a miniature railway, ties having transversely extending kerfs, and a rail having a web extending down into said kerfs and a pin extending through one end of each tie and through the web of the rail.

1,680,919. BELT CLAMP. BASCOM LEE WALKUP, Mexia, Tex. Filed Dec. 2, 1927. Serial No. 237,249. 1 Claim. (Cl. 24—31.)



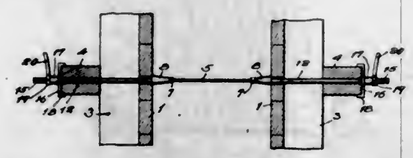
As a new product of manufacture, a belt clamp of the class described comprising an elongated casting provided on one side with an open ended channel, having spaced opposed arcuate walls and an inner flat wall, the entrance portion of the channel being restricted by the presence of inwardly projecting shoulders, the belt ends being adapted to extend between the shoulders, to be forced against said arcuate walls with their extremities resting in contact with said flat walls, an elongated wedge bar located in said channel, and bolts threaded through said casting and engageable with said bar, whereby to permit the bar to be forced between the belt ends to force the belt ends into engagement with the walls of the channel and said shoulders.

1,680,920. GLASS-GRINDING MACHINE. KARL ALBERT WEBER, Los Angeles, Calif. Filed Apr. 6, 1925. Serial No. 20,986. 10 Claims. (Cl. 51—76.)



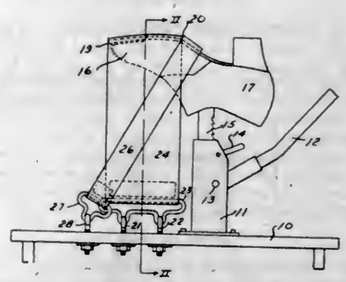
1. In a machine for grinding an edge of a plate of glass, the combination of a supporting runway, a grooved mat of resilient material secured on the runway for guiding and supporting the plate of glass on edge in substantially vertical position, means for maintaining the plate of glass in substantially vertical position, means for feeding the plate of glass longitudinally along the runway support, and grinding means located substantially on a level with the said supporting runway and onto which the plate of glass moves and by which it is partially supported on edge while being ground.

1,680,921. ADJUSTABLE ROOF FLANGE. DAVID WEINBERG, Rockaway Beach, N. Y., assignor to Paramount Roof Flange Corporation, a Corporation of New York. Filed May 13, 1927. Serial No. 191,098. 5 Claims. (Cl. 285—31.)



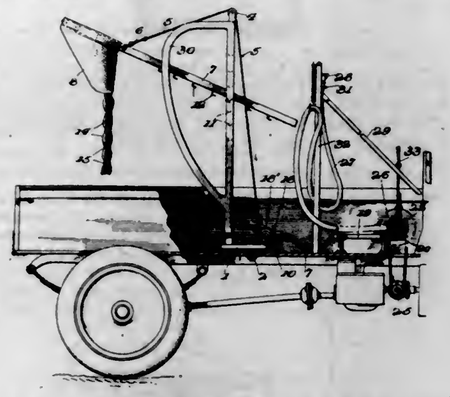
2. As a new article of manufacture, an adjustable roof flange comprising a flange plate having an orifice therein and a collar of ductile material interlocking with the edge of the orifice and formed with spaced annular and cross reinforcing beads.

1,680,922. TUBE AND FLUE EXPANDER. GUSTAV WIEDEKE, Dayton, Ohio, assignor to Gustav Wiedeke Company, Dayton, Ohio, a Firm. Filed Nov. 29, 1926. Serial No. 151,383. 14 Claims. (Cl. 153—82.)



1. In a device for expanding a tube in a tube sheet and comprising expanding rollers and a mandrel for actuating the same, a frame having slots to receive said rollers and having a longitudinal bore to receive said mandrel, a guard supported by and rotatable about the outer portion of said frame and arranged to engage the tube sheet, and means controlled by the normal operation of said device for positioning the tube with relation to the tube sheet, said means comprising a part adjustable with relation to said guard to determine the position of said tube.

1,680,923. CONCRETE-FORM CONSTRUCTION OR THE LIKE. CHESTER I. WILLIAMS, Grand Rapids, Mich. Filed Feb. 26, 1925. Serial No. 11,754. 9 Claims. (Cl. 25—131.)



1. In apparatus of the character described and in combination, form members disposed in opposed relation, a rod, and means associated with one end of the rod for holding one of the form members against displacement relative to the rod, the other end of the rod terminating between the forms, a nut threaded upon said other end of the rod, means including a second rod projecting through the other form member and threaded upon said other end of the first rod for holding said form members against displacement in a direction away from each other, and means enclosing the threaded connection between the rods and cooperating with said nut for holding the forms in spaced relation.

1,680,924. SOLE-CEMENTING MACHINE. FRANK EMERY WILLIAMS, Kansas City, Mo. Filed Mar. 9, 1927. Serial No. 174,035. 1 Claim. (Cl. 12—133.)

In a sole cementing machine, a base element, a shoe last adjustably positionable from said base; belting detachably connected to the base and for looping over a shoe when carried by the last: and a jack intermediate the last and base for actuating said last to stretch said belting.

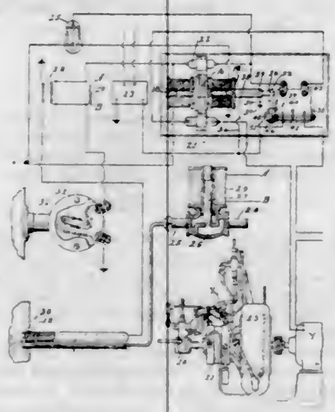
1,680,925. FRUIT GATHERER. CECIL W. WOOD, Hedgesville, W. Va. Filed Dec. 29, 1923. Serial No. 683,466. 6 Claims. (Cl. 193—7.)

6. In a fruit gatherer, the combination of a mast, a pair of independently adjustable bars each fulcrumed on said mast, a hopper supported by said bars between the same and means moving said hopper in a vertical plane.

1,680,926. PROCESS FOR PRODUCING DIASTATIC PRODUCT. KEIZO WOOYENAKA, Tokyo, Japan, and TATSUO OKOCHI, Clifton, N. J., assignors to Takamine Ferment Company, New York, N. Y., a Corporation of Virginia. Filed Jan. 9, 1923. Serial No. 611,653. 4 Claims. (Cl. 195—20.)

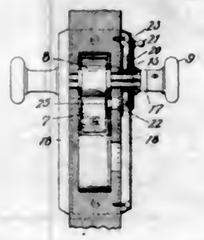
1. The process of manufacturing diastatic product, which consists in impregnating a culture medium that is suitable for growing fungi with an aqueous solution of sodium salicylate and sodium fluoride in a closed receptacle, steaming the medium to effect sterilization thereof, liberating the acid radicals of said antiseptics by adding a dilute mineral acid, inoculating the mass with aspergillus oryzae spores and subjecting same to incubating conditions.

1,680,927. AUTOMOBILE BUMPER BRACKET. GEORGE W. YANSS, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,616. 5 Claims. (Cl. 293—55.)



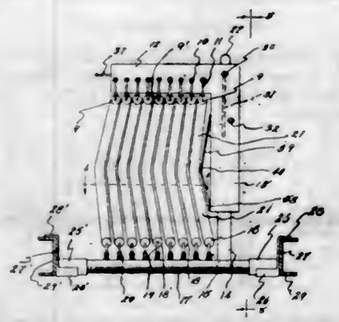
1. A bumper bracket for automobiles of the type in which the frame is provided with a horn having a socket formed thereon containing a fabric cushion connected with a vehicle spring, said bracket comprising a base having an upright portion with clamping means thereon for a bumper member, said upright having a reinforcing member connecting said base and said upright, and means for connecting said bracket to said socket.

1,680,928. AUTOMOBILE BUMPER BRACKET. GEORGE W. YANSS, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,617. 4 Claims. (Cl. 293—55.)



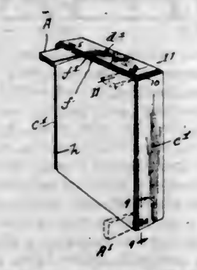
1. A bumper bracket for automobiles of the type in which the frame has a curved horn connected with a vehicle spring by a flexible fabric shackle bolted to the free end of said horn, said bracket comprising a base shaped to conform with and rest on the upper curved surface of said horn, and means for connecting said base to said horn in co-operation with said spring shackle bolt.

1,680,929. SAFETY CONTROL MECHANISM FOR FUEL ATOMIZERS. LOYD I. ALDRICH, Peoria, Ill., assignor to Preferred Oil Burners, Inc., Peoria, Ill., a Corporation of Illinois. Filed July 5, 1924. Serial No. 724,542. 1 Claim. (Cl. 158—28.)



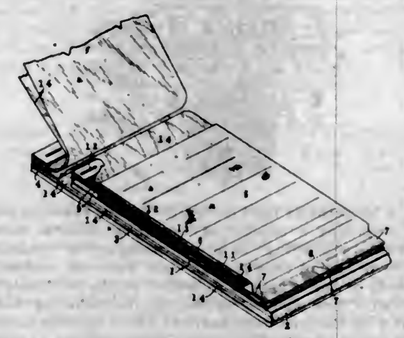
In an apparatus of the class described, the combination of a burner, motor operated means for supplying a fuel mixture to the burner, a thermostat for controlling the operation of the motor operated means, a transformer having a coil in the secondary circuit for heating said thermostat, and a burner igniting circuit shunted around said heating coil so that closing of the latter circuit diminishes the current in the heating coil of the thermostat and permits a slow motor stopping movement of said thermostat.

1,680,930. COMBINED LOCK AND LATCH. KATSUTARO ANDO, Minamikatsushika-Gun, Tokyo-Fu, Japan. Filed June 23, 1927. Serial No. 201,003. 1 Claim. (Cl. 70—20.)



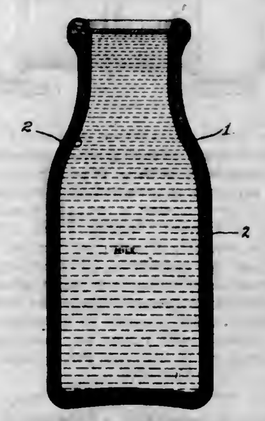
In combination, a combined lock and latch adapted to fit in the mortise in a door and escutcheon plates secured to the opposite sides of the door, a bushing for the knob spindle in the inner side of the door, a latching bolt having an L-shaped bar fixed at one end of its leg, an operating plate with a thumb piece mounted on said bushing through its central opening and interposed between a shoulder of said bushing and said escutcheon plate, a sector board with twin sectors having a sloped side edge respectively mounted on said bushing through its central opening in the inner side of the escutcheon plate and connected to said operating plate by means of screws so that the same may be turned under action of said operating plate, a latching pin normally in its retracted position under tension of a spiral spring adapted to be forced out against the spring in engagement with said sector board and one side wall of the casing of said lock having an opening formed therein, through which opening one end of said latching pin may be extended to engage with an L-shaped bar fixed at one end of the leg of said latching bolt, so that the latching bolt may be held against inward movement.

1,680,931. BOILER. JOHN H. BAKER, Detroit, Mich. Filed Jan. 18, 1926. Serial No. 81,993. 2 Claims. (Cl. 122—333.)



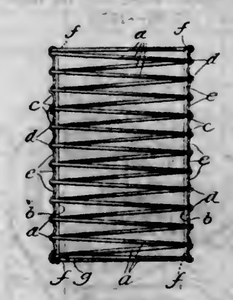
1. A boiler of the class described comprising an upper and lower set of headers, each set comprising a plurality of parallel extending headers in spaced relation to each other, the headers in the upper set being spaced apart a less distance than the headers in the lower set; a plurality of bow shaped tubes connecting the corresponding headers in the upper and lower sets, the tubes connecting adjacent headers being in staggered relation; an L-shaped dome having its base extending transversely of the upper set of said headers adjacent one end thereof; means for connecting said end of said headers in communcation with the leg of said dome; a U-shaped dome positioned transversely over the upper set of said headers adjacent the opposite end thereof, the leg of said U-shaped dome adjacent said L-shaped dome being angularly turned and extending in parallel relation to the leg of said L-shaped dome; means for connecting the base of said L-shaped dome with said leg of said U-shaped dome; a reduced portion on the lower end of the leg of said L-shaped dome; a reduced portion on the lower end of said angularly turned leg of said U-shaped dome; a transversely extending pipe in communication with said reduced portions; a pair of parallel extending pipes, each in communication with said transversely extending pipe; and means for connecting said parallel extending pipes in communication with the headers of said lower set.

1,680,932. SUIT BOX. HERBERT R. BLISS, Niagara Falls, N. Y., assignor to Bliss Containers, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 5, 1925. Serial No. 66,973. 5 Claims. (Cl. 229—47.)



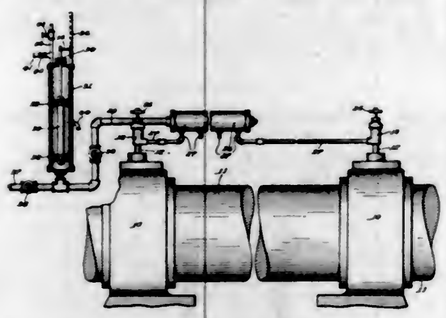
1. A suit box of the character described, comprising body and cover members which telescope together, the body member being provided with folded-over corner flaps and the cover member having corner flaps and telescoping over the body member and sealed thereto by driving stitches through the corner flaps of the cover member and the corner flaps of the body member said stitches also serving to set up the cover member.

1,680,933. MANIFOLDING SALES BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed July 5, 1922. Serial No. 572,776. 1 Claim. (Cl. 282—24.)



In a manifolding book of the character described, in combination, connected sets of three record leaves, the leaves of each set superposable relative to each other, with interposition of transfer material, to produce three inscribed leaves at one writing, the upper two of said relatively superposed leaves of each set being separate from and displaceable from each other and of manifold paper, one of said two being of tissue paper and the other of opaque paper; the lowermost of the three leaves of each set being a combined record leaf and stop leaf directly pasted at one end to said opaque leaf.

1,680,934. COMPOSITION FOR PRESERVING FOOD PRODUCTS. HILLHOUSE BUEL, Seattle, Wash., assignor of one-half to William P. Hammond, Scarsdale, N. Y. Filed Sept. 8, 1921. Serial No. 499,240. 6 Claims. (Cl. 99—8.)

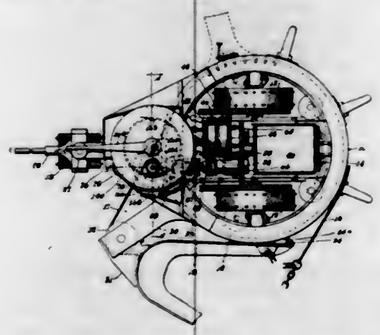


6. A composition of matter comprising a cellulosic material of relatively high strength and resistance, deposited from a solution of ethyl acetyl cellulose in acetone, containing a plasticising agent of light oil, said oil imparting no objectionable taste or odor to food in contact therewith, the deposited material being subsequently fused.

1,680,935. REENFORCEMENT FOR CONCRETE COLUMNS. ARTHUR A. CLEMENT, Chicago, Ill., assignor to American Wire Fence Company, Chicago, Ill., a Corporation. Filed Sept. 27, 1919, Serial No. 326,988. Renewed July 5, 1927. 2 Claims. (Cl. 72—76.)

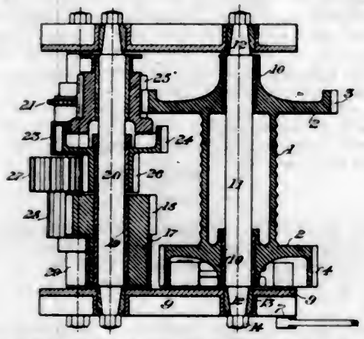
1. A reenforcement for concrete columns, comprising a wire spiral and a series of longitudinal spacers each comprising two wires extending respectively within and outside of the coils of the spiral and connected together between the coils, at least one of the wires of each spacer having seats for the coils and hooks engaging the end coils, certain of said hooks engaging the two end coils to hold the ends of the spiral substantially at right angles to its axis.

1,680,936. LUBRICATING SYSTEM. JOHN F. CULP, Philadelphia, Pa., assignor to Ideal Lubricator Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 4, 1926. Serial No. 85,948. 2 Claims. (Cl. 184—7.)



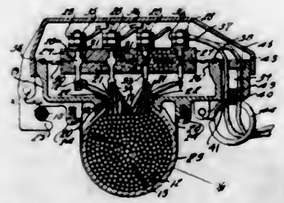
2. A grease lubricating system comprising a plurality of grease supply pipes normally open to establish communication respectively with a plurality of bearings, a valve in each supply pipe provided with a relatively long grease supply groove having a cross-sectional area sufficiently large to prevent clogging under any expelling pressure, means operable at will for varying the grease feeding length of the respective valve grooves, a grease reservoir common to said supply pipes, a plunger in said reservoir for expelling grease therefrom, and means to place said plunger under pressure to cause grease to feed continuously through said valves in quantities predeterminedly proportioned by the set groove lengths of said valves.

1,680,937. TREATMENT OF ALLOY STEEL. ARTHUR C. DAVIDSON, Bronxville, N. Y., assignor to D. Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 333,966. 2 Claims. (Cl. 75—45.)



1. Process of producing high speed steel consisting in melting iron, chromium and tungsten, scavenging to remove oxides, etc., adding cobalt, scavenging, adding vanadium in less than 50% excess over the desired analysis, adding an explosive material, and casting at above 3200° F.

1,680,938. APPARATUS FOR HANDLING LOOSE MATERIALS. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1925. Serial No. 43,671. 6 Claims. (Cl. 37—115.)

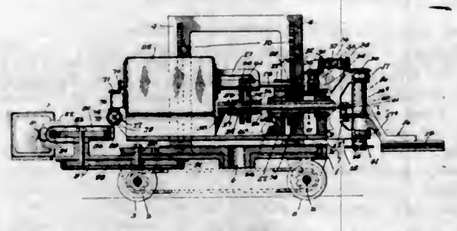


1. An apparatus for handling loose material comprising a scraper having a head and tail rope, a movable head frame having a curved bearing surface adapted to provide lateral support for said scraper while gathering its load, power devices on said head frame, and a control line operable by said power devices and extending about fixed guide means into engagement with the head rope of the scraper.

1,680,939. STUMP-PULLING ENGINE. ERNEST EASTHOPE, Vancouver, British Columbia, Canada. Filed Aug. 17, 1926. Serial No. 129,772. 1 Claim. (Cl. 254—187.)

In a power driven stump puller device the combination comprising, side frames entirely supporting the said device, the said frames being secured to and united by cross-stays, a winding drum revolving upon one of said cross-stays, a ratchet wheel integral with said drum, a pawl engaging said ratchet wheel, an eccentric revolving on a second cross-stay and having a spur wheel integral therewith, a strap for the eccentric provided with an extension forming the said pawl, the spur wheel integral with said eccentric engaging a pinion on a third cross-stay, a spur wheel integral with the last said pinion and engaging a pinion on the second cross-stay, the last said pinion being integral with a spur wheel and carrying an internally positioned claw clutch, a pinion on the second said stay and provided with a clutch face corresponding to that on the last said spur wheel, a second spur wheel integral with the said drum and engaging the last named pinion on the second cross-stay, a second pinion on the said third cross-stay meshing with the spur wheel on the second cross-stay having the claw clutch, the second said pinion on the said third cross-stay being integral with a sprocket wheel driven by the power unit.

1,680,940. SLEEVE TERMINAL BOX FOR ELECTRIC CABLES. WILLIAM W. EMMONS, Newark, N. J. Filed Jan. 18, 1923. Serial No. 613,536. 2 Claims. (Cl. 247—14.)

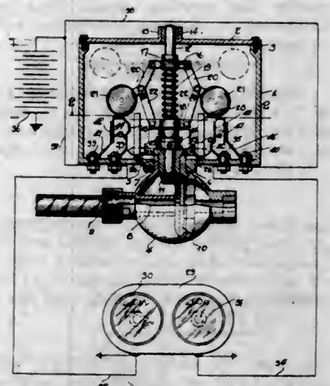


1. A hermetically tight closure for a cable sleeve terminal box comprising a member of insulating material having electrical conducting members permanently embedded therein to extend therethrough, said electrical conducting members having a portion embedded within the insulating material of form adapted for effecting the anchoring thereof in place in the insulating material, and a metallic member permanently embedded in the insulating member to extend from the edges of the insulating member, the extending portion of the metallic member being secured to the terminal box by an hermetic fusion joint.

1,680,941. PROCESS OF COLORING MINERAL MATTER. HARRY C. FISHER, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Nov. 25, 1922. Serial No. 603,370. 10 Claims. (Cl. 91—70.)

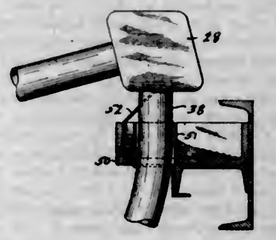
1. That process of coloring mineral matter which consists in forming a ferrite at the surface thereof said ferrite composed of materials extremely applied to the mineral matter.

1,680,942. MINING MACHINE. WALTER S. GRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1924. Serial No. 759,068. 5 Claims. (Cl. 262—28.)



1. In a mining machine, the combination of a turntable, a sub-frame vertically adjustable with respect thereto, a swinging frame mounted for pivotal movement on a horizontal axis at one end of said sub-frame, a supporting member carried by said swinging frame adapted for pivotal movement on a vertical axis, a cutter chain sprocket on said supporting member, a motor on said sub-frame, means whereby said motor may actuate said cutter chain sprocket in all permissible positions of said swinging frame and supporting member, means whereby said motor may selectively control certain of the pivotal movements of said swinging frame and supporting member, and other means whereby said motor may selectively control the vertical adjustment of the entire apparatus with respect to the wheeled support.

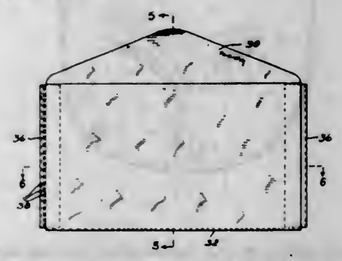
1,680,943. PROCESS OF EXTRACTING FATS FROM VEGETABLE MATTER. IVAN S. HOCKER, Philadelphia, Pa., assignor to The Hocker Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 26, 1924. Serial No. 688,872. 2 Claims. (Cl. 87—6.)



2. The process of extracting fat from cacao beans which consists in finely dividing the cacao beans, mixing with water and heating to bring water soluble constituents into solution and gelatinize the starch therein, then treating the mixture at a suitable temperature with a diastatic ferment to saccharify the starch and to liberate the fat, thereafter adding an alcoholic fermenting agent after reducing the temperature of the mixture below the thermal death point of such fermenting agent, whereby gases are formed which cause coalescence of the fat globules in the emulsion and carry them to the surface of the mixture, and subsequently removing the fat therefrom.

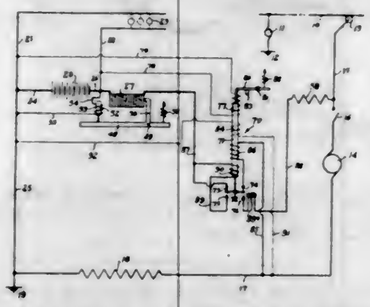
1,680,944. AUTOMATIC STOP AND SLOW LIGHT SIGNAL. GABRIEL E. HOGLUND, Seattle, Wash. Filed May 4, 1925. Serial No. 27,964. 2 Claims. (Cl. 200—80.)

1. In a vehicle signaling system, a plurality of housings arranged for intercommunication, a shaft and a pinion carried by the shaft revolubly mounted in one of the housings, means arranged in the other of said housings and cooperating with the pinion to drive the shaft, a governor mechanism mounted on the shaft within one of the housings, switches arranged in one of the housings, operating means movable longitudinally of the shaft and responsive to the movement of the governor mechanism, said operating means including pivotally mounted switch operating arms yielding in their upward movement by the governor mechanism to avoid operating the switches, and means to hold the arms against pivotal play in their downward movement to thereby cause the arms to operate the switches, whereby in that movement of the governor responsive to speed increase the switches are free of operation while such switches are operated in that movement of the governor responsive to speed decrease.



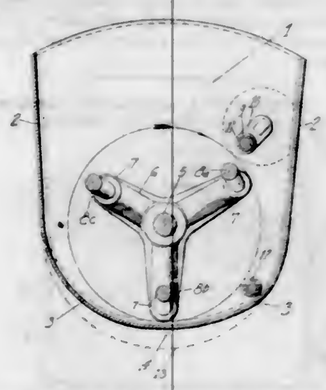
1,680,945. BOILER FURNACE. WILLIAM A. JONES, West New Brighton, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 16, 1923. Serial No. 645,779. 2 Claims. (Cl. 122—235.)

1. In combination, a boiler having horizontally inclined water tubes connected by water compartments, a water back in the furnace, a drip pan connected to the furnace setting and located beneath one of the water compartments, and a pipe connecting the water back with the water compartment, said pipe extending through an opening in said drip pan and being free to move vertically therein, said drip pan having a thimble loosely surrounding the pipe to prevent leakage of water from the pan through the opening for the pipe.



1,680,946. ENVELOPE. LORSER KALINA, Brooklyn, N. Y. Filed May 13, 1926. Serial No. 108,771. 4 Claims. (Cl. 229—85.)

1. An envelope comprising a body portion of paper having open end edges, and folded inserts secured to the

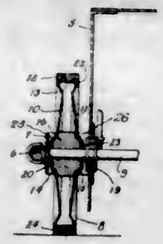


inner faces of the body with the edges of the body exposed to close said open edges, said folded inserts being of relatively tougher paper than the body of the envelope, and having a center fold projecting beyond their respective edges of the envelope to provide protection for the exposed edges of the body.

1,680,947. STORAGE-BATTERY-CHARGING SYSTEM. WILLIAM T. KNIESZNER, New York, N. Y., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 19, 1925. Serial No. 16,639. 21 Claims. (Cl. 171—313.)

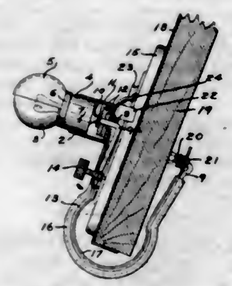
1. In apparatus of the character described, in combination, a circuit adapted to be connected to a source of current and having included therein a translating device and a storage battery connected so that when said device receives current from said source said battery will also receive current therefrom, an auxiliary circuit adapted to be connected to said source of current and arranged to supply charging curent to said battey independently of said first-menioned circuit, means adapted alternatively to close either of said battery charging circuits, and means for cutting down the flow of current to said battery as the latter is substantially fully charged, said means being effective in either of said circuits and adapted when effective in said first-mentioned circuit to cut down the flow of current to said battery without affecting the supply of current to said translating device from said source.

1,680,948. DOUGH MIXER. FRANK X. LAUTERBUR and EDWARD J. LAUTERBUR, Sidney, Ohio. Filed Apr. 12, 1927. Serial No. 183,201. 4 Claims. (Cl. 259—109.)



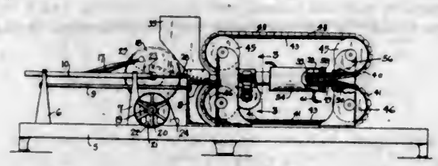
3. In combination with a horizontally rotatable bar type agitator, a mixing bowl having a U shaped bottom with the lowest portion of the bowl bottom relatively flattened out and curved along a line formed on a greater radius than that of the adjoining portions of the bowl bottom, with yielding diverting means mounted in one of the aforenoted adjoining portions of the bowl bottom.

1,680,949. DEINKING PAPER. ALAN R. LUKENS, Wyoming, Ohio, assignor to The Richardson Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 22, 1925. Serial No. 38,934. 6 Claims. (Cl. 92—13.)



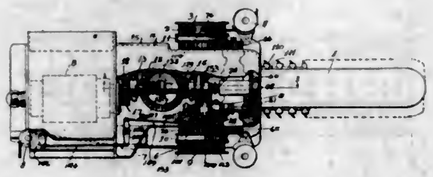
1. That process of removing coloring matter from fibrous pulp which consists in soaking the fibrous pulp in an alkaline solution in the presence of a sulfonic acid compound, and then washing the pulp with water without the use of super-added soap or fatty acid.

1,680,950. WOOD-CENTER SWEEPER WHEEL. FRANK C. MASON, Streator, Ill., assignor to Metal Stampings Corporation, Streator, Ill., a Corporation of Illinois. Filed July 9, 1925. Serial No. 42,355. 12 Claims. (Cl. 301—63.)



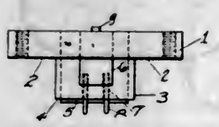
1. A wheel comprising a pair of disks joined together at their peripheries to form the rim of the wheel and each having an axially disposed circular recess, a bearing member having circular end portions, the outer edges of which are chamfered and disposed in the recess of the respective disks, said chamfered edges being effective to cause said bearing to be substantially self-centering between the disks.

1,680,951. LAMP SUPPORT. WILLARD L. MORRISON, Melrose, Mass. Filed May 28, 1925. Serial No. 33,329. 2 Claims. (Cl. 240—8.16.)



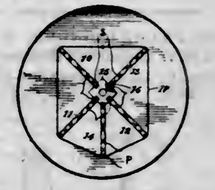
1. A support adapted for attachment of an electric lamp to the dash board of an automobile, comprising, a U-shaped metal support having longitudinally recessed arms resiliently biased toward each other and against the opposite sides of the dash board, a lamp socket carried by the upper end of one of said arms, a terminal carried by the upper end of the other of said arms, a conductor connecting said socket and said terminal, said conductor lying within the arm recesses and being insulated from said support, and means for grounding said support through the dash board.

1,680,952. CORK PACKING AND FORMING MACHINE. ARTHUR F. MULLER, Glendale, N. Y. Filed Mar. 19, 1924. Serial No. 700,206. 9 Claims. (Cl. 18—17.)



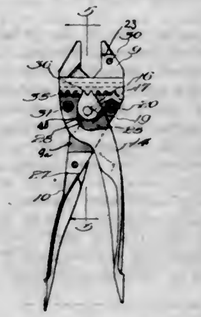
1. In a cork packing machine, a plurality of chains, the links of which when brought together form a tubular mold, radially disposed teeth on said links, and gears for engaging the teeth of said links to advance the mold.

1,680,953. MINING MACHINE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1925, Serial No. 69,228. Renewed Sept. 15, 1926. 22 Claims. (Cl. 262—30.)



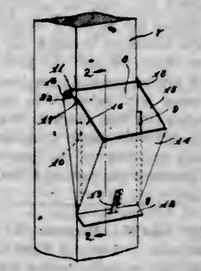
1. In a mining machine, a frame, a cutter bar extending forwardly from said frame and having a cutter chain mounted thereon, a motor at the rear end of said frame, a longitudinal shaft disposed above said cutter bar and connected with said motor, feed operating mechanism mounted on said frame forwardly of said motor, a planetary gear reduction device mounted concentrically with said longitudinal shaft and operatively connected with said feed operating mechanism for driving the same at reduced speed, a driving sprocket for said cutter chain disposed on a vertical axis between said planetary gear and said motor, and gearing connections between said longitudinal shaft and said driving sprocket.

1,680,954. MECHANISM FOR MAKING BATTERY-BOX HANDLES. OLIVER O. RIESER, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed June 18, 1926. Serial No. 116,995. 3 Claims. (Cl. 18—17.)



1. Mechanism for molding battery boxes comprising a stripper plate having holes therein adjacent top walls of a molded box, and male dies shaped so as to slide within said holes, said dies shaped and of sufficient length so as to form handle sockets in side walls of a battery box.

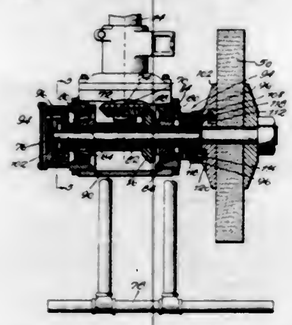
1,680,955. INDUCTANCE. FRANK W. SICKLES, Springfield, Mass. Filed Apr. 15, 1926. Serial No. 102,343. 11 Claims. (Cl. 175—359.)



1. An inductance comprising the combination of a series of thin cellular spirally wound coils arranged radially around a common axis with inter-connecting fields some part of one or more of such coils being the primary winding and the remainder the secondary winding.

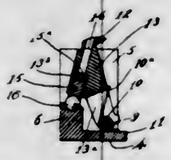
1,680,956. WRENCH. EDWARD H. SIMONSEN, Chicago, Ill., assignor to R. M. Eddy Foundry Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1925. Serial No. 6,919. 3 Claims. (Cl. 81—86.)

1. A wrench comprising a relatively fixed jaw member, a movable jaw, a rack bar on the latter sliding in the fixed jaw member and a lever pivoted to the fixed jaw member and having teeth engaging the rack, the teeth on the rack and lever being so inclined transversely thereof that the pressure of the lever teeth on the rack in the operation of closing the wrench tends to force the rack against the side of the fixed jaw member.



1,680,957. REFUSE CONTAINER. JULES H. STEAN, Marquette, Mich. Filed Sept. 20, 1926. Serial No. 136,431. 6 Claims. (Cl. 220—18.)

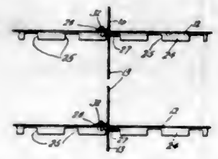
1. A refuse container of the class described comprising: a supporting portion adapted for mounting on a suitable support; a receptacle forming portion swingably mounted



on said supporting portion; and means for mounting said receptacle forming portion on said supporting portion and for simultaneously clamping said supporting portion on said support.

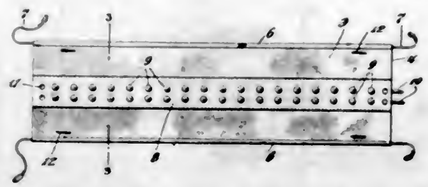
1,680,958. SWING-FRAME GRINDER. FRANK E. STRATTON, Edgewood, R. I., assignor to Diamond Machine Company, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 21, 1925. Serial No. 63,881. 11 Claims. (Cl. 51—99.)

1. In a grinding machine of the swing frame type, a support, a cylindrical frame, fulcruming connecting means rotatably and longitudinally adjustably mounted on said frame, means to universally attach said connecting means to said support, a motor mounted on said frame on one side of said fulcruming means, a grinding wheel mounted on said frame on the opposite side of said fulcruming means, power transmitting mechanism connecting said motor and grinding wheel, a counter weight longitudinally and rotatably adjustably mounted on said frame, an operating handle attached to said frame and shock absorbing means mounted in said power transmitting mechanism to prevent the transmission of vibration from the grinding wheel to the operating handle.



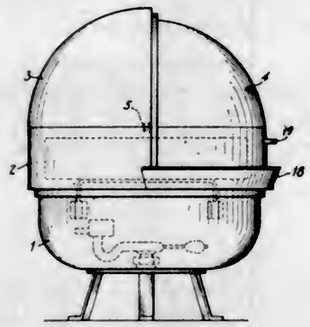
1,680,959. PRINTING-PLATE HOLDER. EMIL E. THIEL, Cincinnati, Ohio, assignor to The Printing Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 733,643. 5 Claims. (Cl. 101—385.)

1. A printing element holder comprising a carrier adapted to enter an orifice in a bed on which a plate is to be mounted, a jaw, means for movably supporting the jaw in the carrier, a screw available through the jaw for turning thereof, said screw threaded into the jaw, and an element at the end of said screw, providing a bearing for the adjustment of the screw with relation to the carrier, means for pivoting the jaw in the carrier, the pivot point of the jaw being in a different angle from the bearing of the screw, and a spring to preserve the jaw in position with the screw thereof bearing against said bearing element.



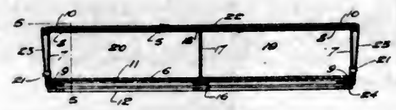
1,680,960. SHELF RACK. WALTER N. VANCE, Chicago, Heights, Ill., assignor to Durand Steel Locker Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Apr. 2, 1926. Serial No. 99,229. 4 Claims. (Cl. 211—135.)

1. A shelf rack comprising spaced uprights having side and rear closures therefor and a front member partially closing the front of said rack and forming a bin front, a plurality of horizontal shelf members, dividing the shelf rack and supported by the uprights, said shelf members having permanently fastened on their under sides angle shaped bars extending parallel to the bin front and having depending portions formed with spaced notches, and a desired number of dividing plates, each dividing plate having



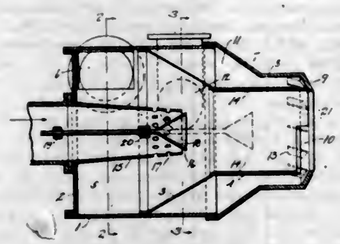
in its upper end a laterally bent flange adapted to fit in the notched portion of a strip and having a portion at its lower end adapted for detachable connection with the upper surface of the next lower shelf member whereby the dividing strip in any particular horizontal compartment may be removed without disturbing a superior compartment.

1,680,961. TIRE COVERING. JAMES H. VAN PUTTEN and JAMES H. SHARPE, New York, N. Y. Filed Aug. 5, 1926. Serial No. 127,256. 1 Claim. (Cl. 152—16.)



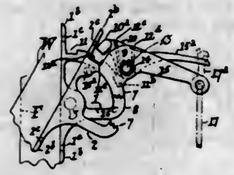
A tire covering comprising a leather tread portion, and strips independent of each other secured to the opposite longitudinal edges of said tread portion, said strips being of fabric and having means for securing the ends thereof together on a vehicle wheel.

1,680,962. DISHWASHER. HERMAN F. VOSHARDT, Chicago, Ill., assignor to Friedley-Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1927. Serial No. 170,464. 5 Claims. (Cl. 220—32.)



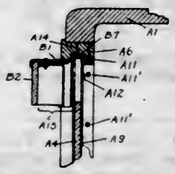
1. A liquid receiving receptacle comprising a body portion and a hood-like portion thereabove, a concavo-convex closure member similar in contour to the hooded portion and telescoping therewithin, pivoted mountings for said closure, and a trough-like member receiving the lower edge portion of the closure when in closed position whereby overflowing of liquid is prevented.

1,680,963. CUSHION. MUERK E. WHITE, High Point, N. C., assignor of one-half to George W. Fleming, Clinton, N. C. Filed Dec. 1, 1925. Serial No. 72,501. 5 Claims. (Cl. 155—179.)



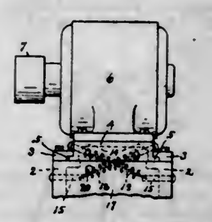
1. A seat cushion of the class specified, comprising a chambered body to receive air under pressure and having a top and bottom spaced apart and formed of a composite rubber fabric, a rubber web extending from the opposite end and side edges of the top and secured to the latter by vulcanization and forming a flush joint with the said composite top, the rubber web extending around and secured to the bottom of the body, a fabric strip attached to the end and side portions of the top of the body, and an upholstering covering comprising top and side and end pieces having their edges fastened to said strip, the end and side portions of the upholstering covering also being extended under the bottom of the body.

1,680,964. PULVERIZED-FUEL MIXER. ALGOT A. WICKLAND, Chicago, Ill. Filed Dec. 26, 1923. Serial No. 682,614. 11 Claims. (Cl. 110—104.)



3. In a pulverized fuel and air mixer, a tubular shell and a sleeve within said shell and therewith forming a fuel and air mixing chamber and a secondary air chamber in coaxial contiguous and cooperative relation to said first chamber, said chambers having substantially co-axial outlets and tangential inlets entering in opposite directions.

1,680,965. ADJUSTABLE FASTENER FOR HINGED STRUCTURES. JOHN SIDNEY WILLIAMS, Brisbane, Queensland, Australia. Filed June 22, 1926, Serial No. 117,702, and in Australia Sept. 21, 1925. 1 Claim. (Cl. 268—109.)

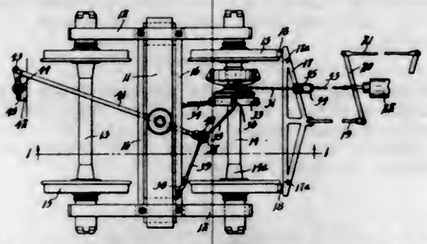


A window fastener of the character described, the combination of a fixture attachable to the window frame comprising a notched quadrant projecting outwardly and provided with an upright pivot post disposed at the center of the segment a plate carried by the window and pivoted on said post, said plate having an arm carrying a pivot pin and a notch to move into register with the notches of the sector, a spring actuated dog mounted on the last named pivot pin and having one end urged in the direction of the notches of the quadrant, and a cord at the other end of the dog and loose in the arm of the said plate whereby the operation of pulling on the cord will first release the dog from the quadrant and then swing the window into open position.

1,680,966. VENTILATOR FOR CLOSED VEHICLES. DANIEL M. WINANS, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Oct. 3, 1927. Serial No. 223,557. 10 Claims. (Cl. 98—2.)

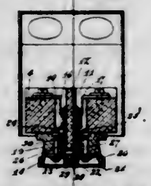
1. In a ventilator comprising a sheet metal frame adapted to supportably mount a pane having a substantially straight edge, said frame being provided with a ledge portion and an angularly disposed stop flange therefor adapted to overlap a marginal pane face adjacent to said edge, clamping strip means including wedge adjusting means therefor, said strip being angle-shape in profile with one of its legs disposed to align with a ledge portion while its other leg is disposed to substantially align with said stop flange and grip the opposite complementary pane face portion, and clamp lug means carried by said ledge and cooperating with said wedge to thrust said strip toward said flange for pane clamping purposes.

1,680,967. MOTOR MOUNTING. HENRY J. BERRY, Detroit, Mich., assignor of one-third to Carl W. Floss, Detroit, Mich. Filed Mar. 5, 1927. Serial No. 173,082. 4 Claims. (Cl. 308—11.)



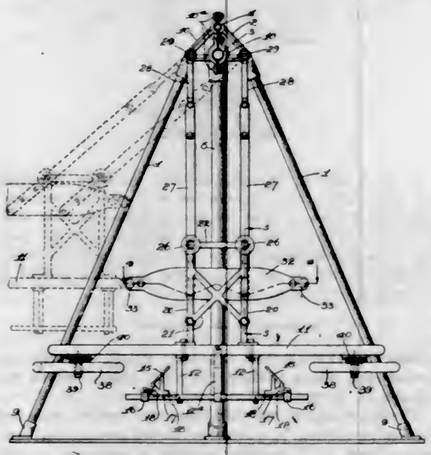
4. In a mounting for an electric machine provided with a belt pulley, the combination of a support embodying parallel guides, a base for the electric machine slidable on the support between the guides, springs positioned transversely between the base and support to resist the turning action of the belt on the base, and means to slide the base to tension the belt.

1,680,968. RAILWAY-CAR BRAKE. CLARK A. BRENNAN, Minneapolis, Minn. Filed Dec. 13, 1926. Serial No. 154,404. 4 Claims. (Cl. 188—146.)



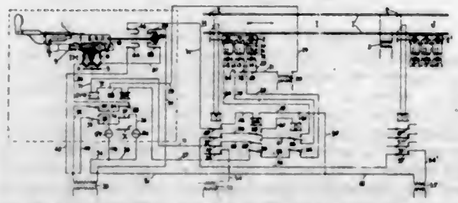
1. The combination with a railway car and the axle and brake rigging thereof, of a brake actuating mechanism, comprising a fixed clutch member secured to said axle, a sliding clutch member journaled on said axle for sliding engagement wtih said fixed member, said sliding clutch member having a drum formed thereon, a flexible member connected at one end to said drum and at its other end to said brake rigging, said flexible member being adapted to operate said brake rigging to set the brakes as said flexible member is wound on said drum, a shifting head for shifting said

sliding clutch member, a toggle arm connected at one end to said shifting head, a toggle arm having one end pivoted to a fixed bracket, said toggle arms being connected together



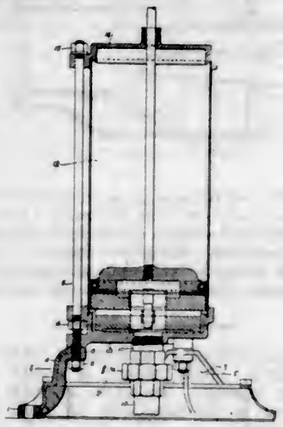
by a universal joint, an actuating rod pivoted to said universal joint and means connected to said actuating rod for moving the same.

1,680,969. CUT-OUT AND PLUG. WILLIAM P. BRIGGS, New Bedford, Mass. Filed Aug. 4, 1926. Serial No. 127,131. 2 Claims. (Cl. 200—133.)



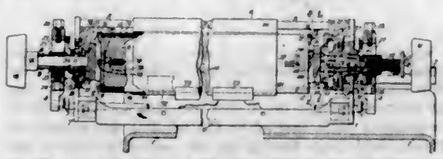
1. In a cut-out a body formed with a pair of passage-ways extending entirely therethrough axially, terminals extending in said passage-ways from the inner ends thereof, a division member between said terminals, said division member projecting beyond the outer surface of said body for forming a projection and a raised portion surrounding said passage-ways and said division member.

1,680,970. AMUSEMENT SWING. CONRAD DAHL, Springfield, Ohio, assignor of one-half to Earl G. S. Tracy. Filed Mar. 31, 1927. Serial No. 179,791. 7 Claims. (Cl. 155—63.)



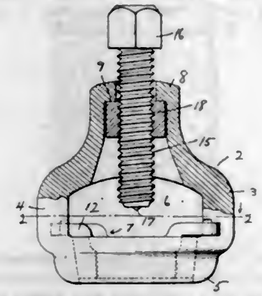
3. In a pleasure swing the combination of a supporting frame, pivoted hangers depending therefrom in parallel relation, a swing carriage including a seat and a portion extending rigidly upward therefrom having pivotal connection with the hangers, a horizontally movable operating member disposed above the plane of the seat, and connections between said member and the hangers whereby the movement of the operating member over the seat is in the same direction as the bodily movement of the swing carriage with respect to its supporting frame.

1,680,971. INDICATION FOR COLOR LIGHT SIGNALS. SALISBURY M. DAY, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Apr. 3, 1923, Serial No. 629,627. Renewed Apr. 5, 1927. 15 Claims. (Cl. 246—135.)



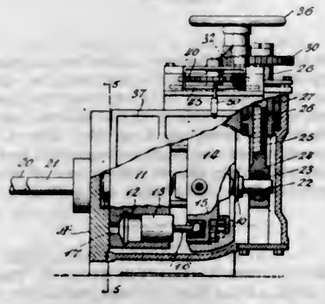
1. In an interlocking system for railways, the combination with a multiple aspect color light signal including a danger lamp, and a transformer for energizing said danger lamp under predetermined conditions, of indicating means located at a distant point and in a circuit including the primary winding of said transformer for indicating whether or not said danger lamp is energized.

1,680,972. GASOLINE PUMP. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 25, 1927. Serial No. 178,180. 8 Claims. (Cl. 103—218.)



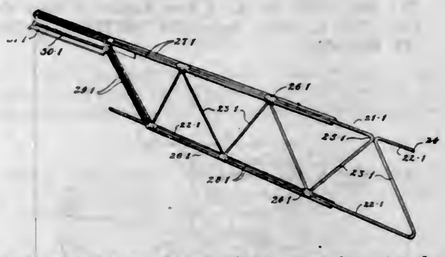
1. In a gasoline pump, a common base, a pump structure mounted thereon, and a casing mounted on said base independent of the pump structure.

1,680,973. TYPEWRITING MACHINE. JACOB FELDEL, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Apr. 8, 1926. Serial No. 100,556. 7 Claims. (Cl. 197—126.)



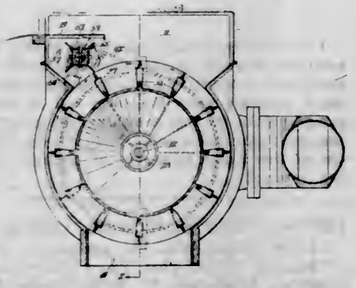
1. The combination with the detachable platen of a typewriting machine, of a table or support, bearings on said table for said platen, platen rotating means associated with said bearings and a guide on said table for facilitating the application of paper to the platen when it is mounted on said bearings.

1,680,974. WHEEL PULLER. FREDERICK GEORGE EISENHUTH, Utica, N. Y. Filed Sept. 2, 1927. Serial No. 217,198. 1 Claim. (Cl. 29—85.)



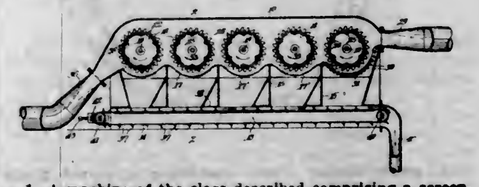
In a wheel puller, a hollow body, the same being formed with a downwardly tapering enlarged annular seat on the open lower end portion of the body, the upper end of the body being reduced, an internally threaded split bushing for disposition within the annular seat, the outer peripheral face of the bushing being tapered for cooperation with the tapered seat, said bushing being adapted to be threaded on the wheel hub, a pressure screw extending downwardly through the reduced upper end of the body, the lower end of the screw adapted to engage the outer end of the wheel axle, a nut arranged in the reduced upper end portion of the body through which the pressure screw is threaded, cooperating means between the bushing and the body for limiting the rotary movement of the members with respect to each other in one direction, said means comprising a pair of diametrically opposed lugs extending laterally from the upper edge portion of the bushing, said hollow body being formed with projections with which the lugs cooperate.

1,680,975. HANDWHEEL AND LOCKING DEVICE FOR SPEED GEARS. DANIEL R. FRANCIS, Waterbury, Conn., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 2, 1927. Serial No. 171,940. 4 Claims. (Cl. 74—7.)



1. The combination with a hydraulic speed gear, having a swash plate adapted to be moved to different inclined positions to vary the effective speed of said gear, a control shaft, and connections between said control shaft and swash plate for changing the angle of inclination of the latter, of an attachment for said gear comprising a bracket, a manually operable control member and a reduction gearing carried by said bracket and interposed between said member and control shaft, for causing a relatively large movement of said member to produce a slight movement of said control shaft.

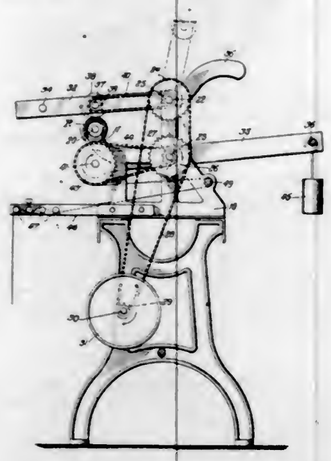
1,680,976. TRUSSED STRUCTURE. HURXTHAL FIELD FREASE, Canton, Ohio. Filed Nov. 4, 1925. Serial No. 66,847. 16 Claims. (Cl. 189—37.)



1. A trussed structure including a truss element and a plurality of spaced chord bars, the truss element including spaced rows of chord members and connecting web members, all the element members being formed from a single continuous strip, and there being spaced junction angles between the chord and web members, one of the rows of chord members abutting and being fastened at each junction angle to a plurality of the spaced chord bars.

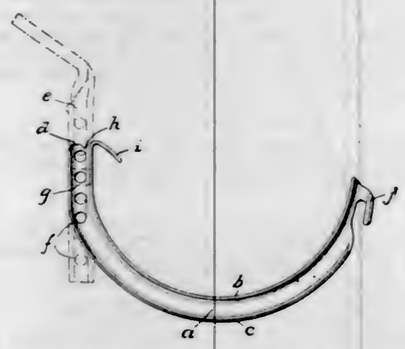
1,680,977. COTTON SEPARATOR. JAMES C. GARNER, Houston, Tex. Filed Apr. 7, 1927. Serial No. 181,739. 21 Claims. (Cl. 19—75.)

1. In a machine of the class described, a casing having an inlet, a rotary drum therein having a plurality of peripheral pockets with foraminous portions on the drum wall adapted to be moved successively adjacent said inlet to be filled, means for passing air through said foraminous pocket portions when in a certain section of the path of travel of the drum and means within the casing and spaced inwardly from its wall for leveling the filled pockets.



1,680,978. COTTON-CLEANING APPARATUS. JAMES C. GARNER, Houston, Tex. Filed Oct. 13, 1927. Serial No. 226,021. 14 Claims. (Cl. 19—72.)

1. A machine of the class described comprising a screening bed having cotton separating instrumentalities thereabove, a casing enclosing said instrumentalities and having



inlet and outlet ports at opposite ends of the bed, a plurality of spaced partitions beneath said bed disposed at an angle thereto whereby to form a plurality of compartments, and conveyor means forming movable bottoms for said compartments.

1,680,979. CLOTH-ROLLING MACHINE. PERCY GARDNER, East Orange, N. J., assignor to H. M. Bunker & Co., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1927. Serial No. 166,775. 14 Claims. (Cl. 242—66.)

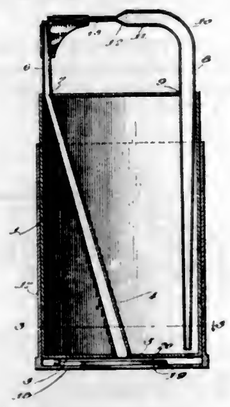
1. In a cloth rolling machine, a fixedly mounted freely rotatable batching spindle upon which the cloth is rolled, and a pair of positively driven drums engaging and exerting a pressure upon the cloth roll at diametrically opposite points of the periphery for frictionally turning the same, the cloth being trained over the periphery of one of the drums to permit of accurate measurement of the yardage.

1,680,980. GUTTER-HANGER CIRCLE. GEORGE B. GEISER, Philadelphia, Pa., assignor to Berger Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 12, 1925. Serial No. 68,502. 1 Claim. (Cl. 108—29.)

A gutter hanger circle comprising a curved flange forming a gutter seat, a supporting web extending outwardly from the flange, and a gutter engaging hook formed by an inwardly bent portion of the flange extending beyond an end of the supporting web, said end of the supporting web being notched at a point slightly spaced from the flange, whereby subsequent bending of the extending portion of the flange and the portion of the web between the notch and the flange produces a gutter engaging hook reinforced at its bend by an inwardly extending web member integral with the supporting web.

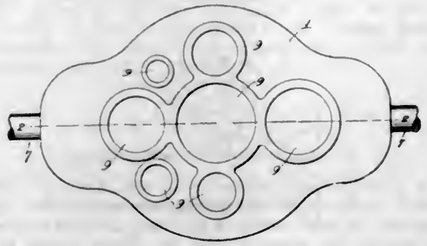
1,680,981. TIRE-CHAIN FASTENER. JAMES R. GLADDEN, Jr., Wathena, Kans. Filed Mar. 7, 1928. Serial No. 259,755. 3 Claims. (Cl. 24—232.)

1. A device of the class described comprising a pair of duplicate parts pivotally connected together, said parts being formed at their outer ends with hooks, and the inner ends being formed with retaining tongues adapted to bridge the entrance portions of the hooks, said retaining tongues extending directly at right angles to said hook.



1,680,982. DEVICE FOR ANIMATING OBJECTS. EDWARD G. GOERK and GUSTAV GOERK, Irvington, N. J. Filed Apr. 2, 1927. Serial No. 180,592. 3 Claims. (Cl. 40—33.)

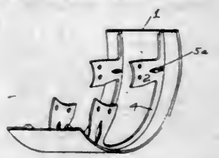
1. In a device of the character described, a supporting element, objects on the support which may be varied in location on the support without effecting the operation of the device, means for animating the objects comprising flexible connections extending from the objects, means for slidably supporting the flexible connections and power driven means for giving different directions of movement to the objects through the flexible connections.



1,680,983. COMBINED LIQUID CONTAINER AND SPRAYER. GEORGE B. GRAF and FLOYD E. WHITMAN, Shawnee, Okla. Filed Dec. 18, 1925, Serial No. 76,217. Renewed Jan. 31, 1928. 2 Claims. (Cl. 299—88.)

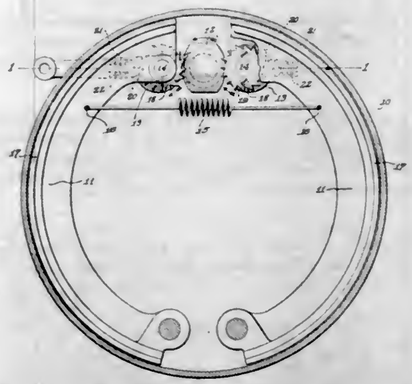
1. A combined liquid container and sprayer comprising a container, a blow tube extending through said container beyond one end of the container, a liquid delivery tube protruding from the space within said container beyond said one end of the container in substantially spaced relation to said blow tube, the protruding portion of said liquid delivery tube being bent to terminate at the adjacent end of said blow tube, whereby an air blast may be delivered by said blow tube across the open outer end of the liquid delivery tube to draw liquid from the container through said liquid delivery tube and to atomize

the liquid, and a bracket connecting the adjacent end portions of said blow tube and said liquid delivery tube, whereby said protruding portions of said blow tube and said liquid delivery tube and said bracket jointly constitute a handle whereby said container may be carried.



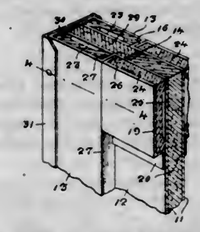
1,680,984. DIESTOCK. JOHN J. GROVE, Detroit, Mich. Refiled for abandoned application Serial No. 476,386, filed June 10, 1921. This application filed July 2, 1924. Serial No. 723,846. 1 Claim. (Cl. 10—114.)

A die stock comprising a plate provided at its intermediate portion with a group of openings, one of said openings being located at the center of the plate and at the center of the group of openings, said plate having upon its side surface a continuous rib completely surrounding each opening of the group and all of the openings of the group, the plate having at its opposite side and at opposite points of its edge aligned lugs, a die plate carried by the lugs, and handles detachably connected with the lugs.



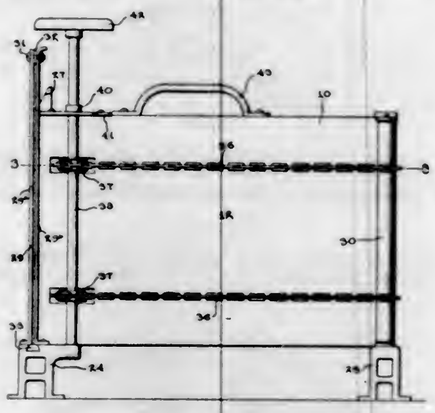
1,680,985. METHOD OF MAKING SHEET-METAL PULLEYS. HENRY J. GILBERT, Saginaw, Mich., assignor to Saginaw Manufacturing Co., Saginaw, Mich., a Corporation of Michigan. Filed July 26, 1924. Serial No. 728,467. 2 Claims. (Cl. 29—159.)

1. The method of making a rim section of a sheet metal pulley that consists in forming a blank including a rim section and oppositely directed flat spoke members integral therewith, forming raised bosses in the blank at the juncture of the spoke members and the body of the blank, folding the longitudinal edges of said blank to form a rim portion of double thickness, bending the spoke members thereon at right angles to said rim blank and



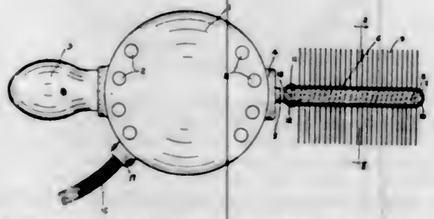
then rolling the folded blank into semi-circular form, thereby causing said raised boss to take up metal of the blank and producing a flat spoke member free of crinkles.

1,680,986. EXPANSIBLE BRAKE. ELY W. HARELIK, Detroit, Mich. Filed Aug. 4, 1926. Serial No. 127,011. 8 Claims. (Cl. 188—196.)



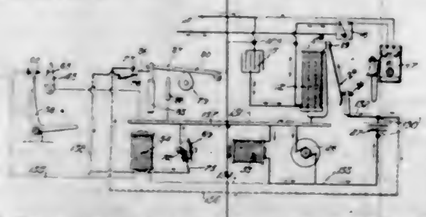
1. In a brake, the combination with a drum, friction members in said drum, and a cam for operating said friction members, of variable spacers between said cam and friction members, said spacers being adjusted by the engagement of said cam therewith to automatically vary the effect of said cam in operating said friction members.

1,680,987. DOOR. FRED W. HARGRAVE, South River, N. J. Filed Mar. 21, 1927. Serial No. 177,155. 4 Claims. (Cl. 189—46.)



1. A fireproof door comprising a pair of sheet metal sections extending the length of the door, and constituting the panel thereof, the vertical side edges of said sections being offset to provide the outer walls of the stiles, sections constituting the cross rails and fitting against the offset portions and flush therewith, plates co-extensive with the panel portion of said first sections and disposed within the offset portions thereof and extending the length of the same, and layers of fireproof material interposed between the sections and plates and adhesively secured thereto.

1,680,988. SLICER. WILLIAM H. HARMAN, Nashville, Tenn., assignor of one-half to Horace H. Grizzard, Nashville, Tenn. Filed Feb. 24, 1927. Serial No. 170,571. 3 Claims. (Cl. 146—150.)



1. A device for the purpose indicated comprising a casing of which one wall consists of a loosely mounted plate yieldingly impelled toward the opposite wall, a positively actuated follower traversing th ecasing, and a knife guide mounted at one end of the casing.

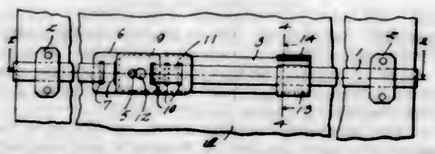
1,680,989. MASSAGING APPARATUS. OLE HIBNER, Cleveland, Ohio. Filed May 22, 1926. Serial No. 110,834. 3 Claims. (Cl. 128—55.)

1. In a massaging apparatus of the class described, the combination of a handle, and a rotatable mandrel, said mandrel adapted to carry a massaging member on its outer surface, said member comprising a continuous core and a plurality of limp massaging strings extending therefrom, said strings adapted to be thrown outwardly by centrifugal force when the mandrel is rapidly rotated.

1,680,990. TELEPHONE. THEODORE HENRY HOWELL, Melbourne, and ROYCE GEORGE FERGUSON, St. Kilda, Victoria, Australia. Filed Apr. 2, 1924, Serial No. 703,799, and in Australia Apr. 18, 1923. 30 Claims. (Cl. 179—2.)

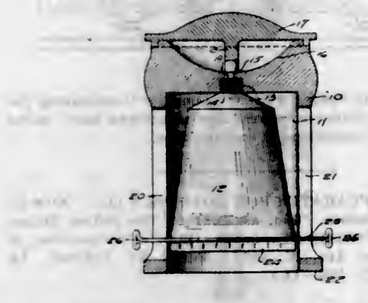
1. In an automatic telephone system furnished with number selecting dials, a number selecting and recording device embodying an electromagnetically controlled stamping device, electro-magnetically controlled mechanism for feeding a ribbon past the stamping device, a local battery for energizing the electromagnets of the stamping device and feeding and adjusting mechanisms, and a relay and condenser adapted to be energized by the ringing current to close the circuits of the local battery and permit it to energize the parts of the device.

1,680,991. FIGURE WHEELED TOY. GAIUS CLEVELAND HUNTER, Buffalo, N. Y. Filed Mar. 23, 1927. Serial No. 177,757. 1 Claim. (Cl. 46—45.)



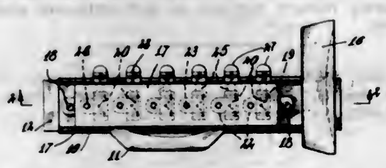
A toy of the character described comprising a body member simulating a combination of an enclosed automobile and flying machine, said body member which comprises a hood, passenger compartment and fuselage being formed of a unitary piece of material, running wheels upon which the body is mounted, a tail member mounted upon a running wheel and pivotally secured to the rear end of the fuselage, wings simulating flying machine wings swingably mounted upon the body, a rocker arm positioned within the body and connected to the running wheels so that it oscillates as the toy is propelled, a figure formed in the rocker arm to simulate the driver of the toy, and means connecting the rocker arm to the wings so that the wings flap as the rocker arm oscillates when the toy is propelled.

1,680,992. THREAD CUTTER FOR SEWING MACHINES. CLARA JEBB, Orillia, Ontario, Canada. Filed Oct. 16, 1926. Serial No. 142,116. 1 Claim. (Cl. 112—252.)



A presser foot having its outer side forward of the needle opening of the foot meeting the upper surface substantially at right angles thereto, the said side adjacent its forward end having a notch cut therein sloping in a downward and inward direction to form a bevelled cutting edge at the upper surface of the foot, the said cutting edge forming an indentation in the outer edge of the upper surface of the foot, whereby threads may be cut by drawing them downwardly and transversely against the cutting edge.

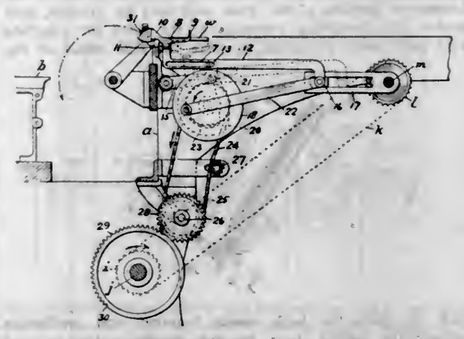
1,680,993. TIE-BAND-SECURING DEVICE FOR TRUNKS AND THE LIKE. SAMUEL G. JOHNSON, Tucson, Ariz. Filed Sept. 1, 1927. Serial No. 216,917. 2 Claims. (Cl. 24—69.)



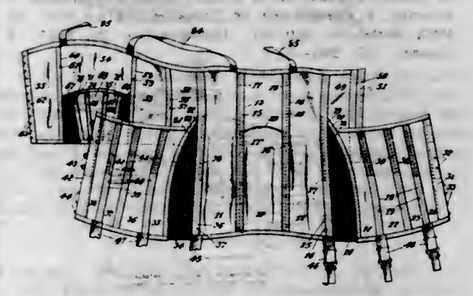
1. A tie band securing device, comprising a lever having spaced studs adjacent to one of its ends, a plate pivotally engaging one of said studs and adapted to be secured to one end of a tie band, a plate to engage the other end of said band and having an opening therein to receive the other stud, a hook on one edge of the lever to engage the tie band and hold the lever in securing position, and a flange on the other edge of the lever and extending across the opening to the hook.

1,680,994. DISPENSER FOR SOAPS, CREAMS, OR THE LIKE. JACOB KARPE, New York, N. Y., assignor to Herman Germain, New York, N. Y. Filed Nov. 24, 1926. Serial No. 150,418. 2 Claims. (Cl. 221—60.)

1. A dispenser for soaps, creams, and the like, contained in a collapsible tube comprising a hollow base and enclosing support adapted to permit the tube to be inserted from underneath, said support having an upper closed top with a threaded recess to receive the threaded delivery end of the collapsible tube and a passage extending from the top of the recess to the top of the support, the top of the support being concave to provide a mixing receptacle, and a removable cap on top of the support, said cap having a depending member to close the passage.



1,680,995. DOUBLE SUN SPECTACLE. JOSEPH KARASIEVICZ, South Amboy, N. J. Filed Aug. 19, 1926. Serial No. 130,126. 1 Claim. (Cl. 88—7.)



In a device for observing the sun, the combination of a box open at opposite ends, a front eye piece mounted at one of the ends, a visor at the opposite end, a closed compartment attached to said box, frames slidably mounted in said compartment and box, the said frames being spaced longitudinally along the length of the box, colored transparent panes verging from the center, mounted in each of said frames, means mounted externally of the compartment for selectively moving the colored panes into an operative position within the box, and means mounted within the compartment for automatically returning the panes into an inoperative position within the compartment.

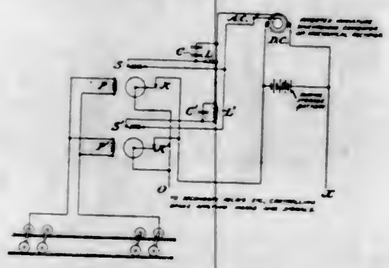
1,680,996. CIGAR-BUNCH MACHINE. ROBERT R. KITCHEL, Ridley Park, and JESSE L. LIPPARD, and JOSEPH E. MULLAN, Philadelphia, Pa., assignors to Bayuk Cigars, Incorporated, Philadelphia, Pa., a Corporation of Maryland. Filed Feb. 7, 1925. Serial No. 7,483. 13 Claims. (Cl. 131—39.)

1. In a cigar bunch machine, the combination with a the feeding device and the delivery by its other end of a having upturned ends, means to actuate the finger to effect the withdrawal by one of its ends of a filler from the feeding device and the delivery by its other end of a previously withdrawn filler, and a bar adapted to bear on the fillers during their withdrawal from the feeding device and delivery to the transfer device.

1,680,997. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed Oct. 25, 1926. Serial No. 143,941. 4 Claims. (Cl. 2—30.)

1. In an apparel garment including a girdle and a brassière member, a brassière front section of inelastic material, the lower edge of which tapers upwardly from a centrally disposed point substantially in the lower edge of the brassière member, and a diaphragm strap comprising a centrally disposed inelastic section with the side edges thereof diverging upwardly, and elastic sections secured to the diverging edges of the said central section of the diaphragm strap and of such an extent as to cause the diaphragm strap to be substantially co-extensive circumferentially with the front section of the brassière member, the lower portion of the diaphragm strap underlying and being free from the upwardly tapered lower edges of the front section of the brassière member whereby the stretch of the upper portion of the diaphragm strap is determined by the width of the front section of the brassière member and the stretch of the lower portion of the diaphragm strap is not so determined.

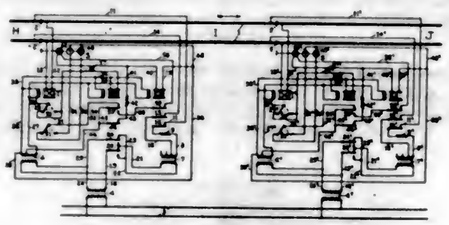
1,680,998. ROUTE GUIDANCE. PHILIP M. KRANTZ, Brooklyn, N. Y. Filed Dec. 1, 1926. Serial No. 151,852. 3 Claims. (Cl. 40—16.)



1. In a route guidance device, the combination of a carrier for an indicia sheet and a holder for said carrier; said carrier including a transparent front sheet, and a second sheet, and these sheets being flexibly joined at their bottoms to constitute a rudimentary book between the sheets of which book an indicia sheet in the shape of a folded map may be placed to be held in the book by

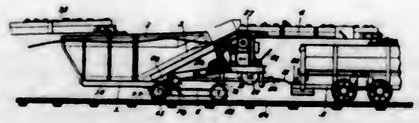
gravity when the book is arranged with such flexible jointure lowermost and substantially horizontal; and said holder including a sheet-like main structure carrying at its bottom a forwardly protruding element on which the lowermost portion of the book may rest by gravity, said holder also including elements at its sides for coacting with said main structure to seize the side edges of the

book, to force the book sheets together and resiliently against the indicia sheet, thereby simultaneously to hold said indicia sheet frictionally within the book and to hold the book frictionally on said forwardly protruding element,—said side elements having portions for engaging the side edges of the book to hold the latter positively against shift laterally of said main structure.



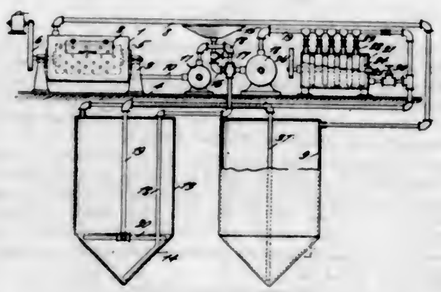
1,680,999. AUTOMATIC TRAIN-CONTROL APPARATUS. ANDREW LANGDON, Port Jervis, N. Y., assignor, by mesne assignments, to Train Control Corporation of America, a Corporation of Delaware. Filed Feb. 20, 1923. Serial No. 620,283. Renewed Dec. 29, 1927. 3 Claims. (Cl. 246—37.)

1. In train control apparatus, the combination of means for imposing an alternating current upon the traffic rail system of an occupied block under clear traffic conditions ahead and removing said alternating current from said occupied block under restrictive traffic conditions ahead, and primary relay means on the vehicle in a conductor receiving alternating current from the energized traffic rail system of a block due to the drop in potential between the points of contact of said conductor with said rail system, and means on the vehicle controlled by said primary relay when energized to give an indication for proceeding under clear traffic conditions ahead and an indication for stopping under restrictive conditions ahead, said primary relay being excited by means on the vehicle, in addition to its excitation through said conductor substantially as described.



1,681,000. CHECK ON LIGHT-SIGNAL LAMPS. EDWIN CHARLES LARRY, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed May 5, 1923. Serial No. 636,997. Renewed Apr. 5, 1927. 21 Claims. (Cl. 246—34.)

1. In a railway signaling system, the combination with a trackway divided into blocks, of a signal at the entrance to each block, automatic means for operating said signals in accordance with traffic conditions including the usual track circuit and associated track relay, and means effective under danger traffic conditions of a certain block for causing the signal at the entrance to the next block in the

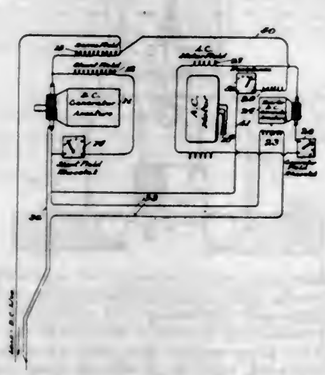


rear to indicate danger when the lamp for illuminating the signal at the entrance to said first mentioned block under danger traffic conditions is extinguished.

1,681,001. APPARATUS FOR LOADING CARS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 17, 1917. Serial No. 162,649. 14 Claims. (Cl. 198—11.)

1. In an apparatus for loading coal in a mine chamber, the combination of a track extending towards the working face, a car adapted to be moved along said track towards and from loading position, a receptacle adapted to be positioned adjacent to said loading position and adapted to the accumulation of a stationary mass of broken coal sufficient to fill said car, and optionally controlled means to quickly transfer the coal of said stationary mass to said car.

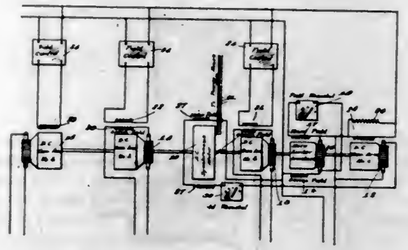
1,681,002. PURIFYING DEVICE. FREDERICK G. LONDAGIN, Seattle, Wash. Filed Apr. 22, 1927. Serial No. 185,852. 3 Claims. (Cl. 210—52.)



1. A purification apparatus in connection with dry cleaners and the like using a solvent such as gasoline, comprising a plurality of settling tanks, means for delivering a chemical solution to one of the tanks, means for circulating said solution, and means for circulating the impure cleansing solvent through a portion of the path of the chemical solution.

1,681,003. GLASS WASHER. VASILIOS S. MACKRES, Brockton, Mass. Filed Jan. 7, 1926. Serial No. 79,846. 3 Claims. (Cl. 15—75.)

1. In a washer, a conical support, a rod reciprocably mounted in said support, a brush attached to said rod, said brush on reciprocation of said rod passing along side of said conical support and adapted to be deflected outwardly thereby, and means urging the said rod in one direction.

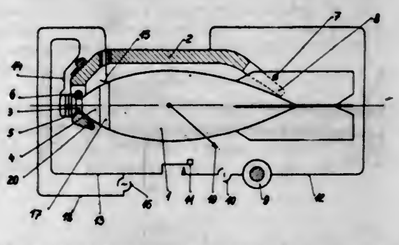


1,681,004. POWER-FACTOR CONTROL FOR POWER SYSTEMS. SHERMAN MELTON, Sturgis, Ky. Filed Nov. 10, 1925. Serial No. 68,219. 7 Claims. (Cl. 172—246.)

7. A synchronous A. C. motor D. C. generator set having a compound wound D. C. exciter, means for energizing one of the field coils of the exciter, with substantially constant potential electrical energy, and means for energizing the other field coil of the exciter proportionately to the output of the generator.

1,681,005. POWER-FACTOR CONTROL FOR POWER DISTRIBUTION. SHERMAN MELTON, Sturgis, Ky. Original application filed Nov. 10, 1925, Serial No. 68,219. Divided and this application filed June 9, 1926. Serial No. 114,770. 3 Claims. (Cl. 172—246.)

1. In a system of the character described, a synchronous motor driving a plurality of generators and an exciter, means whereby the exciter may be utilized for controlling the field of said generators, means whereby an increase of current from said exciter will in direct proportion raise

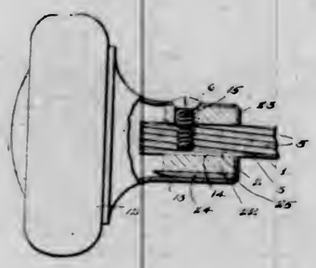


the output voltage of one of said generators, and connecting means whereby the last named generator will supply the field current of said synchronous motor.

1,681,006. ARTICLE OF HEADWEAR. PERCY MERTON, Park Ridge, N. J. Filed Dec. 4, 1926. Serial No. 152,613. 3 Claims. (Cl. 2—195.)

1. An article of headwear including a crown, an outer band forming a strip doubled on itself to present a tubular formation, and a band U-shaped in cross-section, the said outer band being disposed at the under side of the edge portion of the crown and said band constituting a binding for said edges of the crown and outer band, the edges of the crown and tubular strip being horizontal, and said U-shaped band constituting a head-contacting size band.

1,681,007. METHOD OF DISCHARGING BOMBS AND FOR RENDERING THEIR FUSES ACTIVE. BOHDAN PANTOFLICEK, Pilsen, Czechoslovakia. Filed Oct. 18, 1924. Serial No. 744,399, and in Czechoslovakia Oct. 16, 1923. 13 Claims. (Cl. 244—1.)

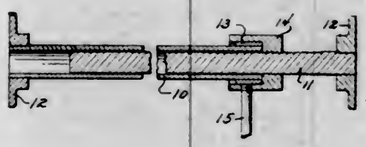


1. In an apparatus of the character described, the combination of means to support a bomb, and electric means for releasing the bomb and rendering its fuse active selectively either with or without delay and causing it to act as an impact fuse or as a delay fuse.

1,681,008. DOOR-KNOB CONSTRUCTION. OTTO PETERMANN, Groton, N. Y., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 14, 1927. Serial No. 175,059. 11 Claims. (Cl. 292—350.)

1. A door knob construction comprising a U-shaped shank constituting an elongated channel member, a knob

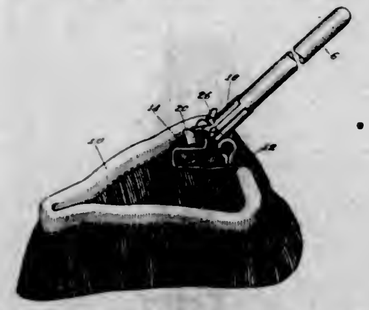
having a hub surrounding one end of said shank, said hub having a hole in alinement with the channel of said shank, and a member of greater diameter than the distance



between said walls passing through said hole into said channel and separating the walls of said channel into binding engagement with said hub.

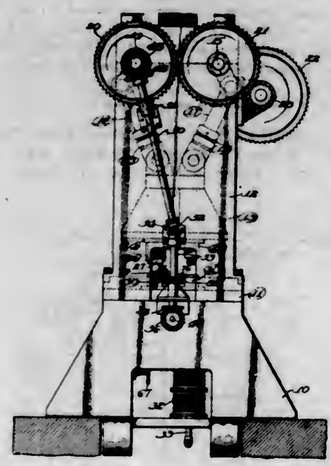
1,681,009. PROCESS OF REFRIGERATING AND PRESERVING COMESTIBLES. PAUL W. PETERSEN, Bay City, Mich. Filed June 23, 1923. Serial No. 647,373. 13 Claims. (Cl. 99—14.)

5. The process of preserving comestibles which comprises washing the comestibles in a solution containing a germicidal agent such as sodium hypochlorite normally subject to dissociation, thereafter rapidly freezing the comestible together with said solution remaining thereon, and subsequently applying a coating of ice to the comestible.



9. Frozen comestibles covered with an icy coating containing a diffusive germicide comprising sodium hypochlorite.

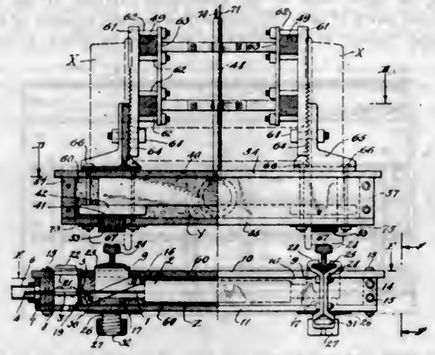
1,681,010. CLOTHES ROD. LAWRENCE RAGGIO, Port Arthur, Tex. Filed Oct. 2, 1926. Serial No. 139,159. 1 Claim. (Cl. 211—123.)



A clothes rod of the character described comprising a hollow section, a threaded section slidably fitted within the hollow section, a collar surrounding the hollow section adjacent the inner end thereof, a nut threaded on the second mentioned section and including a hollow body portion rotatably fitted about the adjacent end of the hollow section and surrounding said collar, whereby the adjacent end of the hollow section is reinforced, said nut having an opening in one side, a combined handle and locking device adapted to be partly threaded into the opening and initially used to turn the nut, and subsequently used to bind against the said washer to hold the sections fixed relatively in a given position, said handle including two pivotally connected sections for the purpose specified.

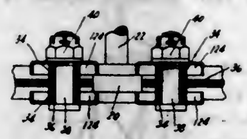
1,681,011. MOP-HANDLE-CLAMPING DEVICE. FRANK M. ROBINSON, Jr., Pasadena, Calif. Filed Jan. 26, 1927. Serial No. 163,644. 2 Claims. (Cl. 306—15.)

1. A mop, including a frame, a handle pivotally mounted thereon, and means for removably attaching the handle to the mop head in a plurality of positions, said means comprising a bar bent in triangular form, said bar extending upwardly from, and forming an integral portion of the mop head frame.



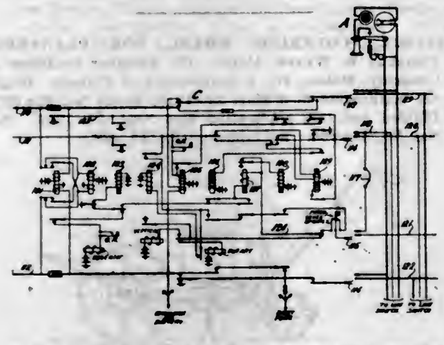
1,681,012. SHEET-METAL PRESS. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1926. Serial No. 133,116. 19 Claims. (Cl. 113—38.)

1. A sheet metal press embodying two separated stations for performing different operations upon the work, means for simultaneously performing said operations, means operating automatically to elevate the work at the respective stations after being operated upon, means for engaging and moving the work while thus elevated, from one of said stations to another station, mechanism for actuating the said work engaging and moving means, a guide for the work between the said stations, said guide being movable into and out of position, and means operating while the work is being done for positioning the guide to receive the work from one station and for directing it to the other station.



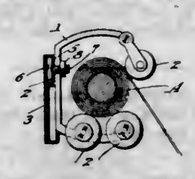
1,681,013. AUTOMATIC TRAIN CONTROL. OSCAR ARTHUR ROSS, New York, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Dec. 28, 1921. Serial No. 525,508. 6 Claims. (Cl. 246—63.)

2. In a device of the kind described a trackway having rails, an inductive member located on the trackway, a vehicle adapted to travel on said rails, an inductive member carried by said vehicle, and means carried by said vehicle and associated with said vehicle inductive member for



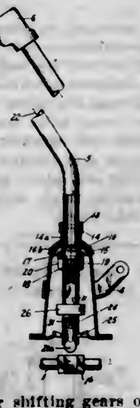
effecting the stopping of said vehicle upon dislocation of said vehicle carried inductive member with respect to said vehicle.

1,681,014. BRAKE MECHANISM. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1927. Serial No. 232,253. 3 Claims. (Cl. 188—250.)



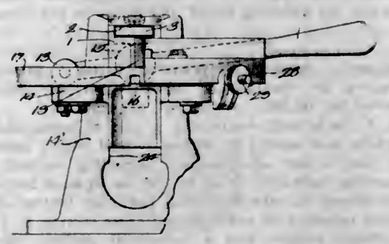
3. A brake shoe having a permanently mounted bushing projecting at its opposite sides, rollers mounted on opposite ends of said bushing, a pin passing through the bushing and having a head engaging one end of the bushing and holding one of the rollers, and a nut threaded on the opposite end of the pin and engaging the opposite end of the bushing and holding the other roller.

1,681,015. AUTOMATIC TELEPHONE SYSTEM. NORMAN H. SAUNDERS, Homewood, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,782. 14 Claims. (Cl. 179—17.)



1. In a party-line automatic telephone system, switching mechanism controlled over a calling line to set up a connection to a party line, a station-selecting device individual to the selected party line, and means for operating said device from the calling line after the connection has been set up to the called line to signal any desired station on the party line.

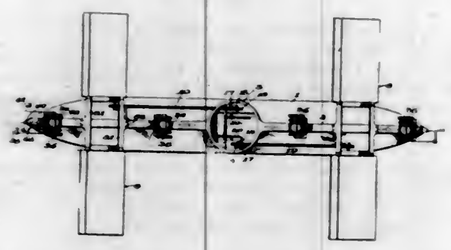
1,681,016. AWNING PROTECTOR. GEORGE M. SCHMIDT, Cedar Rapids, Iowa. Filed May 10, 1926. Serial No. 108,134. 1 Claim. (Cl. 156—44.)



Awning supporting means comprising a track member having a guideway at its upper part and a flange at its lower part, a block sliding in the guideway, a bolt carried by the block, a bracket connected with the bolt and having a part engaging the lower flange and rollers for supporting an awning carried by the bracket.

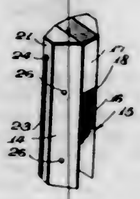
1,681,017. LOCK. ANTHONY R. SMITH, Elyria, Ohio, assignor to The Elyria Iron and Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 3, 1927. Serial No. 165,514. 20 Claims. (Cl. 70—127.)

2. In mechanism for shifting gears of automobiles and the like, the combination of gear means, a shifting lever having a member connectible with and disconnectible from said gear means when the lever is in a predetermined position, means for locking the said member in a disconnected and inaccessible position while permitting ordinary movement of the lever, and means for returning the lever to and maintaining it in the predetermined position while restoring the said members to connected position with the gear means.



1,681,018. SHAVING PLANE. FRANK J. STEPHAN, Chicago, Ill., assignor to H. B. Rouse & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,460. 1 Claim. (Cl. 90—25.)

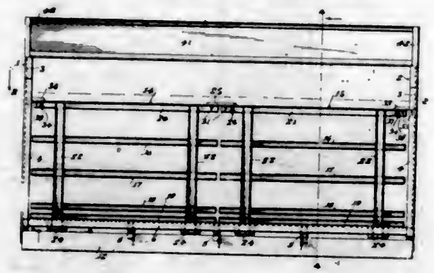
A plane including a stock having a trailing portion of U-shape integrally formed with the balance of the stock and whose longitudinal sides are formed with notches



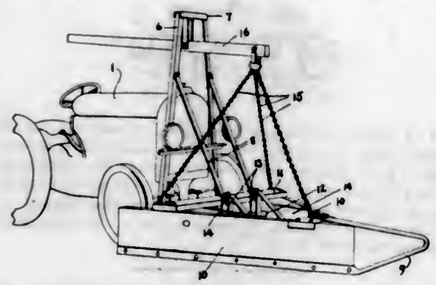
spaced apart from the base of said U-shaped trailing portion; a bar located in said notches and spaced apart from the base of said U-shaped portion to afford a slot through the sole of the stock; and a bit assembled with the stock and having its cutting edge projecting through said slot.

1,681,019. HELICOPTER. HARRY CLARK STEWART, Webster, Ky. Filed Aug. 10, 1926. Serial No. 128,393. 7 Claims. (Cl. 244—15.)

3. In a flying machine, an elongated body, a narrow superstructure extending on the body intermediate the width of the body, each of the end portions of the superstructure having transverse cut-away portions, bearing rings supported at opposite sides of the end portions of the superstructure, plane units extending transversely of the machine through said cutaway portions of the superstructure and through said aligned bearing rings and carrying rings encircling said plane units and rotatably supported in said bearing rings, said carrying rings being secured to said plane units.



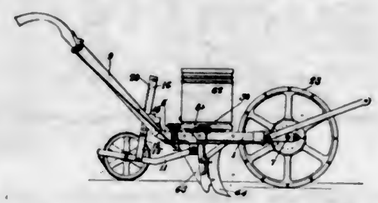
1,681,020. POST. JOHN FRED STIMSON, Aulander, N. C. Filed May 13, 1927. Serial No. 191,249. 2 Claims. (Cl. 155—86.)



1. A device of the character described comprising a pair of chairs with a supporting standard located between the chairs, said chairs being provided with backs, means for covering the standard comprising a pair of finishing strips spaced from each other and having longitudinal slots to receive the side edges of the adjacent backs of the chairs, a spacing block for securing the upper edges of the finishing members together and adapted to rest upon the upper end of the standard, and means for securing the finishing strips and backs to the standards.

1,681,021. SIDE-RAIL TRUCK BODY. SIMEON E. TRAVIS, Jr., Hattiesburg, Miss. Filed Mar. 17, 1926. Serial No. 95,332. 4 Claims. (Cl. 296—8.)

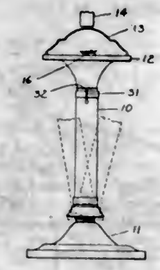
4. A truck body comprising a pair of upstanding end members each having its bottom formed with a horizontal part and a pair of oppositely extending inclined parts projecting outwardly from and at an upward inclination with respect to said horizontal part, the bottom of each of said members of angle shaped cross section to provide a vertical portion and a horizontal portion extending inwardly at right angles from the lower end of the vertical portion, a pair of spaced oppositely disposed side members each of angle shaped cross section to provide a vertical portion and a horizontal portion extending inwardly from the upper end of the vertical portion thereof, the ends of the vertical portions of said side members seated on the outer ends of the horizontal portions of the inclined parts of said end members, a bottom member of the same contour as the bottom of said end members, extending from one end member to the other and secured to the horizontal portions of said side members, and brace members arranged below and corresponding in contour to the shape of said bottom member and extending from and secured to the inner faces of the vertical portions of said side members.



1,681,022. SNOWPLOW. MARTIN VEENSTRA, Ada, Mich. Filed Feb. 1, 1927. Serial No. 165,086. 4 Claims. (Cl. 37—44.)

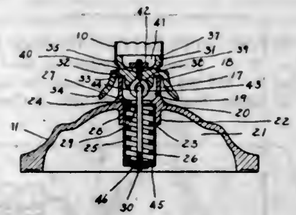
1. A snow plow comprising a bracket adapted to be rigidly attached to a vehicle, vertically slotted guides on said bracket, a plow structure, and a shaft on said plow structure extending through said vertically slotted guides.

1,681,023. COVERING WHEEL FOR PLANTERS. CHARLES E. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Original application filed Mar. 22, 1918, Serial No. 224,057. Divided and this application filed Sept. 24, 1923. Serial No. 664,490. 3 Claims. (Cl. 111—69.)



1. In a planter, the combination with a main frame, a wheel frame having side members pivotally attached to the main frame to swing vertically, and a covering wheel supported by the wheel frame, of a yoke shaped element comprising arms pivotally connected to the side members of the wheel frame to swing fore and aft, said element having an intermediate upwardly extending bar rigid therewith, notches in the rear margin of said bar, means at the rear of said bar adapted to engage the notches therein to hold said bar in different positions of vertical adjustment, whereby the wheel frame and covering wheel may be raised or lowered relatively to the main frame, a spring for normally holding said bar in engagement with said holding means, and handle bars secured to the main frame.

1,681,024. PERMANENT HAIR-WAVING APPLIANCE. ARTHUR G. BORDEN, Washington, D. C., assignor to The Borden Method Incorporated, a Corporation of Delaware. Filed Mar. 21, 1928. Serial No. 263,493. 5 Claims. (Cl. 132—33.1.)

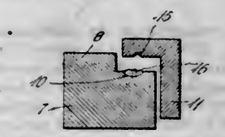


1. In a hair waving appliance a winder comprising a rod member, a heat resisting device concentrically positioned for rotative and longitudinal movement on said rod member, said device having a substantially cylindrical portion, a frusto-conical portion extending therefrom and a tongue projecting from said frusto-conical portion and a notch therein extending longitudinally of said device for receiving strands of hair and guiding said hair in a spiral along said rod member preparatory to subjecting the hair in wound formation to heat.

1,681,025. SMOKER'S STAND. JOHN H. BRADNACK, New Haven, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation. Filed Sept. 21, 1925. Serial No. 57,655. 8 Claims. (Cl. 131—51.)

4. In a smoker's stand, an upright supporting an ash receiver, a base, said upright and base each having a screw-threaded socket, a coil spring having its end entered as screws in said sockets, and means for holding the ends of said spring in place in said sockets.

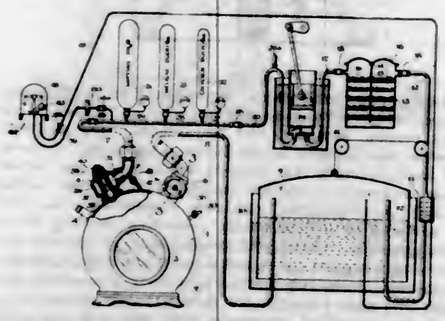
1,681,026. STAND FOR SMOKERS' SETS. JOHN H. BRADNACK, New Haven, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation. Filed Nov. 13, 1925. Serial No. 68,774. 1 Claim. (Cl. 248—41.)



In a stand for smokers' use, a base having a dome-shaped body wall that is provided with an opening in the apex portion, having a seat for a spring structure that borders said opening on the inside, and having an annular seat structure that extends upwardly on the outside from the border of said first mentioned seat, a rider having a seat for cooperating with said annular seat and that is bordered by a downwardly projecting covering flange that generally encloses said annular seat, an upright that serves as a support for an ash receiver extending upwardly from said rider, and means operatively connecting said rider and base comprising a spring that is connected to said rider and that cooperates with said first mentioned seat.

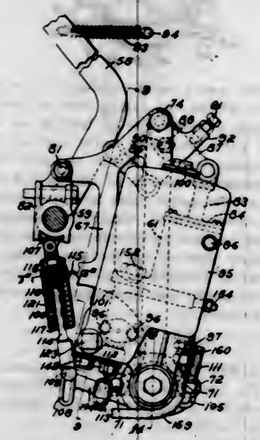
1,681,027. BOTTOM FOR WATER METERS. JOHN W. CALHOUN, Chester, Pa. Filed Oct. 24, 1922. Serial No. 596,692. 1 Claim. (Cl. 137—71.)

A bottom for water meter casings to prevent damage from expansion within the casing due to freezing adapted to be used upon a meter casing having an open bottom and provided with fastening bolts around the opening, said bottom comprising a closure member machined and finished for permanent use to fit within and close the bottom opening of the meter case, and a retaining plate of substantially non-resilient frangible material provided with a central portion to extend entirely over and hold against the outer side of the closure member and having radially extending breakable lug arms to receive the fastening bolts to clamp the retaining plate rigidly against the closure member.



1,681,028. COMPOSITE BRICK. WILLIAM R. CHAPIN, Wyoming, Pa., assignor of one-half to Stogdell S. Staples, White Haven, Pa. Filed Feb. 2, 1928. Serial No. 251,407. 4 Claims. (Cl. 72—21.)

1. A composite brick comprising a body, and a facing having a portion resting on said body, the upper side of said body and the lower side of said portion of the facing

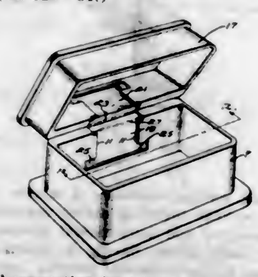


being formed with registering recesses, said recesses being adapted to receive a plastic for keying the facing and body together and being of such relative dimensions as to readily permit the breaking of the plastic key for removal of an injured facing without disturbing any of the other facings.

1,681,029. DIVING APPARATUS. CHARLES J. COOKE, Washington, D. C. Original application filed Aug. 15, 1919, Serial No. 317,838. Divided and this application filed Oct. 23, 1920. Serial No. 419,149. 3 Claims. (Cl. 61—71.)

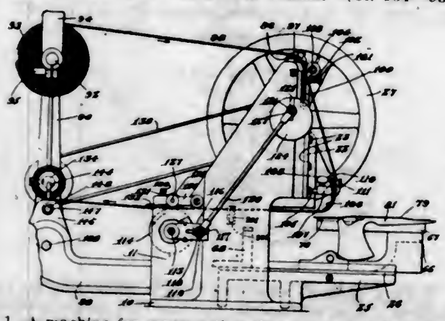
1. Diving apparatus comprising a diving dress, a closed air circuit having an inlet and an outlet at the dress, means in communication with the circuit for introducing air to the inlet to the dress, and a valve situated between the inlet of said circuit and said dress operable by external fluid pressure to hold the valve in a normally open position.

1,681,030. FLUID-PRESSURE BRAKE SYSTEM. FREDERICK S. DUESENBERG, Indianapolis, Ind., assignor to Indianapolis Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 1, 1924. Serial No. 703,421. 21 Claims. (Cl. 188—152.)



9. In a vehicle brake system, the combination of a brake; a brake-operating fluid motor; a master fluid motor for creating a pressure of the fluid in the system; a booster fluid motor for boosting said pressure; an actuator for said booster fluid motor; means including a spring to limit the pressure produced by said booster fluid motor during a predetermined portion of the travel of said actuator; and means to supercede said spring during the remainder of such travel and to cause the pressure to be raised above such limit.

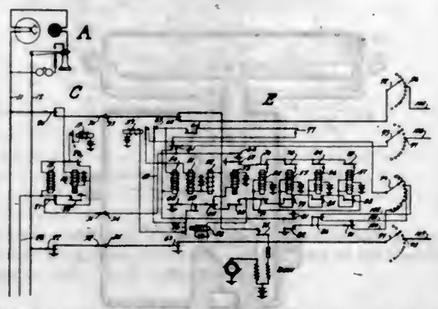
1,681,031. COMBINED WASH RAG AND SOAP HOLDER. HAZEL TIETJEN FORBIS, Missoula, Mont. Filed Oct. 22, 1927. Serial No. 228,032. 2 Claims. (Cl. 46—40.)



1. As an article of manufacture, a toy comprising a combined wash-rag and soap holder, having a body portion formed of a rectangular strip of fabric provided with the simulation of the face of an animal applied thereto near the upper central portion thereof, said strip being folded along its longitudinal center and the two flaps stitched together between the ends to form a pocket, said pocket being formed on the inside of the folded cloth, this pocket being then turned inside out to reverse the flaps and to expose said design, the two upper corners being gathered in to simulate the ears of the animal, and simultaneously to constrict the open end of said pocket.

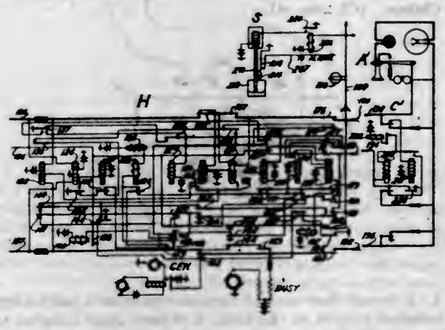
1,681,032. HINGED CONNECTION. JOSEPH C. FULLER, West Newton, Mass., assignor to Northern Industrial Chemical Company, Boston, Mass., a Corporation of Massachusetts. Filed June 7, 1927. Serial No. 197,067. 5 Claims. (Cl. 220—31.)

1. A hinged connection for a box comprising a leaf hinge, the leaf thereof being provided with a pair of oppositely arranged tangs, the hinged connected walls of the box having formed in its face a recess of lesser width than the leaf, the opposite side walls of the recess having slots opening to the edge of the wall whereby the leaf with the tangs bent may be inserted in said slotted recess from the edge of the wall inwardly, and transverse locking recesses in the side walls of the box into which each tang may be bent back to hold the leaf in place after insertion in the recess.



1,681,033. CUT-OUT MACHINE FOR SHOE UPPERS. BENJAMIN W. FREEMAN, Cincinnati, Ohio. Filed Dec. 3, 1923. Serial No. 678,213. 94 Claims. (Cl. 164—93.)

1. A machine for ornamenting shoe uppers, having movable work supporting means, pressure applying means, and shoe upper ornamenting means, said machine constructed



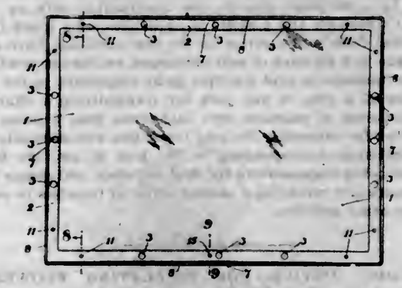
and arranged to provide a substantial space along lateral sides of the work supporting means and ornamenting means sufficiently large to admit thereto at least one hand to hold the work.

1,681,034. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Aug. 12, 1921, Serial No. 491,745. Divided and this application filed Feb. 25, 1924. Serial No. 694,821. Renewed June 6, 1927. 13 Claims. (Cl. 179—18.)

1. In a telephone system, a trunk line terminating in an automatic switch, trunk lines divided into groups accessible thereto, wipers for said switch normally in electrical engagement with the trunk line used in the previously established connection, and means for causing said switch to advance said wipers in response to a digit of a called number to select a particular one of said groups.

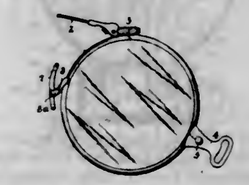
1,681,035. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Wilkinsburg, Pa., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Continuation of application Serial No. 694,821, filed Feb. 25, 1924, and a refiling of application Serial No. 491,745, filed Aug. 12, 1921. This application filed Apr. 22, 1925. Serial No. 24,915. 36 Claims. (Cl. 179—18.)

36. In a telephone system, an automatic switch, subscriber controlled means for operating said switch to connect with a desired line, subscriber controlled means in said switch for controlling the release of said switch, and additional and independently operable means in said switch for controlling its release in case the line connected with is open.



1,681,036. BOTTLE CLOSURE. JOHN M. L. GROBY, Newton, Mass. Filed May 9, 1927. Serial No. 189,859. 4 Claims. (Cl. 215—64.)

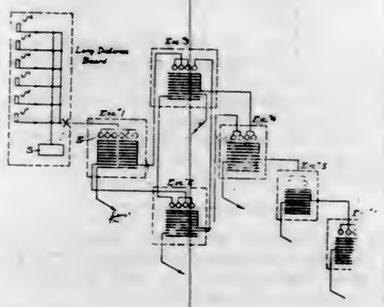
1. A bottle closure comprising a cap member adapted to fit over the beaded top end of a bottle neck and provided with a raised centerpiece, a clamping member comprising a circular portion adapted to fit around the neck of the bottle beneath the bead thereon with ends extending beyond the center of the neck tensioned against the sides thereof, arms connecting with said circular portion of the clamping member with extension upwardly therefrom at substantial right angles thereto from points inwardly removed from the ends of said circular portion, said arms being bent and extended by arm extensions to rest and turn



upon said centerpiece, said arms having such extension relatively to said cap member, and said arm extensions engaging said centerpiece at points so far removed from the bend in said arms that a distortive straightening effect will be imparted to said arms and extensions whereby the cap member will become tensioned against the top end of the bottle upon applying said circular portion of the clamping member to the bottle.

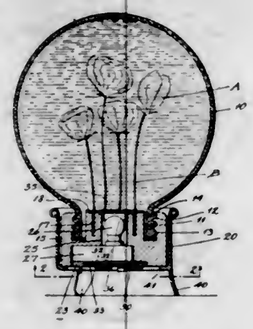
1,681,037. CELLULOID WINDOW. FREDERICK HAROLD HALL, Holford, near Bridgwater, England. Filed Feb. 3, 1925, Serial No. 6,570, and in Great Britain Feb. 9, 1924. 5 Claims. (Cl. 296—145.)

1. A window comprising a flexible transparent panel, a frame having resilient side and end members, means for attaching the middle portions of the edges of the panel to the said side and end members, an outer rigid frame, and means for securing the resilient frame to the said rigid frame so as to allow of a relative movement between them.



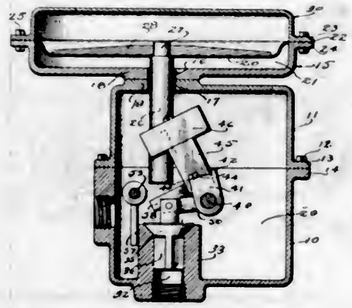
1,681,038. OXFORD EYEGLASSES. HARRY HIGHAM, Newark, N. J. Filed June 14, 1926. Serial No. 115,810. 1 Claim. (Cl. 88—44.)

Folding eye-glasses of the class specified including a pair of lens frames, an elastic bridge having a spring-pivot connection with each frame, and nose-clips for the respective



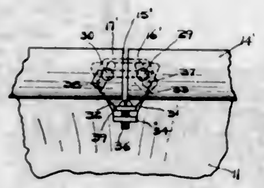
frames each consisting of a pad arranged to lie in a front-to-rear plane and an arm projecting rearwardly from the rear portion of the pad and bent forwardly and being rigidly secured to the corresponding lens frame, said arm adjacent the bend being formed with a rearwardly convex hump, said hump being adapted to cam off the forward portion of the opposite nose pad on contact of said nose clips in passing each other when the eye glasses are folded or unfolded.

1,681,039. AUTOMATIC TELEPHONE TRUNKING SYSTEM. JOHN H. HOMRIGHOUS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 27, 1919. Serial No. 347,844. Renewed May 18, 1925. 25 Claims. (Cl. 179—27.)



1. In a telephone system, the combination with an operator's position and a series of exchanges, of a trunk line outgoing from said position to the first exchange having a multiple jack for each of said exchanges, an impulse sending device common to said multiple jacks responsive to the insertion of a plug in any jack for transmitting a characteritic series of impulses over said trunk line, a series of switches for extending the said trunk line automatically to the exchange corresponding to the jack in use, the first switch being responsive to the said impulses, and means for automatically repeating a similar series of impulses to each of the other switches.

1,681,040. DEVICE FOR DISPLAYING FLOWERS. EVINA AGHA KEMP, New York, N. Y. Filed May 14, 1924. Serial No. 713,167. 6 Claims. (Cl. 240—2.)

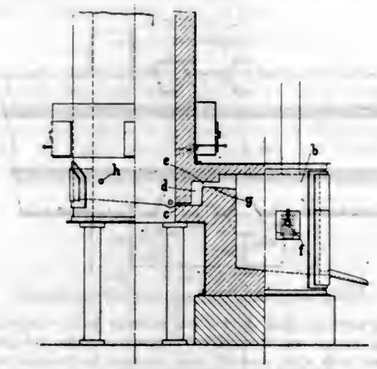


1. A device for displaying flowers and the like, comprising a liquid container having an opening and having a transparent wall, means for sealing said opening, means for holding flowers in display position in liquid within the container, and a source of light adjacent said sealing means said sealing means being formed to permit the passage of light from said source to illuminate the flowers in the container.

1,681,041. GAS CONTROL. CHARLES E. KIMBROUGH, Haynesville, La. Filed Oct. 4, 1927. Serial No. 224,011. 3 Claims. (Cl. 67—115.)

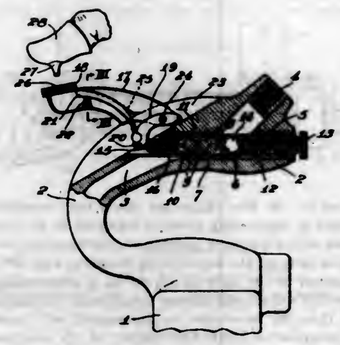
1. A control for a gas system comprising a housing having an inlet and outlet for gas, a valve controlling the outlet, a shaft rockably mounted in the housing, a weighted arm pivotally mounted on the shaft, a lug rigid with the shaft, means connecting the lug with the arm, means under the control of gas pressure for rocking the arm, and means connecting the lug with the valve.

1,681,042. CLOSURE FASTENING. EUGENE A. KUEN, Cincinnati, Ohio, assignor to The Thomas J. Corcoran Lamp Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 28, 1924. Serial No. 728,625. 4 Claims. (Cl. 240—41.)



1. A closure fastening in combination with a lamp body, a reflector located in the body, a closure glass adapted to cover the reflector opening, a split closure rim embracing the open end of the lamp body and engaging the closure glass adjacent to its periphery, the ends of the rim having lugs thereon, and a latch having slots therein oppositely inclined to one another and engaged by the lugs, said slots being adapted to effect movement of the lugs therein when the latch is moved.

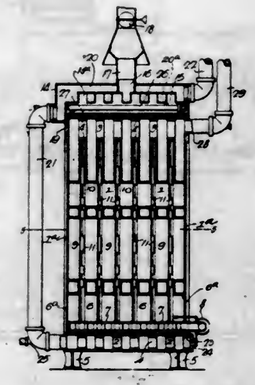
1,681,043. CUPOLA WITH FOREHEARTH. HUGO LUYKEN, Bielefeld, Germany. Filed Feb. 26, 1924, Serial No. 695,259, and in Germany Mar. 5, 1923. 1 Claim. (Cl. 266—40.)



In a furnace comprising a cupola and a fore-hearth, a vertically extending channel having the upper end thereof

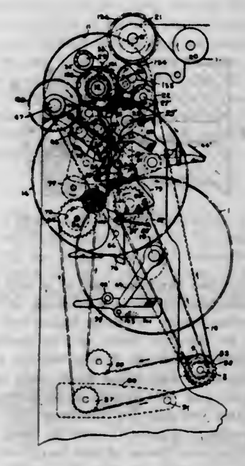
in open communication with the upper portion of said fore-hearth, and a passage of restricted cross-section between

the lower end of said channel and the shaft of said cupola, whereby momentary fluctuations of the level of the molten metal in said cupola shaft are damped.



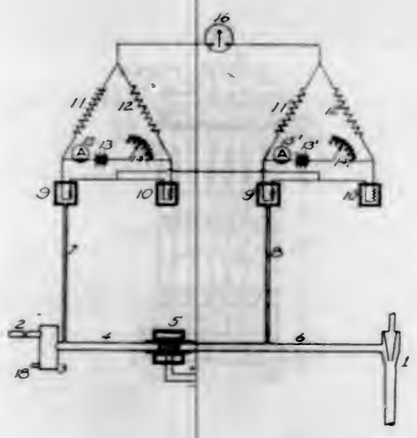
1,681,044. SAFETY TRIGGER FOR PNEUMATIC TOOLS. EMANUEL MALIK, Everson, Pa. Filed Dec. 10, 1927. Serial No. 239,148. 4 Claims. (Cl. 121—35.)

1. The combination with a pneumatic tool having a valve for controlling flow of tool-actuating pressure fluid, of a movable valve-opening trigger borne by said tool, and normally inoperative means associated with the trigger for opening said valve upon the movement of the trigger, said means being rendered effective for said purpose solely upon the insertion of a key in the trigger prior to the movement of the trigger.



1,681,045. GAS-FIRED BOILER. ALEXANDER A. MARKS, Philadelphia, Pa. Filed Jan. 7, 1922. Serial No. 527,791. 9 Claims. (Cl. 122—210.)

I. In an apparatus of the class described, the combination of a series of similar parallel thin hollow heating units adapted to contain water, the said units being slightly separated at their central portions and at their tops and bottoms to provide vertically extending flues for hot gases and the said units being provided with transverse openings in register with each other to form a chamber extending from end to end of the series and surrounded on all sides by the water spaces of the said units, means for closing the chamber at the ends, means for connecting the interiors of the heating units at the tops and bottoms, and a heating device located in the chamber, the said heating device receiving

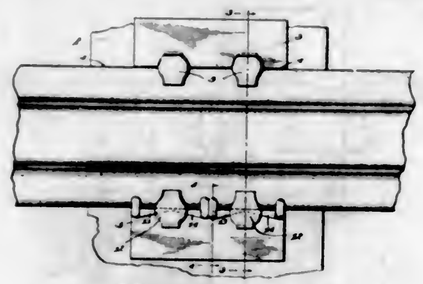


preheated air through the spaces between the bottoms of the units and delivering hot gases to the flues between the upper parts of the units.

1,681,046. PAPER-ROLLING MACHINE. WILLIAM FRANKLIN MARRESFORD, Niagara Falls, N. Y. Filed Nov. 19, 1924. Serial No. 750,750. 25 Claims. (Cl. 242—55.)

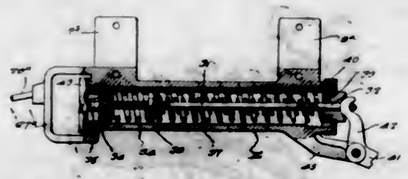
1. In a paper rolling machine a plurality of roll forming rollers grouped about a central space adapted to form a roll within said central space from a paper strip, means for supplying the paper strip to the roll forming rollers, and means for forming a fold in the paper strip at a substantial distance from its end and forming the folded portion of the strip into a core.

1,681,047. GAS-ANALYSIS APPARATUS. CLARENCE H. PORTER, Washington, D. C. Filed Oct. 11, 1924. Serial No. 743,114. 2 Claims. (Cl. 23—255.)



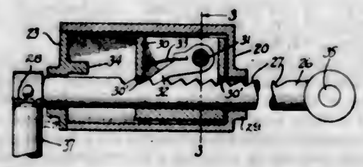
1. In a gas analysis apparatus, electrical means responsive to the thermal conductivity of a gas sample, means adapted to cause combustion of the sample, second electrical means responsive to the thermal conductivity of the burned gas, and a single galvanometer adapted to be actuated by the combined effects of both said electrical means.

1,681,048. BOLT FASTENING. LE ROY PURCELL, Judson, Ind. Filed Jan. 12, 1926. Serial No. 80,841. 1 Claim. (Cl. 85—32.)



A fastening for the threaded end of a bolt and adapted to be wholly embedded in formed opening in the material, comprising a conical body with an inner end face and an outer end face of circular form and in parallel relation, the outer end face accurately fitting within the outer end of the formed opening and being flush with the surface of the material, and fins projecting in diametrically-opposed relation from and beyond the inclined side wall of the fastening, the respective ends of each fin being in alinement with the respective end faces of the body, the diameter of the fastening taken through the fins being uniform for the full length of the fastener, the outer faces of the fins being triangular with their apices in alinement with the inner face of the body and their bases in alinement and merging into the contour of the outer face of the fastener, whereby the fins present a sharp end in alinement with and extending in both directions beyond the inner face of the fastener and are of gradually decreasing thickness and of gradually decreasing width from the inner face to the outer face of the body.

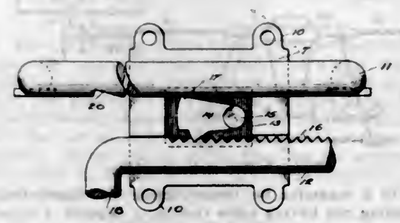
1,681,049. RAIL-FASTENING DEVICE. HENRY H. RENFROE, Rocky Mount, N. C. Filed Sept. 29, 1927. Serial No. 222,870. 8 Claims. (Cl. 238—304.)



8. An anti-creeping device for railway rails comprising a spring metal bar formed as opposed wedges integrally connected at a thin central apex portion to present inner and outer faces reversely tapering to the apex portion, and having upward extensions adjacent to its opposite ends, with offsets thereon to overlie the top of the rail base.

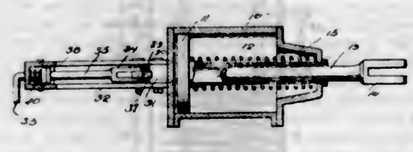
1,681,050. SPRING SUSPENSION OR SHOCK ABSORBER FOR VEHICLES. JOSEPH ROBINSON, Santa Monica, Calif., assignor, by mesne assignments, to Russell Sutherland Smart, Ottawa, Canada. Filed Nov. 19, 1923. Serial No. 675,759. 2 Claims. (Cl. 267—20.)

1. A device of the character described comprising in combination a supporting member adapted to be secured to the chassis of a vehicle; a pivoted rocker-arm pivoted intermediate its ends on the supporting member, and having one end connected to the axle of a vehicle, a supporting spring acting on the other end of the lever, said spring being so designed that its resistance to movement will increase in greater progression than the extent of its compressional movement; and a rebound checking spring connected to the side of said other end of the rocker-arm opposite to that to which the load supporting spring is connected.



1,681,051. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,168. 20 Claims. (Cl. 188—197.)

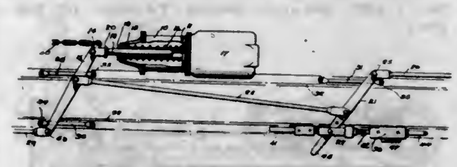
1. A regulator for the brake rigging of railway cars comprising a relatively fixed member adapted to be rigidly secured to the draft sill of a railway car, a take up mecha-



nism adapted to be connected with the brake rigging including a rod passing thru said member, holding means coacting with said rod and enclosed within said member, said holding means having a limited range of free floating movement prior to performing any take up function.

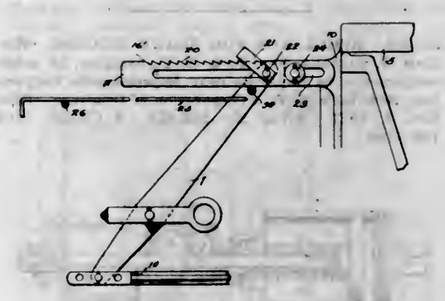
1,681,052. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 22, 1927. Serial No. 177,365. 10 Claims. (Cl. 188—200.)

1. In a manually operated regulator for truck brake rigging, in combination, a support, a regulating rod in parallel position, and a regulator casing having a detent housed therein adapted to engage with said rod and be held in positive engagement therewith by said support, one of said parts having means permitting relative separation of the detent and rod during the regulating movement of the device.



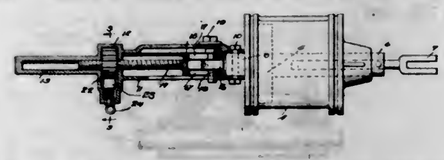
1,681,053. BRAKE-RIGGING REGULATOR. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed June 1, 1927. Serial No. 196,713. 18 Claims. (Cl. 188—200.)

1. In combination with foundation brake gear including a cylinder and cylinder levers, a regulator therefor, including a moveable support for one of the cylinder levers associated with the cylinder and having a lost motion device associated therewith whereby the rear lever may be moved manually a predetermined distance proportional to brake shoe clearance and prior to the actuation of the regulator.



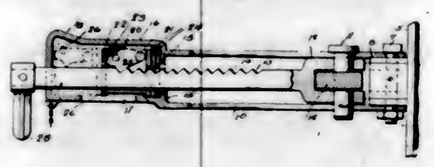
1,681,054. FOUNDATION BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1927. Serial No. 213,611. 15 Claims. (Cl. 188—200.)

1. In a foundation brake rigging of the character described, in combination, an air-brake cylinder, cylinder levers, a piston movable within the cylinder and connected with one of the levers, and a single manually actuated member on the car frame and connected with one of the cylinder levers and acting as a fulcrum therefor but capable of relative free movement in one direction an amount proportional to brake shoe clearance of both trucks, as well as an additional movement for the purpose of permanently



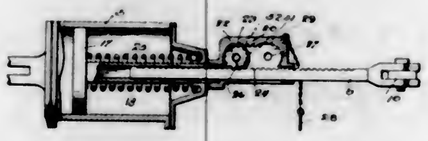
taking up and holding any excess movement of the brake shoes of both of the trucks beyond their predetermined clearance travel.

1,681,055. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1927. Serial No. 230,347. 11 Claims. (Cl. 188—200.)



1. In a regulator for foundation brake rigging, including brake levers and limiting stop means therefor, in combination, a truck bolster having supporting means thereon, a lever fulcrum having a lost motion connection with said supporting means and having a ratchet surface, and a pawl at one end of one of the brake levers in operative engagement with said ratchet and adapted to move relatively to said fulcrum when regulation of the brakes involving movement in excess of that permitted by the lost motion connection takes place.

1,681,056. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1927. Serial No. 230,348. 7 Claims. (Cl. 188—202.)

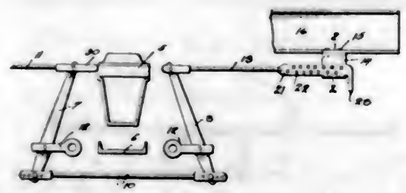


1. In a manually actuated regulator of the character described, in combination, a lever, one end of which is adapted to be supported by the regulator, said regulator including a housing, a high pitch threaded rod in said housing having a lost motion connection with the lever, and pawl and ratchet mechanism associated with said threaded rod for absorbing movement of the lever in excess of the lost motion.

1,681,057. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1927. Serial No. 230,349. 7 Claims. (Cl. 188—200.)

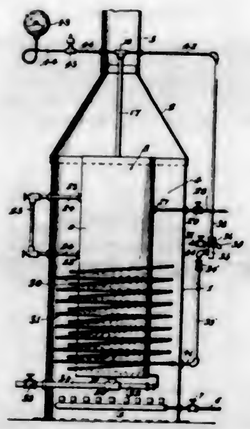
1. In combination with a lever of the foundation brake gear, a regulator therefor including a ratchet bar, a freely floating pawl cooperating with said ratchet bar, and means for holding said pawl in unyielding engagement with said ratchet bar except during the regulating operation.

1,681,058. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1927. Serial No. 230,350. 8 Claims. (Cl. 188—198.)



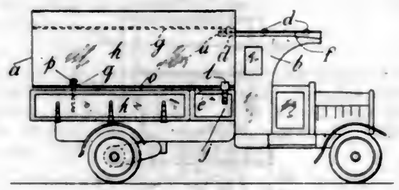
1. In combination with a brake rigging, a lever having a normally fixed point of support, means for changing said fixed point of support comprising a rod operatively associated with said lever and having a rack thereon, a casing enclosing a portion of said rod and rack and having therein a rack surface, and a pinion mounted in said casing and meshing with both of said racks, one of the racks being interrupted, whereby the pinion may rotate free on said interrupted rack while in mesh with the other rack.

1,681,059. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1927. Serial No. 232,885. 6 Claims. (Cl. 188—200.)



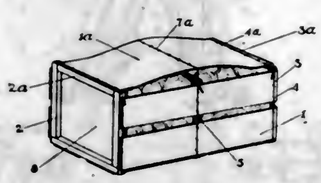
1. In combination with a lever of the foundation brake gear, a variable regulator therefor including an adjusting rod having ratchet teeth thereon, a freely floating cage resting on said rod, and a pawl mounted in said cage and abutting an end wall thereof for engagement with said ratchet teeth, said adjusting rod having a substantially circular cross section whereby, upon turning of said rod, the pawl is disengaged from said ratchet.

1,681,060. REGULATOR FOR BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1927. Serial No. 240,464. 20 Claims. (Cl. 188—197.)



1. In a regulator for brake rigging, in combination, a regulating rod having holes therein, a support, a member cooperating with said support and rod including a pin and slot holding means providing a lost motion movement relative to said support substantially proportional to total brake shoe clearance.

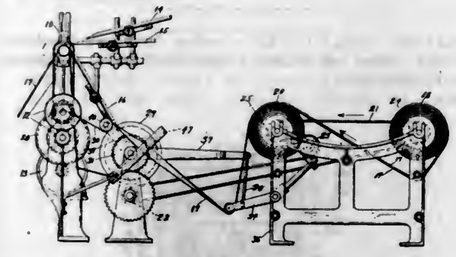
1,681,061. STEAM-GENERATING APPARATUS. JOE S. SEABOALT, Abilene, Tex. Filed Oct. 4, 1926. Serial No. 139,426. 1 Claim. (Cl. 122—245.)



An apparatus for producing wet steam comprising a vertically disposed jacket, a burner arranged within and at the lower portion thereof, a steam boiler positioned within the jacket and arranged over and above the burner, a pair of concentrically arranged, vertically disposed sets of coils opening into each other at the top thereof, positioned within the jacket and surrounding the lower portion of the boiler, means positioned over the burner for establishing communication between the lower coil of the inner set of coils and the bottom of the boiler, a supply line extending into the casing and opening into the lower coil of the outer set of coils, a water line leading to the supply line, a steam supply line leading from the top of the boiler, extending from the jacket and communicating with the water supply line, a wet steam delivery line extending from one side of the boiler above said sets of coils and projecting from the jacket.

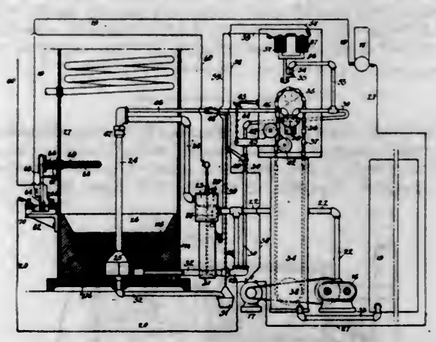
1,681,062. COVER FOR VEHICLES. JOHN HERBERT SPARSHATT, Portsmouth, England. Filed Aug. 17, 1925, Serial No. 50,672, and in Great Britain Apr. 16, 1925. 9 Claims. (Cl. 296—100.)

1. The combination with a vehicle body provided with a rearwardly extending load platform, of a tilt slidably mounted on said vehicle body, a runway for said tilt at each side of said platform, and additional runways for said tilt located forwardly of said platform and in a horizontal plane above that of the first mentioned runways, whereby the weight of said tilt may be shifted from one set of runways to the other, as the tilt is slid forward to clear said platform or backward to cover same.



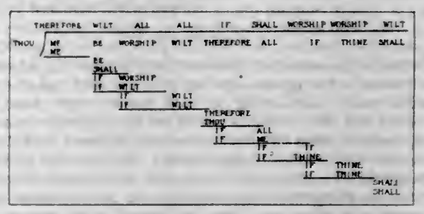
1,681,063. SHIPPING CRATE. ROSCOE STEELE, Rockaway Borough, N. J., assignor to Wirebounds Patent Company, a Corporation of Maine. Filed Dec. 24, 1926. Serial No. 156,872. 3 Claims. (Cl. 217—43.)

1. A wirebound bulge-pack crate comprising cleat-reinforced side and bottom sections connected together in foldable relationship by binding wires secure to and extending across the several sections, the cleats being located adjacent the ends of the sections, and a separate cleated top section secured to the side sections by wires stapled to the top section and tensioned over the cover corners of the crate and intertwisted with the wires on the side sections, the top section being longer than the side and bottom sections to permit the top section to bulge upward, and the cleats of the top section being located adjacent the ends thereof and constructed and arranged to fit between the cleats of the side sections and to shift relative to said side cleats in accordance with variations in the bulge of the top section; whereby the top section will maintain a constant pressure on the contents of the crate and accompany a settling movement thereof.



1,681,064. STOCK-WIND-OFF MECHANISM. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 18, 1927. Serial No. 176,445. 5 Claims. (Cl. 242—55.)

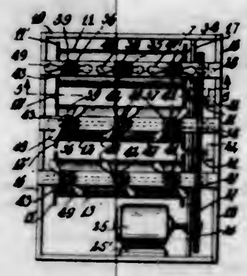
1. The combination of a wind-off mechanism for strip material, with driven apparatus into which said strip is drawn, which comprises a rotatably supported supply reel carrying a plurality of laterally spaced bands of said strip material with a liner, a rotatably supported liner receiving reel adjacent thereto, means intermediate the apparatus and said liner receiving reel for driving the latter from said apparatus, means riding upon a single band of the strip material between the reels and said apparatus for varying the speed of the liner reel in accordance with the tension in the strip material, and means for rotating the reels in either of reverse directions, whereby as the liner end is



reached the directions of the reels may be reversed and the liner receiving reel may become the supply reel as another band of strip material is removed therefrom.

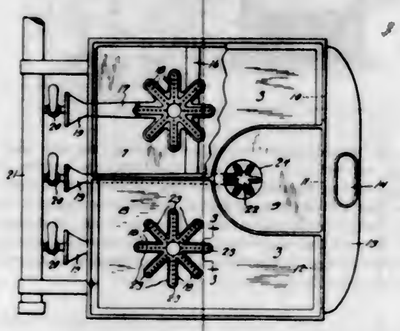
1,681,065. OIL-BURNING SYSTEM. ALDEN AARON STEWARD, Rutland, Vt. Filed June 27, 1924, Serial No. 722,768. Renewed July 5, 1928. 12 Claims. (Cl. 158—28.)

1. An oil burning system comprising an air and oil burner, an air and oil igniter therefor, air supply pipes leading to the burner and its igniter respectively, an oil measuring and delivering device including a basin, a transverse partition having a hinged upper wing, dividing the basin into two compartments into both of which the oil is delivered, and oil supply pipes leading from said respective compartments to the burner and igniter.



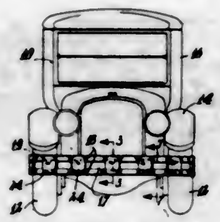
1,681,066. CRYPTOGRAM. WARREN R. SUMMERS, San Diego, Calif. Filed Mar. 1, 1926. Serial No. 91,654. 3 Claims. Cl. 283—17.)

1. A sheet bearing a cryptogram comprising words arranged and grouped in accordance with a solved problem in mathematics in which the numerals constituting the



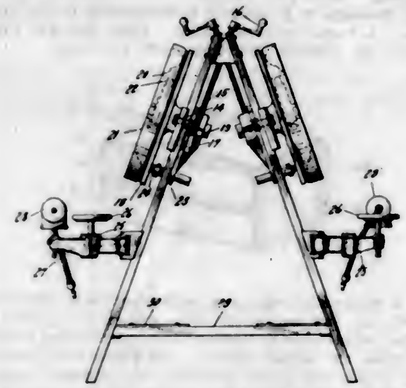
fundamental and resultant components of the solved problem are selected digit numerals assigned consecutively to a series of words constituting a base.

1,681,067. HELICOPTER. RALPH TARSHIS, Brooklyn, N. Y. Filed July 7, 1927. Serial No. 203,991. 4 Claims. (Cl. 244—19.)



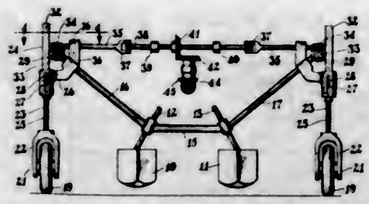
4. A device of the class described comprising a frame, a plurality of spaced apart cylinders rotatively mounted in said frame and a plurality of propellers adapted to produce a forced draft of air substantially at right angles to the longitudinal axis of said cylinders.

1,681,068. GAS RANGE. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Nov. 3, 1926. Serial No. 145,971. 2 Claims. (Cl. 126—39.)



2. A gas range of the character set forth comprising a frame substantially rectangular in shape and provided with a closed cooking top, a bottom plate disposed below said top and spaced therefrom to define an underlying combustion chamber, said bottom plate having a partition dividing the combustion chamber into a plurality of compartments, a flue communicating with the rear end of each compartment, the bottom of each compartment near its forward end only being provided with a plurality of narrow radially disposed slots, a burner disposed below the forward end of each compartment, each burner having a plurality of single rows of gas orifices disposed centrally of and in alignment with said slots to project flame jets through said slots and being so spaced with respect to the edges of said slots as to permit secondary air to enter each compartment along both sides of the flame jets adjacent the bases thereof whereby to promote combustion and to prevent noxious emanations.

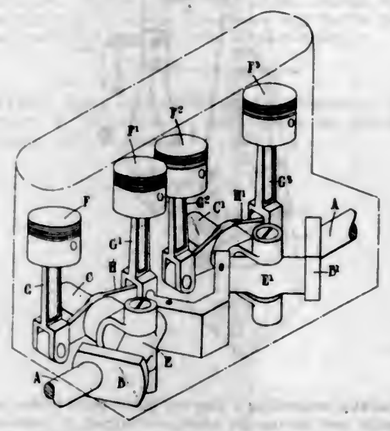
1,681,069. SAFETY BUMPER FOR VEHICLES. ARISTEDE A. THEODOROPULOS, New York, N. Y. Filed Nov. 26, 1927. Serial No. 235,783. 5 Claims. (Cl. 293—55.)



3. In combination with automobile front or rear bumpers including horizontal bars, spaced connectors between the bars, and formed with recesses, shock absorbers fitted in the recesses and caps on top of the shock absorbers.

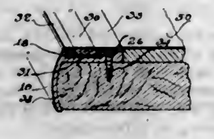
1,681,070. ADJUSTABLE SUPPORT OR EASEL. CURT USCHMANN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 18, 1927. Serial No. 161,846. 2 Claims. (Cl. 29—89.)

1. A supporting stand comprising, a frame, a cross arm slidably mounted thereon, means for vertically adjusting the cross arm, a work table revolvably mounted on the cross arm, a roller attached to the cross arm and engaging the back of the work table to give added support thereto, and a spider attached to said table for centering annular objects thereon.



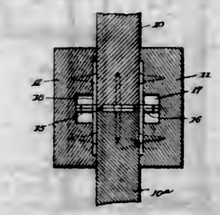
1,681,071. SEA AND LAND AEROPLANE. STEPHEN VITÁNYI, Rockaway Beach, N. Y. Filed July 7, 1927. Serial No. 203,994. 2 Claims. (Cl. 244—2.)

1. In a sea and land aeroplane, the combination with inclined struts connected to support pontoons to the wings of the aeroplane, of brackets secured to the said



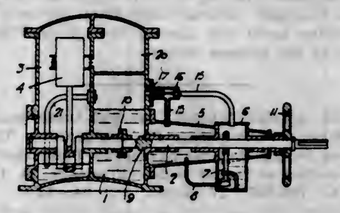
struts, and formed with elongated apertures vertically arranged, vertical shafts slidably arranged in the said brackets, pins secured to and extended from the shafts and engaging in the said elongated apertures, and landing wheels connected to the said vertical shafts, as a means for supporting the said landing wheels so as to be vertically movable.

1,681,072. MULTICYLINDER RECIPROCATING ENGINE, PUMP, AND COMPRESSOR. RICHARD EDWARD WATTS, Stamford, England. Filed Feb. 1, 1924. Serial No. 690,006, and in Great Britain July 17, 1923. 3 Claims. (Cl. 74—14.)



1. A multi-cylinder reciprocating engine comprising a crank shaft, crank pins comprised in the shaft and arranged with their axes intersecting the axis of the crank shaft obliquely, oscillatory members at right angles to the crank shaft and communicating rotary motion to the said crank shaft, beams on the oscillatory members, pistons respectively connected to opposite ends of the said beams, and cylinders in which the said pistons work arranged with their axes at right angles to the oscillatory members and to the crank shaft and so that the centre of gravity of two pistons respectively connected to different beams, and which move in the same direction at the same time, moves in the same line as the centre of gravity of the other two pistons respectively connected to the opposite ends of the same beams.

1,681,073. STAIR NOSING. HAROLD ASHLEY WELCOME, Lowell, Mass., assignor to American Mason Safety Tread Company, Lowell, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1928. Serial No. 251,597. 6 Claims. (Cl. 20—79.)

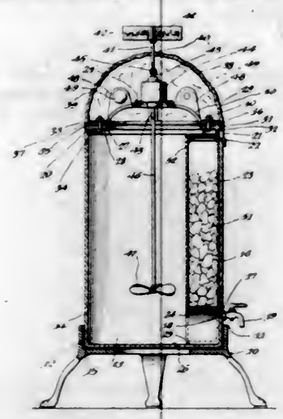


1. A stair tread comprising a strip of rigid material properly contoured in cross section to fit and cover the upper forward corner of a stair tread, an upstanding rib formed upon said strip producing an undercut shoulder, means to secure said strip in position upon the stair tread, a second strip of material having an edge contoured complementary to the undercut shoulder and provided with a furrow having undercut walls, a traction increasing material filling the furrow, and means to secure the second mentioned strip with the complementary parts in co-acting relation.

1,681,074. SECTIONAL PARTITION AND PANEL STRUCTURE. FRANK B. WHEAT, Los Angeles, Calif. Filed Dec. 29, 1927. Serial No. 243,335. 8 Claims. (Cl. 20—4.)

1. A sectional partition or panel structure comprising two juxtaposed sections, a pilaster separable from the sections and overlying the joint between the same, a locking element on said pilaster and cooperating locking elements on both sections engageable with the one locking element on the pilaster for locking said pilaster to said sections, the engagement between said locking elements being such as to prevent movement of the partition sections away from one another.

1,681,075. METHOD OF AND MEANS FOR GAS-TIGHT SEALING OF SHAFTS. RUDOLF HEINRICH WIEGERT, Magdeburg, Germany. Filed May 22, 1926, Serial No. 111,080, and in Sweden Apr. 8, 1924. 3 Claims. (Cl. 286—19.)

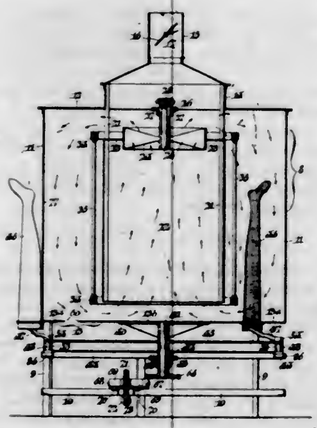


1. A sealing device without solid packing material for a rotating shaft projecting through the wall of a gas tight chamber, comprising a closed receptacle surrounding the shaft at the point where it projects through the chamber and adapted to contain a pressure medium, means for supplying the medium to the receptacle from a source other than the chamber, automatic means for regulating the pressure of the medium in perfect conformity to the pressure existing within said chamber and a valve in connection with said shaft and adapted to be controlled by the last named pressure.

1,681,076. COMBINATION CONTAINER AND COOLER. JEROME I. WOHL, Chicago, Ill., assignor to David Wohl, Gary, Ind. Filed Dec. 6, 1926. Serial No. 152,962. Renewed June 28, 1928. 4 Claims. (Cl. 225—40.)

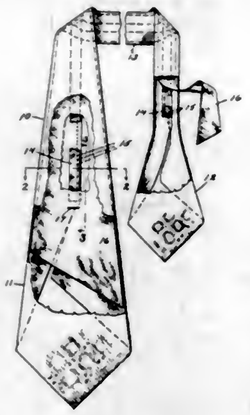
2. In a combination container and cooler, a receptacle having an open end portion, means permitting dispensing of a beverage from within the receptacle, a cooler within the receptacle, a plate having an annular flange resting upon the edge of the open end portion of the receptacle of a dome-shaped closure for the open end portion and having a peripheral edge resting upon the peripheral flange of the plate, a base supported by the plate and having up-standing lateral ears, lighting elements carried by the

ears, an electrically operated element supported by the base, a shaft operable by the element and extending exterior of the dome, sign elements carried by said shaft,



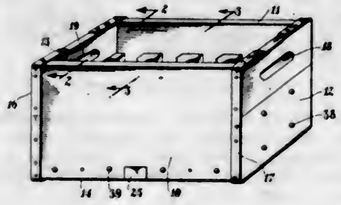
a second shaft operable by the element and depending within the receptacle, and an agitator carried by the lower end portion of said second shaft.

1,681,077. MANUFACTURE OF HIGHLY-CHLORINATED PERYLENES. ALOIS ZINKE and KONRAD FUNKE, Graz, Austria, assignors to Felice Bensa, Genoa, Italy. Filed June 7, 1927, Serial No. 197,229, and in Austria Apr. 2, 1927. 5 Claims. (Cl. 260—161.)



1. A process for manufacturing highly chlorinated perylenes, that is say hepta-to dodeka chloroperylenes consisting in intimately mixing an inert liquid solvent, perylene and an inorganic chloride adapted to act as a chlorine transferring agent and passing through such mixture a current of dry gaseous chlorine.

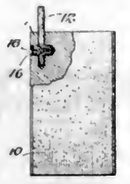
1,681,078. FABRIC DRIER. THOMAS ALLSOP and WALTER W. SIASON, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1924. Serial No. 706,650. 27 Claims. (Cl. 34—12.)



1. A fabric drier including an annular enclosure through which the articles to be dried are advanced, means intermittently conveying a series of vertically pivoted form-supporting members through said enclosure, and means for laterally swinging said members counter-and-clockwise by substantially equal degrees about their pivots for presentation exteriorly of the enclosure to effect stripping and replacement of the articles.

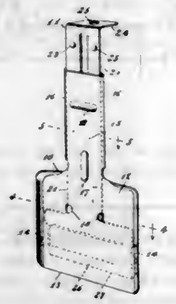
1,681,079. MACHINE-STITCHED CRAVAT OR TIE. ALFRED A. BAKER, Buffalo, N. Y. Filed July 8, 1926. Serial No. 121,241. 1 Claim. (Cl. 2—146.)

A necktie comprising a bias cut fabric piece folded longitudinally and having its edges overlapped, a reinforcing tape extending throughout the major portion of the length of the tie beneath said lapping edges, said lapping edges and said reinforcing tape being secured together by loose machine stitching, and a bias cut filler located within the tie and secured thereto at a single point beyond one end of the reinforcing tape.



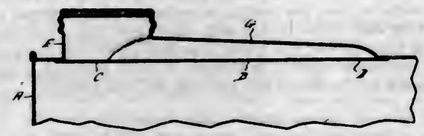
1,681,080. SANITARY MILK-BOTTLE CONTAINER. SAMUEL J. BAILEY, Nicholson, Pa. Filed Aug. 12, 1927. Serial No. 212,444. 1 Claim. (Cl. 217—22.)

In a container for bottles and the like, sides and ends for the container, a series of transverse partitions relative to the sides, the said ends and the said partitions being formed with transverse curved recesses for accommodating bottles, and also with longitudinal slots for forming chambers for the storing of refrigerants.



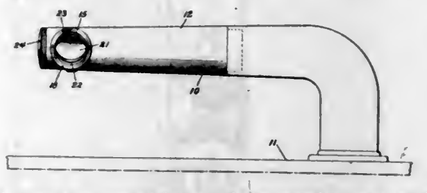
1,681,081. JOINT. WALTER BAILEY, Washington, D. C. Filed Nov. 11, 1927. Serial No. 232,658. 2 Claims. (Cl. 171—326.)

1. A member having a hole therein, a flexible member having an end portion thereof engaged in said hole, and compressible means consisting of a wad of promiscuously intermingled inherently resilient strands of conductive material of indefinite shape and length having a constant tendency to expand when compressed, compressed in said hole



against said flexible member and acting through its constant tendency to expand to maintain said flexible member firmly connected with said first mentioned member.

1,681,082. SINK CLEANER. HENRY BAMBERGER, Brooklyn, N. Y. Filed June 17, 1927. Serial No. 199,561. 1 Claim. (Cl. 15—105.)

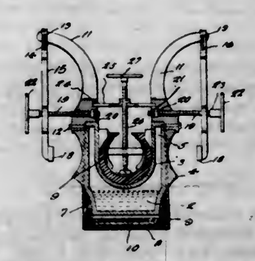


A device of the class described comprising a shovel element, and a scraper element, said shovel element consisting of a shovel body having an effective edge, side flanges, a handle, and tongues, said handle having a channel at each side, said scraper element consisting of an offset portion having prongs, a handle having a manipulating portion connected with said offset portion, and a scraper member embodying an effective edge arranged on said offset portion with the prongs impaling said scraper member, the handle of the scraper element received between the channels and tongues respectively on said shovel body and handle thereof to connect the shovel element and scraper element together for relative movement to optionally dispose the effective edge of the shovel body or scraper member in an effectual position, the scraper element being arranged at the back of the shovel element, and the scraper member being in contact with the shovel body.

1,681,083. NOZZLE FOR SHEET-METAL CONTAINERS. HENRY EDWARD BARROLL, Winnetka, Ill., assignor to Williams Sealing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Jan. 17, 1925. Serial No. 3,108. 1 Claim. (Cl. 221—28.)

A filling can of the class described having a discharge opening and a vent opening in its top wall, said discharge opening being substantially arcuate in shape, a nozzle secured to said top wall and embracing the discharge and vent openings, the aggregate areas of said discharge and vent openings being less than the area of the mouth of the nozzle whereby the liquid flowing through the discharge opening and mouth of the nozzle will assume a shape which will provide a space for the ingress of air through the nozzle and vent opening.

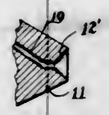
1,681,084. TONE ARM. LEON BAXTER, Brooklyn, N. Y. Filed Nov. 28, 1924. Serial No. 752,773. 1 Claim. (Cl. 179—100.1.)



A tone arm comprising a tubular member open at its outer end and having a pair of oppositely disposed nipples provided thereon and constituting a pair of ports in communication with the interior of said tubular member, said nipples adapted to support a pair of acoustical instruments, a sleeve rotatably supported in the outer open end of said tubular member and having an opening therein for registering with either of said ports, a manipulating head on said sleeve extending beyond the end of said tubular member, said sleeve having a slot therein, and a pin extending from said tubular member into said slot for aligning said opening with either of the respective ports upon the limit of turning movement of said sleeve in opposite directions.

1,681,085. FLASK FOR CENTRIFUGAL SAND MOLDS. WILLIAM H. BEATTY, Birmingham, Ala., assignor, by direct and mesne assignments, to Beatty, Palmer and Beatty, a Partnership composed of William Henry Beatty, Clarence J. Palmer, and William H. Beatty, Birmingham, Ala. Filed May 12, 1927. Serial No. 190,800. 7 Claims. (Cl. 22—65.)

1. A flask of the character described slit longitudinally to provide for a limited contraction thereof, lugs along one edge of the slit portion of the flask which are adapted to overhang the other edge portion, and means to contract the flask, bringing its edges into abutting relation under said lugs, substantially as described.



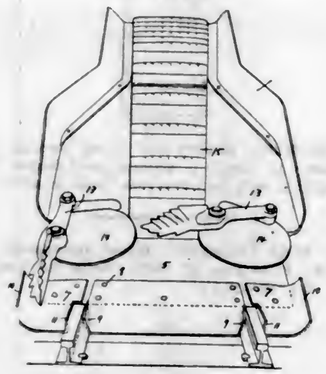
1,681,086. VULCANIZER. THOMAS BELL, Richmond, Va. Filed May 13, 1927. Serial No. 191,157. 3 Claims. (Cl. 18—18.)

1. A vulcanizer comprising a hollow metal block having arcuate projections on the sides thereof which are concaved longitudinally to provide side molds and having an in-

wardly extending mold in the top thereof, presser plates movable into the central inwardly extending and the concaved side molds, and means for heating the block.

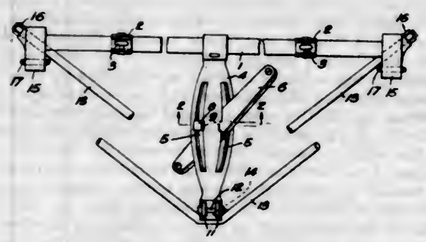
1,681,087. BALL-BEARING CENTER FOR MACHINES. FRITZ HEINRICH BECKER, Irvington, N. J. Filed Apr. 21, 1927. Serial No. 185,638. 3 Claims. (Cl. 82—33.)

1. A machine tool center of the class described comprising a tapered rear section and a tapered forward section, a concave seat formed in the forward extremity of said forward section, a ball disposed on said concave seat, a retaining member comprising a disc having an aperture therein for receiving said ball mounted on the forward extremity of said center adapted to retain said ball on said seat in projecting relation to the extremity of said center, extensions integral with said disc disposed adjacent the tapered surface of said forward section comprising hooked extremities disposed in a groove formed in said center, and a spring ring member disposed in said groove above said hooked extremities for removably securing said retaining member on said center.



1,681,088. APPARATUS FOR DYEING YARN. LOUIS BOUNOUS, Valdese, N. C. Filed Nov. 3, 1927. Serial No. 230,849. 1 Claim. (Cl. 242—118.)

An apparatus of the character described, comprising a perforated metal yarn receiving bobbin adapted to fit over a spindle or a dye directing pipe, said bobbin having a serrated end adapted to engage a correspondingly shaped part on a spindle or tube to lock the parts against independent turning.

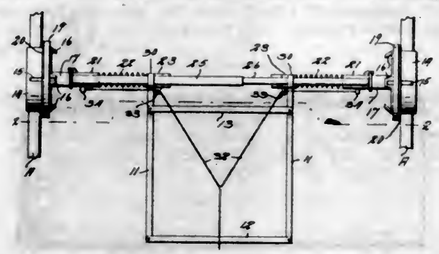


1,681,089. TRACK-CLEANING ATTACHMENT FOR LOADING MACHINES. EDWARD BOTTOMLEY and FRANK WELCH, Sheridan, Wyo. Filed Sept. 7, 1927. Serial No. 218,084. 2 Claims. (Cl. 198—7.)

1. In combination, a coal loading machine, said machine comprising among other elements a gathering head, a central plate fixed to the gathering head and projecting forwardly therefrom, and a plate attached to each side of the gathering head in spaced relation to the central plate, the

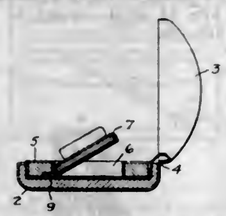
forward end corners of the central plate being directed upwardly, the forward inner corners of the side plate being bent upwardly.

1,681,090. BRAKE-BEAM ASSEMBLY. HENERY MURLEY BOWDEN, Allandale, Ontario, Canada. Filed May 29, 1925. Serial No. 33,800. 1 Claim. (Cl. 188—232.)



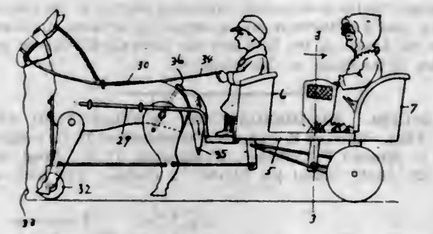
In a brake beam assembly, the combination with the beam, of a strut therefor having two longitudinal slots extending through the strut and intersecting each other at substantially right angles, said slots having opposed corresponding indentures in the side walls at top and bottom of each, such indentures being positioned intermediately of the length of the slots, a lever extending through a slot in the beam, a pivot pin having an enlarged head inserted in opposed indentures in the slot, said pivot pin extending freely through slot and lever, a washer on the pin inserted into the other opposed indentures in such slot and a nut threaded on the end of the pin engaging the washer.

1,681,091. TRACK-GAUGE INDICATOR. LESLIE RAY BRYANT, Hattiesburg, Miss., assignor of one-half to Walter Liston Bass, Hattiesburg, Miss. Filed Jan. 20, 1927. Serial No. 162,357. 5 Claims. (Cl. 33—144.)



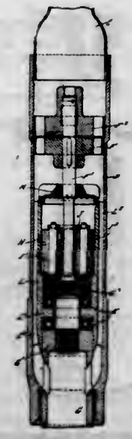
1. A track gauge indicator comprising a frame and an axle on the frame, wheels mounted upon the axle and

adapted to engage the rails of the track, annular gauging rims associated one with each wheel and concentric to the axis thereof, rotatable with the wheel but movable longi-



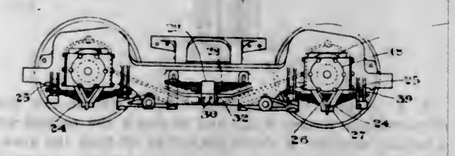
tudinally of the axle independently of the wheel, and means mounted upon the frame for indicating the longitudinal movement of the rims relative to each other.

1,681,092. DISPLAY BOX. JOSEPH BULOVA, New York, N. Y., assignor to Bulova Watch Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1927. Serial No. 177,934. 4 Claims. (Cl. 206—75.)



2. A jewelry display box having a tray and a hinged cover, a display carrier adapted to occupy an uptilted position on said tray, and a stiff supporting tongue fixed to and projecting forward from said display carrier at an angle thereto, the tray having a forward portion providing a recess into which said tongue is adapted to be entered to support the display carrier in its inclined position, and from which the tongue is disengageable by shifting the display carrier rearward to enable the display member to be removed.

1,681,093. FIGURE WHEELED TOY. ANTON CAPEK, Ord, Nebr. Filed Apr. 26, 1928. Serial No. 273,017. 1 Claim. (Cl. 46—45.)

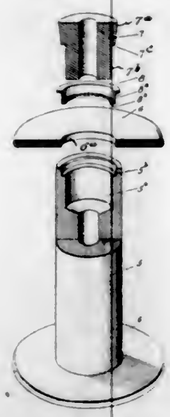


In a figure wheeled toy of the character described, a cart construction having front and rear seating arrangements, a figure disposed within the front arrangement, a figure having its body pivoted within the rear seat arrangement said body having pivotal legs and arm members attached thereto, a crib pivoted to the floor of the cart in front of the rear figure, connections between the crib and the front ends of the arms of said figure, an axle shaft arranged beneath the cart and having supporting wheels upon the opposite ends thereof, and means for supporting the forward end of the cart and means between the axle shaft and said crib to cause the rocking of the crib and the simultaneous rocking of the said rear figure during rotation of the axle shaft.

1,681,094. APPARATUS FOR BORING WELLS AND THE LIKE. MATVEY ALCUNOVITCH CAPELIUSCHNICOFF, Baku, Russia. Filed Aug. 18, 1924, Serial No. 732,779, and in Great Britain Sept. 11, 1923. 4 Claims. (Cl. 255—4.)

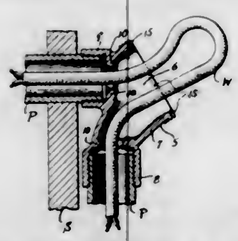
1. In well-drilling apparatus of the character described, the combination of a hollow drill head, an axial flow hydraulic turbine having a fixed ring screwed into the hollow drill head, a bearing within the said guide ring, a rotor spindle journalled at its upper end in said bearing, a drill socket member journalled in the lower end of the hollow drill head, an inner sleeve secured to the drill head and having an internally toothed portion, planetary gears journalled on stub shafts carried by the drill socket member and a gear wheel on the hydraulic turbine rotor spindle meshing with said planetary gears.

1,681,095. TRUCK CONSTRUCTION. WILLIAM F. J. CASEY and GUSTAVE CAVIN, Kingston, Ontario, and CHARLES E. BROOKS, Montreal, Quebec, Canada. Filed Apr. 30, 1927. Serial No. 187,853. 7 Claims. (Cl. 105—194.)



1. In a locomotive truck, a truck frame, journal bearings slidably mounted in the frame, axles rotatably mounted in the bearings, travelling wheels attached to the axles between the bearings, springs beneath the bearings, one end of each of the springs engaging with the frame, equalizer beams pivotally secured to the frame, each being attached at one end to the free end of the bearing spring, shock absorbing springs mounted on the frame between adjacent ends of the equalizer beams, and means connecting the adjacent ends of the beams to the ends of the equalizer springs.

1,681,096. SPOOL AND BOBBIN. HARRY D. CLINTON, Johnson City, N. Y. Filed Sept. 13, 1927. Serial No. 219,301. 8 Claims. (Cl. 242—124.)



1. A spool or bobbin comprising a wooden barrel having a central shouldered recess in each end, hard composition heads faced against the ends of the barrel and having central apertures registering with the shouldered recess therein, thin metallic bushings extending through said heads and into the barrel ends and having serrated marginal flanges extending oppositely from opposite ends thereof

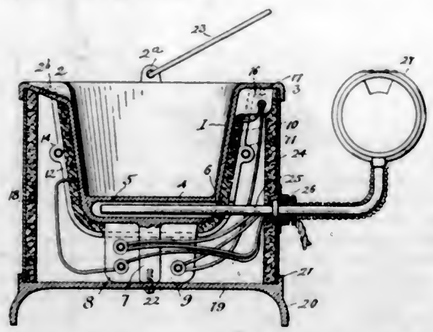
with their outward extending flanges over-engaging the apertured edges of the heads and their inward extending flanges pressing against the shouldered portions of the barrel, and wooden plugs at each end of the barrel having

enlarged tapering head-portions compressed into said bushings to expand the latter outwardly against the barrel walls and shank-portions fitting into the recesses of the barrel, said plug being driven into place by the application of endwise force.

1,681,097. CAPPED ELBOW. LEWIS H. CHURCH, Roselle, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,651. 9 Claims. (Cl. 247—31.)

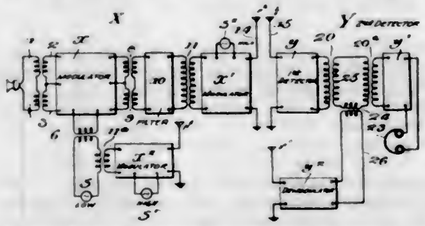
5. A capped elbow comprising, a cylindrical head threadeded to receive a cap and having a rim formed with a locking shoulder, a sleeve branching off from the head, a threaded cap for the head, a spring pawl to engage the locking shoulder, and means extending through the cap to secure the pawl to the cap disposed between the cap and rim to prevent removal of the means when the cap is in place whereby the threading of the cap home upon the head serves to lock the former in position and prevent the removal of the securing means.

6. A capped elbow comprising a cylindrical head threaded to receive a cap and formed with a ratchet surface, and including means to attach the elbow to a pipe, a threaded cap for the head, a spring pawl to engage the ratchet surface, and means extending through the cap to secure the pawl to the cap disposed between the cap and head the securing means being so disposed that the threading of the cap home upon the head prevents the removal thereof.



1,681,098. OIL-STORAGE TANK. MILTON ONA CLARK, Clarkston, Mich. Filed July 10, 1926. Serial No. 121,595. 8 Claims. (Cl. 220—85.)

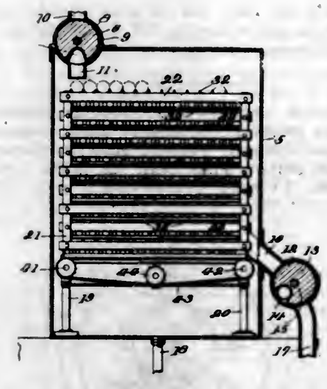
1. An oil tank including a main reservoir adapted to contain oil, a roof tank on the said reservoir adapted to hold water, means establishing communication between said auxiliary roof tank and the said main reservoir, and a



stack rising from the top of the main reservoir and communicating therewith to cause oil to rise in said stack after the oil has risen to the roof of the main reservoir.

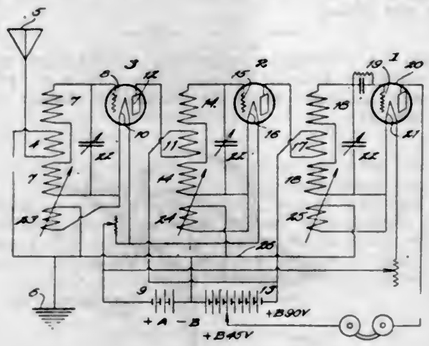
1,681,099. PORTABLE MELTING POT. WARREN F. CLARK, Warren, Pa., assignor to Automatic Electric Heater Company, Warren, Pa., a Corporation of Delaware. Filed Apr. 14, 1924. Serial No. 706,350. 10 Claims. (Cl. 219—44.)

6. A melting pot comprising a receptacle having at its upper end an outwardly extending flange in which is formed a pouring spout said flange having at the extremity a downwardly turned portion, the receptacle having an extension at the lower portion thereof, a base member having a flanged portion at its periphery, said base portion being secured to the downwardly extending portion of the melting pot, and a cylindrical casing extending between the inside of the flange on the base and the downwardly turned portion of the flange on the receptacle.



1,681,100. RADIOBROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Nov. 25, 1925. Serial No. 71,456. 2 Claims. (Cl. 250—6.)

2. The method of radio transmission of signals which consists in doubly modulating a carrier wave by first modulating signals on a relatively low frequency carrier and

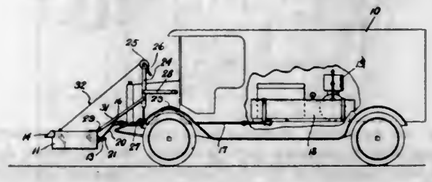


suppressing the unmodulated carrier so as to leave only a side band, and then modulating this side band upon a high frequency carrier, and radiating the same, while simultaneously imposing the unmodulated intermediate frequency carrier upon a separate high frequency carrier and radiating the same.

1,681,101. APPARATUS FOR TREATING FOOD PRODUCTS IN CLOSED CONTAINERS. JOHN COYLE, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 20, 1926. Serial No. 143,010. 18 Claims. (Cl. 126—272.)

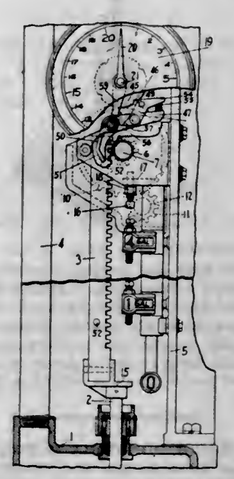
1. An apparatus for treating food products in closed containers comprising a casing, mechanism for supporting and rolling the containers forward and backward, but to a greater extent forward, so that the containers are thus conveyed through the casing, said mechanism including groups of bars, and means for independently raising and lowering the bars in each group.

1,681,102. OSCILLATION-CONTROL CIRCUITS. FRANK H. DALET, New York, N. Y. Filed Feb. 21, 1925, Serial No. 10,915. Renewed Apr. 27, 1928. 2 Claims. (Cl. 250—20.)



1. In a radio receiving circuit embodying a plurality of stages each including a thermionic triode, inductances coupling the plate and grid circuits of the successive stages, and oscillation preventing means embodying coils arranged in inductive relation to said inductances and connected in series with the filament battery, the rheostats and the respective filaments of the triodes whereby to utilize the resistance thereof.

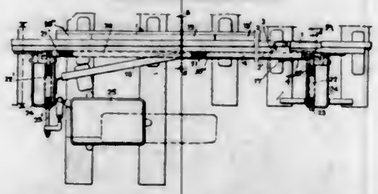
1,681,103. ESTERIFICATION OF CELLULOSE IN PRESENCE OF A PHENOL. CLAUDE DIAMOND, Coventry, England, assignor to Courtaulds Limited, London, England. Filed Apr. 14, 1927, Serial No. 183,902, and in Great Britain June 21, 1926. 2 Claims. (Cl. 260—101.)



1. A process of preparing for acetylation, cellulose which has been treated with caustic soda, the said process consisting in treating the said cellulose with a phenol, substantially as described.

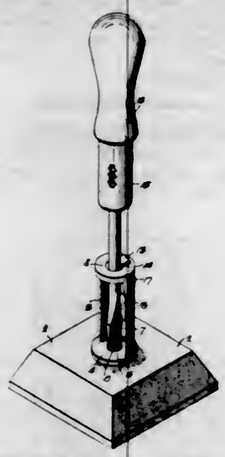
1,681,104. SNOW REMOVER. EVERETTE G. EARNHARDT, Bath, Pa. Filed Oct. 23, 1925. Serial No. 64,441. 1 Claim. (Cl. 37—12.)

An attachment for automobiles, comprising a pair of spaced parallel upright standards arranged at the opposite sides of the hood of the automobile and projecting thereabove, each standard having its lower portion twisted and formed with a laterally extending portion constituting an attaching foot secured to the frame of the automobile, links pivoted on said standards at points intermediate the ends thereof and projecting downwardly and forwardly therefrom and terminating in advance of the frame of the automobile, a casing pivotally supported by the forward extremities of said links, a drum journaled between the upper ends of the standards, a cable attached to the casing and secured to and wound about said drum, means for rotating the drum, bracing elements extending substantially longitudinally of the hood and connected at their ends with the latter and with said standards at points above the adjacent ends of said links.



1,681,105. LIQUID-MEASURING PUMP. EARL E. EICKMEYER, Dayton, Ohio, assignor to The National Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 5, 1925. Serial No. 6,977. 13 Claims. (Cl. 235—1.)

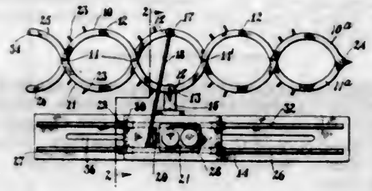
1. The combination with a measuring pump, an actuating device therefor, and a registering device comprising a movable member controlled by said actuating device, of means



operated by said actuating device at the end of each complete movement thereof to correct any variation between the position of said movable member and the quantity of liquid delivered by said pump.

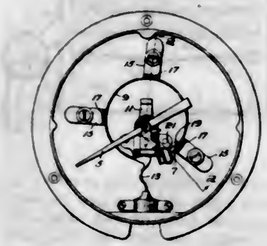
1,681,106. AUTOMATIC STOPPING SYSTEM FOR RAILROAD CARS. JEAN FARENC, Paris, France. Filed Sept. 25, 1925, Serial No. 58,576, and in France Sept. 26, 1924. 9 Claims. (Cl. 104—257.)

1. An automatic stopping apparatus for railroad cars, comprising a stopping shoe, a double guiding device for the shoe, one part of which is fixed and the other movable while remaining parallel with the track, and an automatic returning means for the shoe, whereby the movable guiding part will be relieved from all lateral stresses, thus obtaining an apparatus of substantial construction, reliable in operation and of an entirely automatic nature.



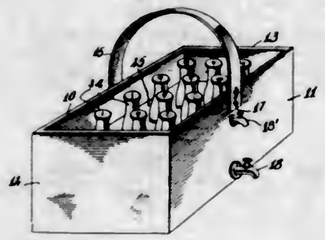
1,681,107. DISPLAY TOOL HOLDER. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's M'f'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1925. Serial No. 76,261. 2 Claims. (Cl. 211—154.)

1. The combination of a base; a tool holding device secured to the base and having a bearing for a screw-driver bit having a broad end; a plug located in the bottom of the tool holding device having a slot therein into which the screw-driver bit extends; means for holding the plug frictionally in the tool holding device; a spring bearing against the bit; and a screw extending into the opening in the bearing for preventing withdrawal of the bit.



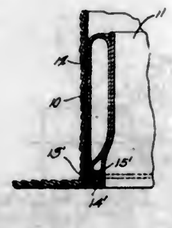
1,681,108. PROPULSION DEVICE FOR SHIPS. WALENTY FILA, Edwardsville, Pa. Filed June 9, 1927. Serial No. 197,614. 3 Claims. (Cl. 115—28.)

1. In a propulsion device of the class described, an internal combustion engine mounted on a platform, wheels secured to the said platform, said wheels adapted to engage tracks secured to a base, a lazy tong pivotally attached, at its center to a bracket secured to the said base, a rod pivotally attached to the opposite center portion



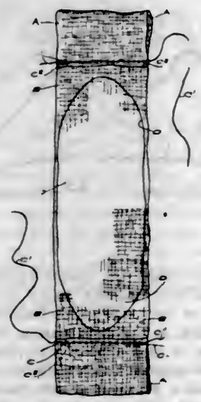
of the said lazy tong, said rod being pivotally attached to an eccentric pin secured to the rim of the fly wheel of the said internal combustion motor.

1,681,109. PRESSURE-OPERATED INSTRUMENT. WALTER HENRY FITTS, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1922. Serial No. 544,264. 7 Claims. (Cl. 73—109.)



1. In an instrument of the class described in combination with a curved hollow tube distortable under internal pressure and having a fixed portion and a free end, positive stop means opposing the surface of the tube between said fixed portion and the free end and providing at least a three point support therefor, a fixed element extended radially inward adjacent the free end of the tube and a projecting lug on the tube adjacent said free end to seat on said element.

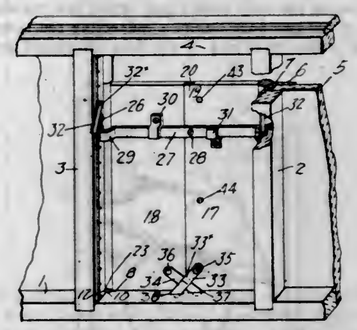
1,681,110. COOLING VENDING CONTAINER FOR DRINKS. WILLIAM FRIEDMAN, New York, N. Y. Filed Aug. 12, 1927. Serial No. 212,449. 2 Claims. (Cl. 224—48.)



1. In a container of the class described, a plate member disposed between the top and bottom extremities thereof, having apertures therein, socket members adjustably mounted in said apertures adapted to retain bottles in upright position, and catches mounted on said plate member adapted to engage in apertures in said holders for securing the latter in a predetermined position.

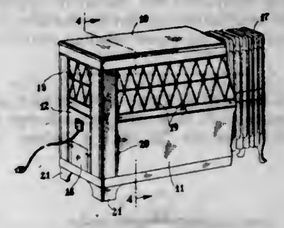
1,681,111. CUSHION. ISADORE W. GARFIELD, Bridgeton, N. J. Filed Nov. 18, 1925, Serial No. 69,881. Renewed Apr. 13, 1928. 1 Claim. (Cl. 2—8.)

A head cushioning device, comprising a hollow flexible annulus member, an inflating nipple extending into the crown of a hat from the upper edge of the annulus, a sweat band arranged around the inner surface of the annulus, a U-shaped flexible member disposed between the lower edge of the sweat band and the annulus, a row of stitching connecting one side wall of the flexible member with the lower end of the annulus and the body of a hat, and a second series of stitching connecting the other side wall of the flexible member with the lower edge of the sweat band.



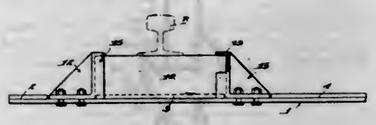
1,681,112. SANITARY TOWEL. NORA GARROW, Glasgow, Scotland, assignor to Robinson and Sons Limited, Chesterfield, England. Filed Dec. 5, 1927, Serial No. 237,908, and in Great Britain July 15, 1927. 2 Claims. (Cl. 128—290.)

1. A sanitary towel comprising an elongated absorbent pad of cotton, a casing of flimsy textile fabric folded longitudinally to envelop said pad, the ends of said casing being folded over transversely to form loops adapted to engage a tape or belt, and the bent over ends of said casing being connected to the main body of said casing by a line of quickly removable stitching having a free projecting end adapted to be pulled by the user.



1,681,113. GRAIN-CAR DOOR FOR BOX CARS. ALFRED GILLINGHAM and EDMUND BJORK, Regina Beach, Saskatchewan, Canada. Filed Sept. 7, 1927. Serial No. 218,088. 2 Claims. (Cl. 20—28.)

1. In a grain door for box cars, the combination with a door frame including uprights, top plate and sill, of a boss carried by the sill adjacent each upright and having its upper face inclined inward and having a central orifice, a tubular bearing member depending from the top plate in central alignment with each of the aforesaid orifices, door leaves each provided with a cylindrical member extending upward into the tubular bearing members and cut at an incline at their lower ends corresponding to the

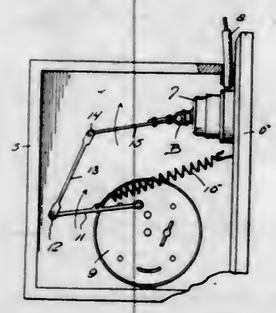


incline of the aforesaid bosses, and projections extending downward therefrom to turnably fit the orifices of the bosses.

1,681,114. RADIATOR COVER AND ELECTRIC HEATER. JULIUS L. GORDON, Brooklyn, N. Y. Filed Feb. 10, 1928. Serial No. 253,299. 5 Claims. (Cl. 219—19.)

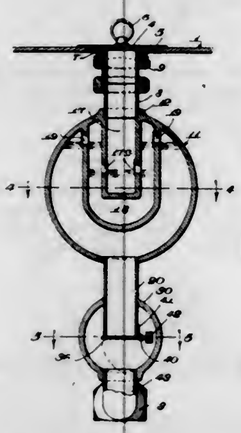
1. A combined radiator cover and electrical heater, comprising a radiator cover having a top member, a bottom member and side members, and electrical heaters attached to the side members.

1,681,115. RAILROAD TIE. ELIAS E. HENDRICKSON, Watervliet, N. Y., and GEORGE CHESTER DIXON, Indianapolis, Ind. Filed Mar. 2, 1928. Serial No. 258,610. 6 Claims. (Cl. 238—286.)



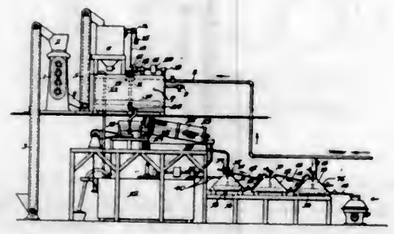
1. A railroad tie comprising a base plate having longitudinally spaced upstanding projections, rail attaching blocks mounted on said plate, each of said blocks having means for cooperation with one of said projections to hold the block against movement relatively to said plate, and block holding castings engaged with said projections and bolted to said plate.

1,681,116. TIME-ACTUATED ELECTRIC SWITCH. CLARENCE L. HERSHEY, Leaman Place, Pa. Filed Dec. 10, 1925. Serial No. 74,529. 1 Claim. (Cl. 200—35.)



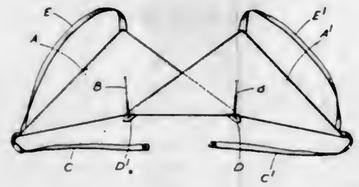
In combination, a casing, an electric snap switch located within the casing, an alarm clock arranged within the casing, a rod, an internally threaded sleeve formed on

the inner end thereof and disposed at right angles thereto, said sleeve being adapted for engagement on the threaded end of the alarm winding shaft of the clock, an arm, a two-part clamp for securing the inner end of said arm to the button of the snap switch end of the arm forming one section of the two part clamp, a connecting rod secured at one end to the outer end of the first mentioned rod, the



other end being secured to the outer end of said arm so that said arm will be moved to a switch actuated position when the first mentioned rod is operated by reason of the alarm winding shaft being released, and a retractile coil spring being secured at one end to the intermediate portion of the first mentioned rod, and at its opposite end to the casing, for immediately so moving the arm to a switch closing position when the alarm winding shaft is released.

1,681,117. CLEANABLE TRAP FOR SINKS AND THE LIKE. HARLEY A. W. HOWCOTT, Baton Rouge, La. Filed Feb. 2, 1928. Serial No. 251,364. 4 Claims. (Cl. 182—23.)

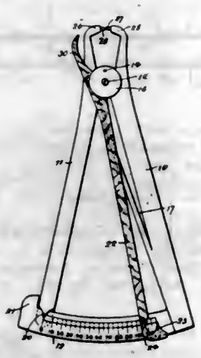


1. A fixture of the class described comprising a truncated cylindrical fluid-tight receptacle having diametrically opposite openings in the periphery thereof to provide an inlet and an outlet therefor, a chamber formed in said receptacle and communicating with said inlet, another chamber surrounding said inlet chamber and spaced from the walls of the receptacle, screened openings in the inlet chamber above the bottom thereof, similar openings in the other chamber at points above the openings in the first mentioned chamber, whereby a water seal is provided in said chambers in the path of the material passing from the inlet to the outlet.

1,681,118. PROCESS OF EXTRACTING, SEPARATING, AND UTILIZING THE STARCH AND PROTEIN CONTENTS OF RICE. OTTO JASCHKE, Crowley, La. Filed Apr. 4, 1925. Serial No. 20,842. 6 Claims. (Cl. 127—67.)

1. In a process of manufacturing starch from rice wherein the different contents of the grain are subjected to chemical action, and as the initial step in said process, dry grinding or crushing the rice grains to an extent sufficient to break down the starch cells and the starch granules thereof, so that the starch particles and the glutinous matters of the grain may be quickly enveloped, permeated, and saturated by a liquid.

1,681,119. BUST BODICE. ROSAMOND LILIAN KENNEDY, Hyde Park, London, England. Filed June 24, 1927, Serial No. 201,271, and in Great Britain Nov. 25, 1926. 2 Claims. (Cl. 2—42.)



1. A bust-bodice comprising breast supports constituted by two substantially triangular pieces of material intersecting in front so as to have a common base line for part of their length, a lateral extension strip attached to the outer extremity of each support and passing around the wearer's back and connected to the inner extremity of the same support, and a shoulder strap extending from the upper corner of each support to a point adjacent the outer corner thereof.

1,681,120. ANTIRICKETIC SUBSTANCES AND THE PRODUCTION THEREOF. AUGUST J. PACINI, Chicago, Ill., assignor to Charles M. Richter, Chicago, Ill. Filed Aug. 24, 1927. Serial No. 215,264. 22 Claims. (Cl. 167—7.)

1. The method of preparing materials containing growth-producing substances so that at least some of said growth-producing substances become replaced by anti-ricketic products, said method comprising concentrating on said materials rays longer than about 3022 Ångström units.

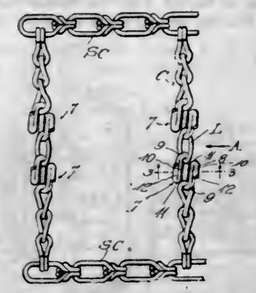
1,681,121. WATCHMAKER'S GAUGE. ROBERT LARSEN, New York, N. Y. Filed Oct. 6, 1927. Serial No. 224,475. 3 Claims. (Cl. 33—148.)

1. A device of the class described, including two arms pivoted to each other and having oppositely disposed gauge members at one end, a transverse graduated member on one of the arms at the opposite end, and an indicating member on the other arm at said opposite end to traverse the graduations of said indicating member, one of the said

gauge members having a recess to receive a bearing of a balance staff, the other member being adapted to engage the opposite end of the staff.

1,681,122. LAUNDRY SAFETY PIN. BENJAMIN LEBWOHL, New York, N. Y. Filed June 22, 1927. Serial No. 200,549. 3 Claims. (Cl. 24—161.)

1. A safety pin of the class described, comprising a pair of members having curved, extended, and inwardly protruding portions, clamping means arranged at one of the ends of the members for clamping these members together, and means for normally urging these members apart upon releasing of the clamping means, said urging means being arranged on the ends of the members opposite the clamping means, and the said curved extended and inwardly protruding portions interfit with each other for holding clothes engaged by the pin against longitudinal slippage when the clamping means are engaged.

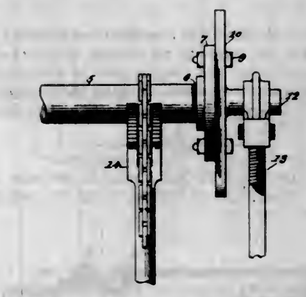


1,681,123. MOLYBDENUM ALLOYING COMPOUND. EMIL A. LUCAS, Washington, Pa., assignor to Molybdenum Corporation of America, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,916. 5 Claims. (Cl. 75—45.)

1. A composition for alloying molybdenum with another metal, comprising a mass fused from a mixture of molybdenum oxide and a flux-forming oxide, the mass containing molybdenum oxides lower in oxygen content than molybdenum trioxide.

1,681,124. PROCESS OF MANUFACTURING MOLYBDENUM ALLOYING COMPOUNDS. EMIL A. LUCAS, Washington, Pa., assignor to Molybdenum Corporation of America, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,917. 2 Claims. (Cl. 75—45.)

1. The process of producing a composition for alloying molybdenum with another metal which comprises roasting molybdenite to remove its sulphur content, and then fusing the roasted body and a fluxing agent, including lime, in the presence of a reducing agent to form a coherent fused mass containing a calcium molybdenum silicate.

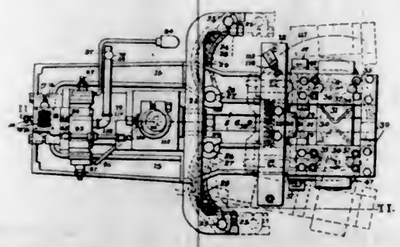


1,681,125. ANTISKIDDING LINK. FREDERICK MARKWICK, Falls, Pa. Filed Oct. 7, 1927. Serial No. 224,628. 6 Claims. (Cl. 152—14.)

1. An anti-skidding link comprising an elongated body having return bends at its ends providing two hooks whose bills extend inwardly toward opposite ends of the link, each of said bills being provided with an integral elongated calk along its lower side extending substantially throughout its length.

2. An anti-skidding link comprising an elongated body having return bends at its ends providing two hooks whose bills extend inwardly toward opposite ends of the link, each of said bills being provided with an integral elongated calk extending longitudinally thereof, said link being of V shape transversely with one of said hooks and its calk occupying one side of the V, the other hook and calk occupying the other side of the V and said body disposed at the apex of the V.

1,681,126. PIPE-FLANGE TOOL. GEORGE E. MCDONNELL, Cedar Rapids, Iowa, assignor of one-half to Thomas F. McDonnell, Cedar Rapids, Iowa. Filed June 26, 1926. Serial No. 118,801. 2 Claims. (Cl. 81—90.)



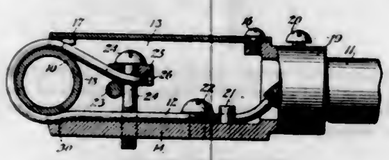
1. A pipe-flange driver, comprising a bar pierced for fastening bolts, and adapted for bolting to flanges of varying diameters, and a hub to be gripped by a pipe-wrench projecting midway from said bar.

1,681,127. APPARATUS FOR PRODUCING MOLD CHARGES OF MOLTEN GLASS. WILLIAM J. MILLER, Swissvale, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 16, 1925. Serial No. 75,757. 22 Claims. (Cl. 49—5.)

2. In apparatus for producing mold charges of molten glass, the combination of shears for cutting the glass, a partible receptacle beneath the shears and comprised of parts mounted to move toward and away from each other, and intermittently effective means whereby the opening of the shears causes the receptacle parts to move toward each other to complete the receptacle, said receptacle parts being released and being arranged to separate by gravity as the shears cut.

22. In apparatus for producing mold charges of molten glass, the combination of shears for cutting the glass, a part-

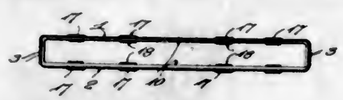
ible receptacle beneath the shears and comprising parts mounted to move from their closed position by gravity, said receptacle parts being provided with contact members, and means moving in unison with the shears and arranged to temporarily engage said contact members as the shears



open and move said receptacle parts into and maintain them in their closed position, said means being disengaged from said contact members as the shears move toward their closed position whereby the receptacle parts are released and open.

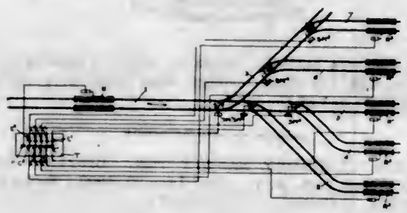
1,681,128. SMOOTHING-IRON PROTECTOR. MARK A. MORSE, Jr., New Orleans, La. Filed Nov. 9, 1926. Serial No. 147,279. 5 Claims. (Cl. 68—27.)

5. A device of the character described comprising a frame, means to attach the frame to an ironing board, cross bars attached to the frame, and resting bars of concave formation attached to the cross bars, abutting the ironing board at one end and falling short of an adjacent end of the frame at the other end.



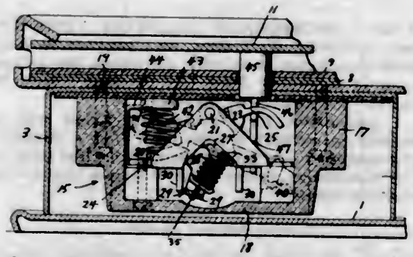
1,681,129. GROUND FITTING. ALAN M. NUGENT, Unionville, N. Y. Filed Apr. 20, 1927. Serial No. 185,291. 5 Claims. (Cl. 247—1.)

1. A ground fitting including a box-like housing open at one end and shaped at said open end to snugly fit a ground pipe or the like, and adapted at its other end for connection with the end of an electrical conduit, means in the casing for snubbing a wire extending out of the conduit, and means in the casing for engaging the end of said wire after it has been passed around the pipe, and tightening the wire on the pipe to thereby tightly couple the pipe and fitting.



1,681,130. SAFETY DEVICE. ANATOLE PANALLE and SAM L. NEEDLE, Washington, D. C. Filed June 29, 1927. Serial No. 202,340. 2 Claims. (Cl. 9—17.)

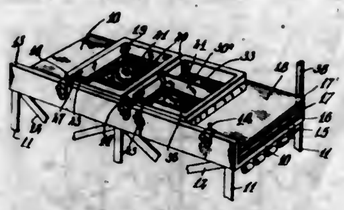
1. A safety device comprising a body portion formed of two pieces of water and air tight material secured to each other, metallic ribs adapted to rest in the body portion, strips arranged interiorly of the body portion and extending longitudinally with respect thereto and other strips secured



on the first strips in such a manner that the ribs are secured between the strips at the point of contact of the ribs with respect to thes rips.

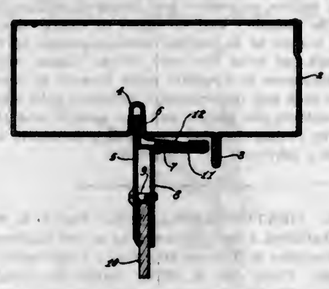
1,681,131. RAILWAY-CAR-CLASSIFICATION SYSTEM. CHARLES W. PRESCOTT, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Jan. 14, 1926. Serial No. 81,245. 7 Claims. (Cl. 104—26.)

1. The method of classifying railway cars which consists in; firstly running the cars down an inclined track leading to a large number of classified tracks through switches, said inclined track having the desired slope and altitude to bring the cars to a rather high speed; secondly in running the cars up a decelerating incline after they have entered the proper classification track so as to retard them and absorb a large percentage only of the kinetic energy stored therein; and thirdly in retarding the cars to the ultimate desired speed on substantially level track by suitable mechanical car retarding means after they have passed beyond the decelerating incline.



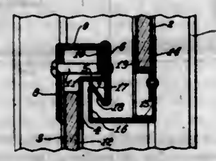
1,681,132. SUPPORTING STAND AND CONTROL SWITCH FOR ELECTRIC IRONS. MERTON A. REYNOLDS, Auburn, Me. Filed Dec. 22, 1925. Serial No. 77,051. Renewed June 27, 1928. 4 Claims. (Cl. 219—25.)

1. An electric iron supporting stand including a base member, a casing mounted thereon, a tray-like support mounted on the casing, a movable plate mounted within said tray-like support, a control switch mounted within said casing and embodying stationary contacts interposed in one of the leads to the electric iron and further including a movable contact arm normally bridging said contacts for making the circuit to the iron continuous, an operating means for the switch including a push button slidably mounted through the top of the casing and the bottom of



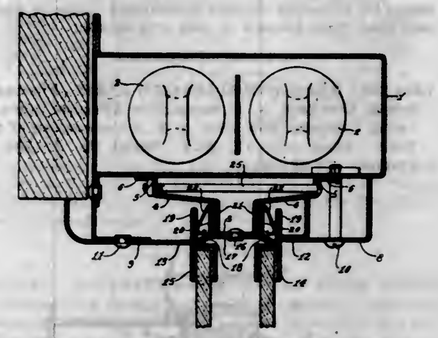
the tray-like supporting member and arranged in engagement beneath said plate whereby the weight of an iron upon the plate will operate to throw the switch into circuit breaking position.

1,681,133. STENCILING METHOD. VICTOR ROSATO, New York, N. Y. Filed Sept. 15, 1927. Serial No. 219,612. 4 Claims. (Cl. 101—126.)



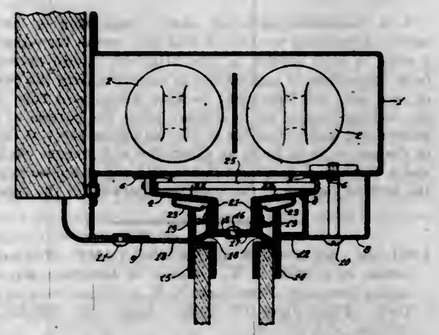
1. In a device of the class described, the combination with a table for supporting material to be stenciled and provided with a vertical member with clamps and projecting pins of frames for supporting stencils of bolting cloth and arranged for engaging upon the table, brackets secured to the frames and having a central aperture communicative with an end slot, L-members slidably mounted in the apertures and having one arm projecting from the said end slots and arranged for engagement against the said pins for registering the frames relative to the table, bushings engaged in the said apertures, and screws threadedly engaging in the bushings and rotatively connected with the L-members.

1,681,134. METAL WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed Sept. 28, 1927. Serial No. 222,454. 10 Claims. (Cl. 189—65.)



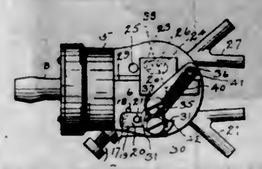
1. In a metal window having an upper sash and a frame head provided with a groove, a top rail for the sash formed with an upstanding flange adapted to enter the groove in the head and an outwardly extending air deflecting flange, and a resilient strip lying along said latter flange for coaction therewith and adapted to engage the head when the sash is raised.

1,681,135. METAL WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed Oct. 14, 1927. Serial No. 226,197. 10 Claims. (Cl. 189—72.)



1. In a metal window having an upper and a lower sash, an upper rail on the lower sash having an upwardly extending flange spaced outwardly from the outer face of the sash, a facing for said rail having a flange and clamped against said upwardly extending flange, and a flexible weather strip clamped against said upwardly extending flange.

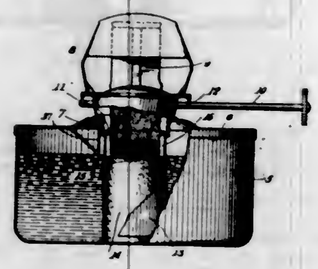
1,681,136. METAL WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed Oct. 22, 1927. Serial No. 227,967. 10 Claims. (Cl. 189—72.)



1. In a metal window having a sash, a jamb and a parting stile therealong, a loose strip of resilient material interlocked with the stile and pressing yieldingly against the sash.

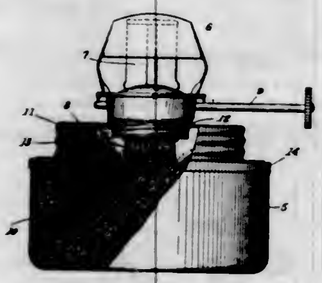
1,681,137. METAL WINDOW. JOHN F. RUTH, St. Louis, Mo. Filed Oct. 22, 1927. Serial No. 227,968. 10 Claims. (Cl. 189—72.)

1. In a metal window having a sash, a jamb and a parting stile therealong, a loose strip of resilient material interlocked with the stile and pressing yieldingly against the edge of the sash.



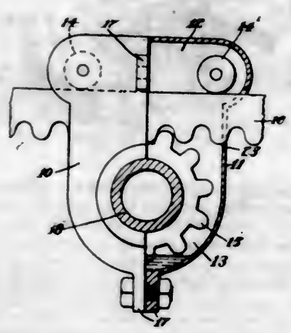
1,681,138. PULSATOR. JOHN A. SCHMITT, Columbus, Ohio, assignor to The Universal Milking Machine Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Feb. 25, 1922. Serial No. 539,167. 9 Claims. (Cl. 31—62.)

1. In a snap over mechanism of the character described, the combination with a body having ports to be alternately opened and closed, of a movable valve member controlling



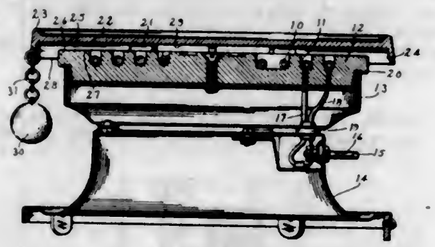
said ports, an oscillatory actuator head mounted independent of said valve, having intersecting arcuate faces, and an operative connection with the port control valve, an oscillatory stop member having wiping engagement with the arcuate faces of said actuator head, said arcuate faces being alternately brought into concentric relation with the pivotal connection of the oscillatory stop member, said stop member locking the actuator head against reversal until the stop member has moved through a prescribed limit of travel and means for actuating the stop member and means to reverse said head when released by said stop member.

1,681,139. KEROSENE SIGNALING LAMP. FURMAN D. SPEAR, New York, N. Y., assignor to Armspear Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 17, 1924. Serial No. 720,506. 4 Claims. (Cl. 67—81.)



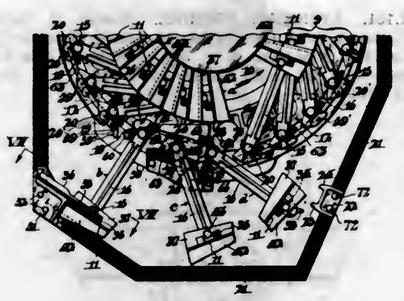
1. A kerosene signaling lamp comprising a pot, a burner detachably secured in said pot, means for adjusting a wick in said burner, a tube attached to and extending from the bottom of said burner to approximately the bottom of said pot, and absorbent packing filling said tube from the bottom thereof up to a point below the bottom of said burner and approximately at the maximum level of the oil in the pot so as to leave an expansion and storage chamber and a depth gage arranged inside said pot at approximately the level of the top of the absorbent packing in the tube.

1,681,140. KEROSENE SIGNALING LAMP. FURMAN D. SPEAR, New York, N. Y., assignor to Armspear Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 17, 1924. Serial No. 720,507. 2 Claims. (Cl. 67—81.)



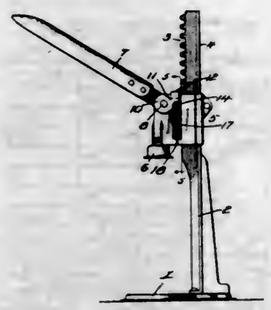
1. An oil signaling lamp having an open top body designed to hold absorbent material, a narrow ring fitting over the outside edge of said top and providing a relatively large opening for the insertion and removal of said absorbent material, a cover to hold in said absorbent material and a burner supported centrally in said cover with a wick depending therefrom into contact with said absorbent material.

1,681,141. SASH-OPERATING MECHANISM. EDWIN W. TERHUNE, Irvington on Hudson, N. Y., assignor to Lord & Burnham Company, Irvington on Hudson, N. Y. Filed Feb. 20, 1925. Serial No. 10,570. 5 Claims. (Cl. 74—56.)



1. In sash operating devices in which a rack bar and pinion are employed, means for maintaining the rack bar in operative engagement with the pinion upon rotation of the pinion, said means comprising a cradle including a two part casing split along a plane permitting assembly of the two parts about the pinion while the pinion is on the line shaft, said parts forming a substantially enclosed chamber, a pair of rollers supported and enclosed within the upper part of the chamber and arranged to engage one edge of the rack bar so as to prevent disengagement of the teeth of the rack bar from the teeth of the pinion, said casing having apertures in opposite ends thereof to receive and guide the rack bar therethrough, whereby said casing completely encloses the pinion and the rollers, and the lower part of the casing chamber serves as a reservoir or pocket to receive a lubricant for the pinion.

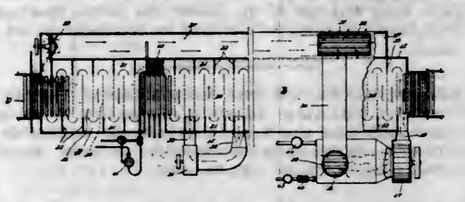
1,681,142. HEATING APPLIANCE. FRANK E. WOLCOTT, West Hartford, Conn., assignor, by mesne assignments, to The Beardsley & Wolcott Mfg. Co., a Corporation of Connecticut. Filed July 6, 1926. Serial No. 120,713. 28 Claims. (Cl. 53—7.)



1. A culinary utensil having a bottom, said bottom having radially disposed ribs depending therefrom and having their inner ends spaced from the center of said bottom and said ends forming an inner utensil centering means beneath the bottom.

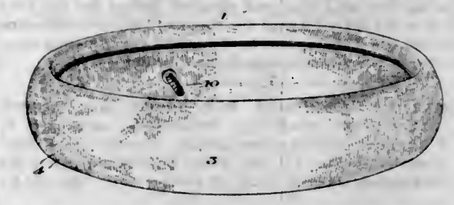
1,681,143. FORM CARRIER FOR DRYING MACHINES. WILLIAM P. GREINER and HOWARD MORSHEAD, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 5, 1924, Serial No. 717,944. Renewed Jan. 11, 1928. 17 Claims. (Cl. 198—19.)

1. In a drying machine comprising an enclosure and a rotatable conveyor, the combination of outriggers fulcrumed around said conveyor, form carriers at the free ends of said outriggers having cams defining helico-axial movement, and means whereby said form carriers are normally restrained against such movement.



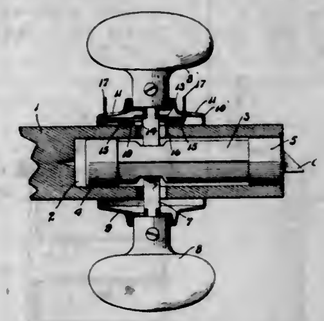
1,681,144. BOTTLE-CAPPING TOOL. HARRY J. LEBHERZ, Frederick, Md., assignor to The Everedy Company, Frederick, Md., a Corporation of Maryland. Filed Nov. 18, 1925. Serial No. 69,868. 4 Claims. (Cl. 226—84.)

3. In a bottle capping tool, the combination of a vertically extending rack member, a capping head adjustably arranged on said rack member, a capper throat carried by said capping head, a hand lever pivotally mounted in said capping head, a flat plate member concentrically mounted on the pivot of said hand lever and having a pair of lug extensions thereon, one of said lug extensions forming a spacing member between one side of said hand lever and said rack member, and the other of said lugs being resiliently connected with a point on said capping head, said first mentioned lug forming an abutment with said hand lever and tending to return said hand lever to normally raised position after each successive operation of said capping tool.



1,681,145. METHOD OF AND APPARATUS FOR HANDLING AND DRYING PULP TUBES OR THE LIKE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Portland, Me., a Corporation of Maine. Filed Mar. 3, 1923. Serial No. 622,610. 61 Claims. (Cl. 34—12.)

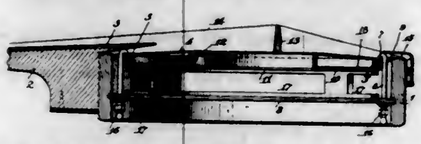
1. A drier having a chamber, means for moving articles



to be dried therethrough and continuously rotating said articles, and means for directing a current of air successively back and forth across said chamber to dry the articles moving therethrough.

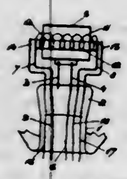
1,681,146. APPARATUS FOR CURING TIRES UNDER INTERNAL PRESSURE. FRED BROWN PFEIFFER, Akron, Ohio. Filed Feb. 23, 1923, Serial No. 620,701. Renewed June 16, 1928. 2 Claims. (Cl. 154—9.)

1. An air bag for use in bringing tires from a flat band condition to tire shape without exerting stretching action upon the beads of the tire, comprising an expansible core and a plurality of non-extensible reinforcing members about said core and arranged at right angles to the plane of the tire, the bag being free to expand circumferentially along its outer periphery, the reinforcing members being disconnected from one another so as to permit them to spread during the expansion of the bag, the bag being thickened along its inner periphery.



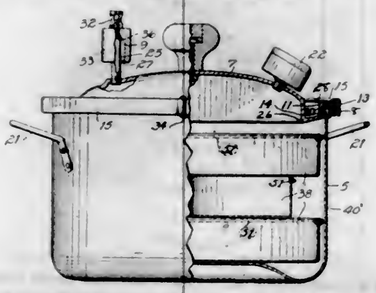
1,681,147. LOCKING ROSETTE. LUCIEN A. DEXTER, Grand Rapids, Mich., assignor to National Brass Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Mar. 22, 1927. Serial No. 177,251. 2 Claims. (Cl. 292—359.)

1. The combination with a door and door latch having a latch bolt and a rotatable shaft to actuate the latch bolt of a rosette adjacent one surface of the door through which



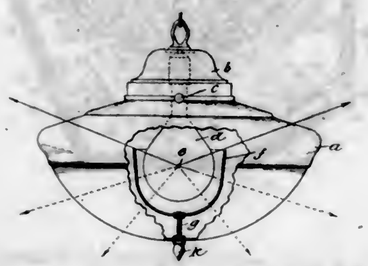
the rotatable shaft passes, means for attaching the rosette to the door, a locking bar located within said rosette associated with said rotatable shaft and having an operating member extending outside of the rosette and means for slidably mounting said locking bar comprising a member having a guide through which said locking bar slides, said guide being attached to the rosette and having openings thru which the means for fastening the rosette to the door extend.

1,681,148. BANJO OR THE LIKE MUSICAL INSTRUMENT. WILLIAM H. DE WICK, Brooklyn, N. Y. Original application filed Sept. 19, 1922, Serial No. 589,058. Divided and this application filed Mar. 28, 1925. Serial No. 18,952. 4 Claims. (Cl. 84—270.)



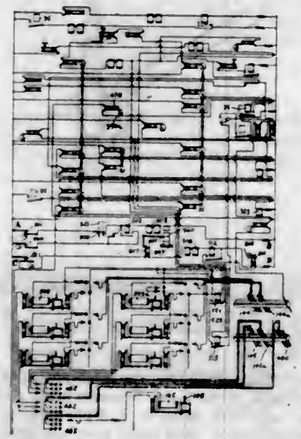
1. In a musical instrument the combination with an outer hoop, a sound board extending transversely therein, and a ring resting on one side of said board and spaced from the inner wall of the hoop, of a membrane head extending over said ring, and securing devices for the head lying in the space between the ring and hoop and extending through the sounding board, and means for adjusting them located at the opposite side of the sounding board.

1,681,149. ELECTRODE FOR DISCHARGE TUBES. GILLES HOLST, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed May 11, 1926, Serial No. 108,346, and in the Netherlands June 8, 1925. 5 Claims. (Cl. 250—27.5.)



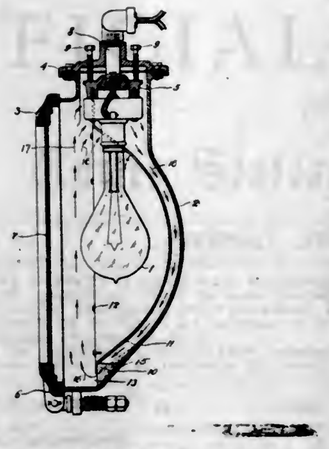
1. In a discharge tube, electrode supports, a lead-in wire connected to each support, an electrode of such a form that it is longer than the distance between its supports, and a rod for supporting said electrode to prevent its sagging when heated, said rod being an electrical conductor and having electrical connection with the electrode lead in wires.

1,681,150. CONTAINER. ALFRED VISCHER, Jr., Floral Park, N. Y., assignor to Self Seal Pressure Cooker Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922, Serial No. 589,814, and in Great Britain Mar. 20, 1922. 11 Claims. (Cl. 53—1.)



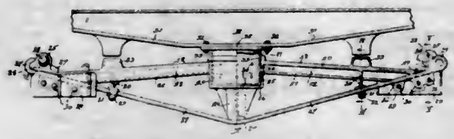
1. A container combining a body and closure, automatically effective means for sealing the closure with respect to the body at super-normal temperatures, and automatically effective means for sealing the closure with respect to the body at internal pressures substantially above atmospheric, said means comprising a coefficient of expansion of the closure higher than that of the body and an upturned rim on said closure whereby longitudinal movement of said closure, due to internal pressure, expands said rim.

1,681,151. LIGHTING FIXTURE. EDWARD J. DAILEY, Jr., New York, N. Y., assignor to Graybar Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 21, 1925. Serial No. 57,510. 1 Claim. (Cl. 240—78.)



In a lighting fixture, a globe, a movable threaded stem extending through the bottom of the globe, a light deflector rigidly mounted on the stem and within the globe, and means on the lower part of the stem and outside of the globe for adjusting the position of said deflector.

1,681,152. TOTAL-TAKING DEVICE. CHARLES CAMPBELL, London, England, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Jan. 22, 1926, Serial No. 82,933, and in Great Britain Feb. 4, 1925. 9 Claims. (Cl. 235—58.)



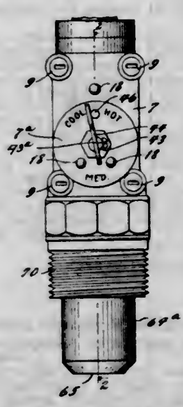
2. In a machine of the class described, in combination, devices for sensing major and minor group designations, means for accumulating major and minor group totals, means controlled by the major group sensing device for printing both major and minor totals whenever major group designations change, and means automatically brought into operation upon a change in major group designations for delaying the printing of the major total until the minor total has been printed.

1,681,153. FLOOD LIGHT. HOWARD L. JOHNSTON, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1923. Serial No. 680,395. 2 Claims. (Cl. 240—41.)

1. A lighting unit comprising a closed casing, a lamp mounted in said casing, a reflector, means for mounting said reflector in said casing for providing a lamp chamber and a cooling chamber, means in said reflector for providing a passage between said chambers and an outwardly curved portion in said casing provided with inner upstruck portions for providing a channeled passage between said chambers.

1,681,154. TRUCK BOLSTER. BRODERICK HASKELL, Franklin, Pa., assignor to Pittsburgh Steel Foundry Corporation, Glassport, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1926. Serial No. 147,499. 12 Claims. (Cl. 105—229.)

1. A fabricated trussed truck bolster comprising a compression member having ends and provided at its center section with an integral depending center strut having formed therein a hollow seat or female member of a bearing having a closed bottom at one end and an open top, a tension member having its center portion engaged by the bottom of the center strut and its outer ends secured to the ends of the compression member.



1,681,155. PLASTIC MATERIAL FROM PEAT AND PROCESS OF PRODUCING. ISADORE SIDNEY MELLANOFF, Philadelphia, Pa., assignor to Kemikal Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 23, 1928. Serial No. 256,492. 9 Claims. (Cl. 106—22.)

1. As a new composition of matter, a product formed by the interaction of an alkaline solution of peat, a phenol and an aldehyde.

1,681,156. PROCESS OF MANUFACTURING OXYGEN CONTAINING COMPOUNDS OF THE ALIPHATIC SERIES. ISADORE SIDNEY MELLANOFF, Philadelphia, Pa., assignor to Kemikal Inc., a Corporation of Delaware. Filed Mar. 13, 1928. Serial No. 261,415. 16 Claims. (Cl. 260—119.)

1. The process of manufacturing oxygen containing compounds of the aliphatic series consisting in heating carbohydrates with alkali in intimate contact with air then adding a heavy hydrocarbon and increasing the temperature to about 210° C., and subsequently shutting off the supply of air and decreasing the temperature to about 150° C.

1,681,157. VALVE. LEWIS W. EGOLESTON, Buffalo, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1924. Serial No. 718,767. 29 Claims. (Cl. 236—48.)

1. In a valve of the character described, a casing having a port, a valve cooperating with said port, a lever for operating said valve, a second lever, a tension spring connecting said levers, said second lever being movable to position said spring to exert its force to move said first lever in opposite directions, means whereby said spring normally exerts its force to swing said second lever to so locate the spring as to cause the first lever to move the valve to open position, and means responsive to a characteristic of a liquid or gas for controlling movement of said second lever.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 373—No. 3. TUESDAY, AUGUST 21, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,553,627, F. Nagler, Rotor, decided July 10, 1928, claims 10 and 11.

Pat. 1,574,284, A. B. Cumner, Means for draining motor-vehicle crank cases and the like, decided August 3, 1928, claims 1, 2, and 4.

Pat. 1,650,932, C. A. Butcher, Relay system, decided July 9, 1928, claims 1 and 7.

Pat. 1,655,166, E. W. Seaholm, Vehicle brake, decided July 18, 1928, claims 1 and 2.

Final decision in interference has been rendered against the following trade-mark:

T. M. 143,987, Certain named medicinal and pharmaceutical preparations, Kaufmann Department Stores, Inc., Pittsburgh, Pa. Registered June 21, 1921. Decided July 10, 1928.

Notices of Cancellation.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

William P. Saunders, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The American Products Company, of 3265 Colerain Avenue, Cincinnati, Ohio, to effect the cancellation of the trade-mark registration of William P. Saunders, of care of Sano Mfg. Co., 310 North 18th Street, Birmingham, Ala., No. 126,897, dated October 7, 1919, and the notice of such proceeding sent by registered mail to the said William P. Saunders at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said William P. Saunders, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

Tiger Products Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Union Supply Company, of 10 South Broad Street, Elizabeth, N. J., to effect the cancellation of the trade-mark registration of Tiger Products Company, of 1503 Merchants Bank Building and 55 East Third Street, St. Paul, Minn., No. 139,410, dated February 1, 1921, and the notice of such proceeding sent by registered mail to the said Tiger Products Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless Tiger Products Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

Diamond Creamery Co., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of National Creamery Company, of Boston, Mass., to effect the cancellation of the trade-mark registration of Diamond Creamery Co., of Massena, N. Y., No. 84,216, dated November 21, 1911, and the notice of such proceeding sent by registered mail to the said Diamond Creamery Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Diamond Creamery Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business August 10, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 111,108; Trade-Mark Division, 1,851. Oldest new case, Oct. 10, 1927; oldest amended, Oct. 10, 1927. The dates given are 1927 except where † indicates 1928.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

BLACK BROTHERS FLOUR MILLS *v.* DENNIE.

No. 2,060. Decided June 4, 1928.

TRADE-MARK—SIMILARITY.

Where two marks used upon egg mash include the words "Just-Right" and "Just Rite," respectively, such words being disclaimed apart from the mark shown, and the marks are not otherwise confusingly similar, *Held* that a petition for the cancellation of the latter mark was properly denied.

APPEAL from Patent Office. Affirmed.

Mr. James Atkins for Black Brothers Flour Mills.

Mr. Frank B. Dennie pro se.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Patent Office dismissing appellant's petition for the cancellation of appellee's registered trade-mark, consisting of the representation of a disk having the outer edge of one color, with a central portion of a different color, the representation of a chick appearing within the central portion of the disk, the words "Egg Mash" appearing in a rectangle horizontally across the center of the disk and chick, and the words "Just-Right" immediately above the disk. The words "Egg Mash" and "Just-Right" are disclaimed apart from the mark as shown.

This mark is used on egg mash in Class No. 46, Foods and ingredients of foods.

Appellant's mark, which was adopted prior to the entry of appellee into the field, consists of a ring, incomplete at the lower portion for about one-fourth of its extent, a picture of a little girl carrying in one hand a pan of chicken feed, while scattering some of the feed with the other hand, several of the chicks being represented as upon the ground, the whole appearing in the foreground of a farmyard, with a door of a building in the background. Just above this composite picture appear the words "Just Rite." The mark is applied to poultry food, as is the mark of appellee.

The Commissioner found that the words "Just Right" as used in these marks are descriptive, and hence not susceptible of exclusive appropriation by either party. See *Standard Paint Company* v. *Trinidad Asphalt Mfg. Co.*, 220 U. S. 446.

Appellee's design, apart from the disclaimed words, not being "so simple as to be a mere device or contrivance to evade the law and secure the registration of nonregistrable words" (*Beckwith* v. *Com. of Patents*, 252 U. S. 538, 274 O. G. 613; *McIlhenney's Son* v. *Trappey & Sons*, 51 App. D. C. 273, 278 Fed. 582, 299 O. G. 461), and the marks of the parties, apart from the descriptive words, not being descriptively similar, the decision was right and is affirmed.

Affirmed.

U. S. District Court—District of Connecticut.

SCHURICHT *v.* MCNUTT *v.* WILLIS. SCHURICHT *v.* MCNUTT *v.* BURNS.

Decided April 20, 1928.

[26 Fed. Rep. (2d) 388.]

1. WITNESSES—SUBPŒNA DUCES TECUM—NOT ISSUED WHERE EVIDENCE IS SPECULATIVE.

In interference proceeding relating to ammunition patent, in which claim of anticipation by foreign patent was set up, operativeness of foreign patent attempted to be established by showing that same ingredients were used in a certain ammunition, *Held* too speculative and incompetent to authorize issuance of subpœna duces tecum under section 869, Revised Statutes (28 U. S. C. A., sec. 647), to obtain testimony relative to operativeness of such foreign patent.

2. SAME—SAME—NOT ISSUED WHERE FACTS CAN BE OTHERWISE ESTABLISHED.

A subpœna duces tecum under section 869, Revised Statutes (28 U. S. C. A., sec. 647), should not issue where facts to be proved by the papers wanted can be otherwise established, as where a party has in his possession or under his control the means of acquiring the information he seeks to obtain.

3. SAME—SAME—COURT ORDER—HEARING ON COMPETENCY AND MATERIALITY.

Subpœna duces tecum should not issue under section 869, Revised Statutes (28 U. S. C. A., sec. 647), without order of court, and counsel for witness is entitled to be heard on question of competency and materiality, especially where testimony is taken before a United States commissioner or notary public for use in a Patent Office proceeding and where documents or information sought are of a special, confidential, or secret nature.

IN EQUITY.

Interference proceedings between one Schuricht, one McNutt, and one Willis and between one Schuricht, one McNutt, and one Burns. On motions of Burns and Willis to quash subpœna duces tecum addressed to the Remington Arms Company and others, and by McNutt to enforce obedience thereto. Motion to quash granted and motion to enforce denied.

Mr. George Ramsey, for Willis and Burns.

Messrs. Pennie, Davis, Marvin, and *Edmonds* for McNutt.

THOMAS, *D. J.:*

This matter comes before the court on the motion of counsel for Burns and Willis to quash a subpœna duces tecum addressed to Remington Arms Company and to one Herrmann and one Hadley, alleged to be employees of the Remington Arms Company, in connection with depositions being taken in the above interferences pending in the United States Patent Office.

A motion was also made by counsel for McNutt to enforce obedience to the subpœnas. Both motions were heard on March 27, 1928. Counsel for Bruns and Willis and counsel for McNutt filed briefs following an extended oral argument.

The testimony in question is being taken under an order issued by Acting Commissioner of Pat-

ents, Dr. Kinnan, dated January 28, 1928, and is as follows:

The party McNutt has filed a petition that he be permitted to take testimony relative to the operativeness of the disclosure of certain prior art patents set up in his motion to dissolve. The parties have stipulated that such testimony may be taken.

Under the circumstances of the case, the petition is granted, and the Law Examiner is directed to set times for McNutt to take such testimony and times for the other parties to take rebuttal and have hearing of the motions at which such testimony is to be considered.

This order relates to the operativeness of the disclosures of the patent or patents in question. Section 869, Revised Statutes (28 U. S. C. A. sec. 647), under which such subpœnas are asked, provides, inter alia, that—

Such judge, on being satisfied by the affidavit of the person applying, or otherwise, that there is reason to believe that such paper, writing, written instrument, book, or other document is in the possession or power of the witness, and that the same, if produced, would be competent and material evidence for the party applying therefor, may order the clerk of said court to issue such subpœna accordingly.

It is therefore necessary at the outset to determine whether the papers demanded as evidence will be competent and material evidence for the party McNutt under the Patent Office order under which this testimony is being taken.

It appears from the papers on file that McNutt, assignor to Winchester Arms Company, is trying to sustain the burden placed upon him by proving that the priming composition of the Ziegler British patent, No. 14,583 of 1900, has been commercialized in Swiss ammunition which is fully operative and is of the highest quality. From the brief of counsel for Burns and Willis, it appears that there are certain differences between the main disclosure in the Ziegler patent and the Swiss ammunition, at least in the proportions of the ingredients, and that such differences exist does not seem to be seriously denied. It does not seem to me, however, that this question is of any importance, in view of the conclusions hereinafter set forth. The issue in the Patent Office is, Does the Ziegler patent teach persons skilled in the art as it was known when the patent was issued to make an operative primer by following the teachings of the patent, and without independent experiments? In *Wirt* v. *Farrelly et al.* (C. C.) 84 F. 89[1], Judge Wheeler, on page 892, said:

A patent cannot, as an anticipation, properly have implied into it, from necessity, more than it fairly shows, to make it represent an operative structure. What is required, and not so shown, is left for later inventors. *Dashiell* v. *Grosvenor*, 162 U. S. 425, 16 S. Ct. 805 [40 L. Ed. 1025]; *Universal Winding Co.* v. *Willimantic Linen Co.* (C. C.) 82 F. 228.

See, also, *New England Motor Co.* v. *B. F. Sturtevant Co.* (C. C.) 140 F. 866, where Judge Hazel, on page 869, repeated the rule stated in the Wirt Case, supra.

The rule as to anticipation by a foreign patent is very strict, and is well expressed in the decision in *Permutit Co.* v. *Harvey Laundry Co. et al.* (D. C.) 274 F. 937. At page 940, Judge Hazel said:

Inasmuch as controlling importance is attached by defendants to what is described and illustrated in the prior foreign publications, the rule as to them may be stated here. Foreign publications, to constitute them anticipations of a later invention, must disclose a complete and operative structure, and, indeed, the description given must be sufficiently clear and definite and understandable to enable persons skilled in the art or science to which the invention or device belongs to practice and construct it. *Seymour* v. *Osborne*, 11 Wall. 516, 20 L. Ed. 33; *Badische Anilin & Soda Fabrik* v. *Kalle* (C. C.) 94 F. 163. Drawings or exhibits, if any, shown in connection with prior publications must be considered with the published description of the device, which the law requires must be in "full, clear, and exact terms," so that those desiring to manufacture the article or reduce it to practice may do so without either independent experiments or the exercise by them of the inventive faculty. If the prior description and drawings relied on do not conform to that rule, a subsequently issued patent in this country for the same invention is not defeated. *Hanifen* v. *Godshalk Co.* (C. C.) 84 F. 649. In Robinson on Patents, vol. 1, section 329, it is stated that the invention described in the prior publication must be identical in all respects with that whose novelty it contradicts.

The Courts of Appeals for the Second Circuit, in affirming the decision, *Permutit Co.* v. *Harvey Laundry Co.*, 279 F. 713, speaking by Judge Manton, said, on page 719:

If prior patents and publications can be reconstructed by extraneous efforts to fit the exigency of the case, it would, as was said in *Badische Anilin & Soda Fabrik* v. *Kalle & Co.*, 104 F. 802, 44 C. C. A. 201, require an inquiry, not only as to what the publication communicates to the public, but "it will be transferred to an endeavor to ascertain what its author intended to communicate." We cannot read into this article what is not there, and which it would be necessary to obtain from the later development of the art in order to meet with appellee's success.

In 1906 Gans applied for the German patent 197,111. This patent covers the invention made in artificial zeolites. It deals with the precipitation system of softening water, but is devoted to the method of manufacturing zeolites. The patent fails to anticipate the patent in suit. It was the same inventive mind at work. When he applied for his German patent, he did not disclose the subject-matter of the patent in suit, because it was three years later when he disclosed his present inventive thought and applied for the patent in suit. He does not describe the same idea of means in the same stage of development as that which his later invention embodies. A reading of the statement of the German patent fails to disclose a description of a complete and operative art or instrument ready for immediate employment by the public. *Westinghouse* v. *Great Northern*, 88 F. 258, 31 C. C. A. 525.

In *Carson* v. *American Smelting & Refining Co.*, 4 F. (2d) 463, Judge Gilbert, speaking for the Circuit Court of Appeals for the Ninth Circuit, states the rule in the following language on page 465:

A foreign patent is to be measured as anticipatory, not by what might have been made out of it, but by what is clearly and definitely expressed in it. An American patent is not anticipated by a prior foreign patent, unless the latter exhibits the invention in such full, clear, and exact terms as to enable any person skilled in the art to practice it without the necessity of making experiments. *Seymour* v. *Osborne*, 11 Wall. 516, 555, 20 L. Ed. 33; *Hanifen* v. *Armitage* (C. C.) 117 F. 845; *Permutit Co.* v. *Harvey Laundry Co.* (C. C. A.) 279 F. 713; *General Electric Co.* v. *Hoskins Mfg. Co.*, 224 F. 464, 140 C. C. A. 150. In *Westinghouse Airbrake Co.* v. *Great Northern Ry. Co.*, 88 F. 258, 31 C. C. A. 525, the court said: "The prophetical suggestions in English patents of what can be done, when no one has ever tested by actual and hard experience and under the stress of competition the truth of these suggestions, or the practical difficulties in the way of their accomplishment, or even whether the suggestions are feasible, do not carry conviction of the truth of these frequent and vague statements."

This rule was later quoted and followed by Judge Van Orsdel in *Re Ek*, 19 F. (2d) 677, App. D. C. 203.

[1] Counsel for McNutt has referred to a number of decisions setting forth a rule where operativeness of a patent in suit is attacked. The question of operativeness of prior art patents, as in this case, is somewhat different from the question of operativeness of a patent in suit. This is very properly so, as the benefit of the doubt should be resolved in favor of the subsequent inventor, whereas a patent in suit must be proven incapable of operation in order to overcome the presumption of its validity. Even though it could be proven that the Swiss ammunition contains the same ingredients and in the same proportions as taught by the Ziegler patent (which is denied by counsel for Burns and Willis,) such proof would not be material and relevant, because manufacturers of Swiss ammunition may have some secret knowledge not disclosed in the Ziegler patent which would enable them to make operative ammunition, whereas others, without this knowledge, would not be able to make operative ammunition from the teachings of the Ziegler patent. Whatever is not taught by the patent and requires independent experimentation is left for future inventors. If operative ammunition can be made by trying out the mixture set forth in the patent, the operativeness of the Ziegler patent is established, whereas, if operative ammunition can not be made by persons skilled in the art by following the disclosure of the patent without independent experimentation, no amount of proof of the operativeness of the Swiss ammunition will prove the operativeness of the Ziegler patent. It is therefore clear that evidence concerning the Swiss ammunition is so speculative and so obviously incompetent and immaterial that the subpœna should be quashed.

[2] Furthermore, even if the operativeness of the Swiss ammunition was material, the subpœna should be recalled under the rule that a subpœna should not issue where the facts to be proved by the papers wanted can be otherwise established, as where a party has in his possession or under his control the means for acquiring the information he seeks to obtain, *In re Romine* (D. C.) 138 F. 837, at page 843, and cases there cited, because (*a*) Winchester already has Remington's analysis as well as its own and that of the Frankford Arsenal and Picatinny; and (*b*) the matter to be proved is open to it by having suitable tests of the Ziegler patent disclosure made by experts.

[3] It seems that the witnesses appeared before the United States commissioner and testified, but that they refused to answer many questions under instructions of counsel, who argued that the subpœna was not properly issued. When the matter was brought before the court at the hearing on March 27, counsel for Remington, Burns, and Willis based his refusal on the ground, first, that the subpœna had been issued without an order of court; and, second, that counsel should have been heard on the question of competency and materiality before the subpœna was issued. *Tucker* v. *Peiler* (C. C. A.) 297 F. 570.

This is especially the case where testimony is taken before a United States commissioner or notary public for use in a Patent Office proceeding, and where the documents or information sought are of a special, confidential, or secret nature. In *Dancel et al.* v. *Goodyear Shoe Machinery Co.* (C. C.) 128 F. 753, at page 760, Judge Colt said:

It is to be borne in mind, in this connection, that the compulsory production of books and papers in court, where all questions as they arise can be submitted to and decided by the court, is very different from their compulsory production before a notary public under section 863 [28 U. S. C. A. sec. 639], or an examiner under equity rule 67, where the magistrate has little power to afford protection to the witness.

However, counsel were advised at the hearing that the subpœna was issued upon order of court, which order, however, was apparently not served on counsel. The attorney for the witnesses had a right to be heard on the validity of the subpœna and to protect witnesses and the Remington Company from disclosing documents not properly demandable under subpœna. Perhaps a better way to test the question would have been by a timely application to the court for an order to quash the subpœna until counsel could be heard. At the hearing on the motion, counsel explained that this was not possible on account of the short time between service of the subpœna and the return thereon.

The motion to quash is granted, and the motion to enforce is denied, and it is so ordered.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

883,729, J. A. Merrett, Cylinder drying machine, C. C. A., 2d Cir., Doc. 9840, *J. R. Hatmaker* v. *The Dry Milk Co.* Affirmed (notice dated June 26, 1928).

1,011,598, W. E. Fitch, Fireplace damper, C. C. A., 6th Cir., Doc. 4919, *Peerless Mfg. Co.* v. *Chattanooga Foundry & Roofing Co.* Affirmed June 12, 1928.

1,071,027, F. A. Bruckman, Automatic pastry-making machine, filed June 16, 1928, D. C., N. D. Ohio, E. Div., Doc. 2605, *McLaren Consolidated Cone Corp.* v. *The Noss Pretzel & Cone Co.*

1,084,820, T. Pescatore, System of transporting heavy loads by motor vehicles, filed June 20, 1928, D. C., E. D. Mich. (Detroit), Doc. 2784, *Lapeer Trailer Corp.* v. *Guaranty Trust Co.*

1,146,938, H. Hubbell, Attachment-plug receptacle, filed June 20, 1928, D. C. Conn. (New Haven), Doc. 1959, *H. Hubbell* v. *Gaynor Electric Co., Inc.*

1,149,580, Hofmann & Gottlob, New caoutchouc substance and vulcanization product thereof, C. C. A., 2d Cir., Doc. 9888, *The Grasselli Chemical Co.* v. *National Aniline & Chemical Co., Inc.* Affirmed (notice dated June 26, 1928.)

1,152,396, G. W. Combs, Means for supporting and controlling gyratory structures, C. C. A., 6th Cir., Doc. 4977, *Great Western Mfg. Co.* v. *R. G. Lowe* (*Lowe Mfg. Co.*). Claims 6, 7, 11, 19, 20, and 21 held not infringed June 16, 1928.

1,264,770, J. F. Brennan, Brake tester, D. C., N. D. Calif. (San Francisco), Doc. E 2080, *Brake Testing Equipment Corp. et al.* v. *L. Gillig et al.* Patent held valid and infringed June 16, 1928.

1,290,060, A. J. Boland, Enameling furnace, filed June 18, 1928, D. C., E. D. Mich., S. Div., Doc. 2765, *A. J. Boland* v. *Victor Peninsular Co.*

1,336,901, D. Handelan, Hot-air heating system, filed June 21, 1928, D. C., S. D. Ill. (Springfield), Doc. 918, *The Twentieth Century Heating & Ventilating Co.* v. *H. S. Myers et al.*

1,391,936, S. Bosky, Brassière, D. C., S. D. N. Y., Doc. E 38/251, *S. Bosky* v. *F. Knopf et al.* (*Kaybee*). Patent held valid and infringed June 25, 1928.

1,404,539, C. K. Nelson, Confection, C. C. A., 6th Cir., Doc. 4996, *Eskimo Pie Corp.* v. *National Ice Cream Co.* Affirmed June 13, 1928.

1,407,789, O. P. Erhardt, Beverage mixer, filed June 19, 1928, D. C., E. D. Mich., S. Div., Doc. 2768, *The A. C. Gilbert Co.* v. *United Electrical Mfg. Co.*

1,458,960, W. E. White, Bar spacer, filed May 15, 1928, D. C., N. D. Ill., E. Div., Doc. 8241, *Kalman Steel Co. et al.* v. *Universal Form Clamp Co. et al.*

1,460,716, B. F. Greer, Book-form savings bank, filed May 12, 1928, D. C., N. D. Ill., E. Div., Doc. 8202, *Banker's Utilities Co., Inc., et al.* v. *Stronghart Co.* Same, filed June 27, 1928, D. C., S. D. N. Y., Doc. E. 45/276, *Banker's Utilities Co., Inc.*, v. *Interstate Trust Co.*

1,475,980, O. Zerk, Lubricating apparatus, filed June 23, 1928, D. C. Mass., Doc. E 2986, *The Bassick Mfg. Co.* v. *Commonwealth Screw Co.*

1,477,600, L. W. Shields, Belt buckle, filed May 19, 1928, D. C., N. D. Ill., E. Div., Doc. 8257, *Hickok Mfg. Co., Inc.*, v. *S. B. Levick Co.*

1,478,687, C. L. Turner, Bottle closure, D. C., S. D. Calif. (Los Angeles), Doc. K–87–J, *B. H. Turner* v. *R. W. W. Grigsby*. Dismissed without prejudice May 21, 1928.

1,488,237, A. C. Durdin, jr., Float-actuated electric switch-operating mechanism, filed May 14, 1928, D. C., N. D. Ill., E. Div., Doc. 8240, *Chicago Pump Co.* v. *Weil Pump Co. et al.*

1,509,382, H. J. Wagenhorst, Automobile wheel rim, C. C. A., 6th Cir., Doc. 4804, *J. H. Wagenhorst* v. *Hydraulic Steel Co. et al.* Affirmed June 16, 1928.

1,516,012, G. F. Hinrichs, Poultry packing, filed June 15, 1928, C. C. A., 8th Cir. (St. Louis), Doc. 8232, *G. F. Hinrichs, Inc.*, v. *L. C. Henderson et al.* (*Henderson Produce Co.*).

1,561,836, N. Q. Donnelly, Apron, filed June 18, 1928, D. C., S. D. N. Y., Doc. E 45/313, *Donnelly Garment Co.* v. *J. Beim et al.* Same, Doc. E 45/166, *Donnelly Garment Co.* v. *Calrose Mfg. Co.* Patent held valid and infringed June 22, 1928. Same, filed May 11, 1928, D. C., N. D. Ill., E. Div., Doc. 8199, *Donnelly Garment Co.* v. *D. Nathanson.* Doc. 8200, *Donnelly Garment Co.* v. *A. G. Knell et al.* Doc 8201, *Donnelly Garment Co.* v. *L. Broyde.*

1,581,188, C. G. Fink, Process of electrodepositing chromium and of preparing baths therefor, filed June 27, 1928, D. C., S. D. N. Y., Doc. E 45/375, *United Chromium, Inc.*, v. *L. Weisberg et al.* (*Weisberg & Greenwald*).

1,617,552, O. Strufe, Refrigerator, filed May 16, 1928, D. C., N. D. Ill., E. Div., Doc. 8244, *O. Strufe* v. *The American Refrigerator Corp.*

1,665,428, C. Wagner, Ditcher, filed June 23, 1928, D. C. Colo. (Denver), Doc. 8727, *C. Wagner* v. *J. Kensler.*

Des. 66,281, L. E. Ellis, Textile fabric, D. C., S. D. N. Y., Doc. E 38/326, *L. E. Ellis* v. *A. Shapiro & Son Co., Inc., et al.* Patent held valid and infringed June 20, 1928.

Des. 75,242, A. J. Heinke, Textile fabric, D. C., S. D. N. Y., Doc. E. 45/223, *H. R. Mallinson & Co., Inc.*, v. *The Style Dress Co., Inc.* Patent held valid and infringed June 20, 1928.

Re. 15,733, Kesten & Osborne, Automatic brake for elevators, filed June 25, 1928, D. C., S. D. N. Y., Doc. E 45/361, *Otis Elevator Co.* v. *Gurvey Elevator Co.*

Re. 16,879, E. Mayer, Device for optically measuring light, photometer, filed June 25, 1928, D. C., S. D. N. Y., Doc. E. 45/360, *Drem Products Corp.* v. *B. Hopfen et al.*

Trade-Marks Canceled.

40,832. Eggs. The Chillicothe Packing Company, Chillicothe, Ohio. Registered July 28, 1903. Canceled July 30, 1928.

134,028. Certain named foods. Mexican Products Corporation, Nogales, Ariz. Registered August 10, 1920. Canceled July 30, 1928.

166,530. Canned fish. José María Castillo, Bilbao, Provincia de Vizcaya, España. Registered April 3, 1923. Canceled July 30, 1928. (International Registration No. 797. Registered January 29, 1923.)

197,210. Dried fruits. California Prune & Apricot Growers Assn., San Jose, Calif. Registered April 14, 1925. Canceled July 30, 1928.

211,752. Preparation for the digestive organs and the liver. Charles Frederick Schibener, doing business as The Drew Pharmacal Co., Buffalo, N. Y., and Toronto, Canada. Registered April 20, 1926. Canceled July 30, 1928.

221,931. Girls' coats. Phil Klein, New York, N. Y. Registered December 14, 1926. Canceled July 30, 1928.

240,716. Men's suits. L & M System Clothes, Inc., New York, N. Y. Registered April 3, 1928. Canceled July 30, 1928.

Adjudicated Patents.

(D. C. La.) The Henderson patent, No. 1,422,202, for improvements in dry kilns for drying lumber, *Held* not infringed. *Henderson* v. *Welch Dry Kiln Co.*, 26 F. (2d) 810.

(D. C. Pa.) The Elliott patent, No. 1,457,153, relating to removing oxygen from water, claims 4–9 and 11–18, inclusive, *Held* not infringed. *Elliott Co.* v. *H. S. B. W.-Cochrane Corporation*, 26 F. (2d) 815.

(D. C. Pa.) The Elliott patent, No. 1,497,491, for removal of oxygen from hot water, *Held* not infringed. *Id.*

(D. C. Pa.) The Elliott reissue patent, No. 15,866, relating to removing oxygen from water, *Held* invalid because claims in question were not within same invention as set out in original patent. *Id.*

Disclaimers.

1,292,081.—*Joseph Sachs*, Hartford, Conn. ELECTRIC SWITCH. Patent dated January 21, 1919. Disclaimer filed August 1, 1928, by the patentee, *Colts Patent Fire Arms Manufacturing Co.*, a Corporation, consenting to and ratifying this disclaimer "in so far as its interest in the aforesaid patent may appear."

Hereby enters this disclaimer as follows:

"He hereby disclaims all switches of the character described in claims 12, 13, 14, 15, 16, 17, 18, 19, 20, and 21 except those wherein the actuator extends transversely of the switching members and wherein each connection or coupler between a switching member and the actuator is rigidly and fixedly secured to its switching member and is provided with an open slot for receiving the actuator."

1,301,175.—*Joseph Sachs*, Hartford, Conn. ELECTRIC SERVICE AND METER-TESTING SYSTEM. Patent dated April 22, 1919. Disclaimer filed August 1, 1928, by the patentee, *Colts Patent Fire Arms Manufacturing Co.*, a Corporation, consenting to and ratifying this disclaimer "in so far as its interest in the aforesaid patent may appear."

Hereby enters this disclaimer as follows:

"He hereby disclaims claims 11 and 12.

"He hereby disclaims all constructions of the character disclosed in the specification or drawings or described in claims 1, 2, 3, 6, 7, 8, 9, 10, and 13 except those wherein the load side connectible means includes an accessible fuse and fuse receiving contacts and all of the remainder of the said means is inaccessibly inclosed.

"He hereby disclaims from the scope of claims 4 and 5 all constructions of the character described therein except those wherein the load side connectible means includes an accessible fuse and fuse receiving contacts and all of the remainder of the said means is inaccessibly enclosed, and wherein the said load side connectible means also includes a circuit opening connecter adapted to be manually opened independently of the service side connectible means and without removing the load side connectible fuse from its receiving contacts."

1,657,716.—*George B. Hinton*, Mexico, Mexico. PROCESS OF MAKING CEMENTITIOUS MATERIAL OF CELLULAR STRUCTURE. Patent dated January 31, 1928. Disclaimer filed August 1, 1928, by the patentee.

Hereby enters this disclaimer to that part of the specification which is in the following words, to wit: "sodium resinate" occurring in line 70 of page 1 of the specification.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 21, 1928.

[VOL. 373. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 263,085. HOSTLER COAL & COKE COMPANY, Chicago, Ill. Filed Mar. 13, 1928.

SENECA

Chief of the Chiltons

For Coal.

Claims use since June 1, 1927.

Ser. No. 264,183. THE OHIO LEATHER COMPANY, Girard, Ohio. Filed Apr. 2, 1928.

No claim is made to the word "Calf" apart from the mark shown in the drawing.

For Leathers.

Claims use since November, 1927.

Ser. No. 264,546. U. S. FUR AUCTION BROKERAGE CORP., New York, N. Y. Filed Apr. 7, 1928.

Applicant disclaims the use of the words "The Logical Place to Buy and Sell Your Products" apart from the mark shown in the drawing.

For Furs.

Claims use since January, 1923.

Ser. No. 265,304. TENNESSEE PRODUCTS CORPORATION, Nashville, Tenn. Filed Apr. 23, 1928.

The words "Smokeless Hardwood Charcoal" are descriptive and are disclaimed as part of the mark.

For Charcoal.

Claims use since March, 1928.

Ser. No. 267,163. MARTHA E. TRAVERS, Columbus, Ohio. Filed May 28, 1928.

OXY-DENE

For Marlaceous Materials—Namely, Travertine in its Raw State for Use in Aquarium Water.
Claims use since 1926.

Ser. No. 267,226. BLACK STAR MINK FARM, Chilton, Wis. Filed May 31, 1928.

BLACK STAR

For Fur Pelts.
Claims use since April, 1928.

Ser. No. 267,254. THE HILL & GRIFFITH CO., Cincinnati, Ohio. Filed May 31, 1928.

LAV-O-BOND

No registration rights are claimed for the word "Bond" apart from the mark as shown on the drawing.
For Blend of Natural Materials to be Used in Molding and Core Sands Having Bonding, Venting, and Peeling Properties.
Claims use since May 1, 1928.

Ser. No. 267,814. UNITED RABBITRIES MARKETING INC., Duarte, Calif. Filed June 9, 1928.

URMC

For Raw or Partly-Prepared Materials—Namely, Hides and Furs.
Claims use since Oct. 15, 1926.

Ser. No. 267,952. ED. A. GORMAN, INCORPORATED, Dayton, Ky. Filed June 13, 1928.

BLU-GLO COAL

The words "Blu-Glo Coal" are disclaimed apart from the mark as shown in the drawing.
For Coal.
Claims use since January, 1928.

CLASS 2.

Receptacles.

Ser. No. 260,132. NELLIE M. PAUL, Easton, Pa. Filed Jan. 14, 1928.

HIGH HANDS A K Q J 10 DRINKING CUPS

No claim is made to the words "Drinking Cups."
For Individual Paper Drinking Cups.
Claims use since Oct. 24, 1927.

Ser. No. 266,890. SÄURESCHUTZ-GESELLSCHAFT M. B. H., Berlin-Alt-Glienicke, Germany. Filed May 23, 1928.

Haveg

For Storage, Dissolving, and Transport Vessels or Tanks, Casings, and Cylinders All Made of or Provided with Coatings and Linings Which are Chemically Resistant and Composed of Plastic Compositions.
Claims use since Nov. 30, 1922.

Ser. No. 267,050. JAMES MANUFACTURING COMPANY, Fort Atkinson, Wis. Filed May 26, 1928.

Jamesway

For Mangers for Metal Cow Stalls, Calf, Bull, and Hog Pens, Stock and Storage Tanks.
Claims use since Mar. 1, 1921.

Ser. No. 267,758. DAIGGER CORPORATION, Chicago, Ill. Filed June 9, 1928.

SERV-A-KONE

The word "Kone" is disclaimed apart from the mark as shown in the drawing.
For Tray for Ice-Cream Cones.
Claims use since Dec. 31, 1927.

Ser. No. 268,599. GENERAL FIBRE BOX COMPANY, West Springfield, Mass. Filed June 25, 1928.

HY-LITE

For Corrugated-Fibre Boxes.
Claims use since Mar. 1, 1928.

Ser. No. 269,143. PI BETA PHI SETTLEMENT SCHOOL OF THE PI BETA PHI FRATERNITY, Gatlinburg, Tenn. Filed July 5, 1928.

ARROWCRAFT

For Textile Goods—Namely, Bags and Bag Bodies Baskets, and Trays of Splint, or Bark, or Willow, or Corn Shuck, or Similar Material or of a Combination Thereof, and Certain Wooden Articles—Namely, Flower Vases, Drinking-Glass Coasters, and Boxes for Holding Cigarettes, or for Similar Use.
Claims use since about July 11, 1927.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 269,342. W. W. WINSHIP & SONS, INC., Utica, N. Y. Filed July 9, 1928.

MIGRATOR

For Wardrobe Trunks, Leather and Artificial Leather Hatboxes, Wardrobe Hatboxes, Wardrobe Suitcases and Carrying Cases, and Trunks.
Claims use since Sept. 14, 1927.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 231,983. CRYSTAL CHEMICALS, INC., Pittsburgh, Pa. Filed May 21, 1926.

Crystal

No claim is made for the words "Antiseptic, Economical," and "Pure" placed within the border of the triangle apart from the mark shown in the drawing. The trade-mark consists of the word "Crystal" in ornate white script letters having a narrow black border above a black triangular frame whose one side is placed horizontally as a base, and the word "Crystal" is found inside the frame on a white ground. The two sides of the frame above the base contain the words "Antiseptic" and "Economical," and the base of the frame contains the word "Pure," all in white letters. The ornate-lettered word above the triangle and the triangle are formed on an orange-colored background.
For Metal-Polish Cleaning Compound Consisting of a Jellylike Composition.
Claims use since Apr. 1, 1926.

Ser. No. 261,802. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse, No. 4711" gegenüber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Feb. 17, 1928.

For Soaps Including Toilet Soaps and Shaving Sticks.
Claims use since March, 1926.

Ser. No. 262,374. FRANCIS T. MUTSCHLER, Sunbury, Pa. Filed Feb. 28, 1928.

For Automobile Top Dressing.
Claims use since January, 1924.

Ser. No. 267,077. PERMANIZING STATIONS OF AMERICA, INC., Denver, Colo. Filed May 26, 1928.

PERMO

For Cleaner for Automobile Bodies, Painted, Varnished, and Other Surfaces.
Claims use since on or about Dec. 1, 1926.

Ser. No. 267,671. SIMON MANUFACTURING COMPANY, Richmond Hill, N. Y. Filed June 7, 1928.

No claim is made to the word "Products" apart from the mark shown.
For Metal Polish.
Claims use since May 1, 1928.

Ser. No. 268,167. NELL OLIVER, Portland, Oreg. Filed June 16, 1928.

The words "Cleansing Soap" and "Price 50¢" are not claimed apart from the other features of the mark. The name "Nell Oliver" is applicant's signature.
For Soap.
Claims use since May 23, 1928.

Ser. No. 268,644. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed June 25, 1928.

No claim is made to the printed matter appearing on the drawing with the exception of the words "Flit" and "Stanco Incorporated."
For Liquid Cleansing Compounds and Detergents for use on Glass, Porcelain, Tile, and the Like and for Laundering Operations.
Claims use since May 25, 1928.

Ser. No. 268,768. FRANK A. BUASS CO., INC., Brooklyn, N. Y. Filed June 28, 1928.

For Metal Polishes.
Claims use since about Feb. 29, 1928.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 203,464. LOUIS B. FRANCHINA, Cleveland, Ohio. Filed Oct. 6, 1924.

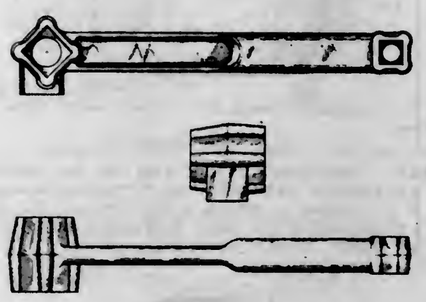
76,119. HATRACK. JOHN BROCH, Corona, N. Y. Filed June 2, 1928. Serial No. 26,974. Term of patent 3½ years.

The ornamental design for a hatrack as shown.

76,120. RACK. JAMES H. BURDETT, Flossmoor, Ill. Filed Nov. 21, 1927. Serial No. 24,224. Term of patent 7 years.

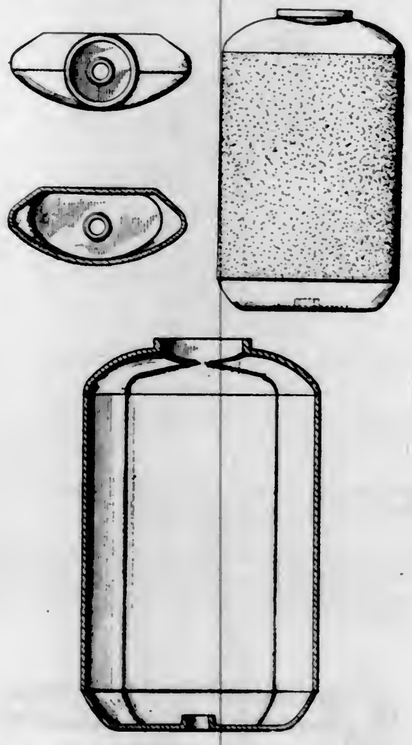


The ornamental design for a rack as shown.

76,121. DRESS. KATHERINE E. BURNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1928. Serial No. 26,334. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.

76,122. COMBINED POLE-LINE WRENCH AND HAMMER. CHARLES L. CLARK, Pittsburgh, Pa., assignor to A. Bishop Chance, Centralia, Mo. Filed Apr. 2, 1928. Serial No. 26,090. Term of patent 14 years.

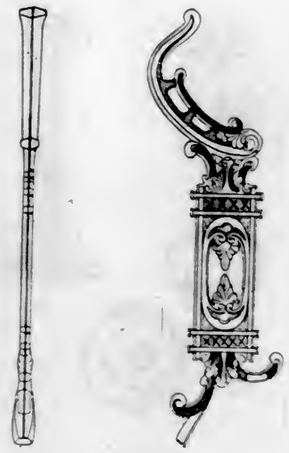


The ornamental design for a combined pole line wrench and hammer, as shown.

76,123. TEXTILE FABRIC. RICHARD COCKING, Waltham, Mass. Filed May 10, 1927. Serial No. 21,908. Term of patent 3½ years.

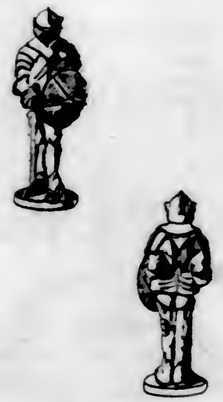
The ornamental design for a textile fabric as shown.

76,124. LIQUID-COOLER BOTTLE. FRED W. COOK, Michigan City, Ind., assignor to Perfection Cooler Company, Michigan City, Ind. Filed Apr. 2, 1928. Serial No. 26,092. Term of patent 14 years.



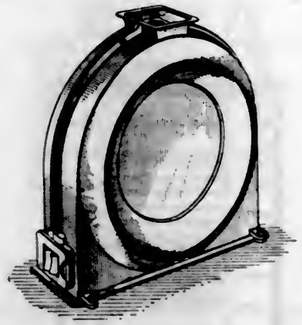
The ornamental design for a liquid cooler bottle as shown.

76,125. LIGHTING-FIXTURE ARM OR ARTICLE OF ANALOGOUS NATURE. JOHN DI GAUDIO, Brooklyn, N. Y., assignor to Modern Lighting Fixture Co., Inc., a Corporation of New York. Filed June 2, 1928. Serial No. 26,976. Term of patent 3½ years.



The ornamental design for a lighting-fixture arm or article of analogons nature substantially as shown.

76,126. LIGHTING-FIXTURE BRACE OR ARTICLE OF ANALOGOUS NATURE. JOHN DI GAUDIO, Brooklyn, N. Y., assignor to Modern Lighting Fixture Co., Inc., a Corporation of New York. Filed June 2, 1928. Serial No. 26,977. Term of patent 3½ years.



The ornamental design for a lighting-fixture brace or article of analogous nature substantially as shown.

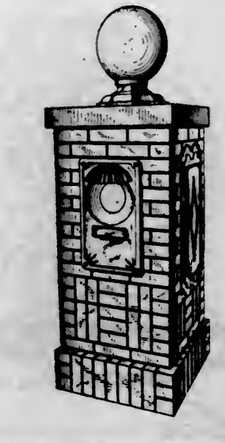
76,127. SHAKER FOR SALT AND PEPPER OR SIMILAR ARTICLE OF MANUFACTURE. JEANNE L. DRUCKLIEB, New York, N. Y. Filed Mar. 31, 1928. Serial No. 26,081. Term of patent 7 years.

The ornamental design for a shaker for salt and pepper or similar article of manufacture, substantially as shown.

76,128. HOSE-WINDING-MACHINE CASING FOR USE AT FILLING STATIONS, GARAGES, AND OTHER PLACES. ALRAH B. EDWARDS, Abilene, Tex. Filed Apr. 7, 1927. Serial No. 21,500. Term of patent 7 years.

The ornamental design for a hose winding machine casing for use at filling stations, garages, and other places, as shown.

76,129. BOTTLE. WILSON D. EDWARDS, Terre Haute, Ind., assignor to The Herpicide Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1928. Serial No. 26,785. Term of patent 7 years.

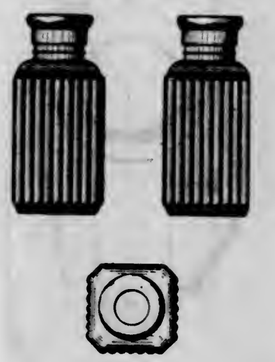


The ornamental design for a bottle as shown.

76,130. BOTTLE. WILSON D. EDWARDS, Terre Haute, Ind., assignor to Turner Glass Company, Terre Haute, Ind., a Corporation of Indiana. Filed May 31, 1928. Serial No. 26,923. Term of patent 3½ years.

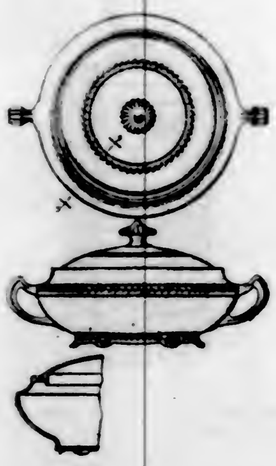
The ornamental design for a bottle as shown.

76,131. GASOLINE-METER CASING. CHARLES D. FAGAN, Sharon, Pa., assignor to Sharpsville Boiler Works Co., Sharpsville, Pa., a Corporation of Pennsylvania. Filed July 28, 1927. Serial No. 22,903. Term of patent 14 years.



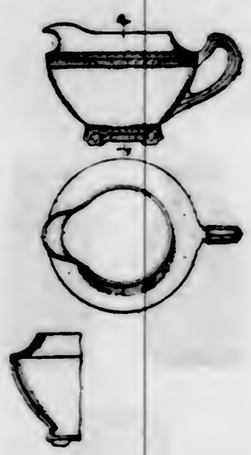
The ornamental design for a gasoline meter casing substantially as shown.

76,132. RADIATOR ORNAMENT. FRANK GENTILE, Brooklyn, N. Y. Filed Oct. 22, 1927. Serial No. 23,853. Term of patent 3½ years.



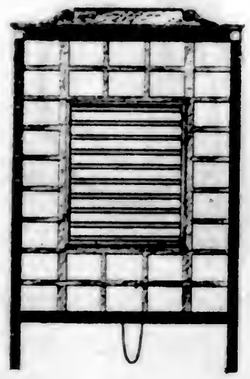
The ornamental design for a radiator ornament, as shown.

76,133. BOTTLE. LOUIS HALK, Hackensack, N. J., assignor to Northam Warren Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 26,050. Term of patent 14 years.



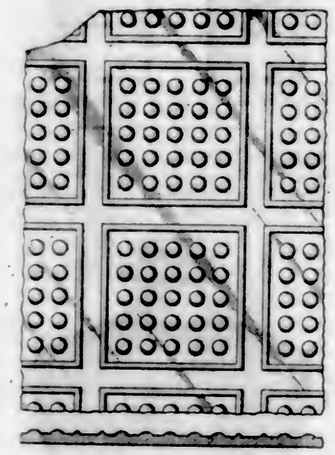
The ornamental design for a bottle as shown.

76,134. BOWL OR SIMILAR ARTICLE. GEORGE HAVILAND, Paris, France, assignor to Haviland & Co. Societe Anonyme, Limoges, France, a Joint Stock Company. Filed Jan. 10, 1928. Serial No. 24,802. Term of patent 14 years.



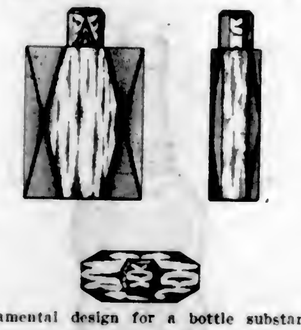
The ornamental design for a bowl or similar article, as shown.

76,135. PITCHER OR SIMILAR ARTICLE. GEORGE HAVILAND, Paris, France, assignor to Haviland & Co. Societe Anonyme, Limoges, France, a Joint Stock Company. Filed Jan. 10, 1928. Serial No. 24,805. Term of patent 14 years.



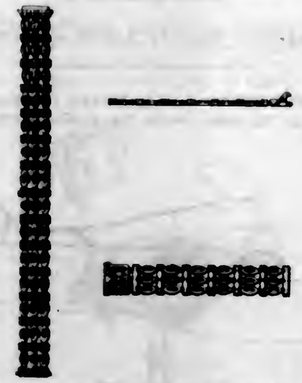
The ornamental design for a pitcher or similar article, as shown.

76,136. DISPLAY BOARD. FRANCIS T. HAYES, Richmond Hill, N. Y. Filed Mar. 30, 1927. Serial No. 21,404. Term of patent 3½ years.



The ornamental design for a display board, substantially as shown.

76,137. FIGURED GLASS. LEONARD F. JACKLIN, Streator, Ill., assignor to The Western Glass Company, Streator, Ill., a Corporation of Illinois. Filed Mar. 12, 1926. Serial No. 16,896. Term of patent 14 years.



The ornamental design for figured glass substantially as shown.

76,138. BOTTLE. FERNAND JAVAL, Paris, France, assignor to Houbigant, Inc., New York, N. Y., a Corporation of New York. Filed June 1, 1928. Serial No. 26,948. Term of patent 14 years.

The ornamental design for a bottle substantially as shown.

76,139. WATCH BRACELET OR SIMILAR ARTICLE. FELIX P. KINSLEY, St. Louis, Mo. Filed Mar. 1, 1928. Serial No. 25,627. Term of patent 7 years.

The ornamental design for a watch bracelet or similar article, as shown.

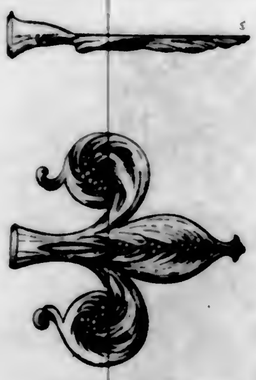
76,140. ELECTRIC-LIGHT FIXTURE. WILLIAM KLEHR, Forest Hills, N. Y., assignor to Edward F. Caldwell & Co. Inc., New York, N. Y., a Corporation of New York. Filed May 15, 1928. Serial No. 26,678. Term of patent 3½ years.

The ornamental design for an electric light fixture as shown.

76,141. WALL PAPER OR THE LIKE. FRANK E. LEITCH, Stamford, Conn., assignor to Stamford Wall Paper Company, Stamford, Conn., a Corporation of Delaware. Filed Nov. 23, 1927. Serial No. 24,259. Term of patent 3½ years.

The ornamental design for wall paper or the like as shown and described.

76,142. BOTTLE. ROBERT LIDDELL, Puteaux, France, assignor to Societe Parisienne des Produits de Beaute "Ganna Walska," Pantin, France. Filed Oct. 3, 1927, Serial No. 23,615, and in France June 21, 1927. Term of patent 7 years.

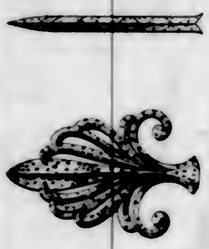


The ornamental design for a bottle substantially as shown.

76,143. FISH LIFTER. JULIA LITWIN, Buffalo, N. Y. Filed June 14, 1928. Serial No. 27,118. Term of patent 14 years.

The ornamental design for a fish lifter, substantially as shown.

76,144. END ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 23, 1928. Serial No. 25,536. Term of patent 3½ years.

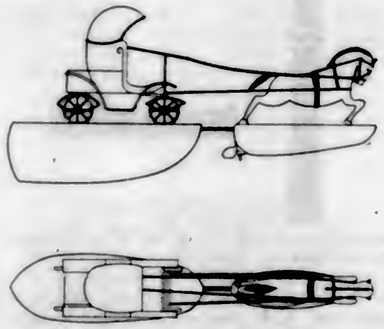


The ornamental design for an end ornament for drapery poles and rods substantially as shown.

76,145. END ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 23, 1928. Serial No. 25,537. Term of patent 3½ years.

The ornamental design for an end ornament for drapery poles and rods substantially as shown.

76,146. END ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 23, 1928. Serial No. 25,538. Term of patent 3½ years.

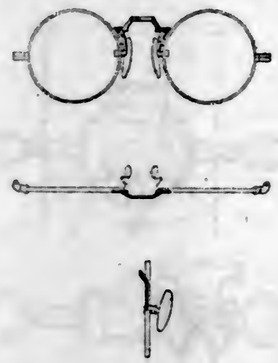


The ornamental design for an end ornament for drapery poles and rods substantially as shown.

76,147. BOTTLE. GEORGE N. MAS, Washington, D. C., assignor to American Ornamental Bottle Corporation, Lynchburg, Va. Filed Dec. 29, 1926. Serial No. 20,207. Term of patent 14 years.

The ornamental design for a bottle, as shown.

76,148. TOY BOAT. JANE R. MILLER, Los Angeles, Calif. Filed Apr. 25, 1928. Serial No. 26,455. Term of patent 7 years.

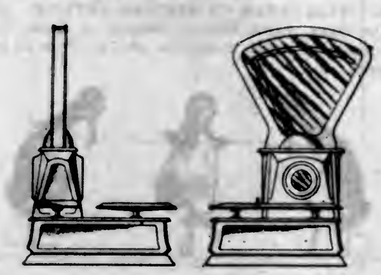


The ornamental design for a toy boat, as shown.

76,149. SPEEDOMETER DIAL. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 6, 1924. Serial No. 8,544. Term of patent 7 years.

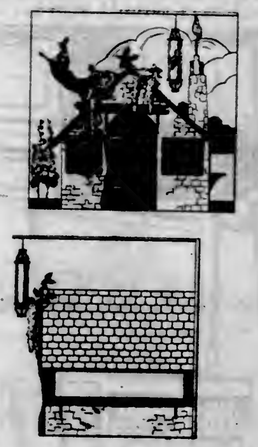
The ornamental design for a speedometer dial substantially as shown.

76,150. NOSE BRIDGE FOR EYEGLASSES. JACOB J. POMERANZ, Brooklyn, N. Y. Filed May 11, 1928. Serial No. 26,639. Term of patent 14 years.



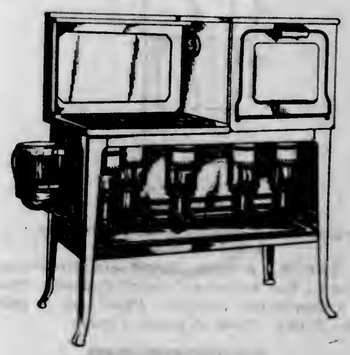
The ornamental design for nose-bridge for eyeglasses as shown.

76,151. OFFICE CHAIR. ERNEST RACZ, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 7, 1928. Serial No. 25,729. Term of patent 14 years.



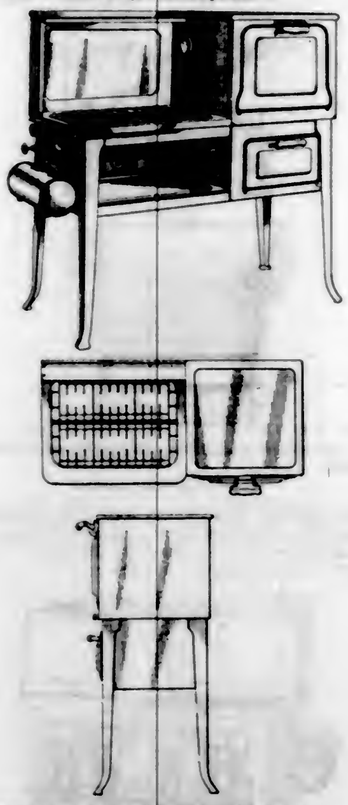
The ornamental design for an office chair, as shown.

76,152. SCALE FRAME. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed May 6, 1927. Serial No. 21,870. Term of patent 14 years.



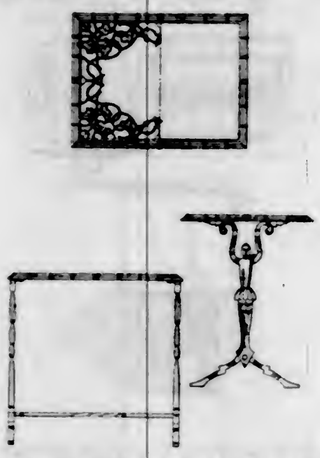
The ornamental design for a scale frame as shown.

76,153. DISPLAY BOOTH. ERNEST REICH, Chicago, Ill. Filed Feb. 17, 1928. Serial No. 25,476. Term of patent 14 years.



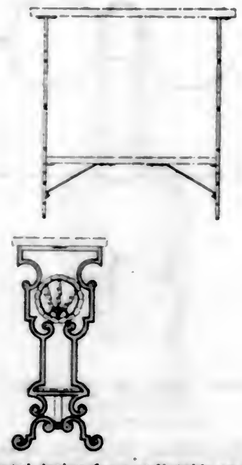
The ornamental design for a display booth, as shown and described.

76,154. STOVE. MARC RESEK, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1927. Serial No. 24,116. Term of patent 14 years.



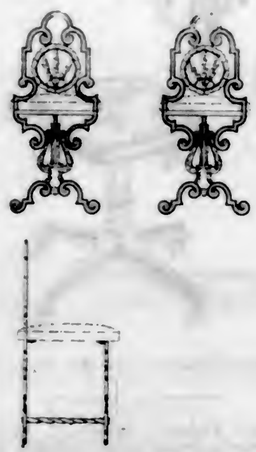
The ornamental design for a stove as shown.

76,155. STOVE. MARC RESEK, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1927. Serial No. 24,117. Term of patent 14 years.



The ornamental design for a stove as shown.

76,156. TABLE. RICHARD RYCHTARIK, Cleveland, Ohio, assignor to The Superior Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1928. Serial No. 27,004. Term of patent 7 years.

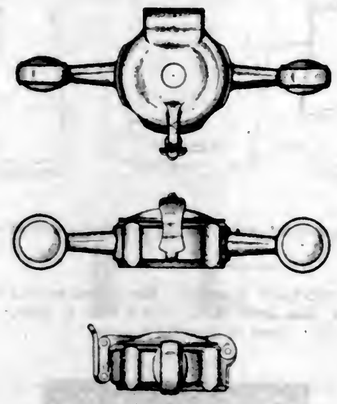


The ornamental design for a table as shown and described.

76,157. RADIOTABLE. RICHARD RYCHTARIK, Cleveland, Ohio, assignor to The Superior Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1928. Serial No. 27,005. Term of patent 7 years.

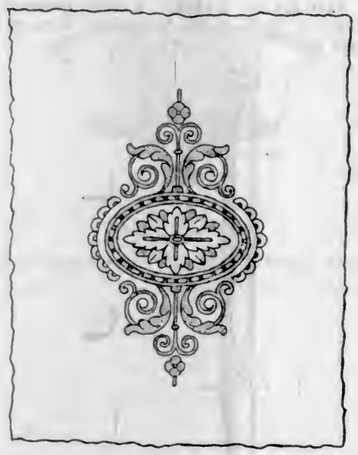
The ornamental design for a radiotable as shown.

76,158. CHAIR. RICHARD RYCHTARIK, Cleveland, Ohio, assignor to The Superior Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1928. Serial No. 27,006. Term of patent 7 years.



The ornamental design for a chair as shown.

76,159. STATUETTE OR SIMILAR ARTICLE. ALAIN SAINT OGAN, Paris, France, assignor to Louis Dangel. Filed May 21, 1928. Serial No. 26,774. Term of patent 7 years.



The ornamental design for a statuette or similar article, as shown.

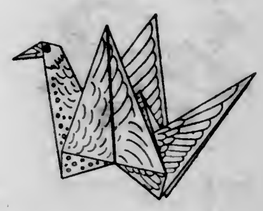
76,160. RADIATOR CAP. HERMAN SCHLAICH, Long Island City, N. Y., assignor to Motormeter Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Apr. 13, 1923. Serial No. 5,805. Term of patent 14 years.

The ornamental design for a radiator cap substantially as shown and described.

76,161. EMBROIDERED TEXTILE FABRIC. WERNER SCHMID, White Plains, N. Y. Filed Jan. 19, 1928. Serial No. 24,918. Term of patent 3½ years.

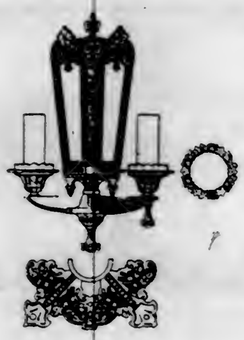
The ornamental design for emboridered textile fabric, as shown.

76,162. EMBROIDERED TEXTILE FABRIC. WERNER SCHMID, White Plains, N. Y., assignor to Audrey Dreifuss, Emil Dreifuss, Jerome Dreifuss, Louis Dreifuss, and Sybille Dreifuss, Copartners doing business as National Lace and Embroidery Company, New York, N. Y. Filed Apr. 28, 1928. Serial No. 26,499. Term of patent 3½ years.



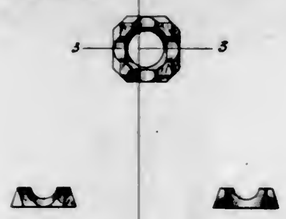
The ornamental design for embroidered textile fabric, as shown.

76,163. CONDIMENT HOLDER. EDWIN E. SLICK, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa. Filed Oct. 10, 1927. Serial No. 23,710. Term of patent 14 years.



The ornamental design for a condiment holder, as shown.

76,164. PAPER BIRD PUZZLE. VERNON B. SMITH, Chicago, Ill. Filed June 7, 1928. Serial No. 27,034. Term of patent 7 years.



The ornamental design for a paper bird puzzle, as shown.

76,165. LIGHTING-FIXTURE BRACKET. OLAF S. STROM, Los Angeles, Calif., assignor to Solar Lighting Fixture Co., Los Angeles, Calif., a Corporation. Filed May 5, 1928. Serial No. 26,582. Term of patent 3½ years.

The ornamental design for a lighting fixture bracket as shown.

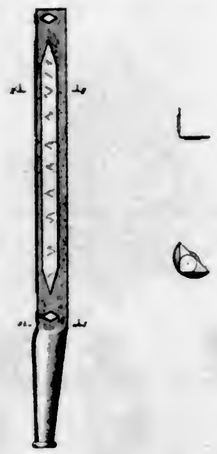
76,166. RING SETTING. GUY A. TOMLINSON, Detroit, Mich. Filed Nov. 12, 1927. Serial No. 24,093. Term of patent 3½ years.

The ornamental design for a ring setting substantially as shown and described.

76,167. AUTOMOBILE RADIATOR CAP. JESSIE CARR TYNDALL, St. Louis, Mo. Filed Jan. 16, 1926. Serial No. 16,122. Term of patent 7 years.

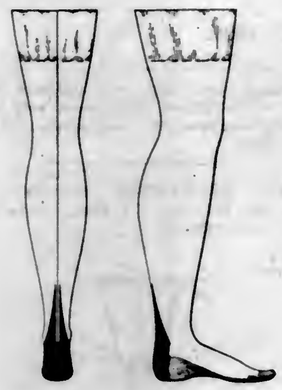
The ornamental design for an automobile radiator cap, as shown and described.

76,168. OVERSHOE. KATHRYN L. VALENTINE and GEORGE RAMSEY, Jersey City, N. J. Filed Mar. 28, 1928. Serial No. 26,051. Term of patent 14 years.



The ornamental design for an overshoe substantially as shown.

76,169. TEXTILE FABRIC. EMIL WEINER and HARRY KATIMS, New York, N. Y. Filed Feb. 1, 1928. Serial No. 25,132. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

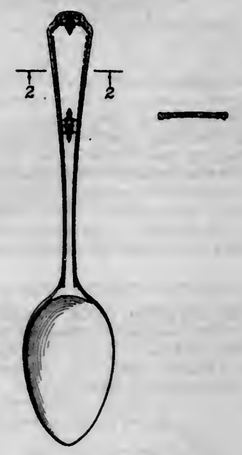
76,170. STOVE LEG. LEWIS T. WILCOX, Peekskill, N. Y. Filed Oct. 15, 1927. Serial No. 23,754. Term of patent 14 years.

The ornamental design for a stove leg, as shown and described.

76,171. STOCKING. HARRY S. WOLFF, New Rochelle, N. Y. Filed Apr. 27, 1928. Serial No. 26,482. Term of patent 14 years.

The ornamental design for a stocking, as shown.

76,172. LIGHTING FIXTURE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 19, 1928. Serial No. 27,194. Term of patent 7 years.

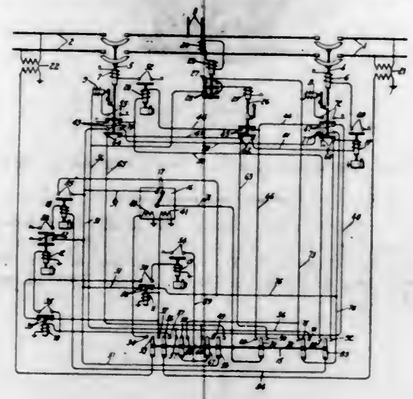


The ornamental design for a lighting fixture, as shown.

76,173. LIGHTING FIXTURE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 19, 1928. Serial No. 27,195. Term of patent 7 years.

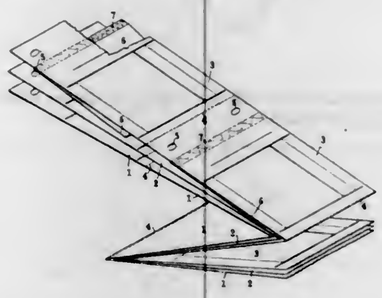
The ornamental design for a lighting fixture, as shown.

76,174. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed May 31, 1928. Serial No. 26,943. Term of patent 14 years.



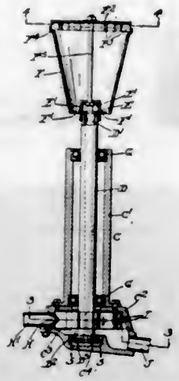
The ornamental design for a spoon or similar article as shown and described.

PATENTS



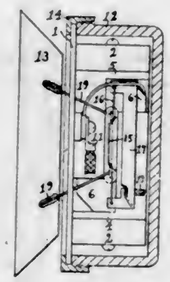
GRANTED AUGUST 21, 1928.

1,681,158. AUTOMATIC SWITCHING SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 28, 1927. Serial No. 187,402. 11 Claims. (Cl. 171—97.)



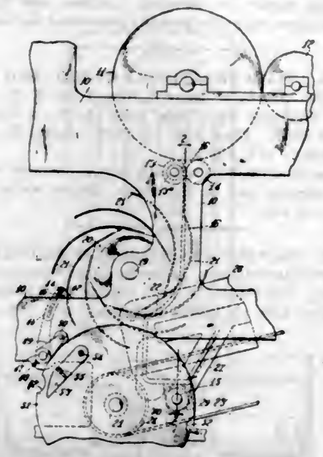
1. In combination, a load circuit, a source of current connected thereto, another source of current normally disconnected from said load circuit, means responsive to a predetermined abnormal condition of said first mentioned source for effecting the disconnection thereof from said load circuit and the connection of said other source to said load circuit, and means responsive to a predetermined phase relation between the voltages of said sources when said other source is connected to said load circuit for effecting the reconnection of said first mentioned source to said load circuit.

1,681,159. MANIFOLDING BOOK. JAMES W. ANDERSON, New York, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Nov. 16, 1923. Serial No. 675,199. 7 Claims. (Cl. 282—12.)



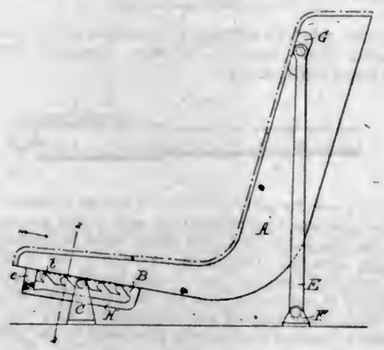
1. A traveler record strip having a longitudinal series of traveler record leaves joined end to end and a translucent auxiliary record leaf for and lapping each of a series of adjacent joined traveler record leaves and attached along a line transversely thereof to the traveler strip in the vicinity of the juncture of the lapped traveler record leaf with the next preceding record leaf, said auxiliary leaves being adapted, by virtue of their attachments with said traveler strip, to be carried forwardly successively into inscription-receiving position.

1,681,160. OIL BURNER. WILLIAM C. ANTHONY, Streator, Ill. Filed Dec. 17, 1925. Serial No. 75,926. 7 Claims. (Cl. 158—77.)



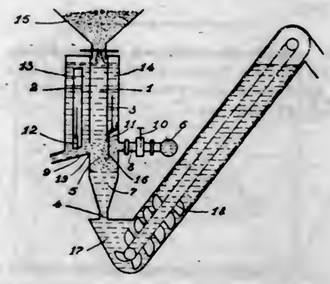
1. In combination in a furnace, a moving fuel preparing element including a generally tubular member carrying an impeller part, shaped to engage a liquid projected against it, a fuel pick up member mounted on the bottom of such tubular member in communication with the interior thereof, and an air and fuel mixing and preparing member such member provided with perforations adapted to admit air, and means for supplying fuel under pressure to such moving element, to cause the same to rotate such fuel pick-up member adapted to pick up fuel and force the same to the interior of such tubular member and from which the fuel is forced by centrifugal action to the mixing member.

1,681,161. TELEPHONE RECEIVER. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Aug. 29, 1925. Serial No. 53,350. 9 Claims. (Cl. 179—115.)



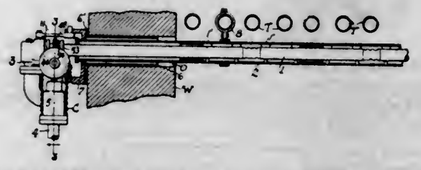
9. In combination an armature, tensioned resilient supporting means whereon said armature is mounted, an actuating coil disposed around said armature, a diaphragm, and means to connect said armature to said diaphragm.

1,681,162. DELIVERY APPARATUS FOR PRINTING PRESSES. NIELS C. ANDERSEN, Chicago, Ill., assignor to The Goss Printing Press Co., Chicago, Ill., a Corporation of Illinois. Filed May 12, 1927. Serial No. 190,926. 21 Claims. (Cl. 93—93.)



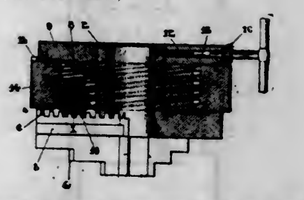
1. In a delivery apparatus for papers moving forward successively in timed relation, the combination of a receiver upon which such papers are piled, a kicker device, means for mounting the kicker device movably in position for reciprocation back and forth across the face of the receiver, and means actuated in timed relation with respect to the delivery of the papers for moving said kicker device into contact with a paper at timed intervals for causing the paper to have a different position on the receiver as compared with the papers adjacent thereto, the means for mounting and moving the kicker device being so arranged that the kicker device comes into contact with the paper in each instance by a blow on the edge of the paper while moving in a substantially straight-line motion.

1,681,163. SEAT FOR MOTOR CARS AND LIKE PURPOSES. HERBERT AUSTIN, Bromsgrove, England. Filed May 17, 1924, Serial No. 714,032, and in Great Britain May 18, 1923. 7 Claims. (Cl. 155—14.)



4. A seat for a motor car or like purpose comprising a seat proper, a seat back rigid therewith, struts forming the sole support for the rear of the seat, each pivoted at its upper end to the back of the seat proper at a point which is near the top of the back and pivoted at its lower end to the floor of the vehicle, and means for supporting the front of the seat from the floor, said means being such as to permit of the forward edge being moved when desired.

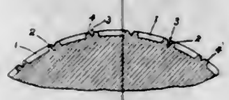
1,681,164. APPARATUS FOR WASHING AND SORTING COAL AND THE LIKE. FIRMIN BASCOUR, Brussels, Belgium, assignor to Societe Anonyme Cribla, Brussels, Belgium. Filed July 20, 1926, Serial No. 123,742, and in Belgium July 28, 1925. 4 Claims. (Cl. 209—157.)



1. In apparatus for washing and separating materials of different densities, the combination of a chamber limiting an upright column of liquid having a narrow upper portion and a wider lower portion, an inlet for said materials at the top of said upper portion, an outlet at the bottom of said lower portion, means for feeding a transverse current of liquid across the foot of said upper portion comprising a side inlet at the top of said lower portion and a side outlet facing said side inlet, and an adjustable plate projecting downwardly into said lower portion and situated between said side inlet and side outlet.

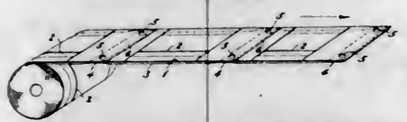
1,681,165. SOOT BLOWER. LEO JOHN BAYER and FRANK A. BAYER, St. Louis, Mo. Filed Oct. 29, 1923. Serial No. 671,436. 5 Claims. (Cl. 122—392.)

1. In a soot blower for boilers, a rotatable blower unit, a steam supply pipe therefor, a valve for controlling the supply of steam to the blower unit, rotary means for controlling the opening and closing of said valve, separate means for rotating the blower unit, and means for coupling the valve-controlling rotary means with the blower uit rotating means by a continuance of the rotation of said rotary means after the valve has been unseated.



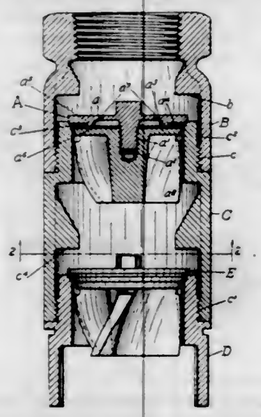
1,681,166. AUTOMATIC CHUCK. FREDERIC BECK, Neuilly, France, assignor to Societe Generale des Mandrins "Brevets Beck," Paris, France. Filed Nov. 21, 1925, Serial No. 70,539, and in France Dec. 23, 1924. 4 Claims. (Cl. 279—117.)

1. An automatic chuck comprising a work and tool carrying plate slotted at its base for the reception of jaws, said plate being formed with an axial sleeve, jaws having portions arranged in said slots and provided with racks exposed at the surface of said carrying plate, a crown member



slidable to its assembled position upon said sleeve, said crown member including pinions mounted in recesses in said crown member and engageable with said racks, said pinions being removable as a unit with said crown member, and a rotatable nut having an internal worm thread engaging said pinions outside of their axes of rotation for operating them.

1,681,167. GOLF OR SIMILAR GAME BALL. GEORGE WILLIAM BELDAM, Ealing, England. Filed May 26, 1928, Serial No. 280,899, and in Great Britain June 10, 1927. 2 Claims. (Cl. 273—62.)

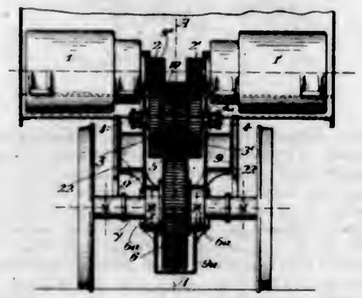


1. A golf or similar game ball having surface cross ribs or rings, and recesses or sunken parts within or surrounded by such ribs or rings, and wherein the surfaces of the ribs or rings within their outer edges are provided along the same with continuous small or narrow grooves, which intersect or run into one another, for the purpose specified.

1,681,168. RECORD STRIP. ARCHIE M. BOVIER, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed Sept. 9, 1924, Serial No. 736,687. Renewed Oct. 11, 1927. 7 Claims. (Cl. 282—12.)

1. A pad for manifolding record devices comprising, in combination, a plurality of traveler strips attached to each other transversely at regularly spaced intervals, there being a weakened line of severance immediately in advance of each of said attachments.

1,681,169. FOOT VALVE. WILLIAM F. BRANDT, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Mar. 24, 1924. Serial No. 701,615. 3 Claims. (Cl. 251—129.)



3. In a valve having a conical seat, a poppet valve having in combination an upper member, a lower member, a common conical face formed by said upper and lower members when assembled for use, an annular gasket made of material adapted to swell when wet, said gasket compressed between the peripheral edges of said upper and lower members, means for admitting the liquid above said valve through the upper plate to said gasket, said gasket extending outwardly slightly beyond the contiguous portions of said valve, and means for securing together said upper and lower members with the gasket compressed between them.

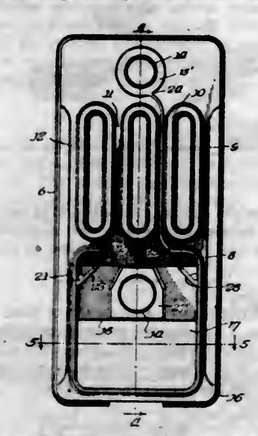
1,681,170. HAIR-TREATING METHOD AND COMPOSITION. JAMES C. BROWN, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 12, 1926. Serial No. 148,108. 13 Claims. (Cl. 36—2.)

1. A method of treating hair, which includes depositing ketatin thereon and in the pores thereof while applying heat to the hair.

1,681,171. DRIVING GEAR FOR ELECTRICALLY-DRIVEN LOCOMOTIVES. JACOB BUCHLI, Winterthur, Switzerland. Filed Feb. 24, 1927, Serial No. 170,699, and in Germany July 12, 1926. 5 Claims. (Cl. 105—113.)

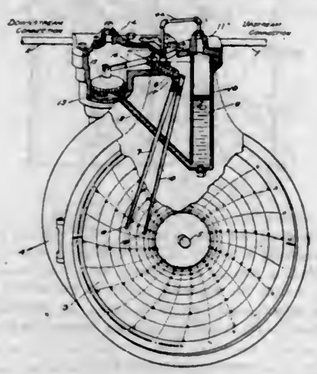
1. In an electrically driven locomotive, in combination, a driving wheel axle, two motors arranged opposite each other with respect to the longitudinal direction of the locomotive, two separate reduction gearings interposed between said motors and said driving wheel axle, a main frame for the locomotive to which the electric motors and said reduction gearings are rigidly connected, a hollow shaft surrounding said driving wheel axle, and a movable coupling interposed between said hollow shaft and said driving wheel axle.

1,681,172. NOVELTY PISTOL. FREDERICK S. COCHO, Columbus, Ohio. Filed Apr. 5, 1928. Serial No. 267,690. 3 Claims. (Cl. 42—1.)



1. In a novelty pistol, a barrel, a spring actuated firing member movable longitudinally of said barrel and projecting from one end thereof, said barrel being of substantially uniform diameter throughout its length, and a movable clip arranged upon one end of said barrel for supporting the latter in connection with the garment of the user, said clip being also adapted for engagement with the firing member to control the opposite movement of the latter.

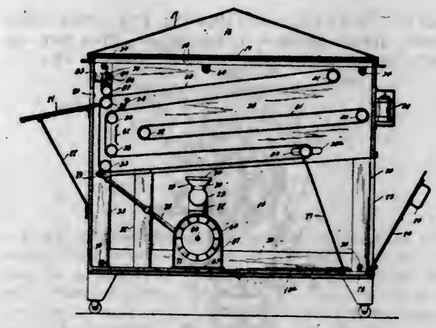
1,681,173. RADIATOR. EUGENE V. DAILY, Chicago, Ill., assignor to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1926. Serial No. 97,860. 19 Claims. (Cl. 237—17.)



1. A radiator of the character described comprising a plurality of loops including end loops, each of said loops

comprising a plurality of hollow columns and a hollow bottom header with the columns open to said header, a continuous shell integral with the walls of said columns and below said header providing a section of a combustion chamber and having a portion of its bottom wall cut away to provide an opening through the bottom thereof, a baffle

connected to said shell over said opening whereby air entering said chamber through said opening will be directed to the chamber at the sides thereof, and a rib on said shell about a portion of the combustion chamber on the side of the shell normally disposed toward the shell of the adjacent loop, said rib being adapted to abut, throughout its length, the rib on the adjacent section.

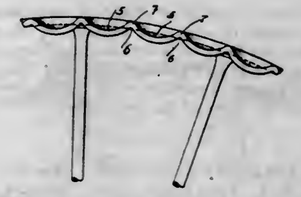


1,681,174. ORIFICE METER. JOHN C. DIEHL, Erie, Pa., assignor to American Meter Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1924. Serial No. 755,393. 4 Claims. (Cl. 234—34.)

1. In an orifice meter, the combination of a chart having designations based on the square roots of differential and line pressures to be recorded and starting at absolute zero; pen arms operating on said chart; and means responsive to differential pressure and line pressure actuating said pen arms, said means adjusting said pen arms to the differential and absolute zeros.

1,681,175. DRIER. WILLIAM DONATO, Detroit, Mich. Filed Nov. 18, 1926. Serial No. 149,102. 16 Claims. (Cl. 34—12.)

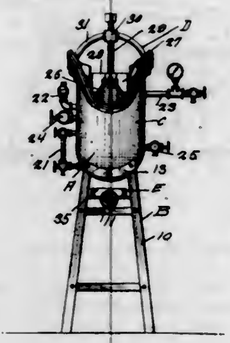
1. In a drier of the type described, a cabinet having entrance and discharge openings, means for feeding articles from the entrance opening to the discharge opening, and a unit below the feeding means for forcing heated air into contact with the traveling articles, said unit comprising a tunnel-like casing communicating at one end with the atmosphere through an opening formed in the cabinet, a



blower mounted in said casing, said casing having a discharge nozzle for the blower, a heating element mounted on the nozzle in alinement with its mouth, and an electric motor in the casing located to be coiled by the air entering the casing from the outside of the cabinet.

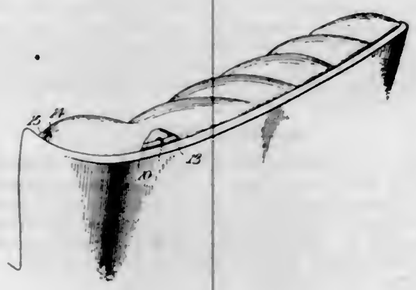
1,681,176. MULTIPLE DIFFUSING NOZZLE. LÉON DUFOUR, Versoix, Switzerland. Filed Jan. 6, 1925, Serial No. 896, and in Germany Jan. 19, 1924. 1 Claim. (Cl. 299—141.)

A multiple diffusing nozzle for converting the velocity of a fluid into pressure and constituted of a compound element having a plurality of passages each defined by uniformly diverging walls, the opposing walls of each passage enclosing angles of substantially 10°, the whole to the effect that the multiple passage nozzle possesses a total outlet aperture considerably larger than that which could be obtained with a single passage nozzle having the same length and the same size of inlet orifice.



1,681,177. METHOD OF MAKING METAL WHEEL RIMS. ERNEST E. EINFELDT, Davenport, Iowa, assignor, by mesne assignments, to French & Hecht, Inc., Davenport, Iowa, a Corporation of Iowa. Original application filed Feb. 29, 1924, Serial No. 696,013. Divided and this application filed Sept. 29, 1924. Serial No. 740,434. 3 Claims. (Cl. 29—159.)

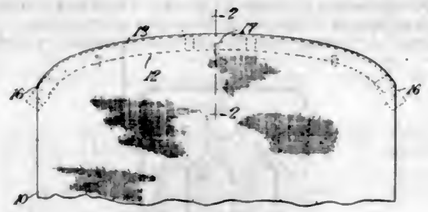
1. The method of shaping a sheet metal blank to form a wheel rim with traction lugs, which consists in bending the marginal edge of the blank at intervals alternately



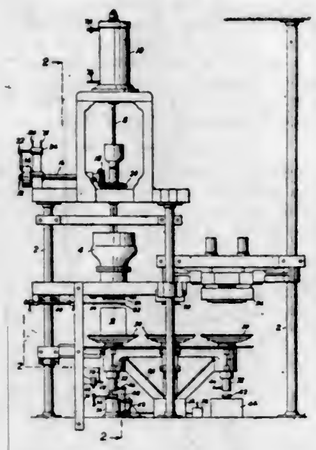
in opposite directions from a common base line coincident with said marginal edge before bending, to produce traction lugs thereon having an effective height substantially greater than the extent of bend of the metal in one direction.

1,681,178. VULCANIZING DEVICE FOR TIRE CASINGS. HARRY ERIKSON, Lowell, Mass. Filed Nov. 12, 1927. Serial No. 232,890. 1 Claim. (Cl. 18—18.)

In a tire vulcanizing device, a combined mold plate and boiler comprising an independent top plate of sheet metal forming a mold, a body portion of sheet metal defining a boiler, and out-turned flanges on the body concentric with the sides of the top plate, said top plate and flanges being rigidly secured together.



1,681,179. SEAT COVER. WALTER L. FRY, Scarsdale, N. Y., assignor to Margaret S. Fry, Scarsdale, N. Y. Filed Oct. 5, 1927. Serial No. 224,062. 5 Claims. (Cl. 155—182.)



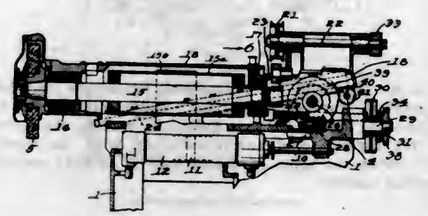
1. A structure of the kind described comprising a bar shaped to conform to and lying entirely on the top of a seat back with its end portions extending forwardly, supports to receive said end portions and take the thrust of said bar, and a cover associated with the bar and adapted to extend over the front of the seat back.

1,681,180. SEAT-COVER SUPPORT. WALTER L. FRY, Scarsdale, N. Y. Filed Feb. 3, 1928. Serial No. 251,549. 2 Claims. (Cl. 155—182.)

2. The combination with a seat back and cover therefor, having a hem at its upper edge, of a longitudinally adjustable reinforcing bar extending through the hem and having parts sliding one on the other, said bar conforming to the shape of the seat top, means on the back rest to receive and support the ends of the reinforcing bar and means entering the underpart of the hem and engaging over the meeting parts of the bar to hold the latter in place.

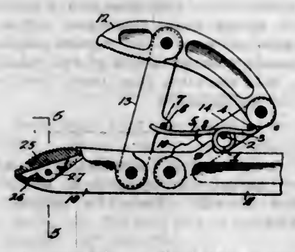
1,681,181. METHOD AND APPARATUS FOR PACKING CARTRIDGES. NORMAN D. FULTON, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 21, 1927. Serial No. 220,909. 10 Claims. (Cl. 86—20.)

1. In a machine for filling a shell with viscous material, means for feeding a charge of material to a shell when the shell and feeding means are located in filling relationship, and cutting means for severing material extending between the feeding means and the shell after the feeding means and shell have been relatively moved from filling relationship.



1,681,182. WHEEL. CHARLES W. HAMMETT, Port Washington, N. Y. Filed Sept. 1, 1926. Serial No. 132,937. 8 Claims. (Cl. 301—35.)

3. In a wheel rim having a recessed channel portion on the outer side thereof, symmetrically spaced and equally sized slots in the outer shoulder of said channel portion,

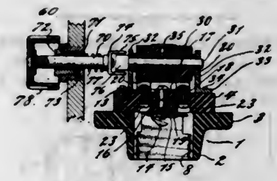


tire clamping means with symmetrically spaced and equally sized arms adapted to pass through said slots, and means attached to the channel portion for locking said clamping means into the channel when the arms of the clamp are moved between the slots while in the channel, including a pivoted device provided with spring operated pins, slots in the outer shoulder of the channel portion into which the pins can be pushed, said pivoted device being of such size as to fit snugly between adjacent arms of the clamp when the clamp is in the channel.

1,681,183. GRINDING MACHINE. JAMES N. HEALD, Worcester, Mass., and WILLIAM LAW, Hartford, Conn., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 30, 1926. Serial No. 84,881. 13 Claims. (Cl. 51—35.)

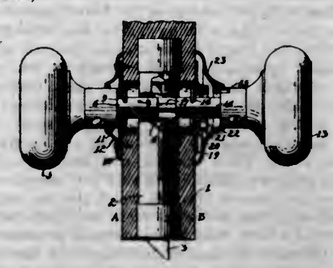
1. In a grinding machine, means for imparting rotation to substantially flat work-pieces, a grinding wheel having its axis of rotation substantially at right angles to the axis of work-piece rotation, and means for feeding said wheel into grinding position by movement in a line contained in the angle between said two axes.

1,681,184. WRENCH. ROBERT HOE, Poughkeepsie, N. Y. Filed June 28, 1924. Serial No. 722,937. 8 Claims. (Cl. 81—117.)



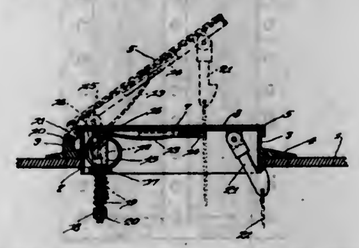
1. A wrench comprising a fixed jaw, a movable jaw, links pivotally connecting the jaws, and a spring having a coiled portion mounted on one link and having its opposite ends extended and abutting respectively against the two links to secure the tightening of the coil by the opening movement of the jaws and close the jaws by unwinding pressure of the coil.

1,681,185. METHOD OF TREATING PARTIAL OXIDATION PRODUCTS. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Filed Nov. 5, 1919. Serial No. 335,940. 19 Claims. (Cl. 87—16.)



1. In the treatment of aliphatic hydrocarbons which already contain artificially-introduced chemically-combined oxygen to different degrees of oxidation including aldehyde-like bodies and oxygenated organic acids, the steps consisting of separating the acids from the other constituents of the mixture, and forming salts of said acids.

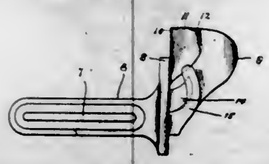
1,681,186. ELECTRICAL FITTING. JOSEPH S. JONES and SAMUEL N. MEAD, Jr., Brooklyn, N. Y., assignors to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed June 11, 1923. Serial No. 644,627. 2 Claims. (Cl. 173—352.)



1. An electrical fitting including a tubular body and a contact base closing one end of the body, said base and body of insulating material, the base carrying an internally threaded socket extending into the body, fixed and movable contacts on the face of the base remote from the body, the movable contacts being normally spring urged to open position, and a rotor journaled on the base above the movable contacts and having cam portions to move the contacts to closed position.

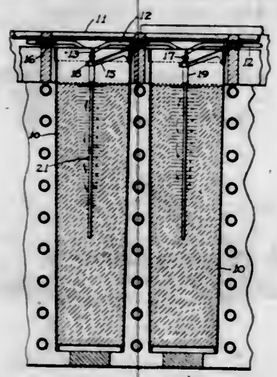
1,681,187. LATCH. ARCHIE KEESLING, Campbell, Calif. Filed Oct. 19, 1926. Serial No. 142,658. 6 Claims. (Cl. 292—359.)

1. A device of the character described, comprising a latch-bar and an operating element operatively connected thereto to advance or retract the same, an operating spindle member engaging said element and movable relative thereto, a fixed support for said device, and interlocking means inserted between the fixed support and movable spindle member and rendered operable by movement of the latter relative to the support.



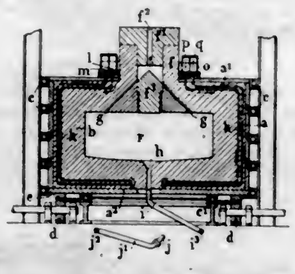
1,681,188. DOOR OPENER. LOUIS EUGENE KUPFER, Chicago, Ill. Filed Apr. 8, 1927. Serial No. 182,082. 1 Claim. (Cl. 16—1.)

In a device of the class described and in combination, a body frame, a movable frame hinged to one side of the body frame, spring members attached at one end to the body frame and their other ends loosely engaged with the movable frame for normally urging the same away



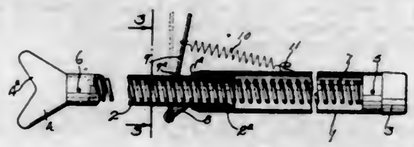
from the body frame, a perforated ear extending inwardly from one side of the body frame, a rod having pivotal connection with the movable frame and movable through said ear, a nut on the lower end of the rod, and a coil spring on the rod between the nut and ear to limit movement of the movable frame.

1,681,189. DEVICE USED IN THE MAKING OF GARMENT COLLARS. NORMAN J. MANGINI, Rochester, N. Y. Filed Apr. 13, 1926. Serial No. 101,789. 2 Claims. (Cl. 112—150.)



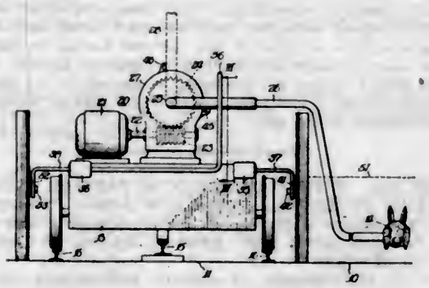
1. A device of the class described comprising means providing two channels at the intake end of the device, one above the other, said channels communicating at one side and the walls of one of the channels being arranged to turn an edge of a top collar travelling in the lower channel and having its edge extending into the upper channel the lower channel opening throughout its length laterally at the side opposite that which communicates with the upper channel, means providing a pressure channel beyond said two channels with its bottom in a horizontal plane with the bottom of the lower channel through which the turned edge, a lining and the top collar pass after issuing from the first two mentioned channels said pressure channel opening laterally throughout its length on the side on which the lower channels open, means providing above said pressure channel an additional channel through which a collar cloth may pass said additional channel opening laterally throughout its length on the same side as the lower channel, and means providing beyond said pressure channel and said last mentioned channel, a pressure channel through which the top cloth lining, the turned edge and the collar cloth may pass before issuing from the device, said last mentioned pressure channel opening laterally throughout its length on the same side as the lower channel with its bottom in a horizontal plane with the bottom of a lower channel.

1,681,190. RAW-WATER ICE-MAKING SYSTEM. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Sept. 1, 1922. Serial No. 585,604. 2 Claims. (Cl. 62—159.)



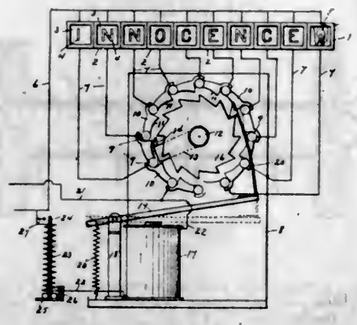
1. In a raw water system, a can, and an air pipe extending down into the can and having a bottom opening and apertured at the side extending diagonally downward from the inside of the pipe.

1,681,191. APPARATUS FOR REFINING METALS. JUVENAL MAXIMOFF and MARIA STELLA DE COSTA, born VINCENT, Versailles, and ROBERT PAUL DANIEL KREBS, otherwise known as LUC GALLICANNE, Paris, France. Filed Jan. 6, 1926, Serial No. 79,584, and in France Nov. 28, 1925. 13 Claims. (Cl. 266—34.)



1. An apparatus for the refining of metals comprising a rotatable furnace, means for rapidly rotating the furnace about its vertical axis, means for heating the interior of the furnace, and means rotatable with the furnace for cooling the walls of the furnace to prevent excessive heating thereof.

1,681,192. VEHICLE BRAKE-PEDAL-HOLDING MEANS. ARTHUR C. MCBRIDE, San Diego, Calif. Filed Feb. 23, 1926. Serial No. 89,922. 4 Claims. (Cl. 74—81.)

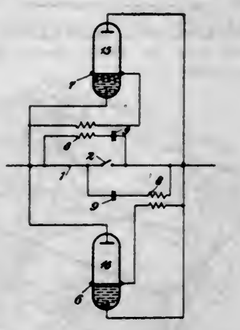


1. In a device of the class described, a pair of telescoping tubes, a spring means positioned within said tubes tending to force the same in one extreme position, and friction stop means mounted on one of said tubes tending to frictionally hold the other from being forced against the action of the spring means.

1,681,193. DOG-RACING APPARATUS. SOLOMON M. PINELES, Chicago, Ill., assignor to Harry B. Staver. Filed Sept. 26, 1927. Serial No. 221,865. 8 Claims. (Cl. 272—4.)

1. In a dog racing apparatus comprising a racing course, a rail track along said course and an electrically propelled carriage on said rail track, a lure supported by said carriage, a reversible electric motor for moving said lure towards and away from said course, energizing circuits for said motor, and switching means for causing said motor to rotate in one direction for lifting said lure and to rotate in the opposite direction to lower said lure.

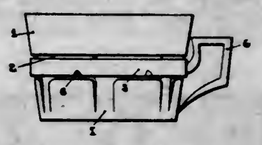
1,681,194. SIGN FLASHER. JOHN G. RUCKELSHAUS, Newark, N. J. Filed Oct. 23, 1924. Serial No. 745,347. 6 Claims. (Cl. 200—11.)



6. In an electric switch of the class described, a series of contact posts arranged in circular spaced relation about a center, a bridging member carried by each of said posts and consisting of an arm projecting toward the next adjacent post in the series, said arm having its inner edge curved to form a cam and being provided at its outer free corner with a stop finger positioned to engage the next succeeding post upon the arm being swung to the inner limit of its movement and thereby close contact with said next succeeding post, spring means urging said fingers into contact with the respective posts, a camming member pivoted concentrically of the series of posts and positioned to successively engage the cam surfaces of said bridging members, and means to rotate said camming member, said camming member and the cam surface of the bridging members being arranged for simultaneous closing of each contact and opening of the next succeeding contact.

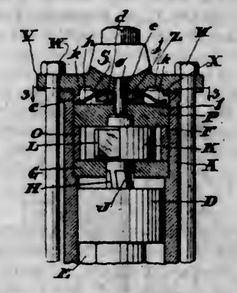
1,681,195. PROCESS FOR PRODUCING ZIRCONIUM COMPOUNDS. FRIEDRICH RÜSBERG, Mannheim, and PAUL SCHMID, Mannheim-Wohlgelegen, Germany, assignors to the Firm Rhenania-Kunheim Verein Chemischer Fabriken A.-G., Berlin, Germany. Filed Nov. 12, 1927, Serial No. 232,934, and in Germany Dec. 13, 1926. 6 Claims. (Cl. 23—16.)

1. In the process of producing zirconium compounds the steps comprising mixing zirconium ores with earth alkalies and earth alkali metal halogenides in absence of carbonaceous matter, heating the mixture to sintering temperature, treating the sintered product with a quantity of hydrochloric acid insufficient to dissolve the basic constitutents of the product, separating the solution, and adding hydrochloric acid thereto.



1,681,196. DEVICE FOR BREAKING THE CONNECTIONS OF ELECTRIC CIRCUITS. REINHOLD RÜDENBERG, Berlin-Grunewald, RUDOLF G. BERTHOLD, Berlin-Siemensstadt, and KARL DONAT, Berlin-Charlottenburg, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed July 2, 1926, Serial No. 120,194, and in Germany June 30, 1925. 8 Claims. (Cl. 175—294.)

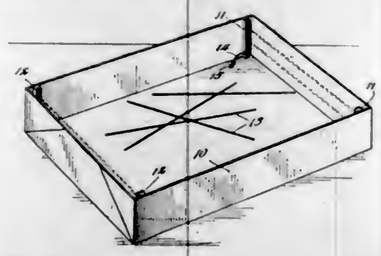
1. In a device for breaking an electric circuit by means of a gas discharge tube having at least one ignition electrode and being connected in parallel relation to the main switch, an oscillation circuit connected to the two



sides of said switch and adapted to be excited by the opening arc of said switch and to operate the ignition elecrode of said gas discharge tube.

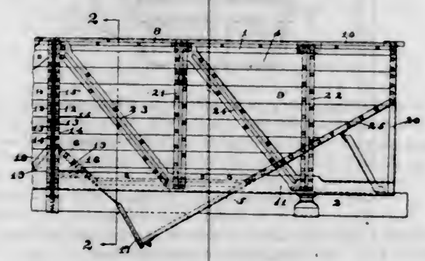
1,681,197. VESSEL WITH HANDLES. RENÉE RUEFF, Paris, France, assignor to Société Economique de Paris, Paris, France, a Corporation of France. Filed July 29, 1927, Serial No. 209,331, and in France May 21, 1927. 1 Claim. (Cl. 65—13.)

A vessel comprising in combination a cup provided with a circumferential groove, the bottom wall of said groove being formed with a plurality of inclines, said cup being formed with a plurality of other grooves leading into the circumferential groove at an angle, a detachable collar with a handle, said collar being provided with a plurality of projecions adapted to enter said circumferential groove through said other grooves and to engage said inclines by rotation of said collar, to cramp the cup.



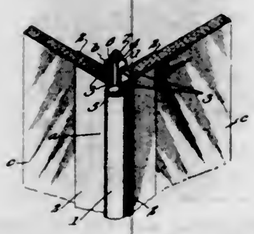
1,681,198. ROCK DRILL. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 18, 1926. Serial No. 149,128. 8 Claims. (Cl. 121—19.)

1. In a fluid actuated rock drill, the combination of a cylinder having a piston chamber with an enlarged bore at one end, a valve block in the bore, a back head for the cylinder cooperating with the valve block to form a valve chamber, means extending through the valve chamber for



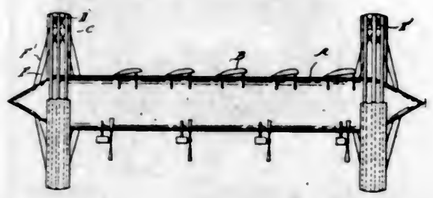
conveying cleansing fluid through the drill, and a spring in the valve chamber encircling the said means pressing against the back head and the valve block to hold said valve block immovable in the bore.

1,681,199. PACKING BOX. MAURICE SPITZER, New York, N. Y. Filed Nov. 18, 1927. Serial No. 234,064. 2 Claims. (Cl. 206—7.)



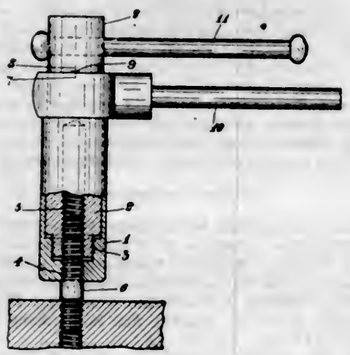
1. A packing box for garments having a pair of open slideways on its sides near each of its ends, and a plurality of rods adapted to be inserted in each pair of slideways from their upper ends so that each dress may be folded over a rod as the box is packed.

1,681,200. CAR CONSTRUCTION. GEORGE A. SUCKFIELD, Avalon, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 19, 1926. Serial No. 110,057. 6 Claims. (Cl. 105—249.)



1. In a car wall, a metallic framing, a member secured to said framing and extending inwardly through the plane of said wall, and sheathing secured to said framing independent of said member.

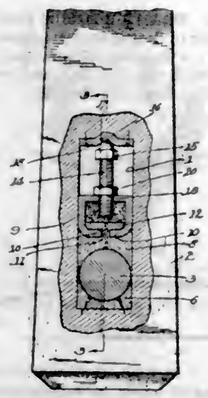
1,681,201. ANGLE BAR FOR SHOW WINDOWS AND THE LIKE. HENRY F. A. WACHTER, Peru, Ill. Filed Dec. 8, 1925. Serial No. 74,012. 1 Claim. (Cl. 189—78.)



An angle bar for show windows and the like, comprising a pair of similar interchangeable pane-engaging strips adapted to be bent so as to be arranged at the juncture of the panes to be secured and contacting with opposite sides of said panes, and a bolt having its head detachably engaged by one of said strips and movable therein when in adjusted position and carrying a nut adjustably cooperating with the other of said strips for clamping the panes between the strips.

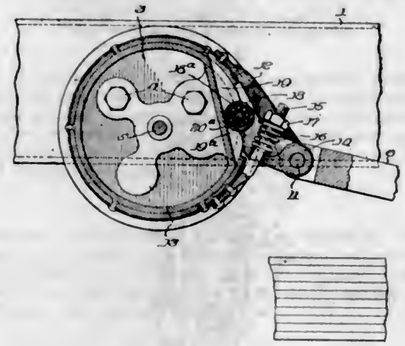
1,681,202. SAFETY APPLIANCE FOR AEROPLANES. WILLIS C. WARD, Orchard Lake, Mich. Filed Sept. 12, 1927. Serial No. 219,029. 2 Claims. (Cl. 244—2.)

1. The combination with an aeroplane having a fuselage, of cushioning means surrounding said fuselage comprising annular inflated tubes and a skeleton framework connecting said tubes with the body of the fuselage.



1,681,203. STUD SETTING AND LOOSENING TOOL. NILS HALVAR WESTERBERG, Hjorthagen Vartan, Sweden. Filed Dec. 1, 1924, Serial No. 753,059, and in Sweden Dec. 10, 1923. 4 Claims. (Cl. 81—53.)

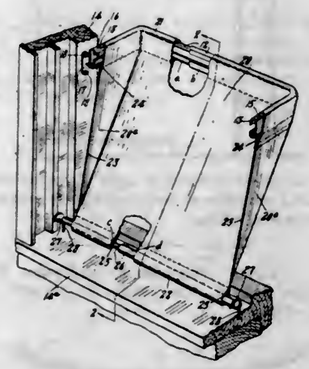
1. A tool for fastening and loosening studs, comprising two members provided with screw-threaded holes for receiving a stud, and each provided with a handle, the threads of said holes being of the same pitch, said members being joined by means of screw-threads in such manner that by being turned in relation to one another they will be jammed onto a stud screwed into the holes in the members.



1,681,204. ADJUSTABLE BEARING. JAMES W. WHITELOCK and JAMES W. CASE, La Habra, Calif. Filed July 22, 1925. Serial No. 45,237. 4 Claims. (Cl. 308—67.)

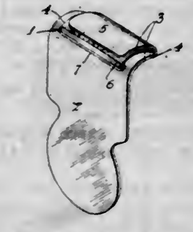
2. The combination of a split bearing, a hollow block open at its bottom and having webs projecting from its side walls, and a backing on one section of the split bearing adapted for reception in the open bottom of the hollow block with the projecting webs overlying the backing so as to prevent displacement of the section of the split bearing on which the backing is formed and close the bottom of the hollow block whereby the hollow block forms a reservoir,

the backing and the section of the split bearing upon which it is formed having a bore opening therethrough from the reservoir to the bearing surface of the split bearing.



1,681,205. SHOCK ABSORBER. THERON H. WILLIAMS, Chicago, Ill. Filed Oct. 4, 1926. Serial No. 139,298. 16 Claims. (Cl. 188—130.)

1. A shock absorber adapted to retard the relative movement between two parts of a vehicle, comprising a curved friction member on one of said parts, a band engaged by said member, means connected to the other part for rotating said band in accordance with such movement, said friction member having cam means associated therewith, and means operable upon the rotation of said band and controlled by said cam means for increasing the friction between said member and band in accordance with the rotational movement thereof in either direction.

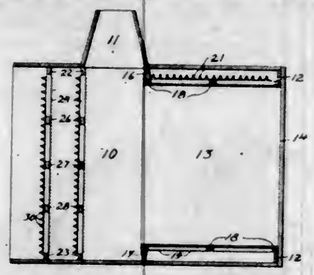


1,681,206. WINDOW VENTILATOR. OSBORNE R. WITTER, Swampscott, Mass.; Lawrence Osborne Witter administrator of said Osborne R. Witter, deceased. Filed Oct. 21, 1927. Serial No. 227,668. 2 Claims. (Cl. 98—99.)

1. A window ventilator comprising an angular upper cross-bar including a neck portion and arms projecting laterally therefrom and having securing means attachable to upright members of a window casing, to support the cross-bar, and maintaining the neck portion invariably spaced from the casing, a straight lower cross-bar formed to extend between said upright members, and having means attachable to the sill member of the casing, and a flexible windshield having an elongated upper edge, formed by an upper pocket adapted to receive the neck portion and the

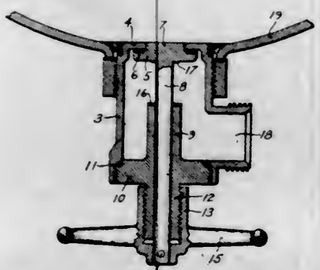
arms of the cross-bar, a shorter lower edge, formed by a lower pocket adapted to receive the lower cross-bar, and intermediate straight edges extending between said pockets, the upper cross-bar being composed of sheet metal having stiffening flanges formed on the opposite longitudinal edges of the neck and arm portions thereof, so that said cross-bar is of minimum weight and adequate stiffness.

1,681,207. CORN RAZOR. EDWARD H. ANSHELM, Brooklyn, N. Y., assignor to Akon Safety Razor Co., Inc., New York, N. Y., a Corporation of New York. Filed June 12, 1926. Serial No. 115,446. 1 Claim. (Cl. 30—23.)



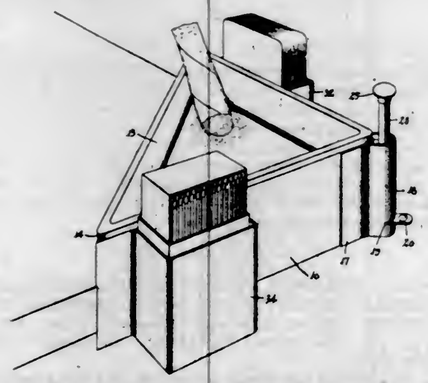
A corn razor embodying an elongated sheet metal blank provided intermediate its ends with a transverse slot, one end of the blank serving as a handle portion and the other end of the blank being returned upon itself to form a clamping portion, and a sharp edged blade permanently secured in position by the clamping portion with the sharp edge of the blade extending substantially across the slot, and parallel to the far edge of the slot, said clamping portion and blade being of curvilinear section.

1,681,208. COMBINED AMPLIFYING MEGAPHONE AND REFLEX RESONATOR FOR SOUND-EMITTING MACHINES. FRANK D. ARNOLD, Humboldt, Iowa. Filed Jan. 22, 1926. Serial No. 82,997. 13 Claims. (Cl. 181—27.)



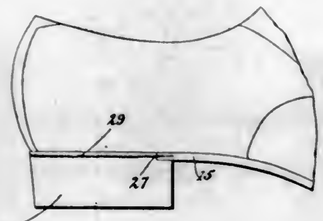
1. A combined amplifying megaphone and reflex resonator for sound emitting machines comprising a housing, a receiving device mounted on and communicating thru the

top thereof, said receiving device being formed as a truncated pyramid adapted to receive sound at its smaller end, a minor housing mounted in the first housing, a harp sur-



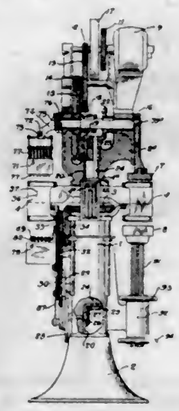
rounding the minor housing, a back plate for said minor housing, and a plurality of harps selectively arranged within the first-named housing.

1,681,209. VALVE. HERBERT E. ATKINSON, Rochester, N. Y. Filed Aug. 18, 1924. Serial No. 732,680. 1 Claim. (Cl. 251—155.)



In a valve, the combination of a body provided with a valve-seat, at its inlet end, and threaded to receive a plug at the other end; a plug screwed into the body; a disc-valve cooperating with the valve-seat; a stem supporting the valve-disc and passing through the plug; and means for moving the valve-stem to open and close the valve; the body being provided with a lateral outlet substantially flush, at its outermost portion, with the inner surface of the plug.

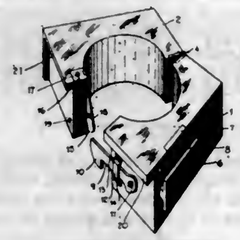
1,681,210. RECEPTACLE. REEVE H. BANKS, Pittsburgh, Pa. Filed Nov. 16, 1926. Serial No. 148,754. 5 Claims. (Cl. 45—75.)



1. A device of the character described comprising a shell having a bottom to seat on the corner portion of a table top and sides extending upwardly from the margin of said bottom, two of said sides extending below said bottom to fit astride said corner portion.

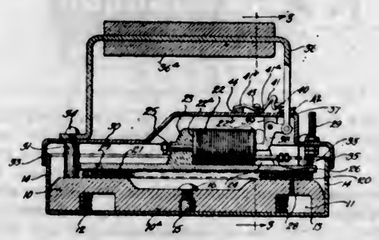
1,681,211. SHOE. WILLIAM RODERICK BARCLAY, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 24, 1926, Serial No. 131,284, and in Great Britain Sept. 1, 1925. 3 Claims. (Cl. 36—35.)

1. A shoe having an upper, an outsole and a cushion heel of yielding material, said yielding material concealing the edge of the heel-seat end of the sole except at the breast end of the heel, where the entire width of the sole overlaps the heel for a short distance.



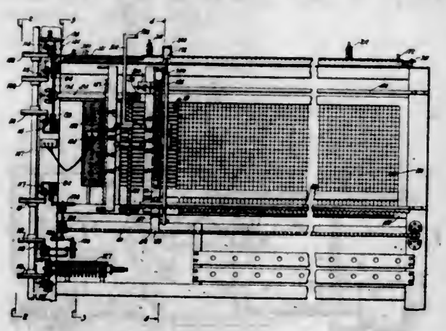
1,681,212. PROCESS OF MAKING PAPER BOXES AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Dec. 15, 1924. Serial No. 755,931. 3 Claims. (Cl. 93—49.)

2. The herein described process of making paper boxes consisting in causing box blanks to be folded over forms with flaps at opposite ends extended, and moved step by step with operating pauses between steps through a sequence of simultaneous folding, gluing of folded portions, and joint forming operations at opposite ends of the box whereby to effect the structure thereof, the respective operations resulting simultaneously on different boxes.



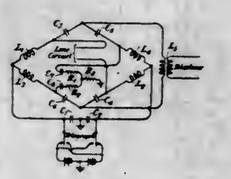
1,681,213. MILK-BOTTLE LOCK. WILLIAM BISCHAN, Bronx, N. Y., assignor to Bot-Lok Co. Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1927. Serial No. 197,579. 1 Claim. (Cl. 282—41.)

A milk bottle locking device comprising a body for attachment to a door-frame to dispose one end thereof in abutting relation with the door, said body including stationary and movable members designed to engage the neck of a bottle, said body having a lock enclosure to be closed by the door, and coacting locking means carried by said members and arranged on said enclosure, being accessible



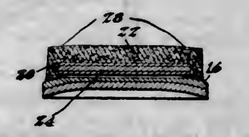
only when the door is opened, one of said locking means being a strip with a pin when downwardly arranged adapted to engage a latch and when upwardly arranged is adapted to receive notes.

1,681,214. CONSTRUCTION FOR FLATIRONS. ROBERT S. BLAIR, Stamford, Conn. Filed Feb. 26, 1923. Serial No. 621,157. 22 Claims. (Cl. 219—25.)



6. In construction for flat-irons, in combination, a casing, a movable handle member thereon, a coil within said casing, means adapted to lead current to said coil, a variable resistance controlling the flow of said current, and means controlled by movement of said handle adapted to effect said variable resistance.

1,681,215. TELEPHONE-EXCHANGE SYSTEM. WILLIAM G. BLAUVELT, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 15, 1927. Serial No. 206,088. 27 Claims. (Cl. 179—27.5.)

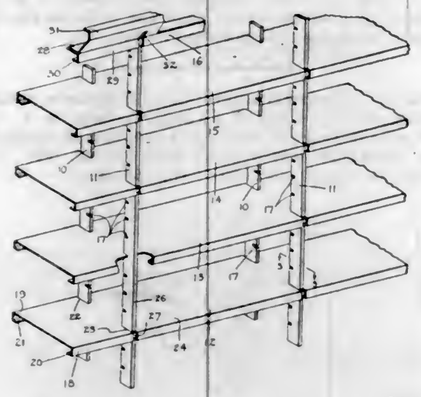


1. In a telephone exchange system in which the terminals of a group of incoming lines intersect the terminals of a group of outgoing lines and in which the terminals of incoming and outgoing lines are interconnected by means under the control of a common operating mechanism, the method of establishing connections which consists in causing the operating mechanism to select a connecting means individual to an incoming line, move it to a position for connecting with a desired outgoing line, and cause it to interconnect the incoming line to which it is individual to a desired outgoing line, and returning the operating mechanism to its position of rest.

1,681,216. COMPOSITE SET. DAVID E. BRANSON, Bloomfield, N. J., and ROY B. SHANCK, Flushing, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 26, 1927. Serial No. 171,219. 4 Claims. (Cl. 179—4.)

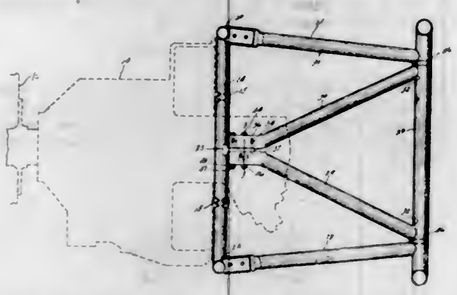
1. A transmission line, a connecting means serially included in said line, a telephone circuit associated with said line through said connecting means, a composite set including a telegraph bridge across said line circuit, telegraph legs associated with each side of said line circuit through said bridge, and auxiliary balancing circuits connecting each of said telegraph legs to sides of said connecting means opposite to those to which said telegraph legs are connected through said bridge.

1,681,217. COMPOSITE HEEL. DARIUS W. BUNKER, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 12, 1926. Serial No. 94,201. 7 Claims. (Cl. 36—35.)



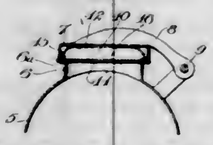
1. A composite heel comprising a base section having a concave attaching face shaped to correspond approximately to the heel seat of a shoe and an outer face the central portion of which is substantially flat and the marginal portion of which is beveled, and a molded top section including a substantially flat insert of non-moldable material at the central portion of the attaching face of said top section and surrounded by a raised, inclined, molded rim, shaped to fit approximately the beveled marginal portion of the base.

1,681,218. SHELF FIXTURE. FRITZ N. CARLSON, Minneapolis, Minn. Filed Mar. 1, 1926. Serial No. 91,352. 7 Claims. (Cl. 211—136.)



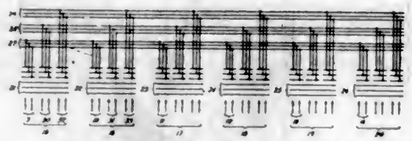
1. In combination, a standard of rectangular cross section, formed with kerfs along one edge thereof, a shelf having a flange depending therefrom and a lip extending inwardly from the lower edge of said flange, said shelf having a slot extending through said flange and lip for the edgewise reception of said standard, the portion of said shelf at the end of said slot being adapted to enter one of the kerfs in said standard, said slot being of a depth sufficient to bring

the outer edge of said standard within said flange, and a flat key of a width equal to the distance between said shelf and lip, held edgewise therebetween, and lodged on one side



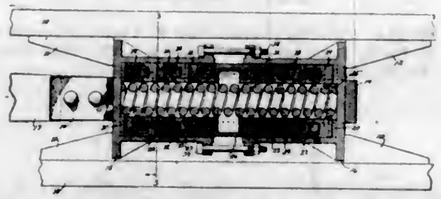
against the inner surface of said flange and on its other side against the outer edge of said standard for holding said shelf in place upon said standard.

1,681,219. ENGINE MOUNTING. HAROLD CAMINEZ, Farmingdale, N. Y. Filed Apr. 2, 1927. Serial No. 180,499. 10 Claims. (Cl. 244—31.)



10. A mount for radial internal combustion aircraft engines comprising a fuselage frame, means for fastening said engine in front of said frame to vertically and horizontally support the entire weight of the engine on said frame in a rigid manner, and compressed elastic strips interposed between the engine and the frame so that the weight of the engine is not applied to the strips for absorbing motor torque reactions.

1,681,220. KEY PAD FOR WIND INSTRUMENTS. ANTHONY CICCONE, Fort Wayne, Ind. Filed Oct. 28, 1924. Serial No. 746,378. 7 Claims. (Cl. 84—380.)

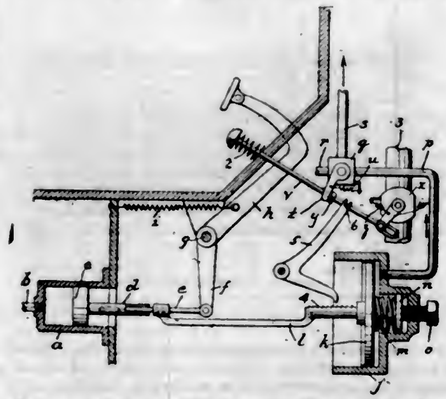


1. A key-pad for wind musical instruments comprising a filler cushion, a pliable facing therefor, and a ply of permanent impression-retaining material between the cushion and the facing.

1,681,221. TELEPHONE-EXCHANGE SYSTEM. PAUL P. COGGINS, Newark, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 16, 1927. Serial No. 219,906. 5 Claims. (Cl. 179—18.)

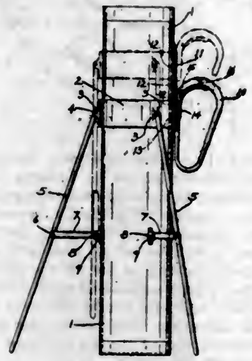
1. The combination of a plurality of groups of incoming lines, a group of outgoing lines individual to each said group of incoming lines, and a group of outgoing lines common to one subgroup only of each of said groups of incoming lines.

1,681,222. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 29, 1923. Serial No. 659,866. 13 Claims. (Cl. 213—28.)



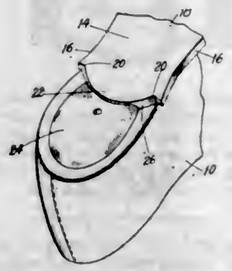
1. In a draft gear, in combination, a chambered follower, an annular series of inclined surfaces within the chamber and formed on a transverse wall thereof, a rotative element having a complementary series of inclined surfaces, spring means opposing turning movement of the rotative element, and means resisting axial movement of such element.

1,681,223. METHOD OF PRODUCING FIBROUS THREAD. JOAQUIN JULIO DE LA ROZA, Sr., Brooklyn, N. Y., assignor to Bagasse Products Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1927. Serial No. 177,465. 12 Claims. (Cl. 92—5.)



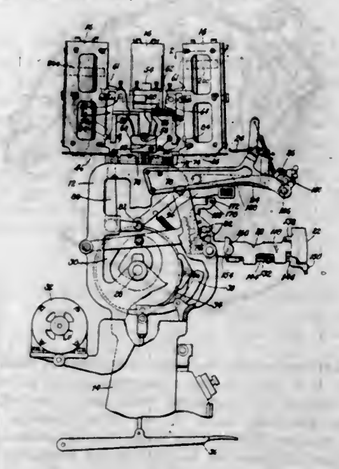
1. A method of producing textile fibers from sugar cane, which includes the steps of permitting the cane to ferment so as to initiate the generation of acids and then retting the fibrous part of the cane with running water.

1,681,224. BRAKING MECHANISM FOR AUTOMOBILES. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed Apr. 11, 1927. Serial No. 182,581. 6 Claims. (Cl. 192—3.)



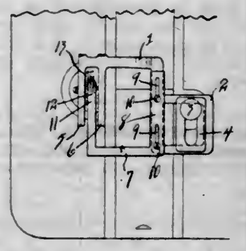
3. The combination with an automobile provided with an engine and a brake adapted to be applied under the influence of fluid pressure, of a cylinder for fluid connected with the brake, a piston in said cylinder actuatable to effect application and release of said brake, a brake pedal, a connection between said pedal and said piston whereby said piston may be operated by said pedal to effect application of the brake, means independent of said brake pedal operative to actuate said piston to effect application of the brake, an accelerator pedal for controlling the supply of fuel to the engine and means controlled by the accelerator pedal for rendering said last mentioned means operative and inoperative.

1,681,225. GOLF BAG. HERMON EARL, Piqua, Ohio. Filed May 9, 1924. Serial No. 712,181. 2 Claims. (Cl. 150—1.5.)



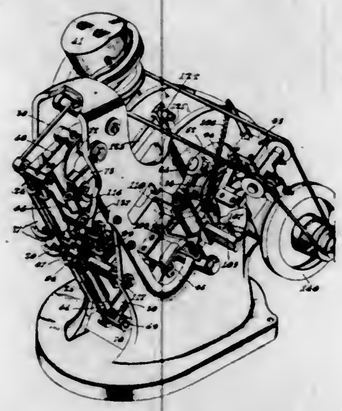
1. The combination with a golf bag, of a sleeve slidably mounted thereon, means pivotally secured to said sleeve to brace the bag for support in an upright position upon the ground, a handle on said sleeve, formed with a hole in its side adjacent the bag, the latter having holes with which the hole in the handle is adapted to be brought into registry, a locking member pivotally secured within the handle and having a projection adapted to pass through the hole therein for entrance into any one of said holes in the bag, and resilient means inserted between the locking member and the handle, for the purpose specified.

1,681,226. MANUFACTURE OF SHOES. THOMAS C. ERSKINE, Columbus, Ohio, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 15, 1924. Serial No. 743,806. 10 Claims. (Cl. 12—142.)



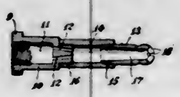
5. That improvement in the manufacture of shoes which consists in forming a tongue upon the heel-seat end of an unfinished sole extending rearwardly of the breast line of the heel, each lateral edge of said tongue forming one side of a notch the corner of which lies on a line to which the edge of the sole is to be finished, said notch being adapted to receive a projecting corner of the breast of the heel, locating the heel with respect to said sole by means of said notches, and attaching it to the shoe over said tongue.

1,681,227. PRESENTING APPARATUS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 19, 1924. Serial No. 714,349. 38 Claims. (Cl. 12—39.)



1. In an apparatus of the class described, the combination with an article-transferring member movable between an article-receiving position and an article-delivering position, of a plurality of magazines adapted and arranged to contain articles of different sizes and selectively to be located in article-delivering position by relative movement of the magazines and the article-transferring member, and the magazines and said member being relatively adjustable to enable articles of different sizes to be delivered from the magazines and directly to said member with corresponding portions of the articles similarly located thereupon.

1,681,228. HEMSTITCHER. BENJAMIN F. GILBERT, Fort Worth, Tex. Filed Sept. 13, 1926. Serial No. 135,079. 3 Claims. (Cl. 112—179.)

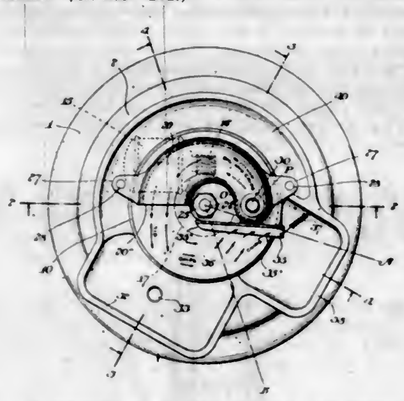


1. A hemstitcher comprising a body member having a pair of cloth holding springs disposed on opposite sides of a sewing machine needle and a loop for adjustably mounting said body on a sewing machine bed, means for fixedly attaching said loop to the machine bed, and a fabric separating member attached to said body member and having an arm provided with a slot for the passage of the needle and stitches and having bent under ends forming springs and located between said cloth holding springs.

1,681,229. FASTENER-SETTING MACHINE. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 14, 1921. Serial No. 496,666. 60 Claims. (Cl. 218—152.)

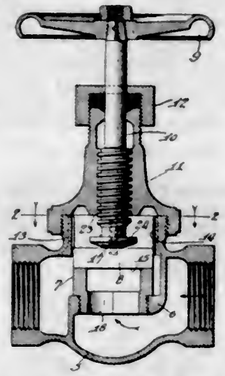
1. A fastener-setting machine comprising a fixed duplex clenching tool, two fastener-inserting tools arranged in duplex relation to cooperate with said clenching tool, means for punching holes in two work elements in confronting relation, and duplex work-feeding mechanism for transferring the punched holes from the punching locality to the fastener-setting locality.

1,681,230. GAS-SAVING DEVICE. ELIAS GOOSSIDE, Brooklyn, N. Y. Filed Jan. 25, 1927. Serial No. 163,330. 1 Claim. (Cl. 67—120.)



A device of the class described, comprising substantially two tubular shaped members threaded one upon the other, a chamber formed in the hindmost of said members, two bores provided in the wall of said chamber and constructed to converge in a forward manner, a bullet-shaped substantially flat faced tip threaded into the frontal member of the aforesaid two, the said tip being formed with two slits, disposed at a right angle to each other, across its flat-faced end-surface only, substantially as and for the purpose set forth.

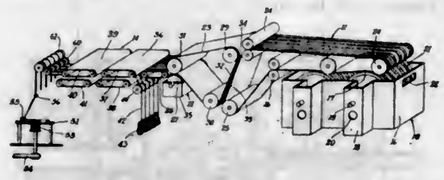
1,681,231. RAIL-HEATING DEVICE. WILLIAM H. GREENFIELD, Philadelphia, Pa. Filed May 12, 1927. Serial No. 190,932. 10 Claims. (Cl. 246—428.)



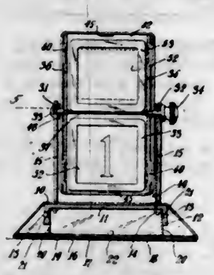
1. A rail heating device comprising a bare electric heating element, and means to support said element in spaced relation from the rail with air serving as the sole medium of heat transmission therebetween.

1,681,232. OIL CLEANER. PETER P-G. HALL, Philadelphia, Pa. Filed July 8, 1924. Serial No. 724,918. 9 Claims. (Cl. 209—222.)

1. In a machine of the class described, the combination of a magnetizable element, means for rotating the element, means for maintaining magnetized and unmagnetized zones on the element, a conduit of gradually increasing width disposed on the element, non-rotatable therewith and adapted to convey a stream of oil over said magnetized zone and to discharge said oil on the surface of the element, and automatically operative means adapted to remove from the element metallic particles abstracted from the oil and adhering thereto after the rotation of the element has carried said particles out of the line of flow of said oil and into said unmagnetized zone.



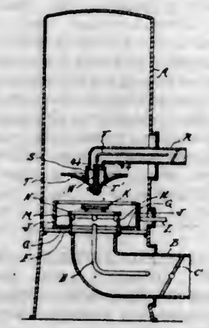
1,681,233. VALVE. JOHN ERNEST HART, Williamsport, Pa. Filed Mar. 21, 1927. Serial No. 176,906. 4 Claims. (Cl. 251—139.)



1. A valve having a casing, a valve seat, a valve disk loosely mounted on said seat, vertical valve disk guides extending away from said seat and at right angles to its plane and means for pressing said disk against said seat, said guides being spaced above said seat a distance somewhat less than the thickness of said disk.

1,681,234. PROCESS AND APPARATUS FOR MAKING YARN. JOHN ALLEN HEANY, New Haven, Conn., assignor to World Bestos Corporation, Paterson, N. J., a Corporation of Delaware. Filed July 27, 1923, Serial No. 654,117. Renewed Jan. 12, 1928. 7 Claims. (Cl. 117—2.)

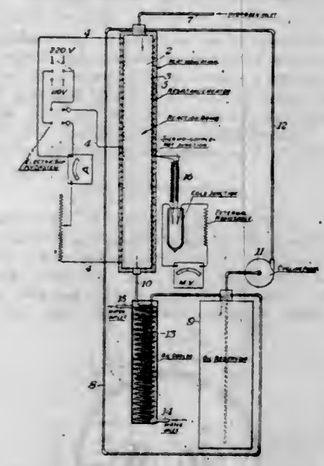
1. The hereindescribed process of making asbestos yarn, which comprises forming a pulp from asbestos material, withdrawing said asbestos material from said pulp in the form of a felted strip or band and advancing said strip or band, compressing the strip or band as it advances, moistening the strip or band as it advances, advancing a filament with the advancing strip or band and forming the strip or band around the filament, to form a strand, and twisting the advancing strand into a yarn.



1,681,235. DESK CALENDAR. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Oct. 2, 1926. Serial No. 139,136. 5 Claims. (Cl. 40—114.)

3. A desk calendar provided with a hollow rectangular base having flaring side and end walls, a bottom member having a cushioned lower surface, spring detents fixed in said bottom member, to extend into said base, and a plate fixed in said base having down-reaching apertured ends to receive said detents, said bottom member forming a close fitting closure to said base and extending slightly below the edges thereof.

1,681,236. OIL BURNER. JAMES H. JACKSON, Detroit, Mich. Filed July 2, 1927. Serial No. 202,985. 5 Claims. (Cl. 158—91.)

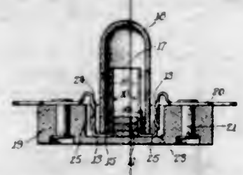


2. In an oil burner, in combination with gravity-fed means for releasing oil in predetermined quantities, a cooling pipe spacedly surrounding the delivery end of said oil pipe, an apertured baffle member positioned in axial alignment with the end of said oil pipe and through which the oil particles released therefrom are adapted to pass by gravity, an oil-confining trough member positioned subjacently of said oil pipe and said baffle member, a burner plate supported by selected portions of said oil trough member in axial alignment with the oil supply pipe and said baffle, and means for primarily heating said burner plate and for thereafter deflecting theretowards a supply of air for commingling with the oil particles atomized by contact with said burner plate.

1,681,237. INSOLUBLE SOAP AND METHOD OF MAKING AN INSOLUBLE SOAP FROM ALDEHYDE FATTY ACID MIXTURES OF MINERAL OIL. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Filed Mar. 7, 1919. Serial No. 281,197. 7 Claims. (Cl. 87—16.)

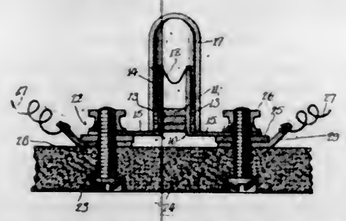
1. The method of treating a partial oxidation product of mineral oil containing aldehyde fatty acids, consisting in separating the aldehyde fatty acids from the other constituents of the partial oxidation product, and forming substantially insoluble soaps of said acids.

1,681,238. PURIFYING PARTIAL OXIDATION PRODUCTS. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Filed Dec. 14, 1925. Serial No. 75,203. 8 Claims. (Cl. 260—116.)



1. In the treatment of a mixture of hydrocarbons which are liquid at normal temperatures and pressures and which already contain artificially-introduced chemically-combined oxygen to different degrees of oxidation in the range from alcohols through aliphatic aldehyde-like bodies to oxygenated organic acids, the step consisting of purifying the same by chemically adding to unsaturated bonds thereof.

1,681,239. ELECTRICAL FUSE. CHESTER A. JOHNSON and HERVEY DANA HARLAND, Chicago, Ill., assignors to Chicago Fuse Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1924. Serial No. 748,366. 14 Claims. (Cl. 200—130.)

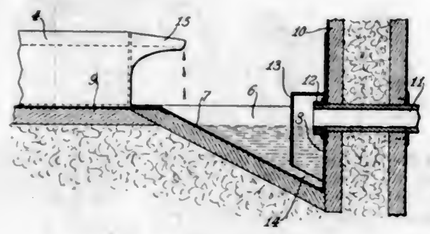


1. An electrical fuse comprising, in combination, a pair of contact members each having fuse supporting and contact legs, an insulating member holding said fuse support-

ing legs in opposed relation, a fuse element connected to said supporting legs, and a protecting case for said fuse element extending between said fuse supporting legs and

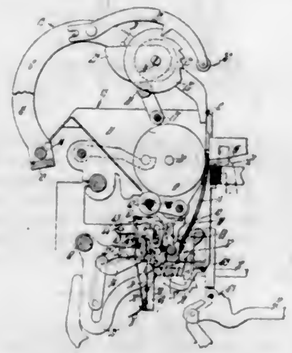
said contact legs and snugly receiving said insulating member at the end thereof adjacent the contact legs of said members.

1,681,240. ELECTRICAL FUSE. CHESTER A. JOHNSON and HERVEY DANA HARLAND, Chicago, Ill., assignors to Chicago Fuse Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1925. Serial No. 5,427. 4 Claims. (Cl. 200—131.)



1. An electrical fuse comprising, in combination, a transparent case having an insulating plug closing the end thereof, and two L-shaped metallic strips each having one leg passing through an aperture in said plug into the space within said case, the inner ends of the latter legs being joined by a fuse element, the other legs of said strips projecting laterally from said case to provide external contacts.

1,681,241. COMBINATION SWITCH. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed Dec. 15, 1922, Serial No. 607,045. Divided and this application filed Mar. 31, 1924. Serial No. 703,011. 4 Claims. (Cl. 200—167.)

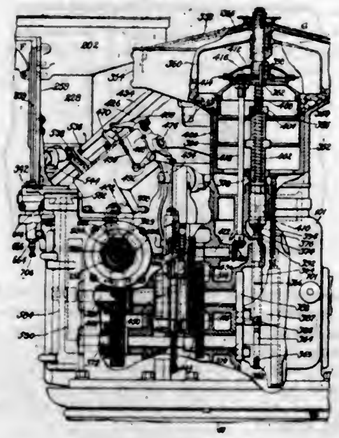


1. In a switch of the class described including a cup-shaped mounting plate, a designating plate, a transparent plate for fitting into said mounting plate and adapted to engage said designating plate, and cylindrical members extending through openings in said plates and having their ends distorted whereby said designating and transparent plates are secured together by said cylindrical members to said mounting plate and a ring member adapted to engage said transparent plate to maintain the said transparent and designating plates in their proper relation and tabs integral with said ring extending through orifices in said mounting plate to secure the same to said mounting plate.

1,681,242. SHOW-CASE REFRIGERATOR. CHARLES E. KLAUS, St. Louis, Mo., assignor to Harry L. Hussmann Refrigerator Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 11, 1926. Serial No. 80,459. 7 Claims. (Cl. 62—37.)

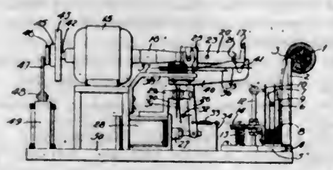
1. In a show-case refrigerator, a drip outlet, comprising, a gathering bowl below the floor level of the show case and having an upright wall adjacent a wall of the refrigerator, a conduit rising from the bottom of said bowl and along its wall, and a lateral outlet for said conduit passing through the wall of the bowl.

1,681,243. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1925. Serial No. 52,272. 9 Claims. (Cl. 197—135.)



1. In a typewriting machine, the combination with a platen, typing instrumentalities, and ribbon-vibrating mechanism, of means for rendering said mechanism normally silent, a card-holding frame for presenting a stencil-card to the types, a train of devices effective to cause said vibrating mechanism to vibrate the ribbon at the type-strokes actuated for a single line of typing by the lower edge of said carbon-holding frame in its lowermost position, and means for line-spacing the frame, said vibrating mechanism returning to silent condition upon a line-spacing operation of said frame.

1,681,244. MACHINE FOR ASSEMBLING AND MOUNTING ARTICLES. ALBERT LATHAM, deceased, Beverly, Mass., by James W. Nourbourn, administrator, Somerville, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Nov. 12, 1921. Serial No. 514,621. 149 Claims. (Cl. 218—18.)

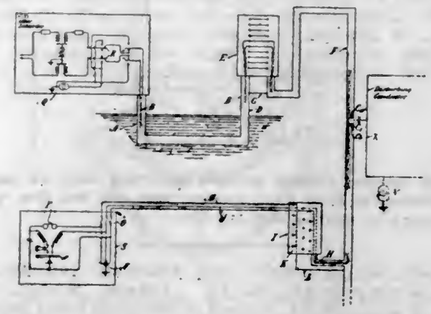


8. In a machine for arranging articles in groups on a holder, a plurality of receptacles for the articles, article-

assembling means, means for delivering articles from different receptacles to the assembling means, means for mounting the assembled group upon the holder, holder-feeding

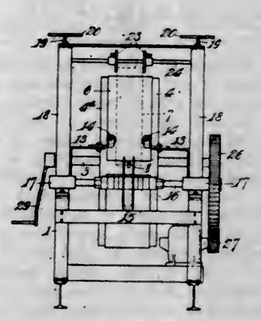
means cooperating with the mounting means, and sealing means to which the holder is advanced by the feeding means.

1,681,245. CABLE-SPLICING MACHINE. DAVID T. MAY, Port Washington, and CHARLES G. MCCORMICK, New York, N. Y., assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed May 6, 1925. Serial No. 28,320. 15 Claims. (Cl. 140—115.)



1. In a wire splicing machine, a wire support, a motor, a guide on the motor shaft adapted to receive the wires from the support, a switch operated by the placing of the wires on the guide, a circuit including a magnet closed thereby, a sleeve on the motor shaft operated by said magnet to clamp the wires between the sleeve and guide and sever the excess wire, a circuit including the motor closed by the operation of said magnet to cause said motor shaft to twist said wires, and a switch actuated by the breaking of the wire to open the motor circuit.

1,681,246. TELEPHONE SYSTEM WITH AUXILIARY SIGNALING CIRCUIT. RALPH G. MCCURDY, Englewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 26, 1924. Serial No. 695,333. 4 Claims. (Cl. 179—2.)

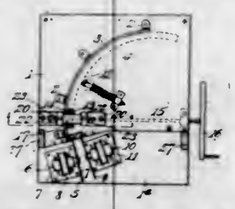


1. In combination, two telephone stations, a conductor pair extending between them to form a talking circuit, sig-

nailing apparatus at both stations, other conductor pairs, all said conductor pairs being comprised in a cable with a

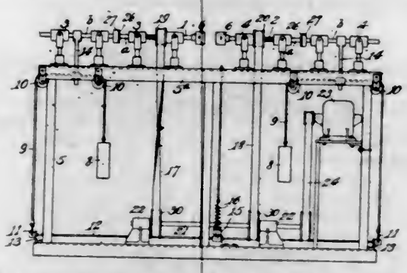
metallic cable sheath, and said sheath forming with one of the conductors of said first mentioned pair a signaling circuit comprising said signaling apparatus.

1,681,247. RUBBER-STRIP-CUTTING APPARATUS. THOMAS MULHOLLAND, Wheeling, W. Va., assignor, by direct and mesne assignments, to Valley Rubber Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 29, 1925. Serial No. 46,824. 4 Claims. (Cl. 164—61.)



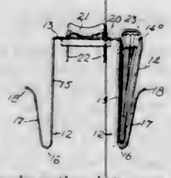
1. A machine for strip-cutting discarded solid rubber tires, comprising a carrying wheel, means for clamping a tire on the rim of said wheel, rotatable guide engageable with the edges of the tire, and a revoluble cutting disk arranged adjacent to said wheel and in facing relation to said rim and adapted to slit annularly a tire carried by said wheel as the latter is rotated.

1,681,248. MACHINE FOR TRIMMING STRIPS OF RUBBER. THOMAS MULHOLLAND, Wheeling, W. Va., assignor, by direct and mesne assignments, to Valley Rubber Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 29, 1925. Serial No. 46,825. 1 Claim. (Cl. 164—61.)



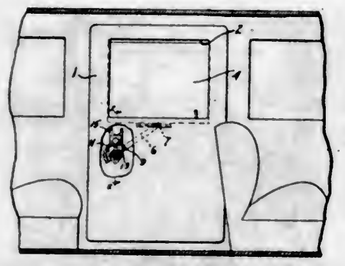
A machine for trimming rubber strips, comprising a table-like support for a strip, an arcuately curved guide carried by said support and against which the strip is held, a rotary cutting disk with respect to which said

strip is advanced lengthwise for cutting from the latter a surface layer of uniform thickness, a rotary feed disk in underlying relation to a portion of said strip, means



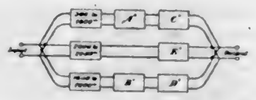
for exerting yielding pressure upon said strip for maintaining the latter firmly engaged with said feed disk, and means for rotating said feed disk.

1,681,249. MACHINE FOR FORMING SPHERICAL SOLID-RUBBER BALLS. THOMAS MULHOLLAND, Wheeling, W. Va., assignor, by direct and mesne assignments, to Valley Rubber Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 29, 1925, Serial No. 46,827. Renewed Jan. 13, 1928. 1 Claim. (Cl. 51—117.)



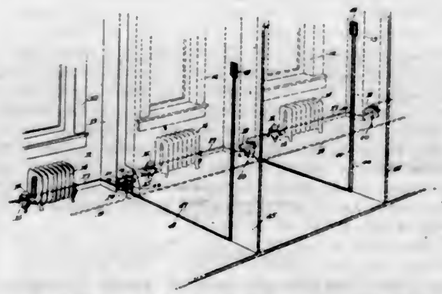
A machine for forming spherical balls from blocks of rubber, comprising a pair of alined rotatable shafts, each of said shafts having a fixed head, abrading means carried by each of said heads, each of said means being shaped to provide a hemispherical socket, at least one of said shafts being longitudinally shiftable, means tending to maintain such shaft advanced to a position in which the socket of the abrading means carried by the head thereof complements the other of said sockets, means for retracting the shiftable shaft, means for rotating said shafts in opposite directions, at least one of said shafts being formed in two sections, and a friction coupling operatively connecting said sections, said coupling comprising collars fixed on the adjacent ends of said sections, an axial cone projection borne by one of said sections in seated relation to the end of the other section, and relatively adjustable housing members having portions embracing said sections and seated against the non-confronting faces of said collars.

1,681,250. MATCH SAFE. JACOB E. NEAHR, Hartsdale, N. Y. Filed June 25, 1924. Serial No. 722,212. 4 Claims. (Cl. 206—20.)



2. A device for insertion into an ash-receiver, comprising a cover having pendent from opposite sides thereof pockets forming match-safes.

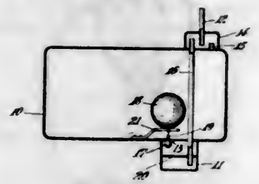
1,681,251. WINDOW-REGULATOR MOUNTING. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed May 24, 1926. Serial No. 111,432. 8 Claims. (Cl. 268—126.)



1. The combination with a support and a window regulator, including an angularly movable member, of a mounting for said member having laterally offset portions for bearing on opposite sides of said support, and means engageable with another portion of said mounting to secure said last mentioned portion to said support and to secure said laterally offset portions from disengagement from said support.

1,681,252. DISTORTION CORRECTION FOR TRANSMISSION LINES. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 11, 1926. Serial No. 134,930. 5 Claims. (Cl. 178—44.)

1. In a transmission system, the method of correcting for delay irregularities which consists in making the large portion of the delay correction mechanically and the final portions electrically.

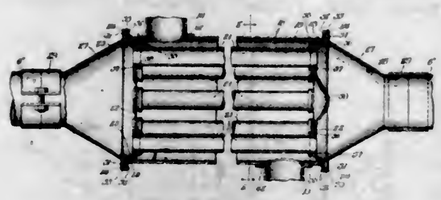


1,681,253. TEMPERATURE REGULATION. ARTHUR J. OTTO, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1927. Serial No. 163,801. 9 Claims. (Cl. 236—1.)

1. In a heat regulating system, the combination of a plurality of heat controlling pressure motors; a motive fluid conducting line connected with each such motor; at least one device interposed in such line between motors, such device including means operable at will to connect or isolate from each other the portions of said line on

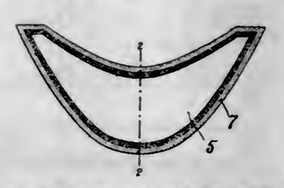
opposite sides of said device, and said device further including means for connecting a pressure fluid controlling thermostat releasably in controlling relation with said line.

1,681,254. EVAPORATOR FOR REFRIGERATING APPARATUS. STUART OTTO, Wilton, Conn., and LAWRENCE BRUEHL, Brooklyn, N. Y., assignors to Gas Refrigeration Corporation, Scranton, Pa., a Corporation of Delaware. Filed Oct. 23, 1926. Serial No. 143,549. 6 Claims. (Cl. 62—118.)



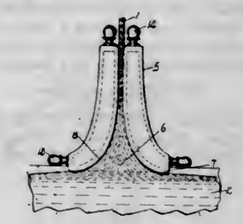
1. An evaporator for absorption refrigerating apparatus, having a sump, a liquid inlet to the upper part of the sump, a liquid outlet from the lower part of the sump, a baffle between said upper and lower parts, and means for preventing the escape of gas from said sump through said inlet whereby increase of gas pressure in said sump forces liquid through said outlet.

1,681,255. MUFFLER. ARTHUR H. QUARMBY, Lansing, Mich. Filed Jan. 12, 1925. Serial No. 1,961. 13 Claims. (Cl. 137—160.)



1. A muffler for internal combustion engines, comprising a plurality of substantially parallel tubular sections arranged around a central section designed to receive the engine exhaust gases, and means to induce a whirling motion in said tubular and central sections.

1,681,256. AUTOMOBILE HEATER. JAMES F. RALEIGH, River Forest, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,074. 3 Claims. (Cl. 257—241.)



1. In an automobile heater of the class described, the combination of a pair of flanged end heads having apertures therein, a plurality of heating tubes extending between said heads and secured in said apertures, each of said tubes having flanges adjacent its ends for engaging the inner sides of said end heads, the extremities of said tubes being spun over the outer sides of said end heads, an air heating chamber embracing said tubes and slidably supported about the same, means for circulating air through said chamber, and means for circulating exhaust gases through said tubes.

1,681,257. SHOE STIFFENER AND METHOD OF MAKING IT. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 6, 1922, Serial No. 599,413, and in Great Britain Dec. 6, 1921. 8 Claims. (Cl. 12—146.)

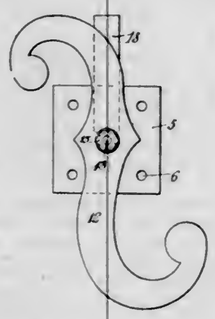
1. The method of making a toe stiffener for boots and shoes which consists in preparing a composite blank one member of which is normally stiff but may be rendered flexible by the application of a suitable agent which has no injurious effect upon leather and the other of which is normally flexible, and removing a margin of the first-named member so as to produce a finished stiffener a margin of which is composed of material which is normally flexible and is thinner than the body portion of the stiffener.

1,681,258. WIDTH MAINTAINER FOR CONTINUOUS SHEET GLASS. CLIFFORD A. ROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 24, 1924. Serial No. 701,313. 21 Claims. (Cl. 49—17.)

1. In the art of drawing sheet glass from a mass of molten glass, the process of maintaining the width of the sheet during its initial forming period, consisting in surrounding the sheet source at its edge in a manner to form a beaded edge portion on the sheet and to continuously confine and direct this edge along a predetermined path of travel, and then eliminating the beaded edge while it is still plastic.

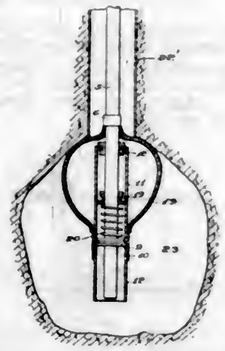
20. In sheet glass apparatus, means for drawing a sheet from a mass of molten glass, a slotted member located external of the molten bath and arranged at each edge of the sheet for contact therewith and above the surface of the molten glass from which the sheet is drawn, each slotted member having a curved heat conducting surface which envelops the sheet edge from its source upwardly for a substantial distance and from which heat is dissipated, each sheet edge contacting with its respective slotted member in the slot thereof only.

1,681,259. PRIMING MIXTURE. ARLIE W. SCHORGER, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed Sept. 24, 1927. Serial No. 221,861. 4 Claims. (Cl. 52—8.)



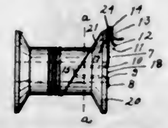
1. A printing composition containing a solid deflagrating oxide of carbon.

1,681,260. CASEMENT WINDOW. EDWIN J. SIBLEY, Westbury, N. Y. Filed Feb. 23, 1927. Serial No. 170,102. 1 Claim. (Cl. 16—163.)



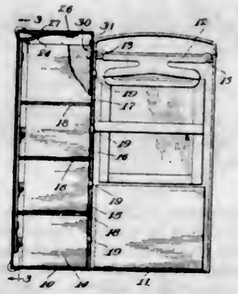
A hinge for metal casement windows comprising in combination a fixed hinge plate adapted to be secured to a vertical portion of the window frame, said plate having an integral lateral extension plate adapted to be secured to a horizontal portion of the window frame, a hinge lug adapted to be secured to the window, a movable hinge plate pivoted to and between said fixed hinge plate and lug, a slotted lug on the movable hinge plate adapted to enter through a slot in the window sash and project on the inside thereof, a slide mounted on the sash and adapted to engage the slot in the movable hinge plate to secure the latter and the window together, and a screw in the window sash accessible from the inside when the window is opened for adjusting the sash relative to said movable hinge plate.

1,681,261. COMBINED SHUTTER HOOK AND SPRING. EDWIN J. SIBLEY, Westbury, N. Y. Filed Feb. 23, 1927. Serial No. 170,103. 2 Claims. (Cl. 292—209.)



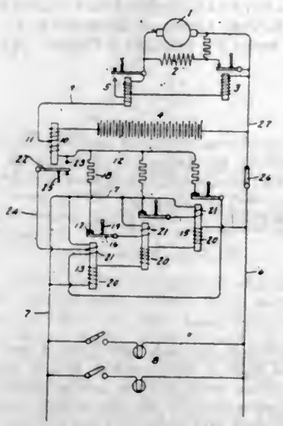
1. As a new article of manufacture a combined shutter hook and spring comprising a base plate adapted to be affixed to a wall, a bolt detachably connected to said base plate in angular relation thereto, a shutter hook detachably pivoted on the bolt a distance away from the base plate, a flat curved spring on the bolt interposed between the base plate and the shutter hook, said spring detachably engaging a hole in the base plate to prevent relative rotary movement between the base plate and bolt, said spring extending to one side of the bolt for yieldingly pressing a shutter against the hook.

1,681,262. OIL AND GAS WELL PACKER. JOHN W. SMITH, GREGG E. SAWYER, and VIRGIL L. MARTIN, Independence, Kans. Filed July 14, 1927. Serial No. 205,717. 11 Claims. (Cl. 166—10.)



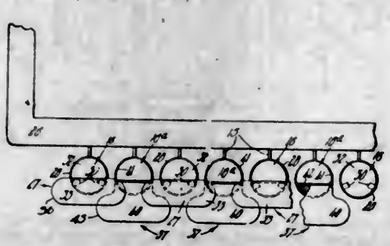
1. A well packer comprising a well tubing, a tubular member encircling said tubing, an expansible sleeve, the lower end of which is secured to said tubular member, and the upper end of which is engaged with said well tubing, the parts being so arranged that the expansible sleeve is bulged outwardly to an extent to present an upwardly facing surface of contact when the well tubing is moved downwardly with respect to said tubular member and means for locking the well tubing to the tubular member to thereby hold said sleeve in its bulged position when the well tubing is drawn upwardly to bring said contact surface into packing engagement with the mouth of the outlet from a shot hole.

1,681,263. ATTACHMENT FOR THREAD SPOOLS. BRYCE A. SMITH, Glendale, Calif. Filed Aug. 16, 1926. Serial No. 129,489. 3 Claims. (Cl. 242—126.)



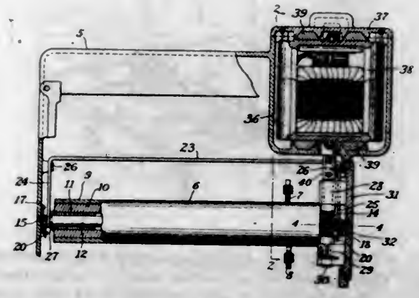
1. In a device of the class described, a length of spring material having an intermediate portion bent in an approximate V form with the ends of said material oppositely directed on a plane at substantially right angles to the longitudinal axis of the V portion, and means on one such end for securing a loose end of thread.

1,681,264. TRUNK. EMIL O. SUELFLOW, Oshkosh, Wis., assignor to The Schmit Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Jan. 2, 1926. Serial No. 78,737. 2 Claims. (Cl. 45—7.)



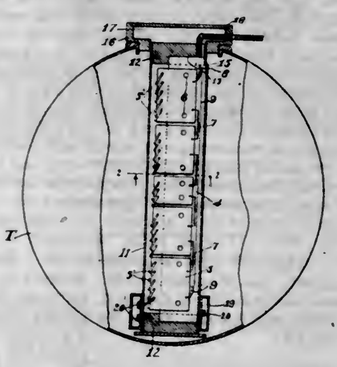
1. A locking device for the drawers of wardrobe trunks comprising a rigid vertical rod slidable vertically past the inner ends of the closed drawers; sockets on the inner ends of all the drawers but one and rigid projections on said rod for simultaneously entering all said sockets by upward movement; and a lifting device actuated by movement to closed position of the drawer not provided with a socket; said device comprising a resilient supporting bar pivoted to said vertical rod, a horizontal socket in front of said rod and above said drawer for slidably receiving the other end of said bar, and contact means carried by the drawer for raising said bar.

1,681,265. ELECTRIC SYSTEM. RAYMOND H. SULLIVAN, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 8, 1924. Serial No. 736,473. 8 Claims. (Cl. 171—313.)



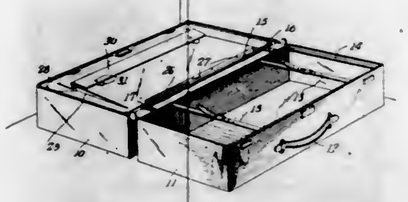
1. In an electric system comprising a source of current at variable voltage, and supply-mains connected with said source, means, for regulating the E. M. F, across said supply-mains, comprising: a plurality of resistors connected in parallel between said source and one of said supply-mains; and a plurality of relays connected in series with, and controlling the flow of current through said resistors, respectively; the relays being energized by connection with the supply-mains and being responsive to substantially the same E. M. F. across these mains.

1,681,266. TYPEWRITING MACHINE. OTTO THIEME, Hartford, Conn., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1925. Serial No. 44,681. 9 Claims. (Cl. 197—176.)



1. An attachable extension for a character-key including a sleeve and a finger-bar, said sleeve provided with a semi-circular head to partially cover the key to expose the character thereof and provide a support to elevate and suspend the finger-bar in front of the key.

1,681,267. POWER MECHANISM. RUSSELL G. THOMPSON, Rochester, N. Y., assignor, by mesne assignments, to North East Appliances, Inc., Rochester, N. Y., a Corporation of Illinois. Filed Sept. 29, 1924. Serial No. 740,684. 2 Claims. (Cl. 74—36.)

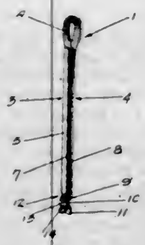


1. Power mechanism comprising: a frame having side-members; a horizontal rotary power-member journaled transversely between said side-members; a horizontal power-shaft geared to one end of said power-member and journaled on and within one of the side-members; an electric motor yieldingly mounted within and upon the frame, in axial alinement with said power-shaft; and means, including a yielding coupling, for connecting the motor-shaft with the power-shaft.

1,681,268. FLOAT-OPERATED RHEOSTAT. LEE R. TITCOMB, Brooklyn, N. Y., assignor to Auto-Meter Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,478. 7 Claims. (Cl. 201—48.)

7. In electric current flow regulating means, a flat bar of insulator material, a series of U-shaped plates of conducting material mounted in straddling relation along one edge of the bar with the connecting portion of the plates offset from the bar and arranged for connection in an electric circuit, U-shaped contacts of magnetizable material pivotally carried by the plates to straddle the bend of the plates, a series of resistance coils electrically connected to the plates in interposed relation thereto, a tube of non-magnetizable and conducting material in which the insulator bar with the contact carrying plates and coils is mounted and enclosed connected in the circuit of the plates and coils, a magnet adapted to attract the plate contacts to the tube to establish the circuit through different portions of the plates, and a float movable along the tube and carrying the magnet for the purpose specified.

1,681,269. BAG PARTITION. HUGO TUECKMANTEL, Newark, N. J., assignor to The T. & L. Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Nov. 17, 1926. Serial No. 148,778. 3 Claims. (Cl. 190—51.)

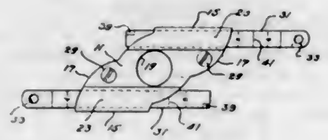


1. In a flat opening compartmented bag, a rigid plate partition foldable over either compartment, a metal channel fixed on the inner edge of said partition, a rod held rigidly in said channel to extend therebeyond, sockets fixed on said bag to receive the rod ends, and means combined with said sockets to normally retain the rod ends therein, said means being yieldable longitudinally to permit removal of the rod and partition.

1,681,270. MATCH CASE AND IGNITING DEVICE. WILLIAM TURK, Minden, Iowa. Filed July 14, 1925. Serial No. 43,501. 1 Claim. (Cl. 206—34.)

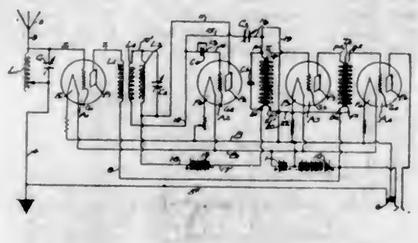
A match case and striking device comprising slidably connected plates, said plates being provided with registering corrugations thereby forming match receiving compartments, the inner side of one of said plates intermediate its ends having secured thereto a striker strip conforming to the inner contour of the corrugations, the ends of one of said plates being provided with inturned flanges overlying the adjacent ends of the other plate, the inwardly extending ribs of the plates registering and one of said corrugations of one of the plates engaging the striker strip and forming means whereby communication between the match compartment is obviated at the point of striking.

1,681,271. HAIRPIN FOR BOBBED HAIR. CLARENCE J. WILLIAMS, San Francisco, Calif., assignor by direct and mesne assignments, to Carrie G. Burbank, Oakland, Calif. Filed Nov. 8, 1926. Serial No. 146,931. 5 Claims. (Cl. 132—50.)



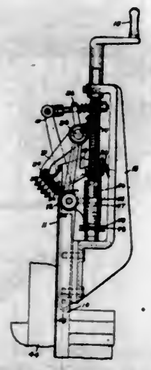
1. A hairpin consisting of a spring-loop portion and outwardly projecting tines having opposed flutes with the concavity of the one facing the concavity of the other and formed from a single piece of flat spring material, the extremities of said tines being provided, respectively, with a ridge and a depression adapted to fit the one within the other to form interlocking means adapted to prevent the displacement of the pin.

1,681,272. LEAD ALLOY. HIROSHI YOSHIKAWA, Tokyo, Japan. Filed Nov. 12, 1926, Serial No. 148,104, and in Japan Nov. 30, 1925. 4 Claims. (Cl. 75—1.)



1. An alloy consisting of lead, bismuth and a metal immiscible with lead of the group: copper and nickel, wherein the bismuth content lies between 0.025% and 4.0% and the content of the metal immiscible with the lead lies between 0.025% and 5.0%.

1,681,273. ADJUSTABLE HOLDING FIXTURE. LOUIS BADY and SAMUEL LEVINSON, Brooklyn, N. Y. Filed Oct. 12, 1926. Serial No. 141,228. 9 Claims. (Cl. 240—85.)

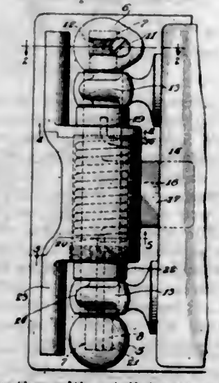


3. In a device of the class mentioned, a central member comprising a pair of rhomboidally shaped plates jointly attachable to an outlet fixture, guides formed with the longitudinal edges of one of said plates imperforate elements receivable between said guides and the other one of the said plates, and means exerting a clamping pressure upon both plates to hold said elements in adjusted position, the outer ends of the latter being capable of sustaining a canopy therefrom.

1,681,274. RADIOCIRCUIT. RAYMOND C. BAIRD, Omaha, Nebr., and EUGENE E. SNELL, Mount Clemens, Mich. Filed July 11, 1927. Serial No. 205,023. 4 Claims. (Cl. 250—27.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625, as amended by act of Apr. 30, 1928.)

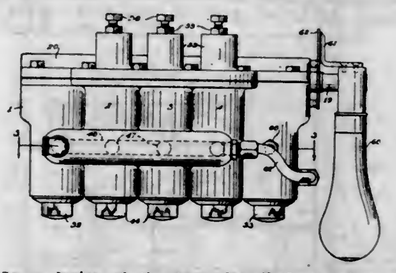
1. In a radio receiving system an input circuit, a detector including plate, grid and filament, means for impressing the input oscillations across both grid and filament and plate filament, such means including a trio of inductively associated coils, two of the latter being series connected and means for impressing a constant voltage of corresponding value on both plate and grid.

1,681,275. MARKING DEVICE. ADELMER M. BATES and CARL G. KRONMILLER, Chicago, Ill., assignors, by mesne assignments, to Bates Valve Bag Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,588. 15 Claims. (Cl. 101—291.)



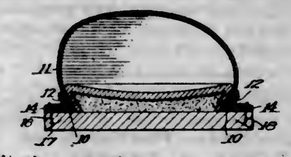
1. In a printing press, having an oscillatory bed and a stationary platen, a fabric sustaining member mounted beyond and parallel with the platen, a marker in position to apply a mark to the fabric on its side opposite said member, and means in the path of the bed adapted to actuate said marker.

1,681,276. FLUID FILTER FOR THE ABSORPTION OF CERTAIN RADIATION. LOUIS BELL, deceased, Newton, Mass., by Sarah G. Bell, administratrix, Newton, Mass., and Walter George Wolfe, Greenwood, Mass.; said Sarah G. Bell assignor, by mesne assignments, to Sarah G. Bell, Newton, Mass. Filed Dec. 1, 1924. Serial No. 753,326. 2 Claims. (Cl. 88—24.)



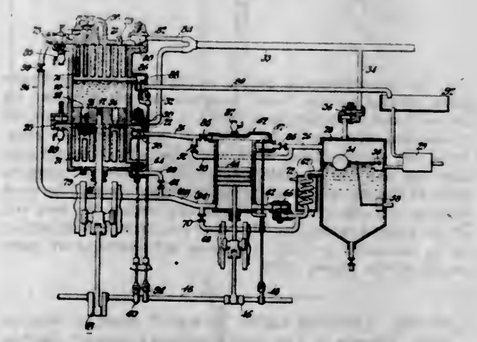
1. In a ray filter of the class described, a fluid medium including a solution of ammonium ferrous sulphate, and a solution of cupric sulphate with a solution of cobaltic sulphate in chromatic balance thereto.

1,681,277. SPRING HINGE FOR TOILET SEATS. BYRON C. BOOTH, Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 19, 1927. Serial No. 220,413. 6 Claims. (Cl. 4—236.)



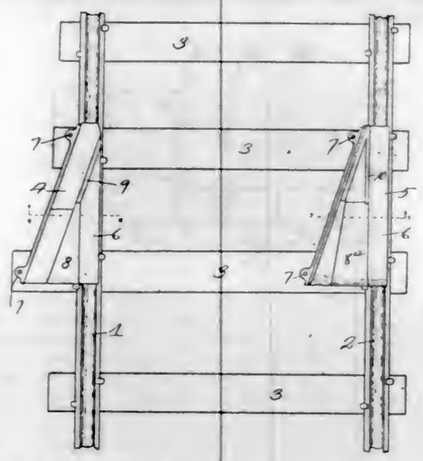
1. The combination with a toilet seat and a closet bowl, of means supporting said seat for pivotal movement, a pivoted member engageable with said seat, resilient means for moving said member upwardly, and means for limiting the upward movement of said member, said member and said resilient means being operative to raise said seat until the limit of movement of said member is reached, and said seat being capable of disengaging from said member and continuing its movement.

1,681,278. PNEUMATICALLY-CONTROLLED AIR VALVE. GARWOOD T. BOYNTON, Dayton, Ohio, assignor of one-half to Morris L. Hahn, Dayton, Ohio. Filed Sept. 1, 1926. Serial No. 132,948. 12 Claims. (Cl. 303—52.)



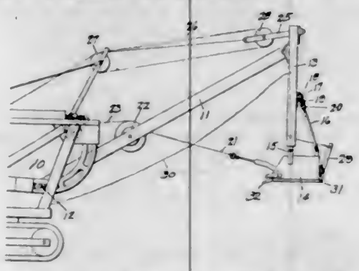
2. In a device of the type described, a primary air chamber, a secondary air chamber in communication with the latter, a valve for admitting air under compression to the primary chamber, a valve for admitting said air to the secondary chamber, a flexible bell-shaped sleeve associated with the second valve for engagement with the walls of the secondary chamber, and a spring for opening the valve of the secondary chamber to admit more air to the latter from the primary chamber when the pressure of the air in the secondary chamber falls below a predetermined amount.

1,681,279. DOUBLE-WELT SHOE. AUGUSTUS W. BOWERS and CHARLES NEWTON PROUTY, Spencer, Mass. Filed July 6, 1926. Serial No. 120,563. 4 Claims. (Cl. 36—17.)



1. A welt shoe comprising an outersole, an upper, a welting strip secured adjacent its upper edge to said upper, and an outer welt secured to said welting strip at a lower point and turned outward and downward therefrom to engage said outer sole.

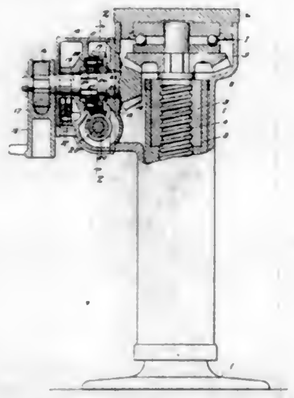
1,681,280. ISOTHERMAL AIR COMPRESSOR. ROBERT EARLL BRUCKNER, Hastings-on-Hudson, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 11, 1926. Serial No. 134,829. 22 Claims. (Cl. 230—45.)



1. In a gas compressor, the combination with an upright cylinder and a reciprocable piston therein, of heat absorbers depending from the piston and adapted to transfer the heat of compression directly to a body of cooling liquid maintained within the cylinder below the piston.

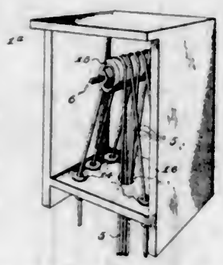
1,681,281. RERAILING BLOCK. RODERICK W. BRYANT, Omaha, Nebr. Filed Dec. 30, 1926. Serial No. 158,018. 1 Claim. (Cl. 104—268.)

A re-railing block disposed adjacent a rail and on the ends of ties outside of the rail, means for securing said block to said ties, said means comprising apertured lugs for the reception of spikes and positioned to engage adjacent ties, an inverted channeled member arching the rail, an inclined guide groove carried by said block and inclining upwardly, the upper ends of said guide groove terminating in a wheel flange receiving groove, said wheel flange receiving groove extending diagonally across the channeled member and terminating at the inner side of the rail.



1,681,282. DITCHER. BIRD C. CLUTTER, Akron, Ohio, assignor, by mesne assignments, to Clutter-Wagner, Inc., a Corporation of Ohio. Filed Sept. 4, 1926. Serial No. 133,712. 3 Claims. (Cl. 214—138.)

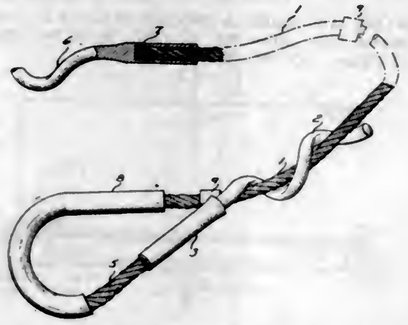
1. In an excavator, a ditcher including a boom, a dipper stick pivoted on the boom, a scoop pivoted adjacent its forward end upon the dipper stick, a link having a pivotal connection with the scoop adjacent its rear end, an apertured lug on the dipper stick, said link extending through said lug and having nuts adjustable thereon on opposite sides of the lug, and a compression spring operable between the lug and one of the nuts normally urging the rear end of the scoop downwardly, the other nut limiting such action so as normally to hold the scoop substantially at right angles to the dipper stick.



1,681,283. LIFTING JACK. JAMES C. DAWLEY, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 5, 1925. Serial No. 48,230. 23 Claims. (Cl. 254—103.)

1. In a lifting jack, the combination with a lifting element, means for actuating the same to lift the load, a rotatable brake member, means for causing said brake member to be rotated by the downward movement of said lifting element, and a friction device cooperating with said brake member to control the downward movement of

said lifting element, of controlling mechanism comprising separately operable means to normally control the action of said friction device and to positively retain said friction device in contact with said brake member.

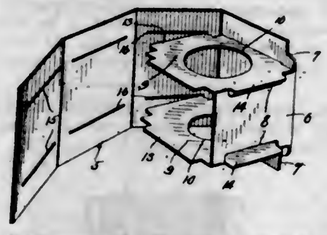


1,681,284. DRY-SPOT CROSS-ARM TERMINAL BOX. DOUGLAS P. DICKIE, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1925. Serial No. 69,095. 4 Claims. (Cl. 247—1.)

1. Means for preventing leakage of current from overhead terminal wires carried by the insulators on telegraph or telephone poles, comprising a housing completely closed to prevent the entrance of moisture and provided with means whereby it may be secured to a telegraph pole closely adjacent to the insulators, a plurality of openings in the floor or bottom wall of the housing, an insulating support mounted within said housing and provided with spacing means, and a plurality of continuous bridle wires adapted to be connected to overhead wires, said bridle wires passing in at separate openings in the bottom wall, over said support and out through another opening in the bottom wall, whereby they will be held in spaced relation and free from moisture within the housing.

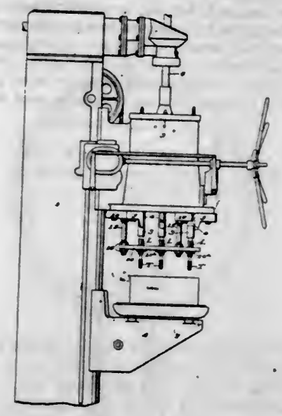
1,681,285. ATTACHMENT FOR STRANDS, ROPES, OR CABLES. GEORGE W. EWINS, Belleville, N. J., assignor to American Cable Company, Inc., a Corporation of Delaware. Filed Dec. 1, 1926. Serial No. 151,909. 2 Claims. (Cl. 24—123.)

1. The combination with a flexible strand, rope or cable of a spiral metal terminal secured thereto by a sleeve compressed upon the end thereof and adapted to be entwined about an intermediate portion thereof to form the strand into a loop, and a stop member also attached to an inter-



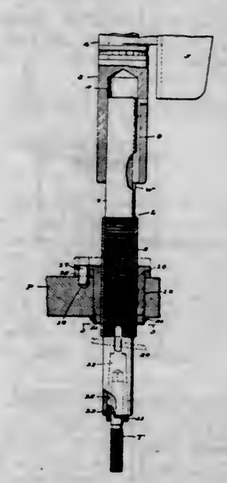
mediate portion of said flexible member and adapted to be engaged by said spiral terminal and thereby to determine the size of said loop.

1,681,286. LINTEL. WALTER H. FASSHAUER, Philadelphia, Pa. Filed June 8, 1921. Serial No. 475,937. 5 Claims. (Cl. 189—37.)



1. An article of manufacture being a beam integrally formed and having two strengthening flanges and a third flange, one of said strengthening flanges being at the top of said beam and the other two flanges being at the bottom thereof, said beam having the under side of its base constructed of irregular contour between the edges of the two lower flanges to form a holding means for receiving and positioning another article of building construction.

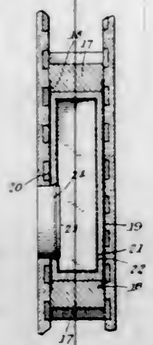
1,681,287. CONTAINER. FREDERICK W. FRENCH, Oakland, Calif. Filed June 29, 1926. Serial No. 119,395. 1 Claim. (Cl. 229—37.)



A lamp wrapper comprising a sheet of material including four side walls, an end member forming a part of the wrapper, inwardly bendable extensions forming a part of the end member, said end member having slits separating the extensions from the end member throughout portions of the lengths of the extensions, said slits defining tongues when the lateral extensions are bent inwardly, tongues formed on the edges of the extensions, the side walls having slots to receive the tongues when the side walls are bent around the extensions, and said extensions having openings to support a lamp therein.

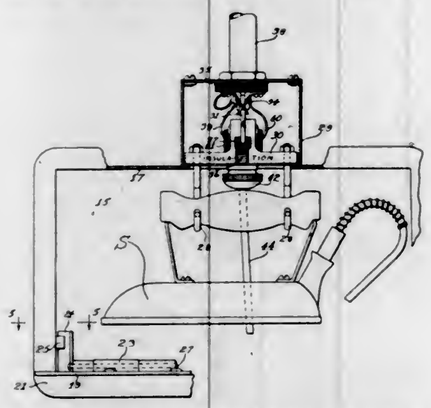
1,681,288. POSITIVE TAPPING MECHANISM FOR MULTIPLE-SPINDLE MACHINES. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed July 18, 1925. Serial No. 44,440. 7 Claims. (Cl. 10—130.)

3. A multiple tapping machine combining a translatable tool-head; a plurality of rotatable spindles adjustably supported on said tool-head; a threaded member translatable but non-rotatable relative to each of said spindles; a tap carried by each of said threaded members; a plate adjustably supported by said tool-head; and a plurality of nuts supported by said plate and each having an operative connection with one of said threaded members between its rotating spindle and the tap rotated thereby to give to said taps individual axial movement.



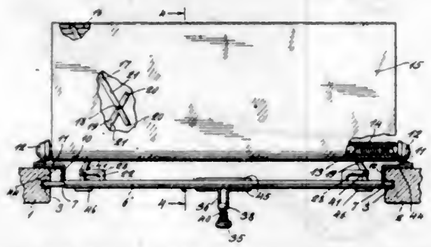
1,681,289. SAFETY POSITIVE-FEED TAP. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed July 18, 1925. Serial No. 44,441. 3 Claims. (Cl. 10—135.)

1. A tapping machine combining a rotatable spindle; a lead-screw rotatable with said spindle and translatable relatively thereto; a cap carried by said lead-screw; a member



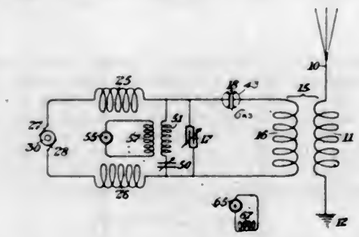
located intermediate the spindle and the tap and formed with a socket and an aperture; a lead-nut located in said socket and having a threaded engagement with said lead-screw, whereby rotation of the lead-screw effects axial movement thereof; a flange on one end of said lead-nut engaging one side of said member positively to hold said lead-nut against movements in one direction; a stud projecting from said flange and entering the aperture in said member positively to hold the nut against rotary movement, and a releasable retainer engaging said nut at the opposite side of said member impositively to hold the nut against movement in the opposite direction, said retainer being adapted to be overcome by a predetermined strain on said lead-screw.

1,681,290. WALL SAFE. EUGENE E. GLASS, Los Angeles, Calif. Filed Apr. 13, 1927. Serial No. 183,562. 5 Claims. (Cl. 109—2.)



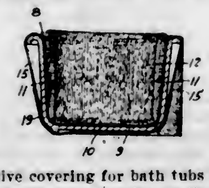
1. A wall safe comprising a frame, plates of fireproof and non-breakable material spanning the sides of the frame to form a closed body, a box within the body spaced from the frame and plates and formed of non-inflammable material, heat resisting material filling the space around the box, one of the plates, one side of the box and the heat resisting material being formed with registering openings coacting to produce an entrance opening, a collar secured in the wall of the entrance opening, and a door for closing the opening.

1,681,291. SADIRON RECEPTACLE. EUGENE E. GLASS, Los Angeles, Calif. Filed May 25, 1927. Serial No. 194,139. 8 Claims. (Cl. 219—25.)



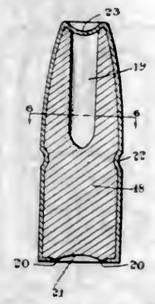
1. In combination, a receptacle adapted to be built or inserted in a wall and having an entrance through which an electrical sad iron is adapted to be inserted into or removed from the receptacle, a switch for controlling the supply of current to the sad iron, and means correlated with the switch to support the sad iron within the receptacle and to move the switch to open position under the weight of the said iron.

1,681,292. AUTOMOBILE AWNING. WILLIAM M. GLOVER, Denver, Colo. Filed Feb. 21, 1927. Serial No. 169,830. 15 Claims. (Cl. 156—44.)



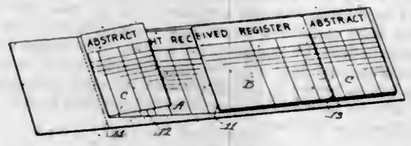
15. In an automobile awning structure the combination of a support mounted in the window opening of a car, a flexible shade connected at one end with the support, a handle pivoted in the support and bodily movable on an axis at right angles to its axis of rotation, and an operative connection between the handle and the other end of the shade to cause the latter to be extended and withdrawn by one movement and adjusted to vary its inclination by the other movement of the handle.

1,681,293. SYSTEM AND METHOD FOR THE TRANSMISSION OF RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Mar. 17, 1917, Serial No. 155,500. Renewed Jan. 7, 1928. 48 Claims. (Cl. 250—6.)



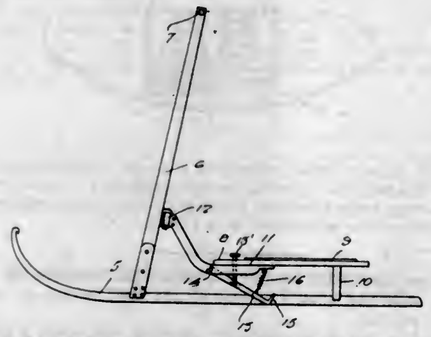
1. The method of wireless signaling, which comprises transmitting radiant energy in such a form as to include a plurality of series of periodic variations having different frequencies respectively, receiving said energy upon a plurality of cooperating receiving devices tuned to said frequencies respectively, causing "beats" in the action of one of said receiving devices and utilizing the action of said "beats" to control a receiving device tuned to said "beats."

1,681,294. COVERING FOR BATHTUBS AND THE LIKE. ROBERT E. HENRY, Pittsburgh, Pa. Filed Oct. 9, 1925. Serial No. 61,456. 4 Claims. (Cl. 4—173.)



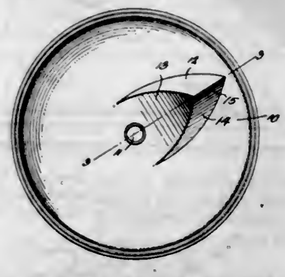
1. A protective covering for bath tubs and the like, comprising a body portion conforming to the interior of a tub, side flap portions on said body portion extending over the longitudinal edges and the sides of the tub, other flap-like portions extending over the outer end walls of the tub, the end flap portions overlying the vertical edges of the side flaps and having their vertical edges folded inward.

1,681,295. MUSHROOMING BULLET AND METHOD OF MAKING SAME. EDWIN J. JOHNSON, Montreal, Quebec, Canada, assignor to Dominion Cartridge Company, Limited, Montreal, Canada. Filed Feb. 28, 1925. Serial No. 12,329. 1 Claim. (Cl. 102—28.)



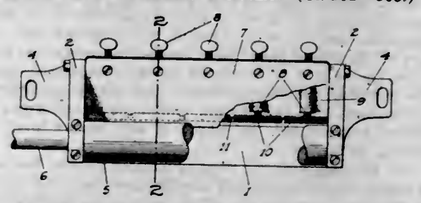
A mushroom bullet comprising a one piece outer hollow metal shell closed at the nose end and open at the other end, a core of softer metal secured in and filling said shell, said core being formed with a cavity extending inwardly from the nose end of the core and affording an air pocket and said shell having the nose end thereof depressed into the mouth of said pocket to seal said mouth and to form an outwardly facing depression at the nose end of the shell.

1,681,296. DUPLICATING RECORD BOOK. EDWARD Z. LEWIS, Chicago, Ill., assignor to The General Manifold and Printing Company, a Corporation of Pennsylvania. Filed Aug. 15, 1925. Serial No. 50,383. 7 Claims. (Cl. 282—27.)



1. A book comprising a plurality of center bound sheets each having printed matter on both sides thereof, and a pair of detachable transfer portions associated with each sheet of the book, and each transfer portion having printed matter on one side thereof corresponding to a portion of the printed matter on the page on the reverse side of said sheet.

1,681,297. SNOW AND ICE SCOOTER. WILLIAM VAINO LINDROOS, Helsingfors, Finland. Filed Feb. 4, 1926. Serial No. 85,965. 2 Claims. (Cl. 280—22.)

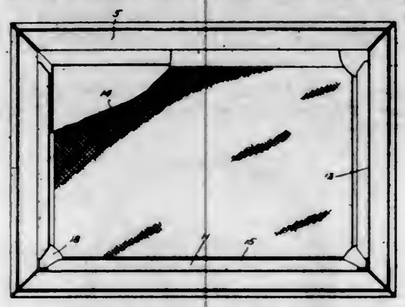


1. In a scooter of the class described, a flexible steel runner, a foot board supported in position above the runner adjacent the rear end thereof, a handle bar secured to the runner adjacent the forward end and extending upwardly therefrom, a pair of spaced bars secured at their rear ends to the forward portion of the foot board, said bars gradually converging towards their forward ends and being bent upwardly, and a vertical pivot connecting the extreme forward ends of said bars to the handle bar.

1,681,298. REFLECTOR. ANDREW LOBERG, Albert Lea, Minn. Filed Feb. 5, 1926. Serial No. 86,284. 1 Claim. (Cl. 240—41.)

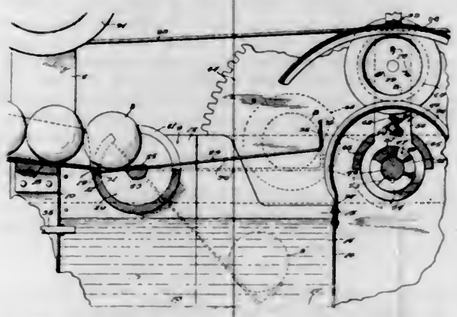
A reflector comprising a shell having the major portion of the area of its reflecting surface of uniform parabolic contour, the said shell having a portion protruding inwardly with respect to said surface and extending generally in a radial direction at an angle of approximately 45 degrees to the vertical plane of the axis of the reflector as a whole and having side faces and a reflecting face of a contour similar to that of the reflecting face of the shell, the side faces of said protruding portion forming juncture with each other at the outer end of said protruding portion, said side faces converging in the direction of their line of juncture on curved lines and being of gradually decreasing transverse dimensions from their line of juncture to their inner ends, whereby the reflecting face of the said protruding portion is of gradually decreasing width from its side which is next adjacent the axis of the reflector shell to its opposite side.

1,681,299. INK FOUNTAIN FOR PRINTING PRESSES. CHARLES L. LOW, Fresno, Calif., assignor to Lisenby Manufacturing Company, Fresno, Calif. Filed July 18, 1927. Serial No. 206,506. 4 Claims. (Cl. 101—365.)



1. An ink fountain including a roll, a resilient plate forming the bottom of the ink trough and having one edge disposed along and adjacent the roll, a rigid strip bearing along its upper edge against the under face of the plate adjacent the roll engaging edge thereof, means supporting the strip along its bottom edge to allow of rocking movement of the strip, and means engaging the strip above the supporting means to rock the strip and cause it to press throughout its length against the plate.

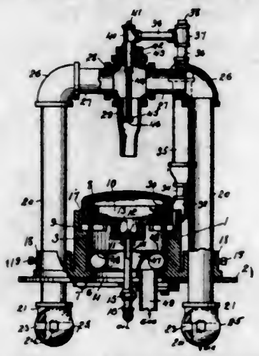
1,681,300. SCREEN MEANS FOR AUTOMOBILES. ARTHUR J. MAAS, Madison, Wis. Filed Feb. 12, 1927. Serial No. 167,767. 1 Claim. (Cl. 156—14.)



Means for screening an opening in an automobile body, comprising a main frame arranged to bear against an automobile body about an opening therein, and extending inwardly from the wall of the opening and having an inner reduced edge portion, a screen holder disposed at the outer

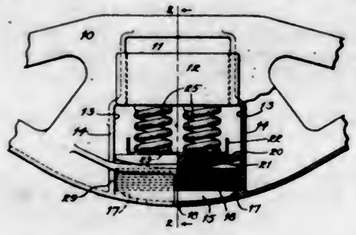
side of the main frame and made up of a lower channel bar and side channel bars, the side channel bars being open at their upper ends, and all of said bars being provided

with portion of U-shape in cross section, crimped over the said inner reduced edge portion of the main frame, and a screen disposed and retained in the said channel bars on the main frame.



1,681,301. DIPPING AND PAINTING MACHINE. SABATINO MAGGI, Passaic, N. J. Filed Sept. 17, 1925. Serial No. 57,001. 18 Claims. (Cl. 91—46.)

1. In a machine of the class described, a liquid container, dipping means comprising an oscillatory dipper and means for oscillating the same to effect immersion of an object supported thereby in the liquid in the container and elevation of the dipped object after immersion, means for delivering the article to be dipped to the said dipper, means for receiving the dipped article, and means operating in consonance with the dipping means for transferring the dipped article from the dipper of said means to the receiving means.

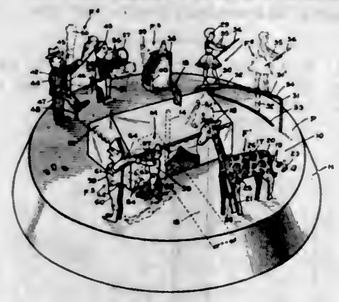


18. In a machine for dipping articles to coat the same, a liquid container, dipping means operating with relation to the container to lower an article into the container and then elevate the same, means for receiving the article, means for transferring the article from the dipping means to the receiving means comprising coacting gripping members movable between the dipping means and the receiving means, and means operating in consonance with the dipping means for effecting movement of the said members in unison from the dipping means to the receiving means and for effecting movement of the gripping members toward each other to grip the article substantially at the termination of the operation of the dipping means, and means for effecting relative separation of the members to release the article and deposit the same upon the receiving means, one of said members embodying a pulley, means arranged in the path of travel of the pulley to frictionally coact with the same in the movement of the gripping members to effect rotation of the said gripping members and the article supported between the same, and concentric spaced shields arranged for the passage therebetween of the article during the period of rotation thereof.

1,681,302. HYDROCARBON BURNER. CHARLES E. MAIN, Kansas City, Mo. Filed Dec. 9, 1922, Serial No. 605,908 Renewed June 30, 1928. 5 Claims. (Cl. 158—66.)

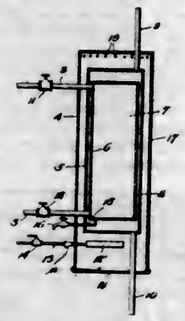
5. In a device of the kind described, a combustion chamber having a draft flue provided with draft regulating means, a tubular burner body having an air inlet communicating with the atmosphere at the exterior of the combustion chamber, means for regulating said air entering said inlet, a vaporizing chamber in said combustion chamber having an outlet, means for supplying liquid fuel to said vaporizing chamber, a superheating chamber communicating with said outlet, a mixing chamber comprising a discharge nozzle disposed so as to discharge against the outer surface of said vaporizing chamber in said combustion chamber, and an air conductor supporting said mixing chamber and discharging therein and longitudinally adjustable, so as to fix said nozzle at different distances from said vaporizing chamber and having an air inlet provided with draft regulating means and communicating with the atmosphere at the exterior of said combustion chamber, said conductor and said superheating chamber being disposed so as to be heated in said combustion chamber by the flame of mixed vapor and air discharged from said nozzle, substantially as set forth.

1,681,303. SIDE FRAME FOR CAR TRUCKS. MARK H. MARTIN, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed July 19, 1926. Serial No. 123,377. 26 Claims. (Cl. 105—197.)



1. A side frame comprising a pocket provided with a drain hole and a spring assembly composed of associated springs and a laminated spring mounted in said pocket and arranged for engagement with a truck bolster.

1,681,304. CIRCUS TOY. LOUIS MARX, Brooklyn, N. Y. Filed Dec. 1, 1926. Serial No. 151,926. 12 Claims. (Cl. 46—40.)

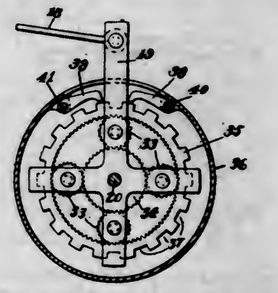


1. A toy of the character described comprising a platform, a plurality of independently movable figures representing circus performers arranged on said platform, said figures being provided with operating means protruding

through said platform, and a motor means unconnected to said performing figures, whereby said figures are movable independently of each other, said motor means including an

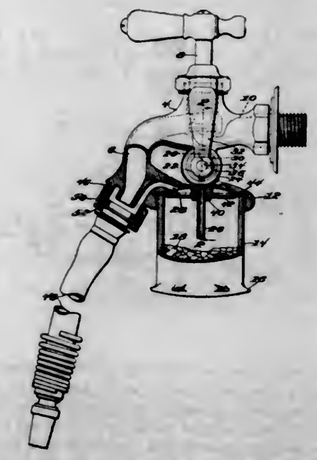
operating member arranged below said platform and movable cyclically into cooperation with the said operating means of the performing figures when the motor means is operated to impart action to such figures in succession.

1,681,305. WATER HEATER. ALPHONSE F. MONEUSE, Valley Stream, N. Y. Filed Dec. 2, 1925. Serial No. 72,783. 1 Claim. (Cl. 122—37.)



In combination with the water chamber of a boiler, a storage tank, a water heater interposed between said boiler and tank, said heater comprising inner and outer casings, providing inner and outer water chambers, valve connections between the boiler and the inner chamber thereby enabling said inner chamber to be entirely cut off from the boiler, connections between the outer chamber of the heater and the storage tank whereby when the water is heated in the outer chamber it will be caused to circulate into and through said storage tank, means for draining the inner heating chamber, and means for supplying heat to the outer casing when it is desired to augment the heat in the outer chamber or to alone heat the water in said outer chamber.

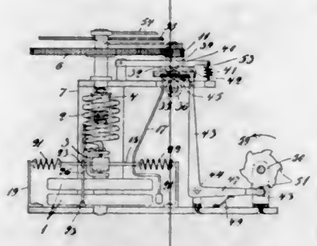
1,681,306. MACHINE FOR CUTTING TO LENGTH CONTINUOUSLY-FORMING TUBING. JOHN W. MOON, Butler, Pa., assignor to Fretz-Moon Tube Company, Butler, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1925. Serial No. 17,673. 8 Claims. (Cl. 29—69.)



5. In a machine for cutting continuous tubing to length, the combination with means to feed forward finished tubing, of a shaft extending in the direction of the tubing and movable in the direction of its axis and rockable on its axis; a stop, a tube guide and a saw, all movable with the shaft in the direction of its axis; said step being adapted to be engaged by the advancing tubing and, together with the tube guide and saw, to be moved forward with the tubing, means operable by the shaft in its rocking movement to bring the saw and tubing into operative relationship and thereby effect a severance of a tube section, a lever adapted to be operable after the engagement of the tubing with said stop and connected with said shaft and also with said stop and adapted, in the first part of its swinging movement in one direction, to rock shaft as aforesaid and in a subsequent part of its movement in the same direction to withdraw said stop and release the cut-off section, and conveying means adapted to carry forward the cut-off section.

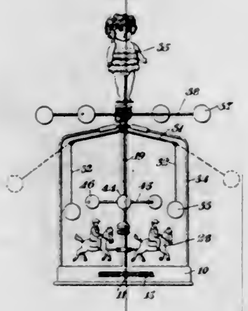
1,681,307. VALVE-REVERSING MECHANISM. ERNEST B. PACKARD, Rockland, Me. Filed May 29, 1925. Serial No. 33,818. 5 Claims. (Cl. 137—139.)

1. Valve reversing mechanism, comprising a rotatable reversing device, a continuously oscillating member for rotating said reversing device in one direction or the other, and a planetary gear drive normally permitting said oscillating member to oscillate idly but effective under certain conditions to transmit movement in one direction or the other to said reversing device.



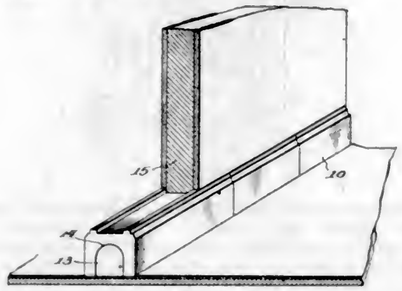
1,681,308. WASHING APPARATUS. SAMUEL D. PARKER, Boston, Mass., assignor to Dario Company, Boston, Mass., a Corporation of Massachusetts. Filed May 13, 1925. Serial No. 29,948. 3 Claims. (Cl. 299—84.)

1. A washing apparatus comprising a faucet for selective discharge of clear or soapy water having a body provided with a water passage having a downwardly extending out-



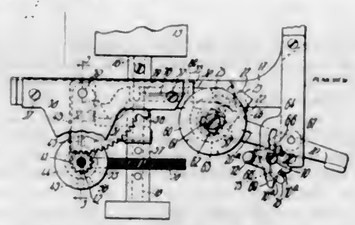
let and a soap container closure formed integrally on the underside of the body, a soap container depending from the body and secured to the closure and adapted to contain a supply of soap to be dissolved by water diverted from the main passage, the body having branch passages extending from the main passage toward the soap container and thence outwardly from the top of the container to the downwardly extending outlet of the main passage, and a valve for controlling the flow of water in the branch passages whereby either the water may be caused to flow entirely through the main passage or a portion thereof may be diverted from the main passage through the branch passages and the soap container.

1,681,309. APPARATUS FOR MEASURING VARIABLE FORCES. JOSUA GABRIEL PAULIN, Stockholm, Sweden. Filed May 19, 1926. Serial No. 110,257, and in Sweden Mar. 21, 1925. 14 Claims. (Cl. 265—1.)



1. An apparatus for measuring variable forces comprising in combination a measuring member movable under the influence of the forces to be measured, a counter-spring acting upon the measuring member, a resetting mechanism adapted to vary the tension of the counter-spring, a zero setting member connected with said measuring member, and driving means under the control of the zero setting member for imparting intermittently resetting impulses of limited amplitude, according to the position of the zero setting member, in either direction to said resetting mechanism.

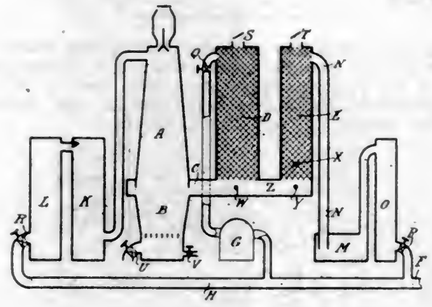
1,681,310. TOY ROUNDABOUT. HARRY M. REINER, Bronx, N. Y. Filed Dec. 14, 1926. Serial No. 154,661. 1 Claim. (Cl. 272—31.)



In a toy roundabout, a container forming a base, a spring motor within the container, a shaft projecting upwardly from the container and operatively connected to the spring motor to be driven thereby, stanchions fastened to the container and projecting upwardly therefrom and having their ends cooperating to form a journal for the shaft, arms associated with the shaft, weighted members, cords suspending said weighted members from the ends of said arms, said stanchions being positioned in the paths of said cords when the weighted members are thrown centrifugally, a tube surrounding the shaft loosely above said container, a pawl and ratchet connection between said tube and shaft, and members rotated by and with said tube.

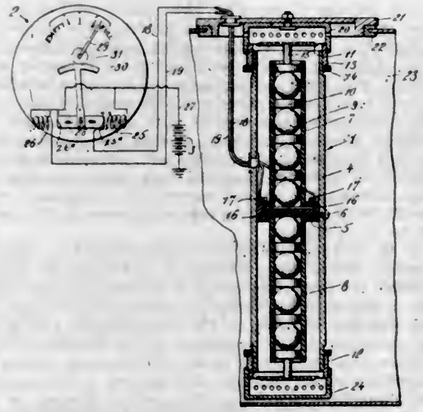
1,681,311. WALL CONSTRUCTION. EWALD F. TECHMER, Chicago, Ill. Filed Feb. 9, 1928. Serial No. 252,978. 1 Claim. (Cl. 72—37.)

In a partition wall construction, a molded base block formed with integral base boards and adapted to support a wall core, said base block having a central flat wall core supporting surface, plaster coat engaging surfaces on both sides of said central core supporting surface, shoulders extending transversely between said core supporting surface and plaster coat engaging surfaces, defining a recessed core supporting surface of substantially the same width as said wall core, said transverse shoulders being inclined to provide tapered guides for locating said core, the said base having flat exterior surfaces extending downward from said plaster coat engaging surfaces and adapted to serve as grounds in plastering whereby plaster coating may be applied substantially flush with the flat exterior surface.



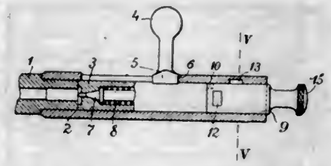
1,681,312. TYPEWRITING MACHINE. LINDEN A. THATCHER, Belleville, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 11, 1925. Serial No. 36,347. 29 Claims. (Cl. 197—114.)

1. A typewriting machine including a revoluble platen, a line-space lever, micrometrical means mounted on the line-space lever to predetermine a single line-space unit of rotation for the platen, and settable means to vary the normal position of the line-spacer lever to predetermine some multiple of the single-line-space unit for a full line-space rotation of the platen.



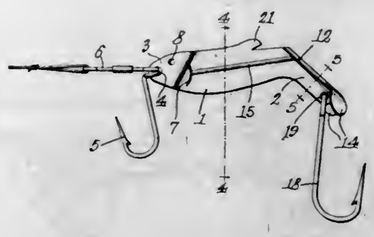
1,681,313. APPARATUS FOR THE MANUFACTURE OF MIXED GAS. MORRIS WILLIAM TRAVERS, London, and FRANK WILLIAM CLARK, Lymm, England, assignors to Regenerative Coal Gasification System, Limited, Manchester, England. Original application filed June 12, 1924, Serial No. 719,585, and in Great Britain June 29, 1923. Divided and this application filed Feb. 12, 1926. Serial No. 87,862. 5 Claims. (Cl. 48—71.)

2. In a plant for making gas from carbonaceous material, the combination of a carbonization chamber, a gasification chamber beneath and in communication with the bottom of the carbonization chamber, means for supplying air and gas alternately to the bottom of the gasification chamber, a regenerator in communication with the top of the gasification chamber and with the bottom of the carbonization



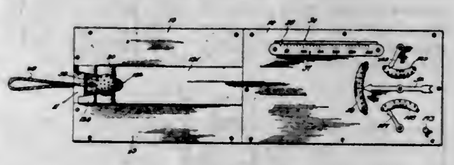
chamber, a separate gas enriching chamber in open communication with the regenerator means for spraying oil into the enriching chamber, and means for forcing some of the gas issuing from the top of the carbonization chamber through the regenerator and into the bottom of the carbonization chamber.

1,681,314. FUEL GAUGE FOR MOTOR VEHICLES. CHARLES E. VAWTER, Philadelphia, Pa. Filed Jan. 8, 1921, Serial No. 435,804. Renewed Jan. 13, 1928. 2 Claims. (Cl. 177—351.)



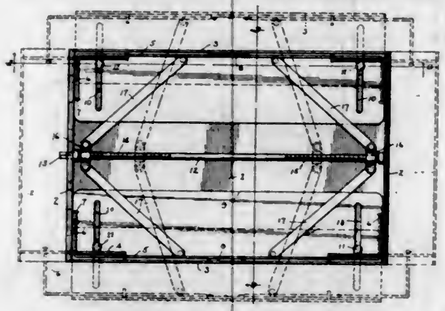
2. In a gauge for fuel tanks of motor vehicles, the combination with a fuel tank of a pressure-sensitive electrical resistance means therein comprising two pressure surfaces exposed, respectively, to the pressure existing in the top and bottom of the tank and a pair of electrical resistance subject, respectively, to the pressure on said surfaces and whose resistance is altered thereby, separate circuits for said two resistances and a measuring instrument having two opposed coils connected to said circuits, respectively, and adapted to indicate variations in the current in the two circuits but to be unaffected by equal changes in the current in the two circuits.

1,681,315. SAFETY MECHANISM FOR FIREARMS. RUDOLF VON FROMMER, Budapest, Hungary. Filed Aug. 10, 1926, Serial No. 128,496, and in Hungary Aug. 14, 1925. 2 Claims. (Cl. 42—16.)



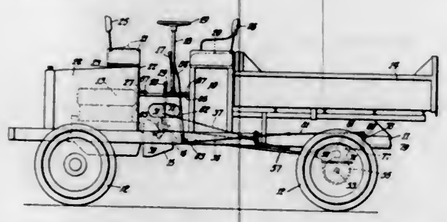
1. In firearms of the kind described a breech casing and a firing pin the said firing pin having a projection and the said breech casing having a groove means on the said firing pin to turn its projection in the said groove in the pulled back position of the firing pin.

1,681,316. MINNOW. VANCE SYLVIAN WATERS, Seattle, Wash. Filed Oct. 3, 1927. Serial No. 223,699. 5 Claims. (Cl. 43—46.)



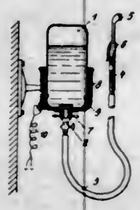
1. An artificial bait comprising a plate-like body having a depending tail provided with a transverse extension which is upwardly and forwardly inclined, the extension being located partly on each side of the tail and having its lower corners downwardly and forwardly inclined.

1,681,317. GOLF-PRACTICING MACHINE. JOHN CLAYTON BACKUS, Smethport, Pa. Filed June 4, 1925. Serial No. 34,909. 81 Claims. (Cl. 265—22.)



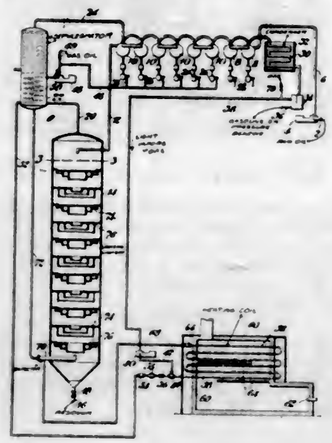
1. A golf practicing machine including a captive ball, mechanism for indicating deflection of flight of the ball from a straight path when the ball is driven, a flexible element securing the ball captive, and separate means engaged with the intermediate portion of said element and operable thereby for actuating said mechanism.

1,681,318. ADJUSTABLE FILE AND HOLDER. EDWARD A. BANSCHBACH, Chicago, Ill. Filed Aug. 11, 1920. Serial No. 402,789. 11 Claims. (Cl. 129—43.)



1. In a file of the class described, a receptacle having hinged ends and slidable sides to open up and widen the receptacle to facilitate access thereto.

1,681,319. MOTOR VEHICLE. LINTON G. BARTLETT, Waukegan, Ill., assignor to William L. O'Connell, Chicago, Ill. Filed Apr. 6, 1922. Serial No. 549,997. 17 Claims. (Cl. 180—77.)

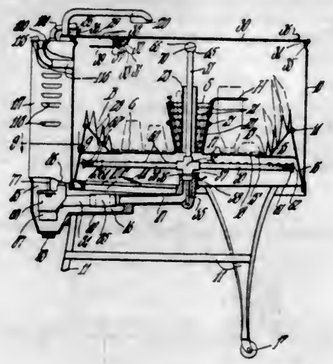


1. In a motor vehicle, the combination comprising a pair of foot levers arranged to be operated by the right and left feet respectively of the driver, oppositely located driving seats conveniently arranged for operation of said foot levers, and mechanism associated with said levers and the clutch and brakes whereby the foot lever, occupying respectively a definite position relative to the driver when driving from either seat, operates the same instrumentality.

1,681,320. PROCESS FOR THE PREPARATION OF A LIQUID FOR RINSING THE MOUTH AND MEANS FOR APPLYING IT. KLEMENS BERGL, Berlin, and WALTER DIETRICH, Berlin-Friedenau, Germany, assignors to the Firm: Max Gottlieb, Berlin, Germany. Filed Apr. 28, 1927, Serial No. 187,338, and in Germany Aug. 3, 1926. 7 Claims. (Cl. 128—224.)

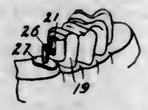
1. A method of producing a rinsing and cleansing liquid and conveying it into the mouth, nose or ears through an injection appliance, consisting in filling a closable container with water shortly before use and then introducing into the said container chemicals consisting of carbonic acid salts and solid acids, bringing the solid chemicals into contact with the water and thereby developing gas, and allowing the mixture thus formed to flow under the pressure thus produced from the container through the injection appliance to the cavity, as and for the purpose set forth.

1,681,321. PROCESS AND APPARATUS FOR TREATING OIL. DAVID G. BRANDT, Westfield, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1922. Serial No. 545,974. 5 Claims. (Cl. 196—66.)



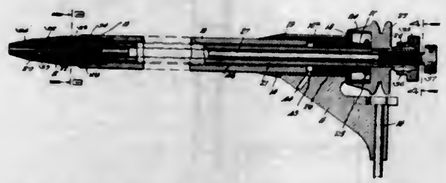
1. A process of cracking high boiling-point hydrocarbons to form low boiling-point hydrocarbons comprising maintaining a body of high boiling-point oil under pressure, vaporizing a lower boiling-point oil in contact with vapors, said lower boiling point oil having a relatively narrow boiling point range and said vapors being of the type that remain uncondensed after passing through the ordinary gasoline condenser, passing the mixed vapors through the body of high boiling point oil to crack the oil, condensing undesired fractions from vapors leaving the high boiling-point oil and mixing this condensate with similar boiling-point oil to form said lower boiling point oil for the process.

5. In an apparatus of the kind described, a cracking chamber, means for preheating oil, a conduit for leading oil from the preheating means to the said cracking chamber, a dephlegmator, means for passing vapors from the said cracking chamber to the dephlegmator, and means for returning vapors condensed in the dephlegmator to the cracking chamber, a series of condensers, means for conducting vapors from the dephlegmator to the condensers, means for separating the heavier portion of the vapors condensed in the condensers and passing it through the dephlegmator to be preheated and from thence to a heating coil, means for passing uncondensed vapors from the condensers to the said heating coil, means for heating the said coil, and means connecting the said heating coil with the cracking chamber.



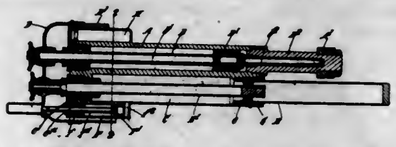
1,681,322. WASHING MACHINE. HENRY CAVE, Springfield, Mass., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed May 17, 1922. Serial No. 561,686. 12 Claims. (Cl. 141—9.)

1. In a washing machine, a washing compartment, an inlet pipe opening into the latter, means to force liquid through said pipe, a spray rotor in said compartment having a part mounted in telescoping relation with said pipe and rotatable relatively thereto during the washing



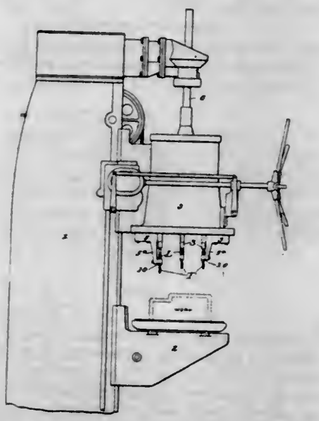
operation, and releasable means in the compartment for preventive relative axial displacement of said rotor and pipe.

1,681,323. REMOVABLE DENTURE. HERMAN E. S. CHAYES, New York, N. Y. Filed July 9, 1919. Serial No. 309,681. 1 Claim. (Cl. 32—12.)



In combination, a pier and a removable denture, said pier having a socket with an open-ended slot in the exposed side thereof and a cooperating substantially T-shaped connecting member on the denture having a shank received in the slot in the side of the socket and angularly outstanding spring wings yieldingly engaging in the body of the socket, a relatively stationary pin adjacent the pier and a socket on the denture positioned to fit said pin.

1,681,324. DENTAL INSTRUMENT. HERMAN E. S. CHAYES and AUGUST P. JURGENSEN, New York, N. Y., assignors, by mesne assignments, to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 4, 1924. Serial No. 735,847. 3 Claims. (Cl. 32—15.)



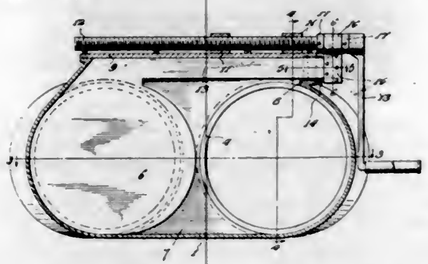
1. In a dental drill head, a cylindrical casing having a spindle mounted therein, a bearing sleeve secured about said casing, a bracket rotatably supporting said bearing sleeve, an adjustable bearing mounted in one end of the casing, and a single means for holding said bearing in adjusted position and for holding said casing in position in said bracket.

1,681,325. RECOIL AND RUN-OUT APPARATUS FOR ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England. Filed Apr. 8, 1927, Serial No. 181,934, and in Great Britain Apr. 13, 1926. 16 Claims. (Cl. 89—43.)

1. Ordnance recoil and run-out apparatus comprising a recoil cylinder, a pneumatic recuperator the interior of which does not communicate with the interior of the recoil cylinder, and a hollow ram which is caused to enter the recuperator cylinder during the recoil of the gun so as to compress the air in said recuperator cylinder and the interior of which communicates with the interior of the recuperator cylinder so as to act as a reservoir for compressed air.

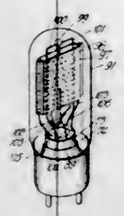
1,681,326. INDIVIDUAL POWER FEED FOR MULTIPLE TAPPING MACHINES. ADOLPH L. DE LEEUW, Plainfield, N. J. Filed Nov. 18, 1926. Serial No. 149,243. 13 Claims. (Cl. 10—130.)

10. A tapping machine combining a tool-head; a plurality of spindle-supporting arms adjustably secured to said tool-head; a spindle supported by each of said arms; a threaded member translatably but non-rotatably carried by each of said spindles; a tap carried by each of said threaded members and adapted to be rotated thereby; a plurality of nuts each having a threaded engagement with one of said members and serving to translate said members independently as they are rotated by the spindles; and means to support said nuts from said spindle supporting arms.



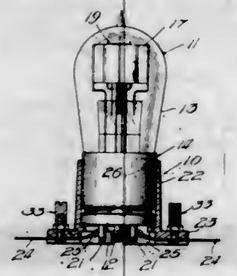
1,681,327. BOOT AND SHOE STIFFENER. HORACE M. EATON, Dennis, Mass., assignor of one-half to George L. Preble, Lynn, Mass. Filed Mar. 18, 1924. Serial No. 700,012. 11 Claims. (Cl. 154—46.)

11. A stiffener for boots and shoes comprising a sheet of fabric having a mass of fibers anchored thereto, a matrix containing a cellulosic material and a finely comminuted



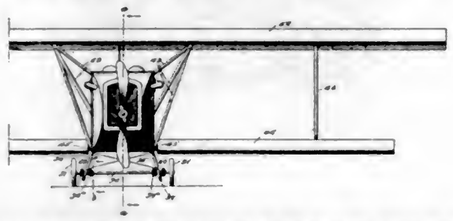
substance impregnating said fibers, and a thin membrane in contact with said fibers upon one face of the sheet, said membrane being partially permeable by the cellulosic material when it is treated with a suitable solvent.

1,681,328. VALVE. OLE P. ERICKSON, Wildwood, N. J. Filed May 10, 1927. Serial No. 190,279. 2 Claims. (Cl. 251—73.)



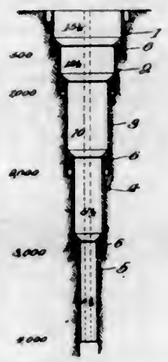
1. The combination with a Y-coupling having a transverse opening in the top of its outlet portion, a box upon the coupling at the said opening, a valve disposed within the outlet portion of the coupling and having a stem disposed within said box, and means connected with the stem and mounted on the box whereby to shift the valve to close either outlet of the coupling.

1,681,329. VACUUM TUBE. CLAUDE E. FITCH, Wilmette, Ill. Filed Oct. 30, 1925. Serial No. 65,774. 2 Claims. (Cl. 250—27.5.)



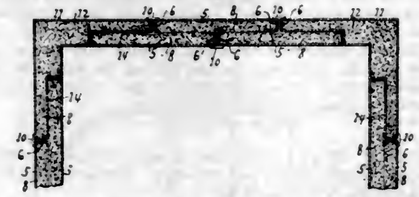
1. In a sealed glass vessel of the character described, a bulb portion, a stem portion extending inwardly from one end thereof, an exhaust tube joined integrally to said stem portion at the inner end thereof and open at its inner end to form an annular wire anchoring portion and an annular series of wires sealed in said annular wire anchoring portion.

1,681,330. SOCKET. EDMUND T. FLEWELLING, Highland Park, Ill., assignor to Roy D. Buell, Chicago, Ill. Filed Nov. 7, 1923, Serial No. 673,287. Renewed Dec. 31, 1927. 4 Claims. (Cl. 173—328.)



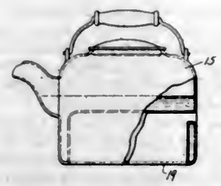
1. In a socket for electrical appliances, the combination comprising means for receiving the electrical terminals of said appliances, a plurality of flat metallic contact strips projecting into said socket and arranged to be engaged at their ends only by the respective appliance terminals upon rotation of the appliance in said socket, the ends of said strips being arranged tangentially to the arcs travelled by the respective terminals upon rotation of said appliances, and projecting inwardly a distance somewhat greater than necessary for mere contact whereby said strips are distorted by said terminals when the appliance terminals are brought into contacting position.

1,681,331. AIRPLANE. ANTHONY H. G. FOKKER, Amsterdam, Netherlands, assignor to Atlantic Aircraft Corporation, a Corporation of New Jersey. Filed May 25, 1923. Serial No. 641,324. 3 Claims. (Cl. 244—12.)



1. A double duty airplane for flying at high speed with a relatively small lift or for flying at a lower speed with a greater lift, comprising a fuselage, a wing located above the fuselage, supporting struts for said wing, inclined downwardly and inwardly from a point on said wing adjacent the vertical plane of each side of the fuselage and connected to the fuselage at their lower ends, said wing functioning as a supporting surface for the airplane for high speed flight, a pair of removable auxiliary supporting surfaces attachable to the sides of the fuselage below said wing for converting the airplane into a biplane, quick-detachable means for securing the auxiliary surfaces to the fuselage and detachable struts connecting each of said auxiliary surfaces and said wings at a point remote from the fuselage, said auxiliary surfaces being solely supported by their jointure with the fuselage and said detachable struts.

1,681,332. WELL CASING. WILLIAM W. FRY, Los Angeles, Calif., assignor of one-half to Robinson Packer Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Dec. 10, 1924. Serial No. 754,991. 1 Claim. (Cl. 166—4.)

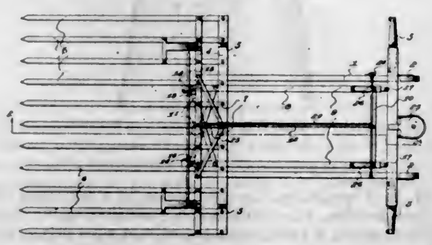


A casing for wells composed of a series of telescopic strings extending from the top to the bottim thereof having packers arranged between the concentric walls of the overlapping strings at their upper ends for detachably connecting said sections together, said packers having head portions extending inwardly beyond the inner walls of the overlapping strings.

1,681,333. SECTIONAL OVEN WALL. CHARLES L. GEHNRICH, Elmhurst, N. Y. Filed May 16, 1927. Serial No. 191,777. 7 Claims. (Cl. 72—16.)

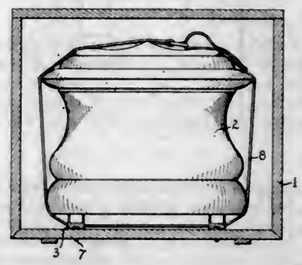
1. A sectional oven wall comprising a plurality of inner and outer panels one behind the other the meeting ends of the outer panels being covered by the panels behind them each panel having a packing of insulating material, and means relative to each pair of panels for locking them together.

1,681,334. LIQUID HEATER. OTTO GESS, Brooklyn, N. Y. Filed Jan. 19, 1927. Serial No. 162,109. 1 Claim. (Cl. 53—9.)



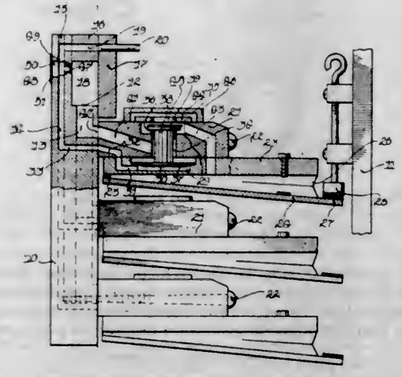
A liquid heating vessel comprising a bottom, elongated, slot-like chambers formed in said bottom and having the end walls thereof spaced from the wall of the vessel, the upper portions of one end of the chamber opening to the exterior of the vessel, and said chambers forming communicating water holding compartments in said vessel, the chambers extending lengthwise of the vessel and presenting to the liquid held in the vessel the maximum heating surface.

1,681,335. STABLE SUSPENSION AND PASTE OF COAL. ROBERT GRIESSBACH and JULIUS EISELE, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 23, 1927, Serial No. 177,832, and in Germany Mar. 24, 1926. 2 Claims. (Cl. 44—8.)



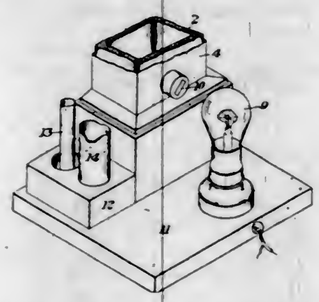
1. The process of producing stable suspensions of coal which consists in mechanically dispersing the coal in a liquid alcohol with an addition of a base soluble therein.

1,681,336. RAKE. ARTHUR T. GRIFFITH, Cozad, Nebr. Filed June 26, 1926. Serial No. 118,694. 8 Claims. (Cl. 56—395.)



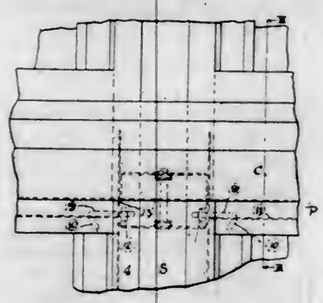
1. A rake comprising a member provided with teeth projecting from the forward end thereof, said member being supported on wheels, a second member slidably engaged with the teeth of the first-named member and means carried by one of said members to engage the other member to interlock same when the second member is in its extreme forward position whereby said members will move forward in unison.

1,681,337. COMBINED CASKET REST AND STRAP SLIDE. FLETCHER D. GRUND, Toledo, Ohio, assignor to The Sozonian Burial Vault Company, a Corporation of Ohio. Filed Jan. 13, 1928. Serial No. 246,414. 3 Claims. (Cl. 27—1.)



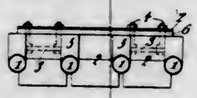
1. A support for caskets or the like, comprising an arched member adapted to be fixed to the bottom of a vault to receive a strap therethrough, a supporting flange on the upper portion of said member on which a casket is adapted to rest, and teeth on the underside of said arched member for preventing slipping of the strap.

1,681,338. VALVE FOR PLAYER PIANOS. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 3, 1915, Serial No. 31,815, Patent No. 1,349,273, dated Aug. 10, 1920. Divided and this application filed Aug. 9, 1920. Serial No. 402,258. 4 Claims. (Cl. 84—62.)



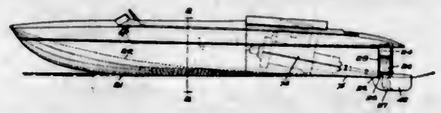
1. In a pneumatically actuated musical instrument, a valve block having a bore extending from top to bottom thereof and having its upper portion enlarged forming a valve chamber, the block being provided with a rectilineal air passage extending from one side of the block and opening into the bore, said block having a second air passage extending from the same side of the block as the first passage, the second passage having an upper rectilineal portion and a lower portion extending from the under face of the block, the block also having a third air passage comprising an upper rectilineal portion extending from the valve chamber and a lower portion extending from the under face of the block.

1,681,339. METHOD AND APPARATUS FOR DETERMINATION OF THE CONCENTRATION OF TURBID SUSPENSIONS. RALPH E. HALL, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont Borough, Pa. Filed Dec. 13, 1924. Serial No. 755,721. 9 Claims. (Cl. 88—14.)



1. The method of determining the concentration of a suspension which comprises diluting a measured quantity of the suspension with a clear, miscible liquid until a luminous object attains a predetermined standard of visibility when viewed through a predetermined thickness of the diluted suspension, viewing the object through the suspension, and measuring the quantity of liquid present when such visibility is obtained whereby the concentration of the suspension may be determined.

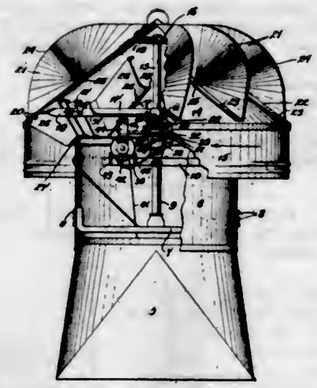
1,681,340. DEMOUNTABLE WALL CONSTRUCTION. EARL F. HAUSERMAN, Cleveland Heights, LEROY D. MOWERY, Cleveland, and JOHN A. BOHNSACK, East Cleveland, Ohio, assignors to The E. F. Hauserman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 134,111. 8 Claims. (Cl. 189—34.)



1. In construction of the character described, the combination of a hollow post, a panel member engageable with said post, and take-up means insertible wholly from within said post for securing said panel member to said post.

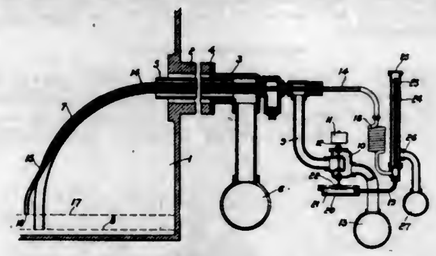
1,681,341. WATER-COOLED FURNACE WALL. ALBIN BERTHOLD HELBIG, Berlin, Germany. Filed May 18, 1925, Serial No. 31,229, and in Germany Jan. 10, 1925. 6 Claims. (Cl. 122—6.)

1. In a wall structure for furnaces, spaced water tubes, firebrick arranged between said tubes and projecting from opposite sides thereof, said firebrick provided on their opposite side faces with horizontal shoulders for interlocking engagement with each other, additional firebrick arranged upon one side of said tubes between said first-named firebrick, an elastic insulating sheet covering the outer face of the wall structure, a plate engaged upon said insulating sheet, and fastening devices connected with certain of the first-named bricks and extending through said insulating sheet and the plate and thereby uniting the bricks in assembled relation while permitting of their relative expansion under heat.



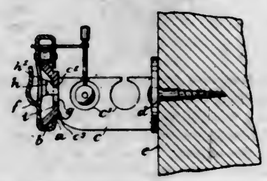
1,681,342. BOAT. WILLIAM ALBERT HICKMAN, West Mystic, Conn. Filed Jan. 10, 1923. Serial No. 611,886. 14 Claims. Cl. 114—66.5.)

1. A boat having a hull, a single propeller having a hub normally emersed when the boat is under way and a fixed non-steering plate having a portion immersed in the water laterally of said propeller at a clearance therefrom to provide a body of water in which the propeller blades freely turn and which reacts on said surface.



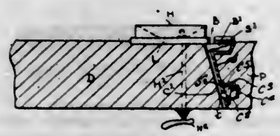
11. A high speed motor boat having a bottom presenting a concavity of inverted V section gradually broadening from a point forward to a point aft in substantially smooth longitudinal curves to provide generally diagonally presented surfaces and longitudinal water breaks along the sides of the concavity opposing the tendency of the water to cling to the sides of the concavity to fill the same.

1,681,343. ROTARY VENTILATOR. WILLIAM F. HIRSCHMAN, Le Roy, N. Y. Filed Aug. 10, 1926. Serial No. 128,384. 2 Claims. (Cl. 98—72.)



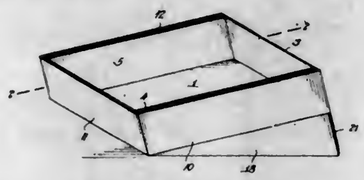
1. In a ventilator, the combination of a revolving wind driven member, an electric motor, a ventilating fan driven by said motor, a switch mounted on said wind driven member and actuated by centrifugal force to deenergize said motor when said wind driven member is rotated faster than a predetermined speed and means for adjusting said switch to vary said predetermined speed.

1,681,344. CONDENSATE-REMOVING SYSTEM. ROBIN BELL-IRVING and PERCY SANDWELL, Powell River, British Columbia, Canada. Filed Dec. 23, 1926. Serial No. 156,729. 9 Claims. (Cl. 137—103.)



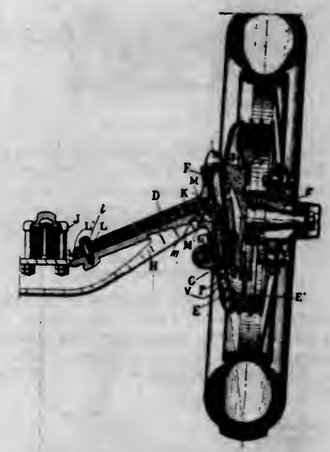
1. The combination of a hollow body having a steam inlet, a normally closed main condensate outlet, a normally open auxiliary condensate outlet and means for opening the main outlet in response to an initial discharge of condensate through said auxiliary outlet.

1,681,345. CURTAIN RAIL AND SUPPORT THEREFOR. ROBERT CRAWFORD JOHNSON, Roxton, Leicester, England. Filed Feb. 26, 1926, Serial No. 90,906, and in Great Britain Mar. 16, 1925. 4 Claims. (Cl. 156—20.)



3. A curtain runner support comprising a pair of brackets constructed to be secured to a support and project therefrom, each of said brackets having a vertically disposed front face, a hook projecting forwardly from said front face intermediate its vertical length, and a rail having spaced apertures to receive the hooks, said rail having a thickness equal to the distance between the hooks and vertical face of the brackets whereby the rail is held in vertical position against the vertical faces of the brackets.

1,681,346. LATCH FOR THE DOORS OF MOTOR ROAD VEHICLES. WALTER KELITA KAYE, Leeds, England. Filed Mar. 10, 1926, Serial No. 93,566, and in Great Britain June 27, 1925. 2 Claims. (Cl. 292—340.)

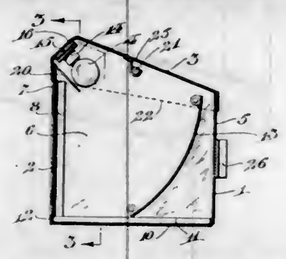


1. A door fastening device, comprising a striking plate mounted in the door frame and provided with a pair of recesses open toward the door opening, one of said recesses adapted to receive the door retaining bolt when projected, and a pivotally mounted spring-pressed safety catch disposed in the other recess and having a portion normally projecting beyond the outer surface of the plate, said catch being adapted to engage the bolt and stop movement of the door in the opening direction and to be pressed into its recess during the movement of the door in the closing direction.

1,681,347. DISPLAY BOX. ALBERT E. KEPPLER, Philadelphia, Pa., assignor to Brown & Bailey Company, a Corporation of Pennsylvania. Filed Oct. 21, 1924. Serial No. 744,875. 5 Claims. (Cl. 206—44.)

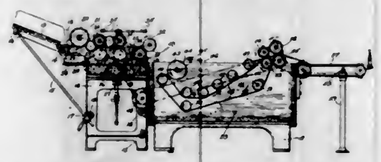
1. A foldable display box made from an elastic material and comprising telescoping box and support sections, said support section comprising elastic members which, when said support section is withdrawn from said box section, spring underneath the latter and form an inclined support therefor.

1,681,348. STEERING-WHEEL BRAKE. ISAAC KOECHLIN, Levallois-Perret, France, assignor to Société Anonyme des Automobiles et Cycles Peugeot, Levallois-Perret, France. Filed Feb. 14, 1925, Serial No. 9,074, and in France Mar. 31, 1924. 3 Claims. (Cl. 188—194.)



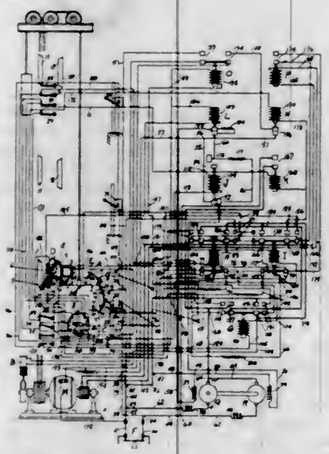
1. In a steering wheel brake the provision of a tubular kingpin for the steering swivel of the wheel, a flexible traction member extending longitudinally through said tubular kingpin, means for connecting one end of said traction member to the transmission gear operated by the driver, a sliding block connected to the other end of said flexible member and cooperating with the inner surface of said tubular kingpin whereby said sliding block may be displaced longitudinally but is prevented from turning in said kingpin, a rigid member integral with said sliding block, and a ball and socket connection between the end of said rigid member and the operating member for the braking members.

1,681,349. ILLUMINATED VEHICLE LICENSE TAG AND HOLDER FOR SAME. PAUL A. KRAUSE, Woodlynne, N. J. Filed Apr. 22, 1926. Serial No. 103,710. 3 Claims. (Cl. 40—133.)



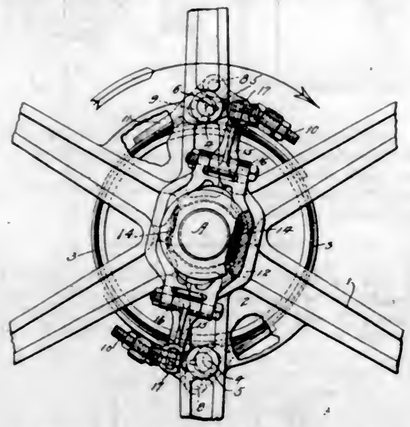
1. A license tag holder including a casing consisting of a piece of sheet metal bent to form a back, sides and inwardly extending flanges on the sides; angle bars secured to the sides adjacent the flanges to form grooves therewith; a bottom, having an upwardly extending flange, secured to the back and the sides with the flange abutting

the flanges of the sides; a license tag mounted in the grooves with the lower edge of the tag in rear of the bottom flange; a lid on the sides and back of the casing



and extending below the upper edge of the license tag; a reflector secured within the casing to the sides thereof, and illuminating means mounted on the lid.

1,681,350. METHOD AND MACHINE FOR GLOSS COATING PAPER. ELIE W. LABOMBARDE, Nashua, N. H. Filed Mar. 2, 1922, Serial No. 540,604. Renewed Jan. 16, 1928. 9 Claims. (Cl. 91—51.)

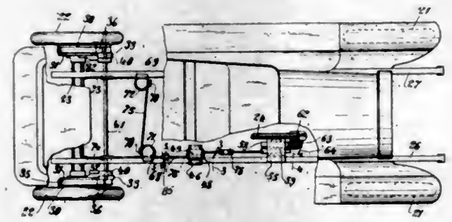


1. The method of producing moisture-proof paper, consisting in flooding the paper with an indeterminate quantity of melted wax in free motion, without subjecting the paper to immersion in the wax, removing surplus wax from both surfaces of the paper, and cooling the wax before it is absorbed by the paper.

1,681,351. SPEED-CONTROL SYSTEM FOR ELECTRIC ELEVATORS. JACOB D. LEWIS and GEORGE WILLIAM LAUTRUP, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 13, 1922. Serial No. 574,617. 3 Claims. (Cl. 172—152.)

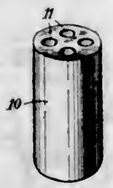
1. A system of control for an electric work motor, comprising in combination, a source of current, a motor generator set having the armatures of the motor and the generator connected in series to said source of current, means for connecting the armature of the work motor in parallel with the armature of the generator, and means for connecting under certain operating conditions the armature of the work motor directly to the source of current while maintaining said armature connected to the armature of said generator.

1,681,352. EASILY-OPERATED CLUTCH. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 12, 1925. Serial No. 36,742. 5 Claims. (Cl. 192—80.)



1. In clutch means of the class described, in combination, a relatively movable clutch member, a relatively stationary clutch member, a pair of clutch bands surrounding the relatively stationary member, the ends of one clutch band being opposite the ends of the other clutch band, a floating equalizing member arranged to turn with the movable clutch member, equalizing connections between said movable clutch member and the opposite ends of the said clutch bands, a clutch shifting collar for the equalizing member to cause operation of its equalizing connections for applying the bands to the stationary clutch member and yieldable means to prevent relative movement of the equalizing member and the shifting collar therefor, except as required and incidental to its equalizing function.

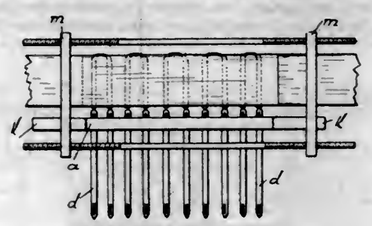
1,681,353. PROCESS OF FORMING ROADS AND THE LIKE. MARCEL LÉVY, Geneva, Switzerland, assignor to "Prodor" Fabrique de Produits Organiques S. A., Geneva, Switzerland. Original application filed Nov. 2, 1922, Serial No. 598,651, and in Great Britain Jan. 3, 1922. Divided and this application filed July 22, 1924. Serial No. 727,574. 3 Claims. (Cl. 94—23.)



1. The method of laying a roadway which comprises forming a substratum of a pitch concrete which is hard, non-plastic and has a crushing strength of at least about 4,000 to 5,000 lbs. per square inch and tensile strength when the large aggregate is not present of about 400 to 500 lbs. per square inch and substantially retains these properties under temperature conditions of use by first mixing said pitch concrete by incorporating into hard pitch under the action of heat a graded aggregate and filling material, laying this mixed pitch concrete as a substratum and covering this substratum with a thin coating of a plastic substance which solidly adheres thereto.

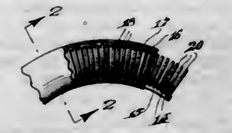
1,681,354. BRAKE MECHANISM. LEE FRANCISCO LOSI, Newark, N. J., assignor of one-fifth to Michael Mercolino, one-fifth to Pasquale Fuoco, one-fifth to Peter Paris, and one-fifth to Gennaro Lardone, Bayonne, N. J. Filed Apr. 21, 1926. Serial No. 103,509. 2 Claims. (Cl. 188—18.)

1. The combination in a vehicle of a pair of brake bodies for an axle thereof, a brake strap for each of said brake bodies, an operating handle in connection with the steering post of the vehicle, a pair of journal brackets fastened to one of the frame members of the vehicle, a roller having a helical circumferential groove journaled in one of said journal brackets, a roller larger in diameter than the first one journaled in the second journal bracket, a journal bracket fastened to said frame member, a guide sheave journaled to the latter journal bracket, a second journal bracket fastened to the other frame member of the vehicle, a guide sheave journaled to the latter journal bracket, a cable with one end extending from said operating handle and winding around the roller having the larger diameter, then leading to and winding around the other roller and then in connection with one of said brake straps, and a second cable with one end in connection with the second brake strap then engaging the sheave journaled to the journal bracket of the second frame member, said second cable then leading to the first guide sheave and connected to the first cable.



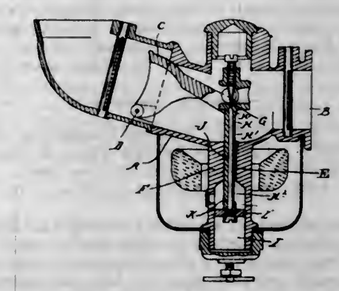
1,681,355. SHAVING STICK. HENRI LOWENFELD, Paris, France. Filed Mar. 4, 1927, Serial No. 172,799, and in Great Britain Mar. 4, 1926. 3 Claims. (Cl. 87—23.)

1. As a new article of manufacture a shaving soap stick having one end thereof adapted to be moved along and in contact with the face of the user, the said end consisting of deep recessed areas and solid partitions dividing and spacing said recessed areas, the total cross-sectional area of the solid portions of the face contacting end of the stick being relatively small as compared with the total area of the said end.



1,681,356. PROCESS AND APPARATUS FOR WEAVING TOGETHER THE ENDS OF SIMILARLY WOVEN BELTS AND BANDS. ARTHUR LUCKWEIL, Mannheim-Neckarau, Germany. Filed Feb. 25, 1927, Serial No. 170,966, and in Germany Feb. 27, 1926. 2 Claims. (Cl. 139—33.)

1. The process for weaving together the ends of tensioning members of the same weave consisting in using upon the entire connecting length of the ends to be interwoven with one another a series of bars running in the same direction as the wefts and spaced apart by the same distances as the wefts, into which the warp threads of the two ends are woven alternately exactly in accordance

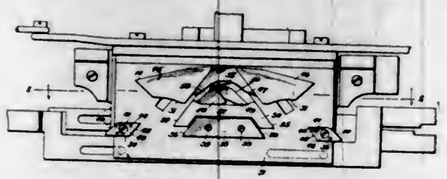


with the weave of the warp threads in the tensioning member, and then knotted to the associated warp threads of the other end which have become free, whereupon a weft thread is woven in, in place of the bars.

1,681,357. TIRE FILLER. MICHAEL J. LYONS, Philadelphia, Pa. Filed Apr. 28, 1927. Serial No. 187,149. 6 Claims. (Cl. 152—8.)

1. A filler for motor vehicle tires including an annular metallic band, tongues on the band, and resilient rings secured between the tongues.

1,681,358. CARBURETOR. ALBERTUS W. MCCALMONT, Pontiac, Mich., assignor, by mesne assignments, to Victore E. Nelson, Pontiac, Mich. Filed Apr. 10, 1922. Serial No. 550,975. 9 Claims. (Cl. 261—44.)



1. In a carburetor, the combination with an air shutter or valve, of a fuel valve actuated thereby and controlling a plurality of discharge passages for liquid fuel, one of said passages being automatically restricted at a predetermined point in the opening travel of the valve.

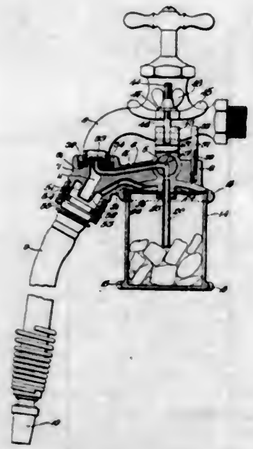
1,681,359. KNITTING-MACHINE MECHANISM. SAMUEL MISHCON, Brooklyn, N. Y. Filed Apr. 22, 1925. Serial No. 25,117. 3 Claims. (Cl. 66—75.)

3. In a knitting machine, a set of needles, a set of jacks cooperable with the needles, a reciprocating carriage, a set of jack-operating locks, consisting of a center lock and two end locks, said locks being fixedly mounted on and movable with said carriage, a set of needle operating locks carried by and movable with said carriage and in-

cluding a movable control lock associated with said center lock to render the same active for jack operation for the fancy stitching operation and to render the same inactive and itself active for the plain stitching operation, and jacquard mechanism for selectively raising the jacks at each half cycle of operation of said carriage, one of said end locks serving to raise the initially raised jacks to the

path of travel of said center lock which still further raises the jacks to raise their needles to the set of needle operating locks during each half cycle of operation of said carriage and the other of said end locks serving to lower the jacks to normal position when they are lowered to its path of travel in the lowering of their related needles by the needle operating locks during each half cycle of operation of said carriage.

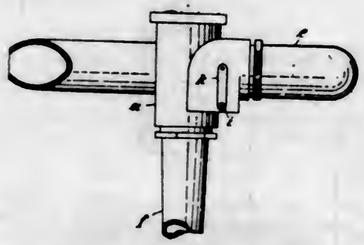
1,681,360. PRESS FEED GUIDE. WILLIAM I. NYE, San Francisco, Calif. Filed Oct. 10, 1927. Serial No. 225,303. 7 Claims. (Cl. 101—415.)



1. A press feed guide comprising a body having a stop arranged upon one end thereof; a spring leaf secured upon the body and arranged to be inserted through the platen sheet of a press; and means slidably mounted upon the body and leaf and movable to compress the leaf toward the body to detachably clamp the platen sheet against said body.

1,681,361. LAXATIVE. RICHARD PASTERNACK, Brooklyn, N. Y., assignor to Charles Pfizer & Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Oct. 30, 1925. Serial No. 65,884. 1 Claim. (Cl. 260—65.)

As a new product, an amorphous substance having laxative properties and melting at below 200° C., and which may be formed by treating phthalic anyhdride and phenol with the usual condensing agents to form phenolphthalein, extracting the reaction product with alkali, reprecipitating the alkaline solution, dissolving the precipitate by means of a suitable solvent, crystallizing out the phenolphthalein, and extracting the new product from the residue after crystallization by means of ether.

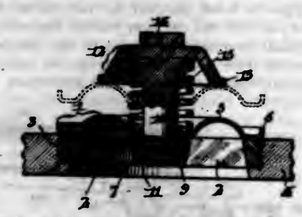


1,681,362. DISHWASHING APPARATUS. ALBERT PIKE, Winthrop, Mass., assignor, by direct and mesne assignments, to Dario Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 30, 1924. Serial No. 740,756. 17 Claims. (Cl. 299—84.)

1. In a device of the character described, the combination with a valve casing, of a soap container detachably carried thereby, the casing having integrally formed therewith a closure for the container and a laterally projecting portion provided with an always open, substantially straight main passage for the direct flow of a stream of water from a faucet to a hose with provision for direct engagement with the annular end of the faucet at the inlet end of said passage and for engagement with the hose at the outlet end of said passage, said laterally projecting portion and casing also having branch water passages

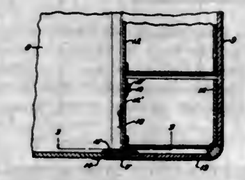
extending from adjacent the inlet end of the main passage to the closure and from the closure to adjacent the outlet end of the main passage, a valve in one of the branch passages for controlling the flow of water through the container, a handle without the casing for actuating the valve, and means independent of the end of the faucet for securing the valve casing to the faucet.

1,681,363. FIRE FOAM NOZZLE. BERNHARD REDDEMANN, Berlin-Lichterfelde, Germany, assignor to Pyrene-Minimax Corporation, a Corporation of Delaware. Filed May 12, 1926, Serial No. 108,600, and in Germany July 8, 1924. 2 Claims. (Cl. 299—111.)



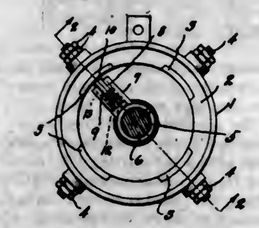
1. A nozzle for foam fire extinguishing apparatus having an inlet, an outlet substantially in line with the inlet, a second outlet having its axis disposed at an angle to the axis of the inlet and first mentioned outlet, a valve common to both outlets for selectively closing one or the other, and a hook-shaped nozzle associated with said second outlet for engaging the nozzle with a burning structure.

1,681,364. VALVE. MAURICE F. RICHARDSON, Berwyn, Pa. Filed Dec. 14, 1922. Serial No. 606,783. 6 Claims. (Cl. 251—144.)



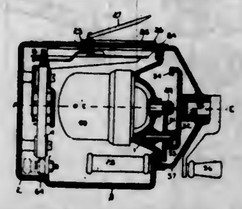
6. In a valve of the type described, the combination of a valve member embodying an annular arched-ridge intermediate concentric seating surfaces and a convex guard

member having a lateral lip, the high point of said arched-ridge and the median of the lateral lip coinciding with a center line through the valve port openings, said valve and



guard members jointly providing a substantially enclosed fluid-trapping cavity wholly within an area bounded by the center line aforesaid, for the purpose specified.

1,681,365. TRUNK CONSTRUCTION. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 29, 1924. Serial No. 702,833. 3 Claims. (Cl. 702,833. 3 Claims. (Cl. 190—28.)



1. A trunk construction, comprising a wardrobe section and a drawer section having bottom portions and adjacent non-yielding edge portions, a non-yielding valance member mounted on the edge portion of one of the sections and overlapped by the adjacent edge portion of the other section, and a reinforcing strip mounted in the bottom portion of the trunk section provided with the valance member and spaced above the valance member to form in combination with the valance member and the front edge of the drawer section a groove, the opposite end portions of the reinforcing strip having parts extending downwardly in front of the lower edge of the said section and engaged by the edge of the other section.

1,681,366. TIMER. CHARLES F. ROGERS, Detroit, Mich. Filed Apr. 14, 1926. Serial No. 101,846. 1 Claim. (Cl. 200—26.)

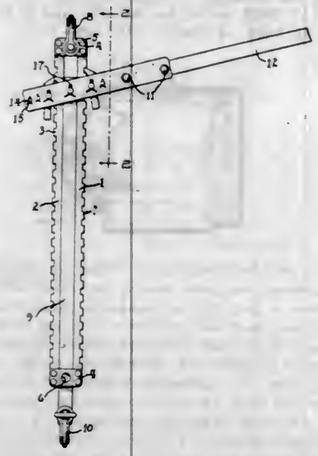
A timer comprising a housing, an insulating ring in the housing, a series of contacts embedded in the insulating ring, a shaft extending into the housing, a sleeve secured to the said shaft, a tubular portion extending from one side of the sleeve and having a pair of diametrically opposite slots in the outer end thereof, a contact member comprising a cylindrical head fitting the inner diameter of the tubular member, a pair of lugs extending from opposite sides of the head and engaging in the slots of the tubular member, a stem secured to the head and extending into the tubular member, a spring about the stem tending to force the contact member ino engagement with the insulating ring and contacts carried thereby, the head of the contact member forming a seat for the said spring, the outer face of the cylindrical head and lugs being cut to arcuate form with the axis thereof extending in parallel relation to the axis of the insulating ring, the axis of the said arcuate face intersecting the longitudinal axis of the contact member.

1,681,367. ELECTRICAL TESTING INSTRUMENT. GEORGE BERKELEY ROLFE, London, England, assignor to Evershed & Vignoles, Limited, London, England. Filed Apr. 11, 1923, Serial No. 631,273, and in Great Britain May 17, 1922. 4 Claims. (Cl. 175—183.)

1. An electrical resistance testing instrument having in combination a magneto electric generator with a rotatable armature, a gear box mechanically connected to the field magnet system of said generator, a facing on said gear box, driving gear for said armature located in said gear box, a cover for said gear box, external means for operating the driving gear, an indicating instrument having a visible pointer and scale, electrical connections between said generator and said indicating instrument, a casing for said indicating instrument, a tubular element on said casing and having a facing for cooperation with the facing on the gear box so as to form an enclosure for the magneto electric generator, a window in said element for permitting the pointer and scale to be viewed and means for associating the testing instrument as a whole with the resistance to be tested.

1,681,368. PURIFYING PHENOLALDEHYDE RESINS. FRITZ SEEBACH, Erkner, near Berlin, Germany, assignor to Bakelite Gesellschaft m. b. H., Erkner, near Berlin, Germany. Filed Jan. 21, 1926, Serial No. 82,843, and in Germany Jan. 27, 1925. 6 Claims. (Cl. 200—4.)

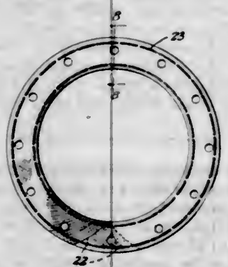
1. A process for making alkali soluble phenolaldehyde resins free of acids which consists in dissolving the resins in alkalies, adding to the solutions obtained so-called hydrotropic salts which have the property of rendering difficulty soluble or insoluble substances soluble in water but do not affect the solubility of the phenol resin and precipitating the resins in the presence of the said salts with acids.



1,681,369. PURIFYING PHENOLALDEHYDE RESINS. FRITZ SEEBACH, Erkner, near Berlin, Germany, assignor to Bakelite Gesellschaft m. b. H., Erkner, near Berlin, Germany. Filed Jan. 21, 1926, Serial No. 82,844, and in Germany Jan. 27, 1925. 4 Claims. (Cl. 260—4.)

1. The process for purifying fusible, soluble phenolaldehyde resins which consists in treating the fusible, soluble raw phenolaldehyde resins with not more than equal parts of water and with sufficient alkali to form a colloidal suspension and then precipitating the said resins by adding salts which have the property of salting out resins.

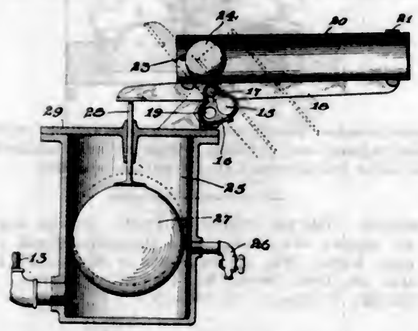
1,681,370. PUSHING AND PULLING TOOL. ADOLPH M. SEEGER, Toledo, Ohio, assignor to The Seeger Device Company, Toledo, Ohio, a Corporation of Ohio. Filed May 7, 1927. Serial No. 189,503. 1 Claim. (Cl. 254—56.)



A pushing and pulling tool including a pair of spaced bars each having teeth on the outer side edges of the bars, means connecting each of the ends of the bars so as to

leave open space at each of the ends of the bars, an intermediate bar in the space between said pair of bars having attaching means on one end and having its opposite end formed to be selectively inserted in said open space at either end of the bars, a lever having pawls to engage the teeth on each of the said pair of bars, means to removably pivot the lever to the intermediate bar, and attaching means

removably engageable with either of said connecting means of the pair of bars whereby upon removal of the pivoting means and of said last named attaching means the intermediate bar may be inserted from either end of the pair of bars so as to adapt the tool for pulling when inserted in one end of the pair of bars and for pushing when inserted in the opposite end of said pair of bars.



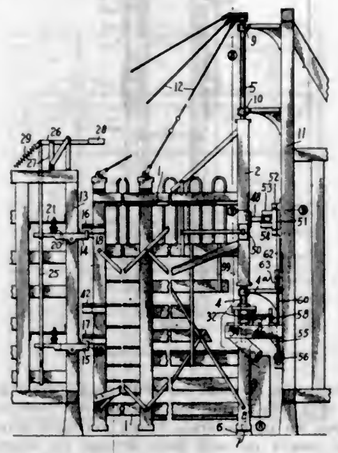
1,681,371. CLUTCH DISK. EDWARD SLADE, New York, N. Y. Filed May 9, 1923. Serial No. 637,622. 12 Claims. (Cl. 192—107.)

1. A clutch disk or lining comprising an annular fabric member, the weft strands of the fabric consisting of at least two strands of twisted asbestos fibre wrapped together, the warp strands consisting of wire interwoven with the weft strands in undulated form so as not to substantially penetrate the weft strands, the wrap and weft extending diagonally with respect to the radii of the annular member.

1,681,372. CUT-OFF VALVE. CLINTON F. SMITH, Boston, Mass. Filed Aug. 28, 1924. Serial No. 734,699. 2 Claims. (Cl. 137—68.)

1. A cutoff for fluid burners comprising, in combination, a feed pipe, a float chamber, an overflow pipe communicating with the float chamber, a buoyant body located in the float chamber, a stem carried by the buoyant body slidable through an opening in the chamber wall, a valve located in the feed pipe, a lever covered by the valve, a normally substantially horizontal run way rigidly connected with the lever, a weight mounted to travel in the run way at one limit of its movement tending to hold the valve open and at the opposite limit tending to close the valve, and means

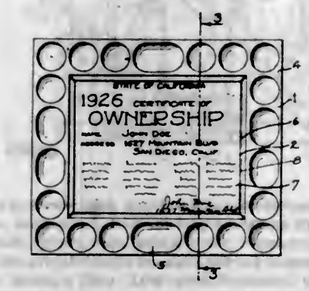
carried by the lever interposed disconnectedly in the path of movement of the stem converting said stem movement into a movement of the run way to initiate the closing movement of the traveling weight, the movement of which tends to complete the closing of the valve.



1,681,373. COMBINATION STOP ACTION FOR ORGANS. HARRY M. SMITH, Cranford, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Aug. 19, 1926. Serial No. 130,206. 7 Claims. (Cl. 84—345.)

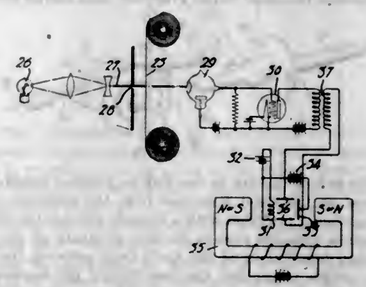
5. The combination of claim 1 further characterized by there being a plurality of the aforesaid rows of jacks; each row having its own jack actuator bar and its own contact bar including the respective operating means therefor and its own combination piston; also its own switch means operable by the set piston for shifting the control by the combination piston to operate at will either the jack actuator bar or the contact bar; said individual switch means being combined together so as to be operated by one and the same set-piston.

1,681,374. GATE. JOHN W. SMITH, Dayton, Ohio. Filed Sept. 25, 1922. Serial No. 590,346. 31 Claims. (Cl. 39—31.)



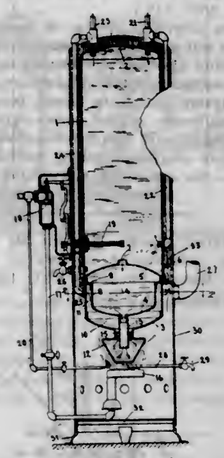
15. The combination with a gate comprising a standard which support said gate as a whole and which is movable about a vertical axis, and a latch to hold said gate normally against movement about said axis, said standard being mounted for vertical movement to lift said gate out of engagement with said latch, of a lifting device to impart vertical movement to said standard and said gate, a gate swinging device movable transversely to said standard and having lugs projecting therefrom toward said standard and spaced apart, and a projection carried by said standard

and arranged normally below the horizontal plane of said lugs and adapted to be moved by the vertical movement of said standard into the space between said lugs, whereby the movement of said lugs in either direction will impart swinging movement to said gate, projections extending laterally from the opposite sides of said standard, and other lugs carried by said swinging device and arranged respectively to engage the last mentioned projections on said standard when said gate is in one or the other of its open positions.



30. The combination with a swinging gate, and a latch to hold said gate normally against movement, said gate being mounted for vertical movement to disengage it from said latch, of a supporting structure mounted adjacent to the axis about which said gate swings, two actuating members mounted on said supporting structures for bodily movement transversely thereto, means actuated by the respective members for lifting and swinging said gate, lever mechanism mounted on said supporting structure and operatively connected with said actuating members to cause the movement of one of said members to be transmitted to the other of said members, and and a vehicle actuated device connected with one of said actuating members.

1,681,375. CARD DISPLAY AND HOLDING MEANS. ALBERT M. SHOOK, San Diego, Calif. Filed June 26, 1926. Serial No. 118,649. 9 Claims. (Cl. 40—10.)



1. A means of the class described, comprising a resilient, rectangular frame portion having a rectangular central recess and an integral back portion, said frame portion having formed in its face side a multiplicity of resilient vacuum pockets, said pockets extending into said frame portion and extending in spaced relation around the same.

1,681,376. SOUND RECORDING AND REPRODUCTION. HOMER C. SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,813. 15 Claims. (Cl. 179—100.1.)

7. An arrangement for producing sound waves from electrical waves which comprises means for establishing an ionized field in a body of gas, means for superimposing thereon an electromagnetic field, and means for superimposing upon the combined fields an electrostatic field varying in accordance with audible frequencies.

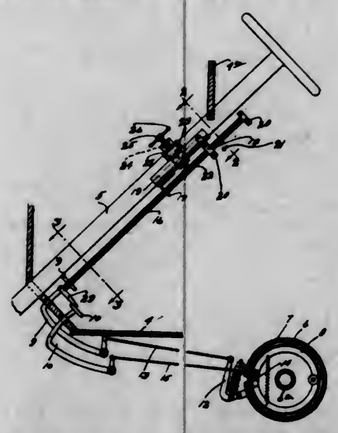
1,681,377. STORAGE WATER HEATER. ELMER S. STACK, Somerville, Mass. Filed Oct. 20, 1921. Serial No. 509,087. 8 Claims. (Cl. 122—18.)

1. A water heater comprising a tank having a bottom head, a heating chamber depending from said bottom head in communication with the space enclosed by such head, and an inner partition crossing the interior of the tank above such head, said partition being constructed and arranged with a portion of its structure at a relatively high level, and another portion at a relatively low level forming a pocket for collection of sediment, and having an opening in said portion at the relatively high level for passage of water into the space between itself and the bottom head, and a tap leading from said pocket.

1,681,378. INSULATOR. ALVIN G. STEINMAYER, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 29, 1924. Serial No. 734,894. 1 Claim. (Cl. 173—321.)

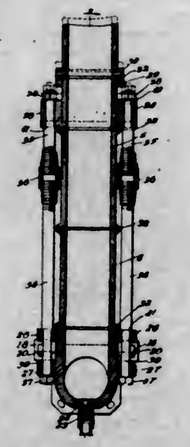
An appliance of the character described, comprising an attaching member, a hook end thereon, a pair of links having registering apertures in their inner ends adapted to be

engaged over the attaching member hook end, the outer ends of the links being struck outwardly and then parallel to provide a yoke frame, an insulating spool adapted to be secured between the opposite ends of the links to receive a strain in a direction away from the attaching member, the outer ends of said links having apertures therein, a securing pin passed through the apertures of the links and through the spool, a head on one end of said pin preventing its movement through the spool in one direction, and means securing



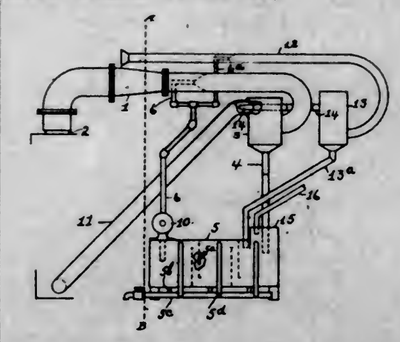
the other end of the pin to one link to prevent longitudinal movement of the spool from the link, the aperture of the other link being provided with a keyhole slot having its narrow portion disposed toward the line of strain on the spool to prevent detachment of the spool from between the links while a strain is applied, the link having the keyhole slot being readily detachable from the pin upon its disengagement from the attaching member and its movement in a longitudinal plane in the line of strain.

1,681,379. METHOD OF COLLECTING INORGANIC POTASSIUM SALT, BETAIN SALT, AND GLUTAMIC ACID FROM THE WASTE LIQUOR PRODUCED IN DISTILLING ALCOHOL FROM FERMENTED BEET MOLASSES. YOSHITARO TAKAYAMA, Koishikawa Ku, Tokyo, Japan, assignor to Saburosuke Suzuki, Tokyo, Japan. Filed Jan. 12, 1927. Serial No. 160,783. 4 Claims. (Cl. 260—112.)



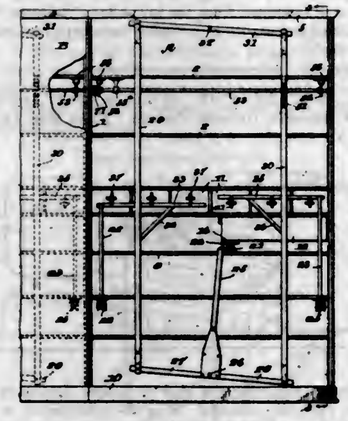
1. The herein described process of recovering glutamic acid, potassium salt and betain from the waste liquor produced in distilling alcohol from fermented beet molasses, consisting in first removing yeast and uncrystallizable substances by dialyzing the waste liquor, then collecting potassium salt and betain salt by concentrating the dialyzed liquor and adding mineral acid thereto, then converting the glutimic acid into glutamic acid by adding excess of the mineral acid to the remaining mother liquor and heating the same.

1,681,380. PEDAL LOCK. JOSEPH M. TAMAN, Minneapolis, Minn., assignor of one-half to Walter Taman, Minneapolis, Minn. Filed Mar. 31, 1927. Serial No. 179,870. 6 Claims. (Cl. 74—81.)



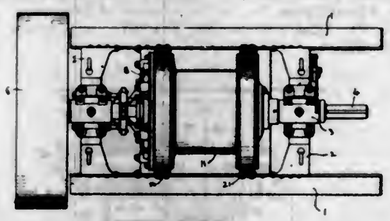
5. The combination with the brake and clutch pedals of an automobile, of a lock rod mounted for sliding and oscillatory movements, said rod at its lower end having a radially projecting foot arranged to be turned into alignment with any one of several of said pedals and to be quickly moved axially to lock any depressed pedal.

1,681,381. CONVEYER. EDGAR B. TOLMAN, Jr., Chicago, Ill. Filed July 5, 1924. Serial No. 724,473. 2 Claims. (Cl. 137—75.)



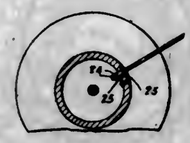
1. Connecting fittings for conveying system pipes consisting of a pipe fitting for the adjacent ends of each of two pipes, an intermediate fitting arranged between said fittings, means on said pipe fittings for aligning said intermediate fitting, each pipe fitting provided with rods non-rotatably carried thereby and extending toward the other fitting, said rods provided with threads at their adjacent ends, extending in opposite directions, and connecting members in threaded engagement with said adjacent ends and connecting the said rods for forcibly separating or contracting the fittings to release or secure the said intermediate fittings.

1,681,382. ELASTIC-FLUID CLEANER. JOHN L. TORKELSON, Burke, Idaho. Filed Oct. 8, 1927. Serial No. 224,914. 3 Claims. (Cl. 110—49.)



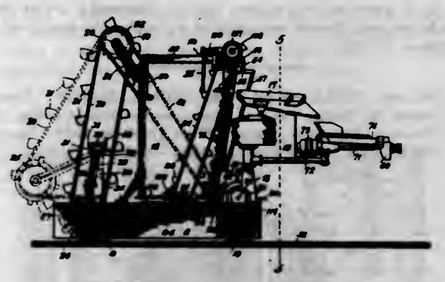
1. The combination of an elastic fluid washing chamber provided with an intake port for foul elastic fluid; a device within said chamber for washing said elastic fluid, a reclaiming chamber for the cleansed elastic fluid, said reclaiming chamber communicating with said washing chamber and being provided with a waste port for discharging the cleansing element and for discharging the substances washed from said elastic fluid; a conduit connected to said reclaiming chamber for conducting the cleansed elastic fluid therefrom; a free air intake pipe; an air washing device in said air pipe; a reclaiming chamber for the cleansed free air, said free air reclaiming chamber being provided with a waste port for discharging the air cleansing element and for discharging the impurities washed from such air, and a pipe communicating with said air reclaiming chamber and with said conduit for conducting air to said conduit.

1,681,383. MERCHANDISING CABINET. ROBERT C. WALSH, St. Louis, Mo. Filed Apr. 19, 1923. Serial No. 633,149. 6 Claims. (Cl. 312—193.)



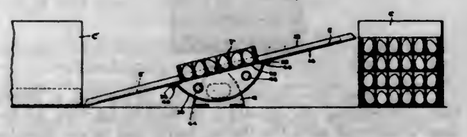
1. The combination with a cabinet having a sliding drawer, and formed with storage spaces both above and below said drawer, of doors closing said storage spaces, locking mechanism for said doors comprising pairs of levers defining a quadrilateral pivoted at the rear of the cabinet, and an operative connection between said drawer and quadrilateral and between said doors and quadrilateral, whereby the movement of said drawer serves to oscillate said quadrilateral and thus actuate the door locking mechanism.

1,681,384. CLUTCH AND CONTROL MECHANISM. HARRY H. WATERS, Clinton, Iowa, assignor to Climax Engineering Company, a Corporation of Delaware. Filed Apr. 25, 1927. Serial No. 186,324. 13 Claims. (Cl. 192—4.)



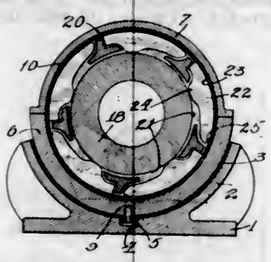
12. In a reversing transmission, a live shaft, a drum thereon, a forward drive clutch, a neutral brake, a reversing brake, a second shaft, levers pivoted on said second shaft, the ends of each of said brakes being secured to one of said levers, a pair of followers connected to said clutch, a cam shaft, cams fixed thereon engaging said levers and followers for controlling and actuating said transmission, and a lever operatively connected to said shaft for operating the same.

1,681,385. TRANSMISSION OF POWER TO VEHICLES. ARCH U. AVERA, Birmingham, Ala. Filed July 13, 1922. Serial No. 574,724. 3 Claims. (Cl. 191—12.)



1. The combination with an electrically driven vehicle, of a cable for feeding power thereto, a drum on which said cable is reeled to take up slack in the cable, circuit connections terminating in contacts carried by said drum and a contact plug terminal for said cable arranged to be moved radially of the drum into and out of engagement with said contacts and frictionally held in engagement therewith whereby the plug may be removed by a radial pull thereon but will be locked against disengagement by the tangential pull exerted thereon when the cable is reeled.

1,681,386. MOLDING MACHINE. ELMER O. BEARDSLEY, Chicago, and WALTER F. PIPER, Oak Park, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1921, Serial No. 483,385. Renewed Jan. 12, 1928. 38 Claims. (Cl. 22—36.)

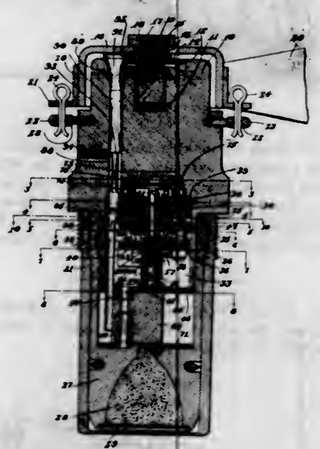


1. In a machine for making molds for founding, the combination of a movable carriage, a machine for filling flasks mounted on the carriage, a sand-reservoir on the carriage adapted to retain sufficient sand for a run of flasks, mechanism for feeding sand from the reservoir to the filling machine and driving mechanism for said sand feeding mechanism.

1,681,387. EGG-CANDLING DEVICE. SAMUEL G. BENZING, Grand Rapids, Minn. Filed Apr. 4, 1927. Serial No. 180,743. 6 Claims. (Cl. 99—6.)

1. An egg candling device comprising a support, a tilting slideway intermediately pivoted upon said support, said slideway having an opening intermediate its ends, a transparent plate set in said opening, and a source of light adjacent said plate.

1,681,388. SELF OILING AND ALIGNING BEARING. EARL ELWIN BERRY, Beloit, Wis., assignor to Beloit Iron Works, a Corporation of Wisconsin. Filed Apr. 10, 1924. Serial No. 705,428. 9 Claims. (Cl. 308—240.)

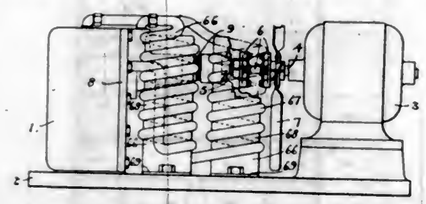


3. In a bearing, the combination with a journal, a cage secured thereon, and a plurality of pads freely movable in said cage formed to have a rocking contact with the journal.

1,681,389. GOLF PAD. BELDEN H. BLAKE, Canton, Ohio. Filed June 25, 1927. Serial No. 201,448. 4 Claims. (Cl. 273—81.)

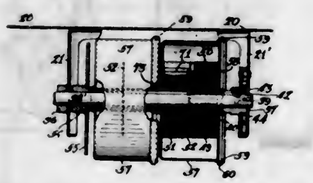
2. A glove having a loop located diagonally across the palm portion thereof and adapted to receive the handle of a club or the like.

1,681,390. TIME FUSE FOR AERIAL BOMBS. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Filed June 28, 1923. Serial No. 648,378. 5 Claims. (Cl. 102—36.)



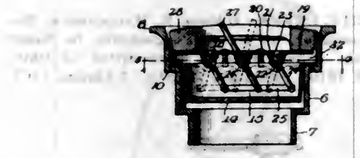
1. In a fuse, the combination of a firing pin, a timing train controlling the operation thereof, a starting mechanism associated with the timing train, and means movable longitudinally of the fuse and operable automatically and only during the flight of the fuse for controlling the starting of the timing train.

1,681,391. GOLF TEE OR THE LIKE. HARRY C. BRATT, Dayton, Ohio. Filed June 29, 1927. Serial No. 202,207. 1 Claim. (Cl. 273—33.)



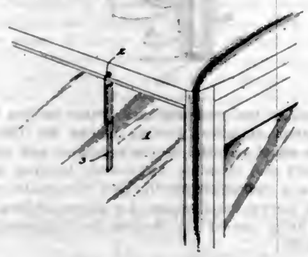
A golf tee formed integrally of wood including a head having an annular medical portion, opposite annular faces inclined upward and downward respectively and inward from said portion, a concavical seat formed in the upper face for poising a golf ball, and a stem for setting the tee in the ground extended from the lower face, the stem flaring upwardly and outwardly in a concavical curve and merging into the head.

1,681,392. ROTARY PUMP. WILLIAM HENRY DAVENPORT BROUSE, Toronto, Ontario, Canada. Filed Mar. 14, 1927. Serial No. 175,378. 6 Claims. (Cl. 230—147.)



1. A pump, comprising a pair of blocks having cylinder chambers therein arranged in axial alignment, a plate arranged between said blocks having an opening in alignment with the cylinders and an opening therebelow, a passage in each of said blocks extending radially from each of said cylinders, chambers in each of said blocks connecting with said passages and connected by the lower opening in said plate, oscillating valves interposed in said passages, and separated by said plate, a shaft having a pair of eccentrics thereon spaced to operate each side of said plate within said cylinder chambers, and a rotor member mounted on each of said eccentrics and each having a vane rigidly extending into the adjacent passage and operatively engaging the valve therein and adapted to oscillate the same to control the passage of fluid to and from said cylinders and the lower chambers connected therewith.

1,681,393. SPRING MOTOR. ISAAC F. BURTON, deceased, Philadelphia, Pa., by Manie E. Burton, executrix, Philadelphia, Pa., assignor to Visualatone Company of America, Philadelphia, Pa., a Corporation of Delaware. Filed May 21, 1924. Serial No. 714,797. 22 Claims. (Cl. 185—37.)

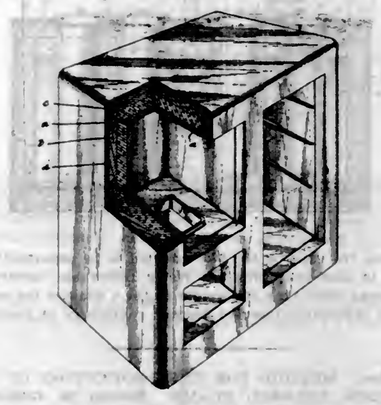


1. In a spring motor, a supporting shaft, a pair of sleeves thereon, a pair of oppositely spiraled springs about the sleeves, the one sleeve engaging one of the springs to wind it and the other engaged by the second spring to transmit the energy thereof, a floating arcuate plate extending transversely to the outer ends of both springs and hooks on the outer ends of the springs engaging opposite edges of opposite ends of the plate to transmit the energy of the first spring to the plate and from the plate to the second spring.

1,681,394. FLOOR-DRAIN VALVE. FRANK W. CARLSON, Chicago, Ill. Filed July 25, 1927. Serial No. 208,239. 11 Claims. (Cl. 277—19.)

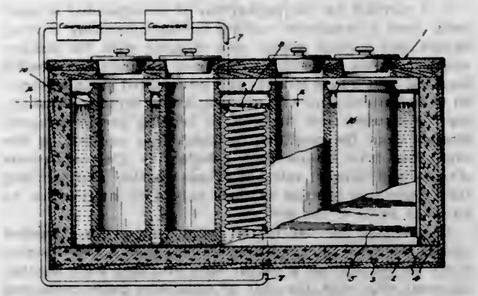
1. A floor drain valve comprising a casing, an inner plate secured to the casing and having a plurality of parallel seats therein, said seats having openings through the plate, a plurality of cores arranged in said seats and having passages to register with the openings in the plate, and means for operating said cores.

1,681,395. WINDSHIELD WIPER. VICTOR H. CHRISTEN, Detroit, Mich. Filed July 14, 1926. Serial No. 122,314. 2 Claims. (Cl. 15—255.)



1. In a wind-shield wiper, a wiper blade comprising a strip of material impregnated with a substance for treating the surface of the glass to prevent the formation of rain drops thereon and a strip of flexible material positioned along side the said impregnated material for wiping the glass, the impregnated material being more compressible than the said flexible material and the working edge of the said impregnated material projecting beyond the working edge of the flexible strip whereby the same is compressed in use so that both strips contact with the surface of the glass.

1,681,396. RAZOR. PAUL COOK, Linden, Md. Filed Sept. 10, 1924. Serial No. 736,866. 9 Claims. (Cl. 30—12.)

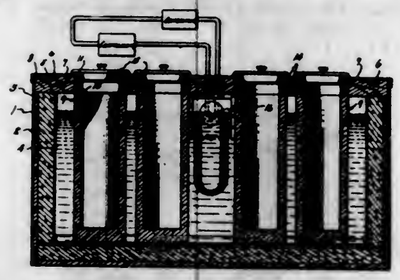


1. In a razor of the character described in combination, an abrasive roller, a movably mounted blade and means operable by advancing the roller in opposite directions in rolling contact with a superficiary for actuating the blade to engage opposite sides of the cutting edge with the roller for sharpening, and means for holding the blade against movement for shaving.

1,681,397. REFRIGERATOR OR CABINET. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed Mar. 19, 1926. Serial No. 95,898. 16 Claims. (Cl. 72—1.)

1. A refrigerator or cabinet, having in combination a box structure, a binder material spread over the exterior of the box structure, a web of flexible material spread over the binder, and a frangible material carried on the outside of the web.

1,681,398. REFRIGERATOR CABINET AND METHOD OF CONTROLLING THE TEMPERATURE THEREIN. LLOYD G. COPEMAN, Flint, Mich. Filed Nov. 18, 1926. Serial No. 149,101. 7 Claims. (Cl. 62—95.)



6. An ice-cream cabinet or similar structure, comprising in combination a tank adapted to contain a non-freezing solution, a top for said tank containing a plurality of apertures, a refrigerating coil positioned within said tank for cooling the solution, and imperforate storage container units for receiving ice cream cans adapted to be inserted through said apertures, said containing units being positioned by but held in said non-freezing solution independently of said top.

1,681,399. REFRIGERATOR CABINET AND METHOD OF CONTROLLING AND OPERATING THE SAME. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 6, 1927. Serial No. 159,266. 7 Claims. (Cl. 62—95.)

5. A refrigerating cabinet of the type designed to receive ice cream cans or similar articles, comprising in combina-

tion a tank adapted to contain a non-freezing solution, a top for said tank containing a plurality of apertures, refrigerating means positioned within the tank for cooling the solution, and independent storage container units for

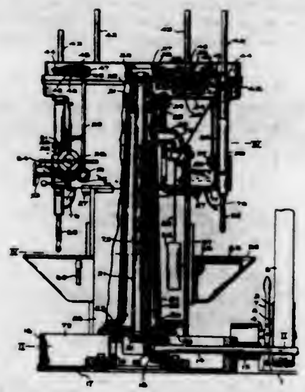
receiving the cans or the like adapted to be separately inserted in said apertures and freely removable therefrom, and means other than the weight of the container for securing the separately inserted storage containers in position.

1,681,400. METHOD FOR THE PRODUCTION OF EXPANDED TRUSSED BEAMS. HARVEY M. GERSMAN, Chicago, Ill. Filed Oct. 9, 1924. Serial No. 742,712. 13 Claims. (Cl. 29—155.)

1. A method for the production of an expanded trussed beam from a structural section having oppositely located flanges and a solid planar web integral with the flanges which consists in slitting the web to provide parallel diagonal continuous strands and interrupted strands parallel to and alternating with the continuous strands, in effecting the expansion of the web, in bending the interrupted strands from the positions in which they are left by the expansion into intersecting relation to the continuous strands and parallel relation to one another and securing the interrupted strands at their points of interruption to adjacent parts of the web.

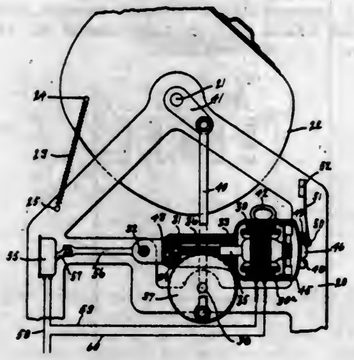
10. A blank for use in the production of an expanded trussed load bearing member consisting of a rolled structural section having a planar web provided with parallel diagonal slits with the slits of successive pairs connected by longitudinal slits, thereby to provide continuous strands and interrupted strands alternating with the continuous strands.

1,681,401. VANITY CASE. WALTER A. GOERTZ, East Orange, N. J., assignor to August Goertz & Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 3, 1928. Serial No. 258,737. 6 Claims. (Cl. 132—83.)



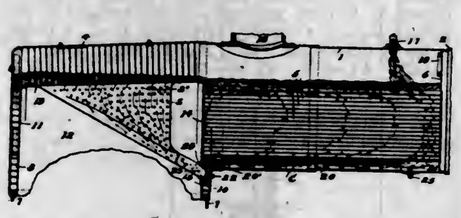
1. In a vanity case having cooperating sections, means for assembling and retaining an inserted member in connection with a section thereof, comprising an in-curled peripheral rim on said section, and an inserted member retaining frame arranged within the internal limits of said rim, said retaining frame having outwardly extending lugs spaced about its outer periphery, said lugs being sprung beneath said in-curled rim of said section.

1,681,402. DRILL PRESS. GEORGE E. HALLENBECK, Toledo, Ohio, assignor, by mesne assignments, to Baker Brothers, Inc., Toledo, Ohio, a Corporation of Ohio. Filed Dec. 15, 1919. Serial No. 344,818. 5 Claims. (Cl. 77—24.)



4. A machine tool comprising a frame having a pair of parallel driven spindles, driving means for the spindles including a shaft parallel to the spindles, and spur gears on said shaft and spindles, non-rotary bearing sleeves for the spindles, a feed shaft for the pair of spindles connected to the said sleeves, and means for disconnecting the said feed shaft from one of the sleeves for independently setting a spindle.

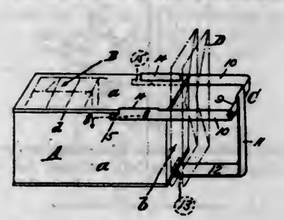
1,681,403. POWER-ACTUATED TOOL. GEORGE E. HALLENBECK, Toledo, Ohio, assignor, by mesne assignments, to Baker Brothers, Inc., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 20, 1923. Serial No. 614,002. 3 Claims. (Cl. 77—23.)



1. A tool carrier, means controlling the rotation of said carrier, a plurality of spindles carried thereby, spindle rotating means, independent feed means for each spindle actuable from said driving means, individually controlled trip means for each spindle feed means, and automatic spindle recover means for each spindle as tripped.

1,681,404. DOMESTIC APPLIANCE. FREDERICK J. HARDMAN, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 23, 1923. Serial No. 670,354. 3 Claims. (Cl. 74—107.)

1. Power operated mechanism comprising, in combination, an oscillatable member, an electric motor, disconnectible gearing for transmitting motion from the motor to the member, a motor switch, a pivoted frame carrying the motor and one of the gears and connected with the switch for operating the latter in response to movement of the frame, means for maintaining the frame in its operating and non-operating positions and means released by movement of the frame to its non-operating position for moving the oscillatable member to a desired position.



1,681,405. LOCOMOTIVE BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,691. 14 Claims. (Cl. 122—68.)

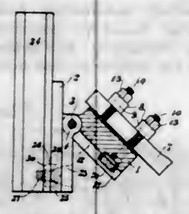
1. The herein described locomotive boiler having a fire box formed with side water legs and a throat, a water-steaming and circulating element arranged in the fire-box and having an inlet end connected to the throat, in combination with parts that divide a portion of the fire-box throat from those portions of the throat through which the side water legs communicate with the body of the boiler, said parts being spaced from but in communication with the inlet end of said water steaming and circulating element.

1,681,406. DISPLAY AND SERVICE RECEPTACLE FOR MERCHANDISE, SAMPLES, AND ADVERTISING MATTER RELATING TO SAME. JOSEPH HENRY HENGEHOLD, Covington, Ky. Filed Oct. 18, 1926. Serial No. 142,438. 1 Claim. (Cl. 211—86.)

The combination with a display or sales receptacle having a raised bottom with a downwardly-extended edge, of an auxiliary extensible skeleton rack comprising a horizontal transverse bar-member having forwardly-projecting embracing-arms adapted to outwardly and slidably engage the upper side-edges of said receptacle, a vertical bar-member extending downwardly from the middle of the said horizontal transverse bar-member, and a forwardly-projecting horizontal bar-member whose upper end is secured to the middle of said horizontal transverse

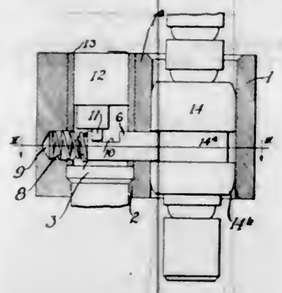
bar-member and whose fore end is upwardly or angularly turned into hook-form for stop engagement with the said downwardly-extending lower edge of the raised bottom of said receptacle, substantially as shown and described.

1,681,407. FISHHOOK. JOHN E. HOWELL, Dallas, Tex. Filed July 22, 1927. Serial No. 207,669. 1 Claim. (Cl. 43—34.)



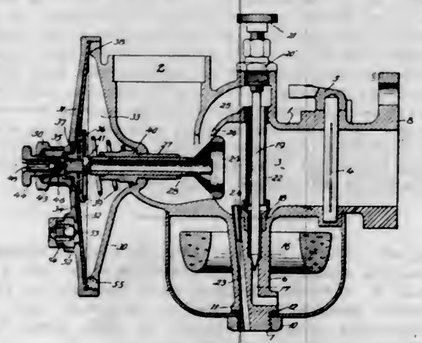
A device of the character described comprising in combination a rigid shank having an impaling fish hook unit at one end thereof, a hitch formed on said shank at a substantial distance from the impaling unit, a pilot hook provided with an eye to reciprocably receive said shank intermediate said hitch and the impaling unit, said pilot hook having its shank bent to form an open loop adjacent said eye and removable resilient means reacting between said pilot hook and said shank for normally holding said pilot hook away from said impaling unit, said loop permitting intentional withdrawal of but prevent accidental separation of said resilient means therefrom.

1,681,408. TOOL HOLDER FOR METAL PLANERS. CHARLES GEORGE JOHANNESMEYER, Glendale, and ALFRED R. MCCANN, Hamilton, Ohio, assignors to The Liberty Machine Tool Company, Hamilton, Ohio, a Corporation of Ohio. Filed Nov. 17, 1923. Serial No. 675,409. 3 Claims. (Cl. 90—54.)



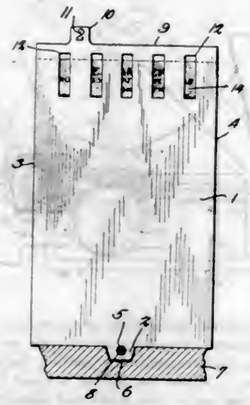
1. In a planer, the combination of a tool slide having a recess therein, a pivot mounted in said tool slide concentric with said recess, a clapper box having a recess and a socket therein and connected to said pivot, a tool holder and means adapted to stabilize said tool holder comprising a channel on the inner surface thereof adapted

to form a firm joint with said clapper box, an interlocking cone fixed to said tool holder and adapted to snugly fit in said socket, said pivot comprising a longitudinal pin



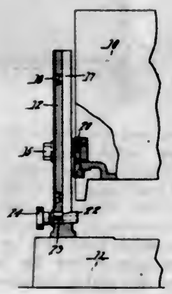
having a collar there-around and combinedly cooperating with said recesses, substantially as and for the purposes set forth.

1,681,409. SPARE-TIRE LOCK. COLVIN L. JOHNSON, St. Louis, Mo., assignor to Johnson Automobile Lock Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 31, 1927. Serial No. 164,890. 12 Claims. (Cl. 70—90.)



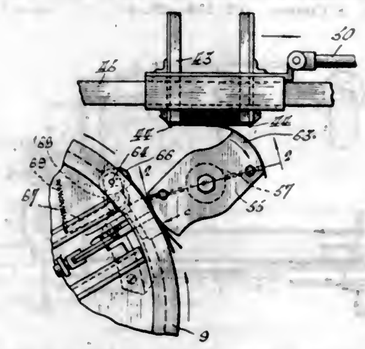
1. In a spare tire lock, a casing having two passages therethrough, an armored cable anchored at one end in one of said passages, a bolt slidably mounted in the casing extending across said last mentioned passage with its end normally projecting into the other passage, a lock cylinder in the passage in which the end of the cable is anchored for withdrawing the end of the bolt from said other passage, and a grooved spool secured to the cable and adapted to be locked in said other passage by said bolt.

1,681,410. CARBURETOR. GEORGE KINGSTON, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a Corporation of Indiana. Filed Feb. 1, 1923. Serial No. 616,331. 7 Claims. (Cl. 261—64.)



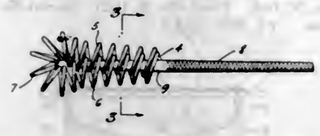
1. In a carburetor, a valve for controlling the main air passage to the mixing chamber embodying a slidably mounted sleeve supporting the valve, a casing supporting said sleeve, a diaphragm secured to the sleeve and closing the casing, resilient means tending to hold the diaphragm outwardly and the valve in closed position, and a passage through the sleeve affording communication between the mixing chamber and the inner side of the diaphragm whereby a differential sub-atmospheric or back-fire pressure may be applied thereto.

1,681,411. METAL CARD. SOLOMON KLEPFER, Indianapolis, Ind. Filed Sept. 22, 1926. Serial No. 137,055. 1 Claim. (Cl. 129—16.7.)



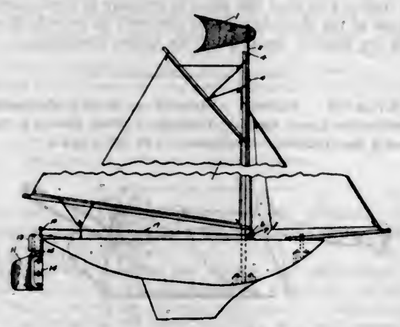
A device of the class described embodying a division plate adapted to be used between thin slips in a filing and indexing mechanism, the plate being stiff enough so that it can be tilted without bending, the plate being provided near to its upper edge with a plurality of transversely spaced openings which are elongated perpendicularly to said edge sufficiently to admit air on the imperforate portion of the slip next adjoining the plate, thereby to prevent the slips from being carried along with the plate when the plate is tilted as aforesaid.

1,681,412. ADJUSTABLE MACHINE-TABLE SUPPORT. GEORGE H. KNIGHT, Torrington, Conn., assignor to The Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed May 18, 1927. Serial No. 192,454. 4 Claims. (Cl. 90—58.)



1. The combination with a table adjustable for height and having a sidewise motion, of an extended portion of the base of the machine having a horizontal top surface, a table support on said horizontal surface having a slot, a rack on the table, a rack in the slot in the table support the teeth of which match and engage the teeth of the first named rack, means for adjusting the second rack vertically, and means for positively holding the bottom of the last named rack to give a non-slipping support to the table.

1,681,413. SHEET-FEEDING MECHANISM. KARL FRITTIOF KRONQVIST, Helsingfors, Finland. Original application filed Apr. 10, 1925, Serial No. 22,139. Divided and this application filed June 3, 1926. Serial No. 113,546. 3 Claims. (Cl. 271—29.)

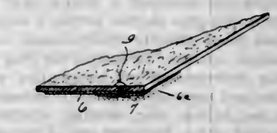


1. A sheet feeding mechanism comprising a sheet holding device, a rotary intermediate wheel, and a continuously revolving transporting device disposed between the sheet holding mechanism and the intermediate wheel, adapted to suctionally engage the lower sheet in the holder and to feed said sheet to the intermediate wheel and simultaneously engage the next sheet from the sheet holding device.

1,681,414. DETACHABLE HANDLE. BUNTARO KUMAGAI, Los Angeles, Calif. Filed May 12, 1926. Serial No. 108,535. 2 Claims. (Cl. 279—102.)

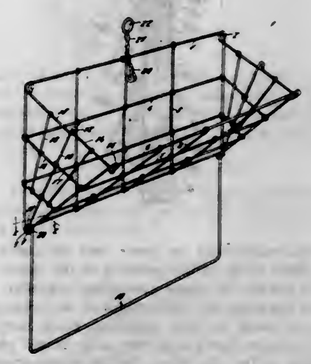
1. A handle comprising a resilient wire of helical convolutions looped along its major axis so as to provide sets of convolutions arranged side by side, the ends of said wire being secured together to hold the end convolutions interlaced, whereby said sets may be moved toward each other with other of the convolutions overlapping and interlaced.

1,681,415. WIND-CONTROLLED STEERING GEAR. HAROLD A. LEE, Suva, Fiji Islands. Filed June 29, 1925. Serial No. 40,316. 1 Claim. (Cl. 114—163.)



A device of the type described comprising a main rudder pivoted to a boat, a control rudder pivoted to the main rudder, means for operating the control rudder, said means including a lever having a circular row of openings disposed concentrically about the pivot point of the lever, said control rudder being operatively connected to an arm, said arm being connectible by means of a fastening member to any one of the desired openings in said lever.

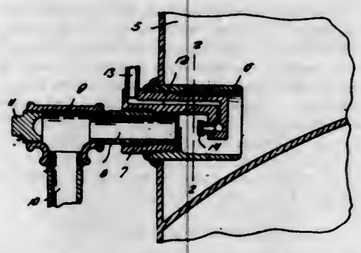
1,681,416. PADLOCK. RICHARD LICHTENBERGER, Neviges, near Velbert, Germany. Filed Dec. 22, 1926, Serial No. 156,370, and in Germany July 12, 1926. 3 Claims. (Cl. 70—108.)



1. In a padlock, in combination, a two-armed lock-case having the inner and outer walls of one of its arms perforated to receive the locking-bolt; a straight locking-bolt adapted to operate through said perforated arm and to enter into an opening in the inner wall of the second arm of the lock-case; a lever pivotally mounted and adapted to move the locking-bolt; a plate pivotally connected with the said lever and having a hook adapted to engage a fixed pin, said plate being arranged to be actuated by a key so as to disengage the hook; and a spring for retaining the book in the locked position of the bolt.

1,681,417. RUG FASTENER. RUDOLPH J. LINDHORST, Cleveland, Ohio. Filed Apr. 11, 1927. Serial No. 182,978. 2 Claims. (Cl. 154—49.)

1. A rug fastener comprising a piece of adhesive tape, and a folded cover thereon capable of being unfolded to expose the face of the tape.

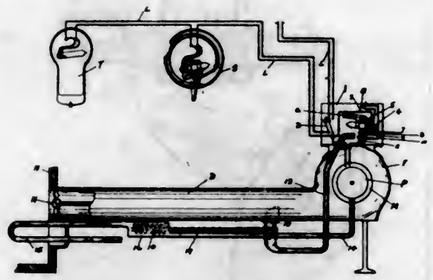


1,681,418. FOLDING RACK OR HOLDER. ANDREW J. LIVESAY, White Sulphur Springs, W. Va. Filed Jan. 9, 1928. Serial No. 245,568. 2 Claims. (Cl. 211—119.)

1. A device of the class described comprising a rear frame, a front frame hingedly connected at its lower end with the lower end of the rear frame and a pair of end

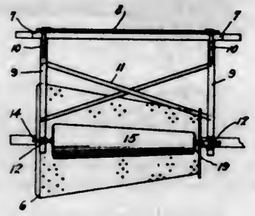
pieces hingedly connected with the ends of the two frames, each end piece being composed of two sections hingedly connected together, a yoke-shaped member having the upper ends of its limbs hingedly connected with the lower end of the rear frame, a stem connected with the center of the top piece of the rear frame and having an eye at its upper end for enabling the device to be hung on a projection extending from a wall and a latch hinged to the top piece of the rear frame for holding the parts in folded position.

1,681,419. RAILWAY-TRACK SANDER. PETER LOFY, deceased, Springfield, Ill., by Cecilia M. Lofy and Magdalena Lofy, executrices, Springfield, Ill. Filed July 2, 1927. Serial No. 203,208. 1 Claim. (Cl. 291—11.)



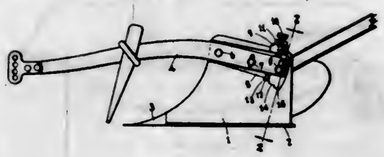
In a track sander, a sand box having a pipe section extending within the same, said pipe section having its outer end internally threaded, a hollow plug threadedly arranged within said pipe section having a sand discharge passage formed longitudinally therethrough, an inwardly disposed L-shaped extension formed on the plug with an air duct extending therethrough and terminating with its discharge end disposed concentrically with the sand discharge passage and the hollow plug forming a pressure nozzle removably carried at the discharge end of the air duct.

1,681,420. WINDOW VENTILATOR. JAMES M. LUDLOW, Carrollton, Ohio. Filed Jan. 6, 1928. Serial No. 244,936. 1 Claim. (Cl. 98—99.)



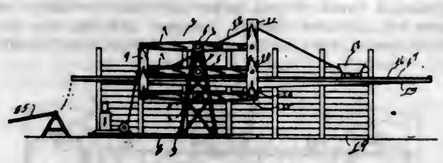
A screen comprising an inner and an outer apertured frame, a filter cloth in the opening of the inner frame, the said cloth having its edges extending inwardly within the frame and engaging the inner edges of the frame, means for binding the cloth to said frame, a mesh screen secured against the outer surface of the outer frame and covering the opening of the said outer frame, superimposed louvers on said outer frame having their edges overlapping and the lowermost louver having its lower edge on a plane below the aperture of the frame, securing members extending through one of the frames, and the other of said frames having slots for securing said securing members, whereby the frames are adjustably secured in contact with each other.

1,681,421. THERMAL SAFETY DEVICE. IRA E. MCCABE, Chicago, Ill. Filed Mar. 29, 1926. Serial No. 98,310. 8 Claims. (Cl. 158—28.)



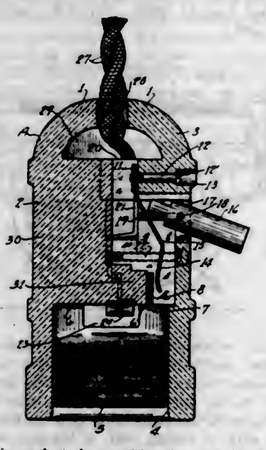
1. A thermal safety device for electrically-operated liquid fuel burner mechanisms, comprising a switch in the motor circuit normally operable to open said circuit, means adapted to hold the switch in closed position, a heat generating element in the motor circuit adapted to release said switch holding means, and means for passing a current of air adjacent said heat generating element to reduce the temperature thereof below the switch releasing degree, said means controlled by the activity of the burner flame.

1,681,422. ROTARY SCREEN CLEANER FOR CONICAL AND CYLINDRICAL SCREENS. FLORANCE MCAULIFF, Mandan, N. Dak. Filed Oct. 3, 1927. Serial No. 223,692. 2 Claims. (Cl. 209—384.)



1. A screen cleaner of the class described comprising a shaft, a pair of sleeves on the shaft, spider structures on the sleeves, a sheet of metal disposed concentrically about the shaft having its longitudinal edges curved inwardly and fixed together so that the sheet is circular in cross section, the ends of the sheet being bent inwardly to provide flanges which are fixed to the ends of the spider structure.

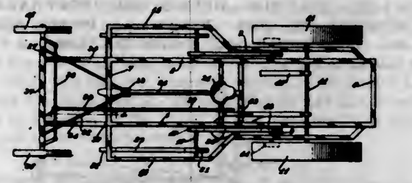
1,681,423. PLOW. CHARLES A. LOUIS MONSARRAT, Riviere du Loup, Quebec, Canada. Filed Mar. 14, 1927. Serial No. 175,095. 3 Claims. (Cl. 97—114.)



1. In a plow of the class described, a landside, a depression at the upper part thereof, a plow beam pivotally mounted in said depression, a series of steps in the lower wall of said depression, a block formed to rest on any of said steps so as to support the plow beam, and means to tighten said block on said steps.

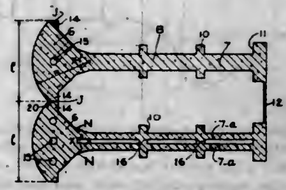
1,681,424. MECHANICAL DEVICE. ALBERT A. MORTON, Baker, Oreg. Filed Aug. 31, 1925. Serial No. 53,454. 2 Claims. (Cl. 74—5.)

1. In a mechanical device, a support, parallel bars pivotally mounted in said support, vertically positioned tie pieces pivotally attached to said bars, one of said tie pieces having a vertically extending post, and an extended platform secured to one of said tie pieces and having its outer end supported from said post.



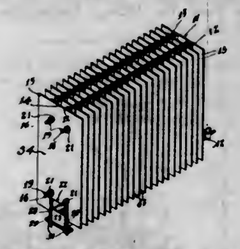
1,681,425. ELECTRIC SOCKET. ERNST MOXTER, St. Louis, Mo. Filed Nov. 22, 1923. Serial No. 676,406. 1 Claim. (Cl. 173—346.)

In an electric socket, in combination, an insulation shell, a pair of conductors seated within and disposed in spaced relation longitudinally of the shell, said conductors being also disposed in parallel relation and located, transversely of the shell, in different planes, separate screw members projecting from the exterior inwardly through the wall of the shell and engaging the respective conductors for securing the same to their seats, a switch-member disposed longitudinally of the shell and having one end secured in electrical engagement with one of said conductors by one of said screw-members, the switch-member having its other end normally in spaced yielding relation to the other conductor, and a lever mounted for oscillation upon the shell for depressing the free end of the switch-member into electrical engagement with said other conductor.



1,681,426. TRACTOR. THOMPSON W. NICHOLS, Grand Rapids, Mich. Filed Mar. 23, 1923. Serial No. 627,109. 1 Claim. (Cl. 180—1.)

In combination with the chassis and drive axle of a motor vehicle, the chassis including side rails, an axle at the front end of the chassis, bull wheels having internal teeth mounted on the axle, auxiliary side rails secured to the chassis in spaced relation with the side rails of the chassis, shafts supported between the side rails, pinions on the outer ends of the shafts and meshing with the internal teeth to operate the bull wheels, sprockets on the shafts, side rails arranged adjacent to the side rails of the chassis adjacent to the rear end of the chassis, shafts supported between the last mentioned rails, inner and outer sprockets mounted on each shaft, chains connecting the inner sprockets and first mentioned sprockets, sprockets on the drive axle, chains connecting the sprockets on the drive axle with the outer sprockets to transmit movement

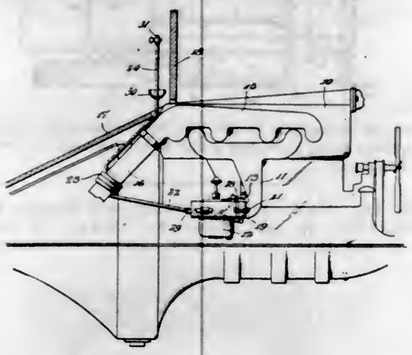


from the drive axle to the last mentioned shafts, and an auxiliary frame including guide wheels secured to the rear of the chassis.

1,681,427. DAM. FRED A. NOETZLI, Los Angeles, Calif. Filed July 13, 1926. Serial No. 122,141. 17 Claims. (Cl. 61—32.)

1. A dam comprising a buttress wall and a buttress head supporting the water pressure certain portions of said buttress head extending laterally on both sides of said buttress wall, said buttress head having such a contour on the water side that said water pressure is transmitted by said buttress head upon said buttress wall by direct compression.

1,681,428. FIN-TYPE AIR HEATER. ORAN W. OTT, Los Angeles, Calif. Filed May 28, 1927. Serial No. 194,937. 7 Claims. (Cl. 126—91.)



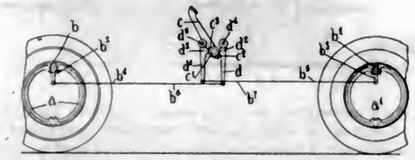
1. A fin type air heater comprising a series of upright flues, two of the walls of each flue being formed of channel-shaped members, fins projecting from the flanges of the channel-shaped members, and a gas burner positioned beneath the flues.

1,681,429. CONVEYER FLIGHT. REDMOND H. PANGBORN, Tacoma, Wash. Filed Apr. 28, 1924. Serial No. 709,420. 7 Claims. (Cl. 198—176.)

2. The combination with a conveyer chain of a link in said chain having a side opening whereby it may be detached and having lugs thereon and a conveyer flight provided with openings adapted to receive the said lugs to povide a rigid connection between the link and flight.

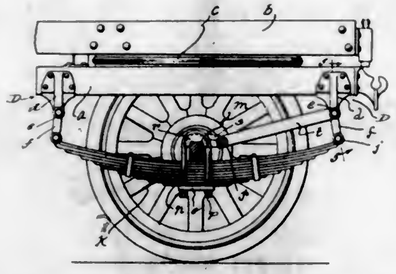
1,681,430. DILUTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. BENJAMIN F. POTTER, Ashland, Ky. Filed Sept. 5, 1925. Serial No. 54,844. 1 Claim. (Cl. 123—119.)

In combination with a motor vehicle including an engine provided with a fuel mixture inlet and an exhaust, and a body provided with a floor board and a dash, an auxiliary air intake pipe communicating with said fuel mixture inlet and extending adjacent the exhaust to be heated therefrom with an end portion projecting upwardly through the floor board adjacent the dash, a control valve adjacent the upper end of said pipe adapted to be manually opened and closed, and a receptacle carried by the upwardly extending portion of said pipe above the floor board and shielded by the dash and adapted to contain fuel for preliminary heating of the pipe.



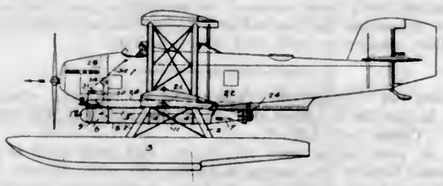
1,681,431. OIL GAUGE. ALEXIS R. PRIBIL, Saginaw, Mich. Filed Jan. 15, 1924. Serial No. 686,251. 5 Claims. (Cl. 73—120.)

3. An ullage rod consisting of a single strip of material adapted to extend downwardly into a liquid container having one end reversely bent upon itself to form a spring loop for frictional engagement with the container.



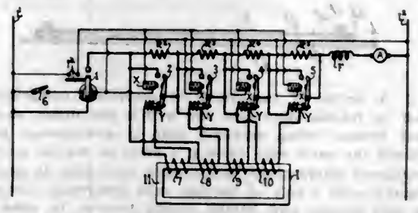
1,681,432. WHEEL BRAKE FOR VEHICLES. JOHN VERNON PUGH, Coventry, England, assignor to Rudge-Whitworth, Limited, Coventry, England. Filed Sept. 7, 1926. Serial No. 134,036, and in Great Britain Sept. 18, 1925. 10 Claims. (Cl. 188—10.)

2. A braking gear for applying braking forces to the wheels on both the forward and rear ends of a vehicle comprising a brake control power-application member, cam members operated thereby, members forming the force transmission lines to the front and rear wheel braking



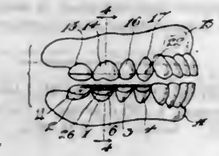
appliances and resilient means controlling the relationship between the relative movements of said transmission members.

1,681,433. VEHICLE-SPRING SUSPENSION. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 14, 1925. Serial No. 50,166. 2 Claims. (Cl. 267—66.)



1. A spring suspension, having in combination with a vehicle frame and axle, a spring underslung on the axle, bolts embracing the axle for securing the spring thereto, a clip member on the upper side of the axle and held in place by the spring securing bolts, this clip having a portion for connection with a radius rod, a bracket secured to the frame having a projecting yoke member, a pin extending across the yoke for fastening one end of the radius rod thereto, and a spring shackle also fastened to the bracket by this pin, this spring shackle extending downwardly and having the spring secured to its lower end.

1,681,434. APPARATUS FOR LAUNCHING TORPEDOES. HOLDEN C. RICHARDSON, Washington, D. C. Filed Oct. 4, 1926. Serial No. 139,396. 3 Claims. (Cl. 244—1.)

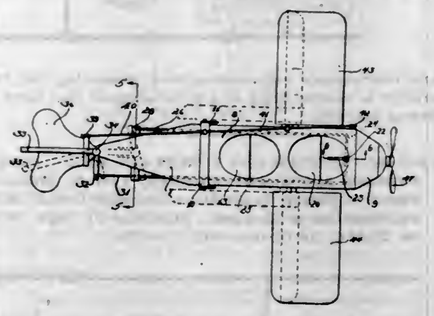


3. In an apparatus for launching a self-propelled submarine torpedo from an aircraft, a discharge tube, a control cylinder mounted thereon and having communication therewith, means for securing the torpedo in the tube, means for tripping the internal mechanism of the torpedo, means for preventing premature rotation of the torpedo propellers, all of said means being connected to be operated in unison, a plunger operable in the cylinder for simultaneously operating the restraining means and permitting a force to be exerted against the torpedo for its delivery from the discharge tube.

1,681,435. MOTOR CONTROLLER. FRANK J. RUSSELL, Wauwatosa, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 1, 1926. Serial No. 112,845. 18 Claims. (Cl. 172—288.)

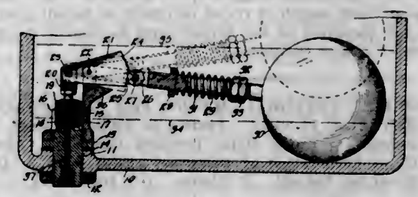
1. In a motor controller, in combination, a plurality of starting resistances for the motor to be excluded from circuit sequentially, a plurality of switches each controlling one of said resistances, certain of said switches each having a restraining coil connected to the resistance preceding the resistance controlled thereby, whereby operation of each switch is dependent upon prior operation of its preceding switch and means to supply a transient current to the restraining coil of each switch to delay operation thereof, said means comprising a plurality of windings arranged in a mutually inductive relation and each connected in series with the restraining coil of one of said switches.

1,681,436. ARTIFICIAL TEETH. VICTOR H. SEARS, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,399. 12 Claims. (Cl. 32—9.)



1. In dentures, a lower set of molar teeth having their occlusal surfaces in the form of ridges extending in front to rear direction and having downwardly receding oppositely inclined surfaces, and an upper set of molars having their occlusal surfaces in the form of grooves substantially corresponding in cross-sectional shape to said ridges and extending in the same direction, said ridges entering said grooves when the upper and lower teeth are in occlusal position and permitting free relative sliding of the upper and lower teeth back and forth and laterally, one side of said grooves having projections to cooperate with said ridges in cutting, shredding or tearing food.

1,681,437. CONVENIENCE OUTLET FOR LIGHTING FIXTURES. ROY W. SCHWEIKER, Lansdale, Pa. Filed Mar. 8, 1926. Serial No. 93,291. 2 Claims. (Cl. 173—338.)

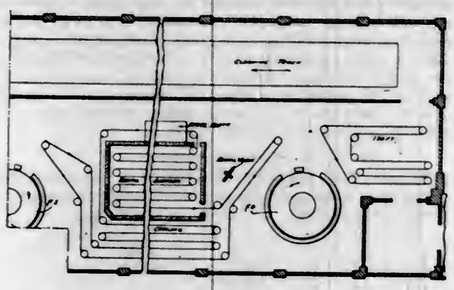


1. In a convenience outlet for lighting fixtures, the combination with lighting fixture body which is pierced with narrow slots leading from the exterior to the interior surface thereof, of a block of insulating material carried by the rear wall of said body and wholly covered thereby so as to be unexposed on the exterior of said body, said block having chambers therethrough and provided on one face with countersinks and with channels leading to said countersinks, of terminals received in said countersinks and engaged with the walls thereof whereby said terminals are prevented from twisting or turning, said terminals having contact parts projecting into the chambers and housed by the latter and movable laterally therein, and screws for holding the terminals in the countersinks and for attachment to the ends of the circuit wires, said channels being adapted to receive the circuit wires.

1,681,438. TOY AEROPLANE VEHICLE. NICK SCOURTES and PAUL KABOUZOS, Detroit, Mich. Filed Jan. 19, 1927. Serial No. 161,991. 4 Claims. (Cl. 208—42.)

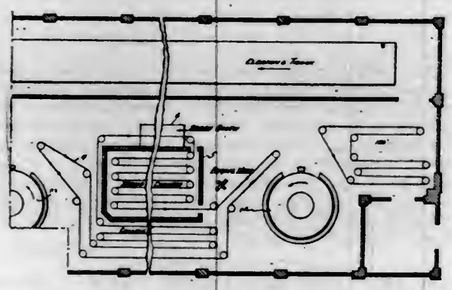
1. A vehicle of the class described comprising: a body portion formed from a plurality of sections; means for attaching said sections together; a steering traction wheel carried by said vehicle; sectional means extending from the forward part of said vehicle to said steering traction wheel for operating the same, one of the sections of said body and one of the sections of said means being removable at will, said attaching means being operative for attaching adjacent ends of remaining sections together after the removal of said one section.

1,681,439. FLUID-REGULATING VALVE. FRANCIS SHENTON, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Feb. 6, 1926. Serial No. 86,556. 5 Claims. (Cl. 137—103.)



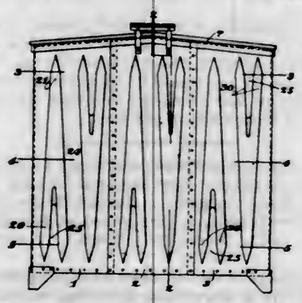
1. The combination of a receptacle having an outlet passage, a valve for closing said passage, and cam means acting on said valve to hold it closed with increasing force as the liquid rises in the receptacle to a predetermined level and then to open the valve suddenly to permit the liquid to be discharged, substantially as set forth.

1,681,440. PROCESS FOR CONTINUOUS GLASS ENAMELING. ALVIN G. SHERMAN and ALBERT MEADOWS, Detroit, Mich., assignors to Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1925. Serial No. 31,810. 11 Claims. (Cl. 91—73.)



1. The process of enameling metal articles adapted to be finished by one or more firing operations, which comprises continuously passing the articles through a cleaning liquid, enamel-coating the articles at a predetermined time relative to the cleaning thereof, continuously conveying the enamel-coated articles consecutively adjacent a source of radiant heat whereby to allow part of the enamel to drip

off but causing setting of the enamel at the required time to temporarily fix the coat of enamel relative to the firing conditions, artificially forcing the drying of said fixed coat



and continuously and consecutively presenting the dried articles to compel firing at a predetermined time after the drying operation.

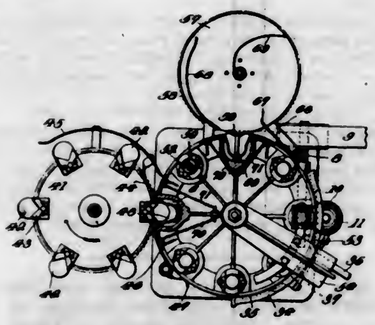
1,681,441. CONTINUOUS PORCELAIN MILL. ALVIN G. SHERMAN and ALBERT MEADOWS, Detroit, Mich., assignors to Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1925. Serial No. 31,811. 10 Claims. (Cl. 91—73.)

1. In an apparatus for the continuous enameling of metallic articles, a firing furnace provided with a continuously moving carrier, separate means for treating articles to be fired including conveyors coordinated as to speed, capacity and length of travel therewith to permit uninterrupted operation of the furnace and to control the time element of each treatment.

1,681,442. INTEGRAL MEANS FOR REENFORCING METALLIC PLATES. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 3, 1926. Serial No. 133,434. 11 Claims. (Cl. 105—410.)

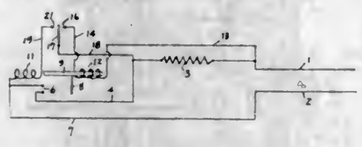
1. A metallic plate formed with a plurality of parallel embossments, each having a wide end and a narrow end, said embossments positioned with their wide ends alternately disposed, said wide ends being divided by ribs extending toward the middle of the embossments.

1,681,443. ANTIFROST DEVICE FOR WINDOWS. HARRAY H. STEINMAN, St. Paul, Minn. Filed Feb. 15, 1926. Serial No. 88,306. 2 Claims. (Cl. 20—40.5.)



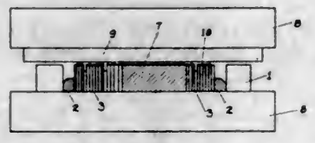
1. A device of the character described, comprising a pair of frames insertable one within the other, each of said frames being provided with a downturned flange around the outer edge thereof, a strip of flexible material positioned intermediate said flanges to be held in position thereby, and a pair of vacuum cups removably connected to said frames and having means thereon to draw the frames into proximity with each other to grip a sheet of material between said frames and to hold it in position in said frames.

1,681,444. SHAFT PACKING. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 17, 1925, Serial No. 16,095. Divided and this application filed Mar. 19, 1926. Serial No. 95,842. 2 Claims. (Cl. 206—56.)



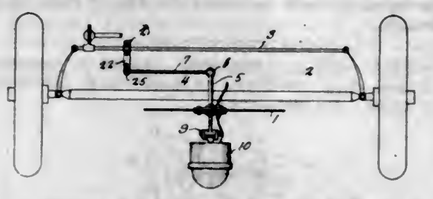
2. As a new article of manufacture, a stiff hollow cylinder and a packing molded of relatively soft material within said cylinder and retained in shape thereby and arranged to be forced therefrom directly into a packing recess.

1,681,445. CONTINUOUS VACUUM JAR-CLOSING MACHINE. THOMAS L. TALIAFERRO, Chicago, Ill. Filed July 10, 1922. Serial No. 574,083. 6 Claims. (Cl. 226—82.)



1. A jar closing machine including in combination a continuously rotating turret having a plurality of segmental pockets, a relatively short stationary member for closing said pockets in succession, means for placing the pockets under vacuum while passing said stationary member, devices associated with each pocket for closing the jars while under vacuum and while the turret is rotating, and a feeding-in disk for feeding the jars into the segmental pockets, said disk having spaced supports adapted to carry the jars into the pockets, said disk being disposed relative to the turret whereby said jars are fed into the pockets at a point distant from the edge of the stationary member so that said jars may be inspected to insure that they are properly positioned in the segmental pockets before concealed from view by said stationary member and placed under vacuum.

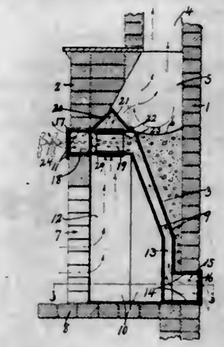
1,681,446. THERMOSTATIC CONTROL. REUBEN S. TICE, Monterey, Calif., assignor of one-half to Arthur L. Holcomb, San Jose, Calif. Filed May 9, 1927. Serial No. 189,975. 3 Claims. (Cl. 236—75.)



1. In combination, a circuit containing a current consuming device and a switch in series therewith, a switch closing circuit, and a control element for the latter, the said circuit being shunted across the switch so as to be shorted by the latter after the circuit has closed the switch.

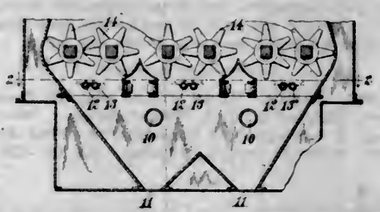
1,681,447. MATRIX AND METHOD OF MAKING THE SAME. EGIL R. TORAISON, Philadelphia, Pa., assignor to John Stogdell Stokes, Huntingdon Valley Post Office, Pa. Filed Aug. 26, 1926. Serial No. 131,768. 12 Claims. (Cl. 101—401.2.)

1. A composite element for use in the printing art having a type forming face of sprayed metallic particles and a suitable non-metallic backing or body portion.



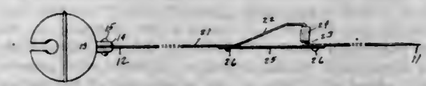
1,681,448. AUTOMOBILE HEADLIGHT AND CONTROL MECHANISM. SETH L. TUCKER and FLOYD C. TUCKER, Hornell, N. Y. Filed Apr. 2, 1927. Serial No. 180,545. 2 Claims. (Cl. 240—62.)

1. In combination with the apron of an automobile having an opening therein, headlight control mechanism including an arm having an intermediately arranged bearing, a shaft upon which the bearing of the arm is mounted, and plates arranged on opposite sides of the apron contiguous to said opening and provided with mating bearing portions for the ends of said shaft.



1,681,449. FIREPLACE. HERBERT H. WALTERS, Syracuse, N. Y. Filed Mar. 14, 1927. Serial No. 175,246. 2 Claims. (Cl. 126—121.)

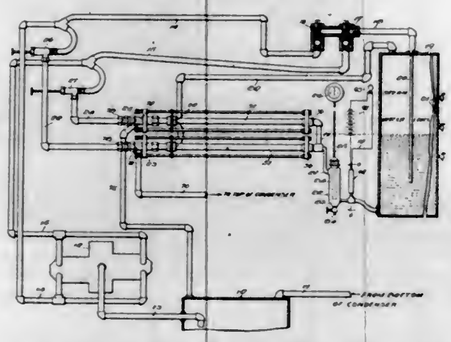
1. The combination with a chimney having a recess for receiving a fireplace and provided with a smoke flue leading from the top of the recess, of an open fireplace comprising a hollow metal shell having upright back and side portions and a substantially horizontal top portion, said shell having a cold air inlet near the bottom of the back portion and a warm air outlet in the front end of the horizontal top portion, smoke flues extending vertically through the horizontal top portion some distance from the front and rear ends thereof, a deflector plate secured to the top wall of the horizontal portion of the shell in front of the smoke flues and extending upwardly and rearwardly over the central portions of the smoke flues, a damper hinged to



said top wall at the rear of the smoke flues to swing forwardly and rearwardly into and out of engagement with the upper edge of the deflector plate, a damper in said horizontal top portion between the smoke flues and warm air outlet, and means operable at will for simultaneously opening said dampers.

1,681,450. LOW-TEMPERATURE FUEL DISTILLATION. EDMUND GEORGE WEEKS, Dunston, England, assignor of one-half to the Firm Merz & McLellan, Engineers, Westminster, London, England. Filed Jan. 15, 1924, Serial No. 686,395, and in Great Britain Oct. 3, 1923. 5 Claims. (Cl. 202—8.)

1. A process for low temperature distillation of carbonizable solid fuel for the recovery of highly volatile oils and the accompanying partial carbonization of the remaining fuel without gumming, which comprises, partially carbonizing the material by passing steam and atmospheric air in regulated amounts to an enclosed body of the fuel, having one component of said fluid medium preheated to a temperature such that the temperature of the mixture of steam and air while being injected is at least as high as the temperature of ignition of the fuel, whereby a portion of the fuel is ignited, and having the quantity of atmospheric air thus admitted limited to that necessary for the combustion of a small percentage only of the enclosed body of fuel.



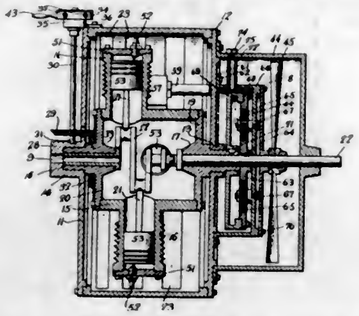
1,681,451. BURGLAR ALARM. MAXWELL A. WEST, Portland, Oreg. Filed Mar. 28, 1927. Serial No. 178,861. 4 Claims. (Cl. 116—77.)

1. A burglar alarm having, in combination, a resilient pointed blade member adapted to be thrust into the woodwork of a door jamb between the door and its casing; a bell attached to said blade forming a handle member therefor;

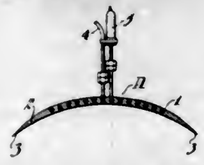
and a latch formed on one side of said blade having a sloping side facing said bell and a shouldered side facing the pointed end of said blade, said latch having a soft face adapted to prevent the marring of said door and to inncrease the frictional engagement between said door and shoulder while said door is being opened until said bell is completely released from its support.

1,681,452. WATER-LEVEL INDICATOR. RAYMOND E. WHITE, Newton, Mass., assignor to Steam Vehicle Corporation of America, Newton, Mass., a Corporation of New York. Filed June 3, 1925. Serial No. 34,597. 13 Claims. (Cl. 122—451.1.)

1. In combination, a boiler having steam space and water space, a connection between the said spaces including a radiating surface for cooling the water and steam in the said connection, the steam in the said connection upon condensing being adapted to impart heat to the cooled water in the said connection, and means responsive to the heat of the water in the said connection for indicating the approximate level of the water within the boiler.



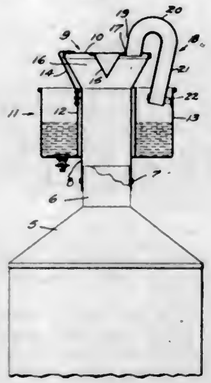
1,681,453. BRUSH. HENRY HARLOW WRIGHT, Worcester, Mass., assignor to M. S. Wright Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1925. Serial No. 24,807. 2 Claims. (Cl. 15—179.)



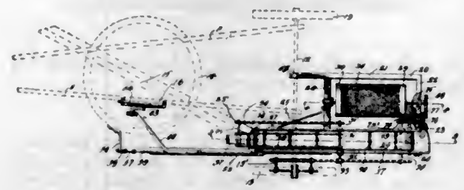
1. The combination with a rotatable brush and supporting bearings therefor, of a deflecting member carried by the brush adjacent each end thereof, each of said deflecting members having an opening through which the ends of the brush may extend and having a portion extending parallel with the brush spindle and an outwardly extending flared portion, the outer edge of the flared portion being positioned substantially in a line with the end of the brush spindle.

1,681,454. ROTARY GAS ENGINE. GEORGE BURTON ABER, Cranberry Lake, N. Y. Filed Sept. 14, 1927. Serial No. 219,459. 12 Claims. (Cl. 123—44.)

1. In an internal combustion engine, a stationary casing, a crank case rotatably mounted in the casing, a plurality of cylinders radiating outwardly from the crank case, pistons in the cylinders, a crank shaft rotatable in the crank case, connecting rods between the pistons and the crank shaft, said casing having a plurality of elongated slots to afford circulation of air in and out of the casing, gearing operatively connecting the crank case with the crank shaft to set up rotation of the crank shaft in one direction upon rotation of the crank case in an opposite direction, means for delivering a combustible mixture to the interior of the crank case, said cylinder being formed with conduits leading from the interior of the crank case to the intermediate portions of the cylinders, exhaust reservoirs in the casing, conduits leading from the cylinders to the reservoirs, an exhaust chamber on the casing and formed with an outlet, said shaft extending into the chamber, a fan on the shaft in the chamber, conduits leading from the reservoirs to the chamber, said fan drawing the burnt gases from the cylinders through the first exhaust conduits, through the reservoirs, through the second exhaust conduits into the chamber and exhausting the gases through the outlet, and ignition means associated with the cylinders.

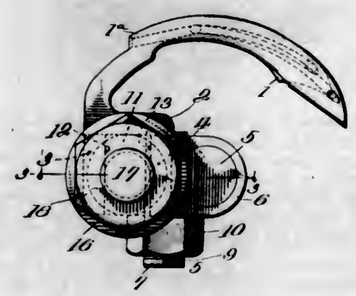


1,681,455. PATCH VULCANIZER. HILTON J. ANDERSON, St. Paul, Minn. Filed Feb. 7, 1927. Serial No. 166,392. 1 Claim. (Cl. 18—18.)



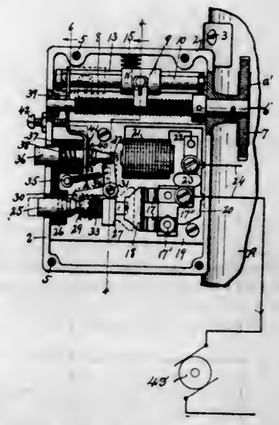
A patch vulcanizer, comprising a flat coil of tubing imbedded in a plastic metal matrix, means for connecting one end of said tubing to a source of steam and control means associated therewith to control the flow of steam therethrough.

1,681,456. SPARK ARRESTER. JAMES O. ANDERSON, Eugene, Oreg. Filed Jan. 13, 1926. Serial No. 80,897. 1 Claim. (Cl. 261—126.)



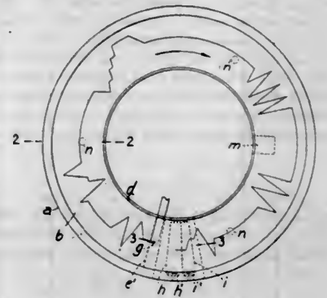
A spark arrester comprising, in combination, a smoke stack, an annular water-containing pan surrounding said stack, a head member connected to the upper end of the stack, said member being of an inverted truncated conoidal shape, said member having a top wall provided with a circular series of apertures disposed concentrically of the axis of the head, an inverted conoidal shaped baffle depending from the central portion of said wall, and a plurality of nozzles each nozzle consisting of a tube formed of an inverted U-shape, one end of each tube being connected to the head at the respective aperture and the other ends of the respective tubes extending downwardly into said pan.

1,681,457. ROCK-GATHERING MACHINE. WILLIAM E. ASPLUND, Deer Park, Wis. Filed Jan. 11, 1926. Serial No. 80,655. 3 Claims. (Cl. 53—17.)



1. A rock gathering and road material separating mechanism for attachment to a wheeled road grader having a rotatable axle, comprising a frame embodying means for mounting the same on the axle, a forwardly extending baffle secured to the lower end of the frame and adapted to be drawn over the ground and in contact therewith to accumulate the scraped road material, an endless conveyor mounted in the frame, a rotary gathering wheel mounted at the lower end of the conveyor for delivering the road material onto the conveyor, a rotatable separating drum operatively mounted beside the upper portion of the frame, a conducting chute mounted at the upper end of the frame adapted to convey the material delivered thereto, from the conveyor, into the rotatable drum, and drive mechanism including means for association with the axle for operating the conveyor, the gathering wheel, and the drum.

1,681,458. LOOPER SUPPORT FOR SEWING MACHINES. JOHN M. BIDDLE, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1926. Serial No. 109,343. 7 Claims. (Cl. 112—199.)

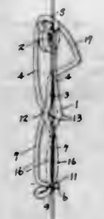


1. A looper support for sewing machines comprising a carrier having a non-circular cross section, a looper having a forked shank adapted to straddle said carrier, said carrier having a shoulder at one end thereof and a clamping nut at the other end thereof for forcing the looper against said shoulder for clamping the same to the carrier.

1,681,459. ELECTRIC MOTOR CONTROL. DONALD M. BLISS, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Filed Nov. 20, 1924. Serial No. 751,077. 2 Claims. (Cl. 172—239.)

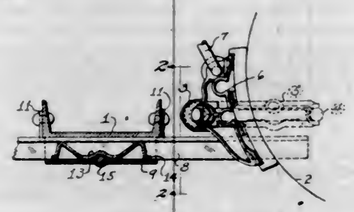
1. In an apparatus of the class described, an electric motor, a motor circuit, a motor driven member, means actuated by an overload in said circuit for effecting the opening thereof, and additional means actuated by the driven member for causing the operation of a part of the first-named means to effect the opening of the motor circuit at the end of a predetermined running period of the driven member.

1,681,460. RECORDING DEVICE. FRIEDRICH WILHELM GUSTAV BRUHN, Berlin-Wilmersdorf, Germany. Filed Feb. 1, 1927, Serial No. 165,211, and in Germany Dec. 16, 1926. 4 Claims. (Cl. 234—1.)



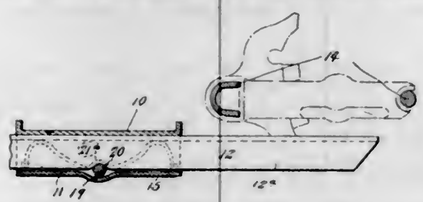
1. A recording device, comprising, in combination, a rotatory transparent annulus and a thin layer of a plastic mass thereon, a stylus operated by the device penetrating into said layer and producing a curve therein, and a roller so arranged with respect to said annulus and the layer thereon as to be adapted to make the curve disappear and render the layer fit to receive another curve.

1,681,461. CLOTHESPIN. WILLIAM R. BUTNER, Yerington, Nev., assignor of one-third to George R. Magee, Yerington, Nev. Filed May 9, 1927. Serial No. 190,051. 1 Claim. (Cl. 24—139.)



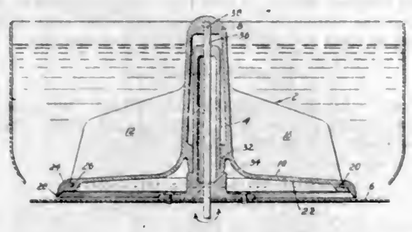
A clothes pin constructed from a single piece of wire comprising a pair of legs connected to each other by a coil that has spring qualities for urging the legs into contact

with each other, one of said legs being U-shaped and having a rounded closed end for removably receiving the other leg, the rounded end normally contacting with the other leg, said legs having registering bends intermediate their length for receiving a clothes line therebetween, said U-



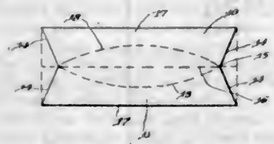
shaped leg having its free end fashioned into a loop for receiving the coil and for preventing the coil from spreading, the loop engaging with the top of the coil, and the other leg having a projecting portion for facilitating the removal of the clothes pin.

1,681,462. SUPPORT-ARM BRACKET. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1927. Serial No. 189,235. 5 Claims. (Cl. 188—210.)



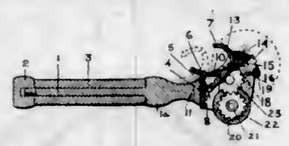
1. In combination, a horizontally disposed car truck part having a vertical surface, a U-shaped bracket below and extending transversely of said truck part, a brake beam guide or support arm positioned in said support bracket and extending beyond the ends of the same, elements on said bracket at each side of said arm and secured to said vertical surface on said truck part, and a yielding element extending substantially throughout the length of said bracket, carried on the bottom thereof and supporting said arm.

1,681,463. SAFETY GUARD. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,490. 20 Claims. (Cl. 188—210.)



1. A safety guard for brake beams comprising a mounting having parallel side walls, a beam engaging member provided with a horizontally disposed portion, a pin carried by said mounting and extending transversely of said walls for engaging said member, the flange of the latter being provided with a seat for receiving said pin, and a resilient member having a fixed bearing and yieldingly engaging the horizontally disposed portion of said member.

1,681,464. CLOTHES-WASHING-MACHINE AGITATOR. LEON CAMETO, Oakland, Calif., assignor to Modern Foundry and Pattern Works, Oakland, Calif., a Corporation of California. Filed Oct. 6, 1926. Serial No. 139,849. 9 Claims. (Cl. 259—134.)

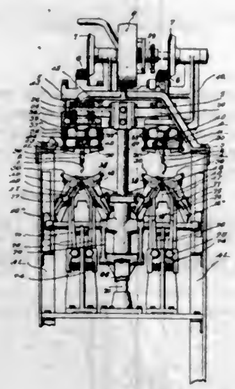


7. A rotary agitator for clothes washing machines having a peripheral band of resilient material.

1,681,465. TOY BOAT. EDWARD L. CAYO, Buchanan, Mich., assignor to Benton Harbor Manufacturing Corporation, Berrien County, Mich., a Corporation of Michigan. Filed Feb. 25, 1927. Serial No. 171,002. 6 Claims. (Cl. 9—6.)

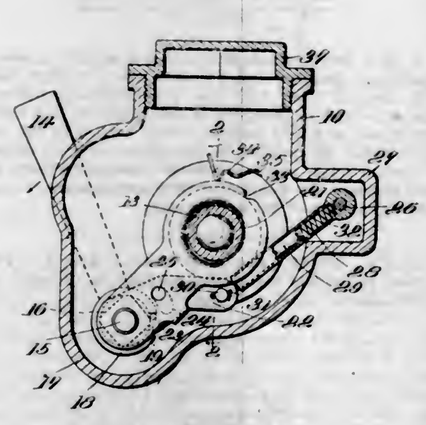
1. In a toy boat, a boat body including outer sheets of material, and a sheet of corrugated material arranged between the outer sheets and forming together with the outer sheets air chambers extending transversely of the body from one longitudinal edge thereof to the opposite longitudinal edges thereof and said air passages having their opposite end portions closed by the longitudinal edges of the sheets and being unobstructed in their directions from said one longitudinal edge to said other longitudinal edge.

1,681,466. RAZOR. PAUL COOK, Seattle, Wash. Filed July 22, 1925. Serial No. 45,212. 8 Claims. (Cl. 30—12.)



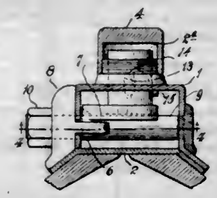
1. In a device of the class described, a frame, an abrasive roller mounted in the said frame, a blade pivotally supported in the frame, releasable means for normally retaining the blade in position for shaving, and means operable by moving the roller in opposite directions in rolling contact with a superficiary for actuating the blade to engage opposite sides of the cutting edge with the roller for sharpening.

1,681,467. MACHINE FOR REMOVING SEED CELLS FROM FRUIT SUCH AS APPLES. BURTON C. COONS, Rochester, N. Y., assignor to Coons Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed May 1, 1925. Serial No. 27,138. 32 Claims. (Cl. 146—40.)



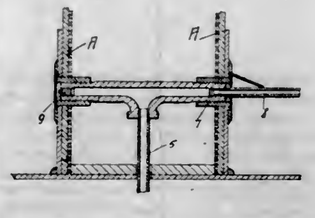
1. The combination with a rotary seed cell removing knife movable inwardly and outwardly with reference to

the axis of turning of the knife, of centering and holding jaws movable toward and from said seed cell removing knife in line with the axis of turning of said knife, and an endless carrier having pins thereon, and means for moving



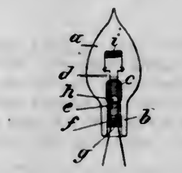
said carrier step by step to cause said pins to align with the axis of turning of the seed cell removing device, so that the centering and holding jaws may move from the pins to the seed cell removing knife and vice versa.

1,681,468. QUICK-ACTING GATE VALVE. JAMES M. DAYTON, Torrington, Conn. Filed May 26, 1926. Serial No. 111,759. 8 Claims. (Cl. 251—18.)



1. In a valve having an aperture, a member selectively to close and free said aperture, a toggle, means to actuate said toggle to bring the axes of the same into and beyond a straight line, a spring to move the central axis of said toggle away from the line joining the outer axes thereof when the axes are not in a straight line, cooperating means on said toggle and member whereby said toggle moves independently of said member into a straight line while the member is in closing position, said cooperating means moving said member instantaneously to a position of substantial opening during the subsequent movement of said toggle beyond such straight line, said actuating means thereafter regulating the area of flow through said aperture between such position and the maximum.

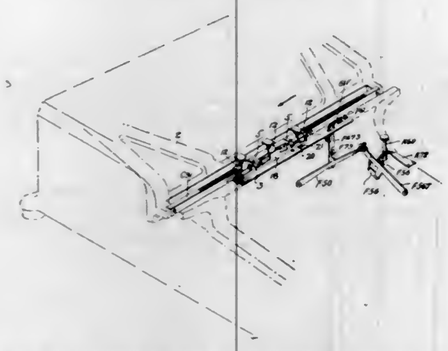
1,681,469. LOCKING DEVICE FOR MOTOR-VEHICLE TIRES AND RIMS. ROBERT DOUGAN, Dallas, Tex. Filed Apr. 4, 1927. Serial No. 180,794. 5 Claims. (Cl. 70—90.)



1. A locking device adapted to be used for locking together a wheel felloe and its rim, comprising a rim lug located at one side of the felloe and having a portion extending laterally into and movable laterally with respect to the felloe, and a lock for securing said extension to the felloe.

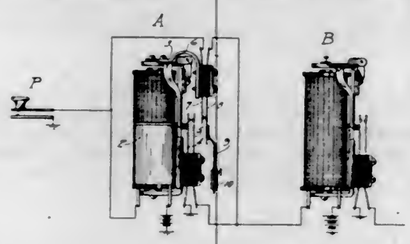
1,681,470. FITTING. FRANK A. DREES, Pawhuska, Okla., assignor, by mesne assignments, of one-half to Fred D. Turner, Pawhuska, Okla. Filed Aug. 1, 1924. Serial No. 729,577. 1 Claim. (Cl. 137—75.)

In a pipe fitting, a face plate having an internally threaded socket integral therewith, the said face plate being adapted to engage the surface of a wall or floor through which the socket passes, a door member hinged to the face plate for normally closing one end of the socket, a T-member connected in a pipe line having one end threaded in the socket, the said end being also internally threaded for the reception of a small pipe whereby the plate forms no part of the pipe line but is merely a threaded support for the pipe at a point where a smaller pipe is connected into the main pipe line.



1,681,471. SAFETY DEVICE FOR SERIES-CONNECTED INCANDESCENT ELECTRIC LAMPS. FRITZ ECKHARDT and MAX HOHNEKAMP, Eisenach, Germany. Filed July 16, 1926, Serial No. 122,980, and in Germany Jan. 29, 1926. 5 Claims. (Cl. 176—24.)

1. In an incandescent electric lamp for connection in series, a hermetically sealed air-containing hollow space within the foot of the lamp, lead-in wires for the filament extending through the said hollow space, a normally non-conductive shunt to the filament constituted by a dry loose



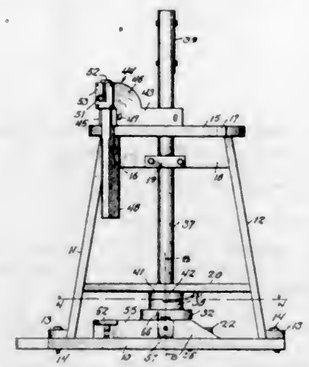
aluminum powder partially filling the said hollow space and having its granules in light contact with one another and with thin insulation between them and in electric contact with the said lead-in wires, said shunt, on the filament being destroyed being capable of becoming conductive by the action of the total voltage applied to the series and of bridging over the faulty places.

1,681,472. SELECTIVE MULTIPLE TABULATING STOP. EMIL JOHN ENS, Newark, N. J., assignor to Ellis Adding Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 13, 1926. Serial No. 135,147. 4 Claims. (Cl. 197—176.)

2. The combination with the movable carriage of a machine adapted for printing characters, said carriage being adapted to carry a rotatable paper-holding platen, of a carrier, independent selectively settable stops unitary with the carrier, said carrier and stops being mounted on, and shiftable with said movable carriage, and latching means for holding in set position any stop which has been set, said latching means also automatically releasing any previously set stop or stops when another stop is set.

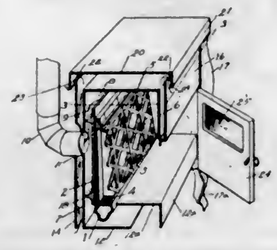
1,681,473. ELECTROMAGNETIC RELAY. JOHN ERICKSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 7, 1920, Serial No. 408,673. Renewed June 20, 1927. 12 Claims. (Cl. 175—320.)

1. The combination, with a relay and an energizing circuit therefor, of means independent of the relay for closing said circuit momentarily, and means for maintaining said relay energized after its original energizing circuit is broken, said means comprising a locking circuit and a vibrating pendulum for controlling said locking circuit.



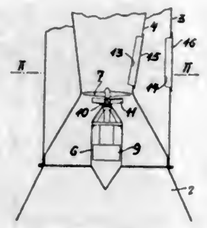
1,681,474. LAUNCHING AND LANDING PLATFORM. JULIUS S. FOX, Cleveland, Ohio. Filed Sept. 27, 1926. Serial No. 137,893. 3 Claims. (Cl. 244—2.)

1. A launching and landing platform for aerial vehicles, comprising an endless traveling element having its upper run substantially level with the surface of the platform, and its lower run extending below the same, and power-driven means for directly driving the lower run of said element, and roller supporting means in said platform directly beneath said upper run and comprising a series of sectional, elongated roller elements pivotally mounted



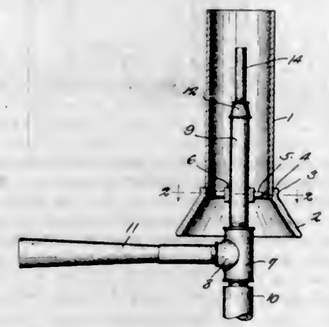
transversely of the platform and directly beneath the upper run, the upper edges of said roller elements of the entire series forming together a continuous supporting tread surface for the upper run of said traveling element to support it and the load carried thereby.

1,681,475. SAFETY SWITCH STAND. PETER FRANDSEN, Monett, Mo. Filed Feb. 5, 1926, Serial No. 86,287. Renewed Nov. 14, 1927. 13 Claims. (Cl. 246—413.)



1. In a switch stand of the class described, a base, a supporting platform carried by said base, a member rotatably mounted upon said base, a substantially vertically disposed standard journaled in said platform, and having connection with said member, means carried by the base and movable into and out of engagement with the member to prevent rotary movement thereof, and means carried by said standard for cooperation with said platform for preventing rotation of the said standard.

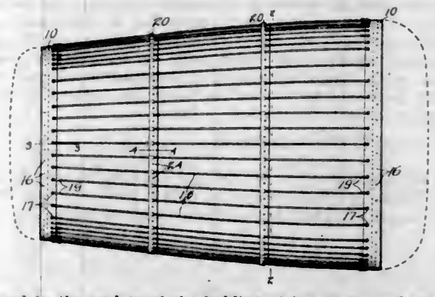
1,681,476. STOVE. EDWARD G. GERMER, Erie, Pa. Filed Dec. 10, 1926. Serial No. 153,781. 8 Claims. (Cl. 126—92.)



1. In a stove, the combination of a stove burner; a radiant body above the burner; a stove shell having passages collecting and discharging the products of combustion; and a case in which the shell is mounted having air spaces between the shell and the case discharging from the upper part of the case to the outer air in which the stove is placed.

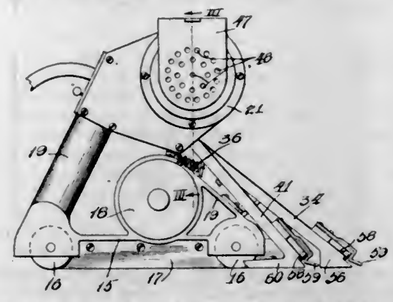
1,681,477. SHIP'S FUNNEL. HANS HASS, Hamburg-Bergedorf, Germany. Filed Dec. 31, 1924, Serial No. 759,189, and in Germany Jan. 2, 1924. 5 Claims. (Cl. 110—162.)

1. A ship's smoke stack, comprising a substantially cylindrical funnel, a double conical insert in and connected with the said funnel to form a constricted passage therein, the diameter of said passage being substantially less than that of said funnel, a steam-line member in the funnel mounted underneath the point of constriction and exhibiting even, eddy-preventing guide surfaces, a propeller mounted in the said member to lie in the plane of constriction, a turbine arranged within the said member for driving the said propeller, and a stationary guiding member supported by the said member and having guiding wings inclined to guide in a direction oppositely to the revolving direction of the said propeller, substantially as and for the purpose set forth.



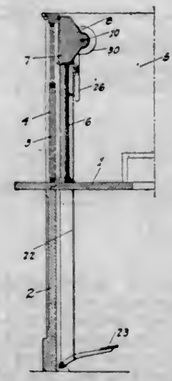
1,681,478. BLOW AND FLUE CLEANER. JOHN H. HOBSON, Sulphur Springs, Ark. Filed Oct. 18, 1926. Serial No. 142,385. 1 Claim. (Cl. 230—94.)

A combined blower and flue cleaner comprising a tubular body of a common diameter from end to end and provided at one end with a funnel-shaped apron, the tubular body having an internal spider disposed closely adjacent to one end of the body, a T coupling disposed adjacent to the apron and having a lateral nipple, a nozzle mounted in the spider and extended into the body, one end of the nozzle being mounted in one end of the coupling; a member in the other end of the coupling, and a member in the lateral nipple of the coupling, one of said members being a fluid-pressure conduit, and the other of said members being a projecting solid closure.



1,681,479. DECK FRAME FOR AUTOMOBILE TOPS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Dec. 9, 1925. Serial No. 74,405. 5 Claims. (Cl. 296—137.)

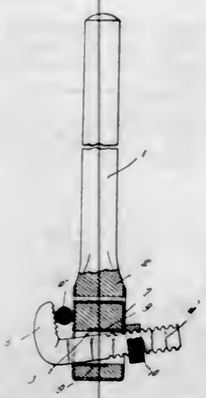
1. A deck frame comprising end bows, holding strips fastened to said bows each of which projects inwardly towards the opposite bow, said holding strips being provided with eyelets, an intermediate bow, a holding strip mounted on said intermediate bow and being provided with perforations and longitudinal wires having their ends dis-



posed in the eyelets of the holding strips of the end bows and extending through the perforations of the holding strip of the intermediate bow, substantially as set forth.

1,681,480. WASHER-PLACING MACHINE. EDWARD HUTCHENS, Cudahy, Wis. Filed Jan. 16, 1926. Serial No. 81,668. 5 Claims. (Cl. 18—1.)

1. A machine of the class described comprising a chamber to sort washers, chutes conducting washers from the chamber, chute fingers for conducting washers from said chutes to pins upon which the washers are to be deposited, a crankshaft journaled in the walls of said chamber, a wiper movable across the openings to said chutes and eccentrically journaled on said crank shaft opposite to the crank thereof whereby the crank counterbalances said wiper.

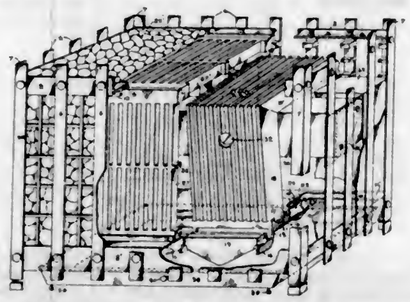


1,681,481. BANK-PROTECTING DEVICE. JOHN W. JOHNSTON, Stockton, Calif. Filed Apr. 13, 1926. Serial No. 101,690. 3 Claims. (Cl. 20—1.01.)

1. A device for protecting an opening comprising a curtain mounted in connection therewith to cover the same

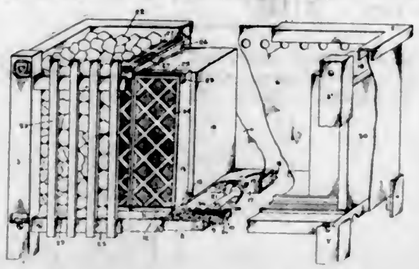
and normally clear of said opening, spring means tending to move the curtain to a covering position, said spring means having a strength sufficient to impel the curtain to a closing position but insufficient to maintain it in such position, releasable means normally preventing the spring means from functioning, and releasable catch means to engage and positively hold the curtain in covering position after the spring means has initially acted to move the curtain to such position.

1,681,482. CABLE WRENCH. MARVIN JOHNSTON and MERLE H. SCOTT, Sapulpa, Okla. Filed Feb. 28, 1927. Serial No. 171,528. 1 Claim. (Cl. 81—165.)



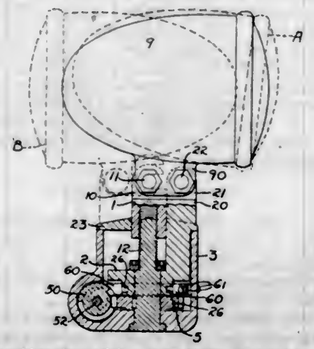
In a cable wrench of the class described, a body comprising an elongated handle having an enlarged rectangular head at one end, a metal casing carried by said head, said head having an opening extending transversely theretbrough, said casing including extensions projecting into said opening to provide metallic bearing surfaces, and a metal clamping device comprising a shank extending through and beyond the opposite ends of said opening, said shank having teeth on one end, a clamping nut carried by said toothed end and adapted to press against one side of said casing, there being a right angularly disposed toothed jaw carried by the opposite end of the shank and disposed in substantial parallelism with an opposite side of said casing, whereby a cable may be clamped between said jaw and said last named side of the casing.

1,681,483. ATTACHMENT FOR SAW-FILING CLAMPS. JACOB KAUTZ, Chicago, Ill. Filed Sept. 20, 1926. Serial No. 136,641. 1 Claim. (Cl. 76—78.)



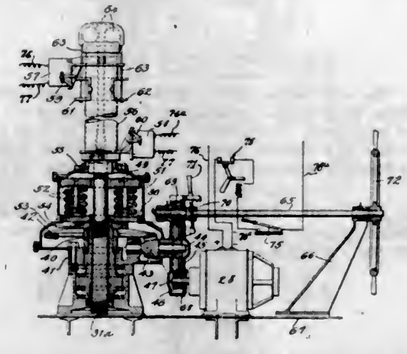
The combination with a saw clamp including spaced brackets having rearwardly extending horizontal portions, a bar connected to said portions, and a body plate having horizontal portions, of a reflector plate supported at its outer end by the horizontal portions of the body plate and its inner end by said bar, said reflector plate being positioned to the rear of a saw plate when said plate is supported by said clamp.

1,681,484. GAS HEATER. WALTER KENNEDY, Cliffside, N. J. Filed Jan. 29, 1925, Serial No. 5,447. Renewed Jan. 16, 1928. 8 Claims. (Cl. 126—92.)



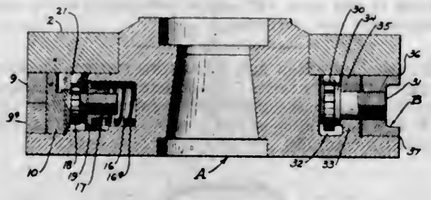
1. In a heater of the class described, an outer open-work container, material simulating fuel within and at the top and front of said container, and a burner at the bottom and behind said material, and radiants behind said material and higher than said burner.

1,681,485. GAS HEATER. WALTER KENNEDY, Cliffside, N. J. Filed Nov. 14, 1925, Serial No. 68,931. Renewed Jan. 16, 1928. 3 Claims. (Cl. 126—92.)



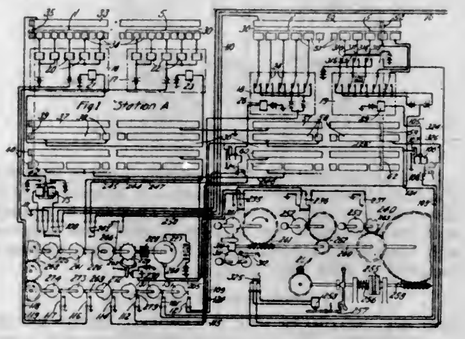
1. In a heater of the class described, several sections, each of which include an insulating member, a radiant in front of the same, a fire-clay top over the same, and passage for the products of combustion through said radiant, a burner beneath said passage, and openings through said top for the passage of said products of combustion, said radiant having a grille-like front, and all of said sections within an outer frame-work closed at the back and ends.

1,681,486. SPOTLIGHT CONTROL. ELVIN L. LARSON, Aberdeen, Wash. Filed June 29, 1927. Serial No. 202,201. 10 Claims. (Cl. 240—61.)



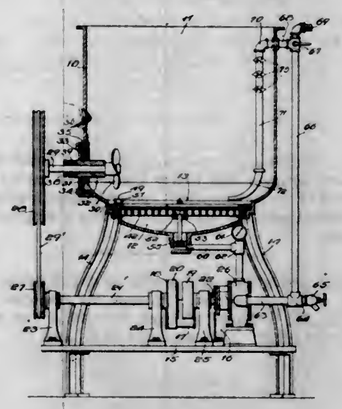
6. In combination with a spot light, two laterally spaced supports pivotally connected thereto, means including a bolt and a nut for moving one of said supports in a vertical direction relative to the other support, means including a turntable journaled on said bolt for rotating both of said supports about a common axis horizontally, means for restraining said turntable from rotation, a gear secured upon said bolt to rotate it, a pinion in mesh therewith, means operable from a distant point to rotate said pinion, and means controlled by said latter means for releasing said restraining means.

1,681,487. APPARATUS FOR CONTROLLING HYDRAULIC GATES. WILLIAM S. LEE, RICHARD PFAEHLER, and DAVID NABOW, Charlotte, N. C. Original application filed Oct. 4, 1924, Serial No. 741,575. Divided and this application filed Apr. 25, 1927. Serial No. 186,544. 5 Claims. (Cl. 137—139.)



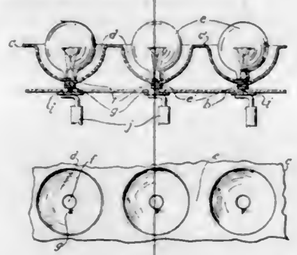
1. In combination with a pivotally mounted hydraulic gate, means to open and close the gate, including a motor with an overload release, and a longitudinally movable screw connected with the gate, a nut thread thereon, a driving connection between the nut and the motor, and means to overload the motor near the end of the closing movement of the gate, including a brake for the nut, and means on the screw for operating the brake as the screw nears the end of its downward movement.

1,681,488. PISTON STRUCTURE. ARTHUR H. LIGHT, Oakland, Calif. Filed July 20, 1926. Serial No. 123,634. 5 Claims. (Cl. 74—108.)



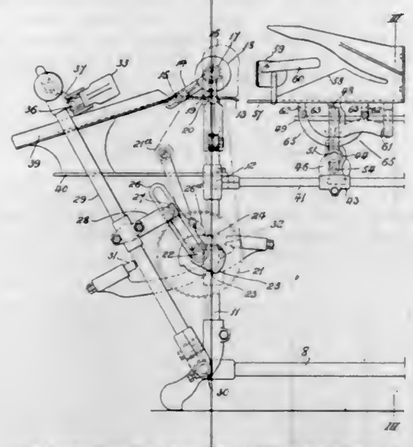
1. A piston of the character described having an annular groove formed in its peripheral surface, a ring consisting of a plurality of segments mounted in the groove, means engageable with each segment to force the segments outwardly in a radial direction, and an adjustable member connected with each segment and adapted to limit the outward radial movement of the segments.

1,681,489. SIGNALING SYSTEM. GEORGE A. LOCKE, Glen Cove, and HAKON H. HAGLUND, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York, and The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 21, 1926. Serial No. 123,861. 10 Claims. (Cl. 178—63.)



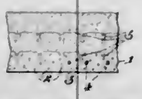
1. In a signaling system, synchronous distributors at respective stations, receiving devices individual to certain elements of the distributor at one station, an operating device different in character from said receiving devices, means for temporarily connecting said operating device to one of said elements, means at a distant station including the corresponding element of the distributor at said distant station for sending an impulse to operate said operating device, and means to disconnect said operating device from said element and restore the normal connection to its respective receiving device.

1,681,490. METHOD OF MAKING SIRUPS. FRANK B. LOMAX, Chicago, Ill. Filed May 3, 1926. Serial No. 106,823. 11 Claims. (Cl. 127—68.)



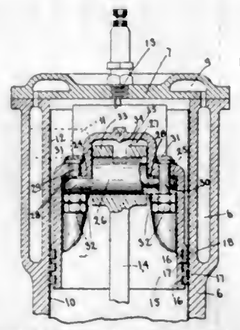
1. The method of forming a filtered solution which consists in enclosing spaces above and below a filtering barrier filling each space with a liquid, placing a solute in the liquid above the filtering barrier, agitating said liquid and solute above the barrier to cause the solute to be dissolved in said liquid, mixing the liquid below the barrier with solution above the barrier and circulating the resultant solution through the barrier to filter the same.

1,681,491. ELECTRIC SIGN. JOHN E. LONG, Multnomah, Oreg. Filed Apr. 20, 1927. Serial No. 185,162. 3 Claims. (Cl. 40—130.)



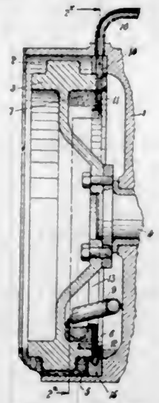
1. In an electric sign, an insulating base, a plurality of electric terminals arranged thereon, a terminal plate in spaced relation with such base having apertures in registry with such terminals, the portions of such plate adjacent such apertures being slit radially to the latter, and bent angularly to form light receiving sockets.

1,681,492. MACHINE FOR WRAPPING ARTICLES OF A UNIFORM OR APPROXIMATELY UNIFORM SIZE AND SHAPE. LEONARD MELLOR, Manchester, England. Filed Mar. 23, 1925, Serial No. 17,463, and in Great Britain Mar. 31, 1924. 5 Claims. (Cl. 93—2.)



1. In a machine for wrapping articles a support for an article and wrapper and means including a rotary folding arm adapted to substantially encircle said support and article during rotation thereof for folding a wrapper around an article.

1,681,493. PROCESS OF MAKING BUILDING MATERIAL. JOHN J. MILLER, Chicago, Ill., assignor of one-third to Jay D. Miller, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 9,695. 2 Claims. (Cl. 154—45.9.)



1. The process of making a composition building material which consists in forming a layer of plastic material in a suitable mold, superposing upon said layer a second layer of cementitious material, and then forcing a plurality of spaced prongs through said superposed layers, whereby portions of the upper layer are forced into the lower layer to mechanically interlock the layers.

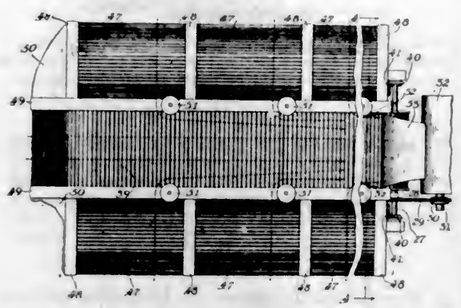
1,681,494. SINGLE-ACTING ENGINE AND PISTON. WARREN NOBLE, Detroit, Mich., assignor to N. C. L. Engineering Corporation, Providence, R. I., a Corporation of New York. Filed Feb. 13, 1922, Serial No. 536,036. Renewed Nov. 15, 1927. 6 Claims. (Cl. 74—108.)

1. The combination with a cylinder of a piston having opposite slipper surfaces bearing on the walls of the cylinder and spaces intermediate such slipper surfaces adjacent one end thereof adapted to contain fluid confined between the piston and the head of the cylinder.

1,681,495. OIL-DISTRIBUTING DEVICE. WARREN NOBLE, Detroit, Mich. Filed June 27, 1927. Serial No. 201,851. 20 Claims. (Cl. 184—6.)

1. In combination with a centrifuge, a centrifugal pump including a fluid impelling rotor, said rotor being fixed to and rotatable with said centrifuge and fluid directing means leading to said rotor and located remotely from the inner periphery of said centrifuge.

1,681,496. PROCESS FOR REFINING CRUDE ARSENIC TRIOXIDE. CHESTER L. READ, Rahway, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 14, 1926. Serial No. 102,090. 8 Claims. (Cl. 23—144.)

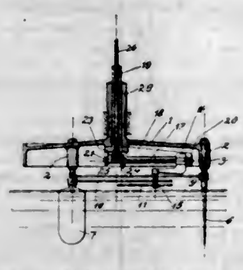


1. A process for refining crude arsenic trioxide comprising volatilizing the crude arsenic trioxide and passing the volatilized crude arsenic trioxide over a substance which will absorb impurities from the said crude arsenic trioxide to produce pure white arsenic.

1,681,497. PROCESS FOR PURIFYING SODIUM STANNATE SOLUTION. CHESTER L. READ, Rahway, and BERRY MARVEL O'HARRA, Westfield, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed July 3, 1926. Serial No. 120,520. 5 Claims. (Cl. 23—53.)

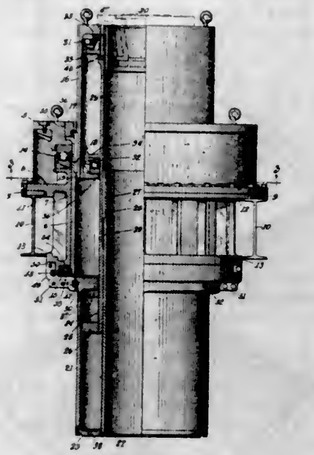
3. In the purification of alkali-metal stannate solutions, the step of removing lead and copper by the action of sodium sulphide, then removing antimony selenium and tellurium by the action of tin in an oxidizable condition and heat, whereby the said lead and copper may be recovered separately from the said antimony selenium and tellurium.

1,681,498. FEEDER FOR FIBER BREAKERS. GEORGE L. RICE and LOUIE E. WHITCOMB, Chicago, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Feb. 23, 1927. Serial No. 170,100. 26 Claims. (Cl. 19—157.)



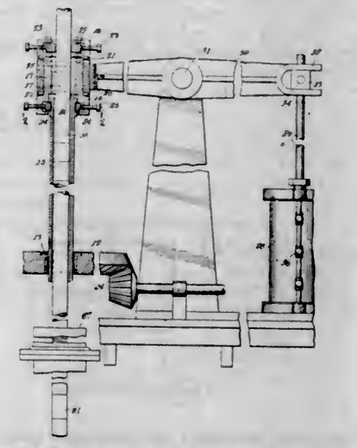
1. In a sliver feeder for breakers, the combination of a frame, a conveyer thereon leading to a breaker, an elevator for raising a sliver from a pile onto the conveyer, said elevator being inclined to support the sliver while elevating the same.

1,681,499. ETCHING SOLUTION. JOHN W. SAUER, Chicago, Ill. Filed Apr. 28, 1927. Serial No. 187,412. 3 Claims. (Cl. 41—42.)



1. A solution of the character described composed of water, copper sulphate, nitric acid, muriatic acid, ferrous sulphate, and sodium chloride.

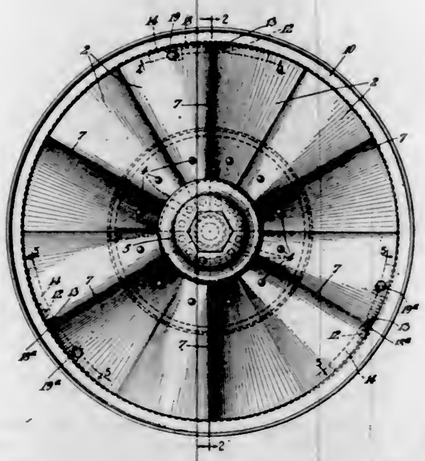
1,681,500. BLADE WHEEL. ERNST SCHNEIDER, Vienna, Austria. Filed Oct. 18, 1926, Serial No. 142,293, and in Austria Dec. 7, 1925. 21 Claims. (Cl. 170—147.)



1. The combination with a blade wheel for propellers, turbines, pumps or the like, having a plurality of individually pivoted blades movable relatively thereto, of guiding mechanism connected to each of said blades, and control means for moving said blades relatively to each other operatively connected to said guiding mechanism and adapted, during the rotation of said wheel, to maintain the intersection of the radius vectors, erected perpendicular to the blades at their pivots, at a point within the circular path of the pivotal points of said blades and on a line passing through the center of said wheel and during normal operation under load substantially perpendicular to the line of relative translatory movement between said wheel and the surrounding medium.

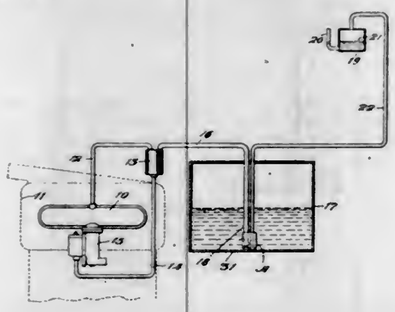
1,681,501. WELL DRILLING. WALDO SHELDON, Greenwich, Conn. Filed Sept. 24, 1924. Serial No. 739,495. 41 Claims. (Cl. 255—22.)

2. In a well drilling apparatus, a rotary table, a drive sleeve slidingly keyed in said table, an annular power cylinder, an annular piston therein for raising and lowering said drive sleeve, said power cylinder being insertible into and withdrawable from said rotary table, a bearing for the rotary table, the annular power cylinder having a detachable connection with and supported from said bearing.



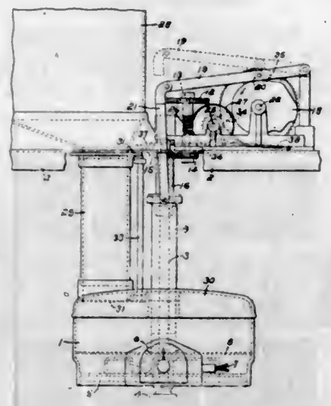
1,681,502. WELL-DRILLING APPARATUS. WALDO SHELDON, South Norwalk, Conn. Filed Oct. 27, 1925. Serial No. 65,109. 13 Claims. (Cl. 255—22.)

1. In well drilling apparatus, a drill stem chuck, a rotary table carrying a removable drive bushing and a hollow removable quill having a sliding driven fit in said removable



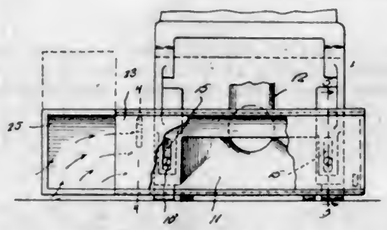
drive bushing and detachably connected with the chuck, said chuck having means for adjustable driving connection with a drill stem projecting through the quill and readily disconnectible means for applying accurately regulatable lifting or lowering force to said removable chuck carrying quill and a drill pipe extending down through the chuck and quill and held by the adjustable driving means of the chuck.

1,681,503. DISK-WHEEL AND DEMOUNTABLE RIM CONSTRUCTION. ROBERT W. SIMPSON, New York, N. Y., assignor of one-half to Evina A. Kemp, New York, N. Y. Filed July 27, 1926. Serial No. 125,150. 7 Claims. (Cl. 301—17.)



4. A vehicle wheel comprising a rim, locking pins projecting inwardly therefrom, a disk enclosed by said rim, said disk having peripheral slots therein adapted to permit the pins to pass through from one side of the disk to the other, and means for moving the rim angularly with respect to the disk to lock said pins out of alinement with said slots.

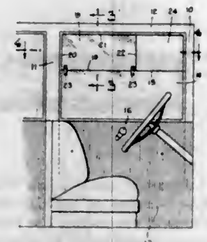
1,681,504. LIQUID-LEVEL GAUGE. FRANK B. SMITHE, New York, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1925. Serial No. 46,530. 10 Claims. (Cl. 73—54.)



1. In a tank instrument for liquid level gauges, a suction pipe, a gauge pipe, a block connected to said pipes, said block having a passage therein which communicates with the suction pipe and is adapted to open into the tank at the lower side of the block when the latter is in operative position in the tank, and a second downwardly extending passage which communicates with the gauge pipe and with the first mentioned passage, the passages being so interrelated that the application of suction to the suction pipe will withdraw liquid from the gauge pipe.

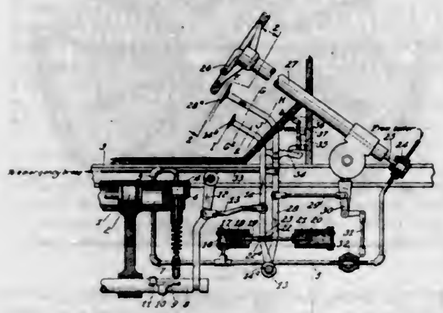
1,681,505. NUT-COOKING MACHINE. OTTO C. STROTH and PAUL R. LEMPKE, Dover, N. H. Filed Apr. 29, 1927. Serial No. 187,686. 4 Claims. (Cl. 53—7.)

1. In a nut cooking machine, the combination with nut-cooking, nut-feeding and nut delivery means, of a shaft, a disk secured thereto adapted to receive the nuts to be cooked from the feeding means and to support them while subject to the cooking means, means to rotate said shaft, and time-controlled means for raising said shaft to deliver the nuts from the disk to the delivery means.



1,681,506. DUSTPAN FOR FLOOR-SURFACING MACHINES. IRA V. SPURLIN, Hamilton, Ohio. Filed Oct. 25, 1926. Serial No. 144,098. 7 Claims. (Cl. 51—176.)

1. In a dust pan for floor surfacing machines, a pan unit constructed for attachment to the machine frame rearwardly of the sanding drum, a cover plate for said pan, and a housing at one end of the plate open at its front and inner end, said housing extending beyond the end of said sanding drum and having communication with said dust pan in it when the cover plate is associated therewith.

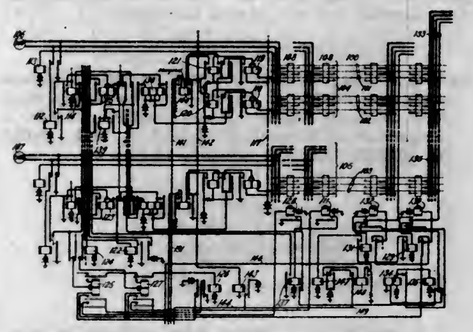


1,681,507. VEHICLE WINDOW. REINHOLD H. WAPPLER, Yonkers, N. Y. Filed Jan. 6, 1926. Serial No. 79,589. 5 Claims. (Cl. 296—44.)

1. In a windowed vehicle of the type which normally deflects air outwardly relative to the window during the movement of the vehicle and wherein a deflected air stream normally returns to the plane of the window, an openable window closure so constructed and arranged that when it is completely closed it will close up all but the upper

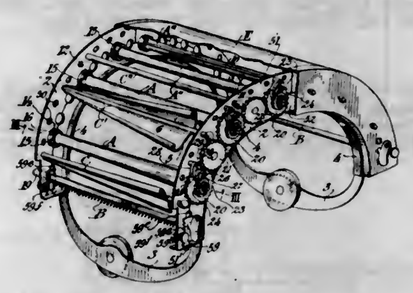
forward window portion, thereby leaving an opening which lies forwardly of the point at which the air stream returns to the plane of the window.

1,681,508. OPERATING CONTROL MEANS FOR AUTOMOTIVE STEAM POWER PLANTS. RUSSELL R. WATERMAN, Long Beach, Calif., assignor to Farmers' National Bank, trustee, Greenville, Ohio, a Corporation of Ohio. Filed May 17, 1926. Serial No. 109,568. 11 Claims. (Cl. 192—3.)



2. In a means of the class described, the combination with a steam engine, a steamline connected therewith and a brake means, of a throttle positioned in said steamline, a foot pedal connected with said throttle and said brake means for operating the former or both the former and the latter, and a cut-off valve operating pedal for controlling the steam cut-off valve to said steam engine, said operating pedal being positioned in association with said first mentioned foot pedal whereby said operating pedal may be simultaneously operated with the operation of the first mentioned foot pedal.

1,681,509. CADMIUM PLATING. LEON R. WESTBROOK, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 23, 1926. Serial No. 150,376. 16 Claims. (Cl. 204—1.)



15. A cadmium plating composition comprising about 50 parts of cadmium hydroxide, about 0.18 part of nickel as a compound of nickel which is soluble in an aqueous alkali metal cyanide solution, about 88 parts of sodium sulfate and about 11.5 parts of gulac.

1,681,510. TELEPHONE SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1926. Serial No. 143,352. 12 Claims. (Cl. 179—9.)

1. In a telephone system, a plurality of connective elements divided into groups, means to operate said elements, means common to said groups of elements for recording the simultaneous operation of all elements of a group, and means for selectively associating the recording means with said groups.

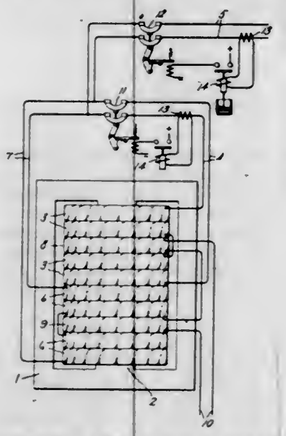
1,681,511. HAIR WAVING OR CURLING DEVICE. SUMTER B. BATTEY, New York, N. Y. Filed Nov. 4, 1926. Serial No. 146,201. 28 Claims. (Cl. 132—31.)

1. A hair waving or curling device comprising a frame, a rotatable form supported thereby, said form being adapted to wind up and tension a strand of hair, means for locking the form against rotation relative to the frame, and supporting means carried by the frame and engaging a strand of hair, said supporting means being adapted to sustain the tensile stress applied to the hair by said rotatable form whereby the hair may be tensioned without imparting pull to the scalp.

1,681,512. METHOD OF MANUFACTURING KNITTING NEEDLES. ARTHUR J. A. BEYER, Philadelphia, Pa., assignor to James H. Bell, Philadelphia, Pa. Filed July 5, 1923. Serial No. 649,532. 19 Claims. (Cl. 163—5.)

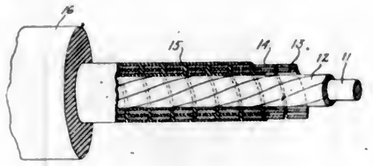
1. The method of making a knitting-machine needle with integral actuating-butt and hook portions, which consists in folding an elongated sheet metal blank having opposed

symmetrically configured edges to channel formation, and clinching the end of said blank remote from the butt to form a substantially solid section hook portion.



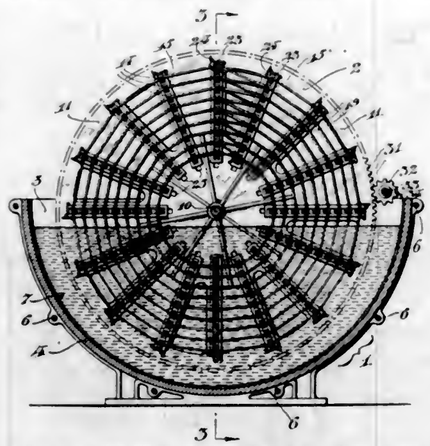
14. As an article of manufacture, a knitting needle having integrally formed butt and hook portions made of longitudinally channeled section with the end adjoining the latch solidified and bent to hook formation.

1,681,513. COMPOSITE MANIFOLDING STRIP. ARCHIE M. BOVIER, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Sept. 9, 1924. Serial No. 736,686. 5 Claims. (Cl. 282—12.)



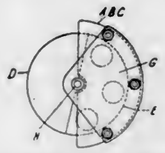
1. In combination, a traveler record strip having severance lines dividing it into a succession adjacent attached traveler record leaves and an auxiliary record leaf for each of said traveler leaves, said auxiliary leaves lapping the respective traveler leaves and forming therewith respectively adjacent attached sets of traveler leaves, each auxiliary record leaf being free from attachment to the respective lapping traveler leaf and having attachment to an adjacent advance traveler record leaf and extending rearwardly from its attachment across the adjacent line of severance, each of said auxiliary record leaves having also a line of severance parallel and substantially contiguous to said first mentioned severance line whereby a traveler record leaf and its auxiliary leaf may be simultaneously severed along said contiguous severance lines, thereby freeing the auxiliary leaf from the traveler strip.

1,681,514. PROTECTIVE APPARATUS. FREDERICK F. BRAND, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 9, 1926. Serial No. 114,814. 6 Claims. (Cl. 175—294.)



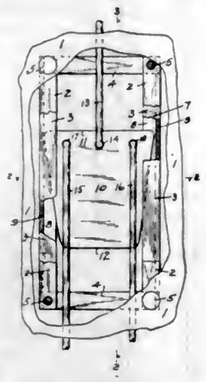
1. The combination with electrical apparatus having a magnetic core, and a winding on said core formed in sections connected in parallel to an outside circuit, of means responsive to overload condition of the apparatus for disconnecting one only of said winding sections, said winding sections being inductively related in said apparatus in such manner that the impedance of the apparatus is substantially increased by said disconnecting of one winding section.

1,681,515. SUBMARINE CABLE. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1925. Serial No. 47,245. 5 Claims. (Cl. 178—45.)



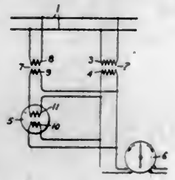
1. An electrical conductor comprising a conducting member and a plurality of layers of loading material having interstices applied to said conductor, the corresponding interstices of all of said layers being in alignment, and the whole loaded conductor impregnated with a compound which is semi-fluid under seat bottom conditions.

1,681,516. WARP-DYEING MACHINE. EDWIN E. CARLSON and LAWRENCE A. STEAD, Chester, Pa. Filed July 15, 1926. Serial No. 122,526. 16 Claims. (Cl. 8—19.)



15. In a dyeing machine comprising a vat and a reel rotatable therein, radially disposed rows of yarn supporting bars on said reel, a stationary cam on said reel, and cam followers on each row of supporting bars adapted to successively engage said cam to move said supporting bars out of contact with said yarn.

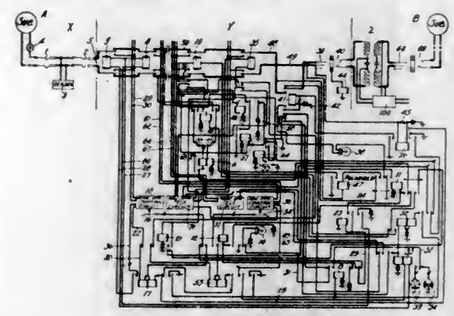
1,681,517. MEANS FOR DAMPING OSCILLATING OR ALTERNATING CURRENT CIRCUITS. NEWSOME HENRY CLOUGH, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 16, 1926, Serial No. 116,309, and in Great Britain July 20, 1925. 8 Claims. (Cl. 250—16.)



1. A damping means comprising a condenser, variable means for absorbing a portion of the current passing through the said condenser, and compensating means adapted to maintain constant capacity in said condenser.

1,681,518. AUTOMOBILE SAFETY BRAKE EQUALIZER. OTTO L. COMPTON, Olympia, Wash. Filed Mar. 31, 1927. Serial No. 179,846. 1 Claim. (Cl. 188—204.)

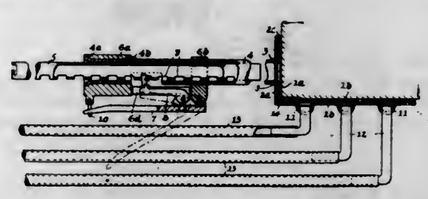
In an equalizing apparatus, the combination of fixed parallel guiding means; a symmetrical trapezoidal equalizer plate mounted in said guiding means and free to move longitudinally therein; a central brake rod attached to the equalizer plate on its central axis and near its longer parallel edge; two lateral brake rods attached to said equalizer plate on each side of said central brake rod; and limiting means, comprising a part of said parallel guiding means, and permitting a free turning movement of the equalizer plate about said central brake rod connection in the normal operation of the brakes, but preventing an abnormal turning movement thereof by the engagement of one of the corners of the shorter parallel side of said equalizer plate therewith, thereby providing a lateral component of the braking forces whereby the force applied to the central brake rod is transmitted to one of the lateral brake rods when the other brake rod is inactive without permitting said remaining brake rod to be materially slackened.



1,681,519. REGULATING SYSTEM. JAMES R. CRAIGHEAD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,382. 10 Claims. (Cl. 171—119.)

1. In combination, an alternating current supply circuit, a transformer connected to said supply circuit, a load circuit comprising a plurality of branch circuits connected in parallel to be energized from said transformer, and means for introducing into one of said branch circuits an electromotive force proportional to the difference between the supply circuit voltage, divided by the transformer turn ratio, and the load circuit voltage.

1,681,520. TRUNK CIRCUITS. JACK F. DAHL, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 31, 1927. Serial No. 195,226. 9 Claims. (Cl. 179—27.)

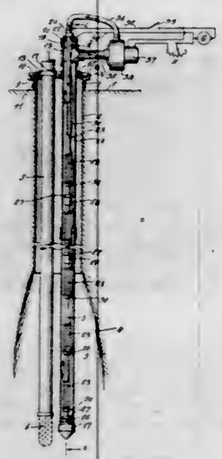


1. In a telephone system, a plurality of operators' positions, a trunk circuit incoming to one of said positions and terminating in a plug, a trunk signal, means at each operator's position operable by the operator thereat in response to said signal, a telephone set at each operator's position, and means allotted to each operator's position responsive to the operation of the responsive means of such position and to the insertion of said plug into an outgoing line jack for disconnecting the talking conductors of said trunk circuit and for connecting said plug to the telephone set of such operator's position.

1,681,521. PROCESS OF CLEANING AND BURNISHING METALLIC POWDERS. JOHN A. DALY, New Rochelle, N. Y. Filed Aug. 2, 1926. Serial No. 126,748. 4 Claims. (Cl. 51—278.)

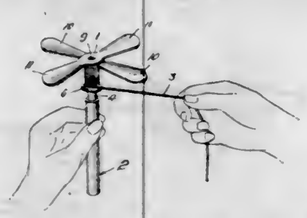
1. The process of burnishing metals in a state of fine subdivision which comprises commingling the particles of metal with harder finely divided material and agitating the commingled substance.

1,681,522. ADJUSTABLE CURTAIN SUPPORT. WALTER DAMM, Paterson, N. J., assignor of one-half to Joel E. Crandall, Paterson, N. J. Filed Aug. 7, 1926. Serial No. 127,735. 3 Claims. (Cl. 156—23.)



1. In a curtain-supporting means, a telescopic support adapted on telescopic adjustment thereof to bear against oppositely facing surfaces and thus be supported and including a pair of telescopically movable members, a lever pivoted to one member to move in a plane extending lengthwise of the line in which said members are telescopically movable, and a pawl pivoted to the lever to move also in a plane extending lengthwise of said line and engageable with the other member to lock said members against telescopic collapse.

1,681,523. APPARATUS FOR HEATING OIL WELLS. PATRICK V. DOWNEY and CLIFFORD H. WENDROFF, Denver, Colo. Filed Mar. 26, 1927. Serial No. 178,679. 5 Claims. (Cl. 219—33.)

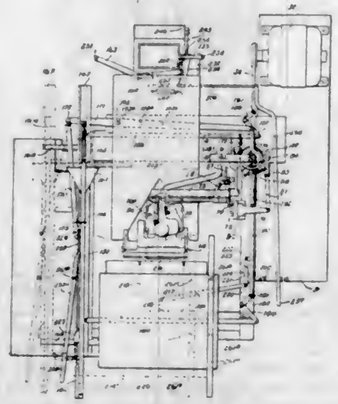


1. An apparatus for heating oil wells, comprising, in combination, a pipe adapted to extend from the top of the well to the bottom thereof, a pipe of smaller diameter located within the first pipe and extending substantially

from one end thereof to the other, a plurality of electric heater elements secured to the smaller pipe and spaced from each other, means for conducting an electric current to the heating elements, and means for causing a

current of air to flow downwardly through the smaller pipe and upwardly within the larger pipe whereby the electric heaters will be subjected to a flow of air that tends to distribute the heat.

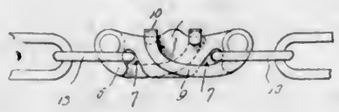
1,681,524. FLYING TOP. JOSEPH DUCHESNEAU, Leominster, Mass., assignor, by mesne assignments, to The De-Lite-Us Spring Clasp Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1927. Serial No. 165,524. 2 Claims. (Cl. 46—51.)



1. In a device of the class described, a stick having a cylindrical end adapted to receive a cylinder, propeller blades rigidly secured to a cylinder by an eyelet so that when a string is withdrawn from the string receiving portion, with a sudden pull, the cylinder, and the parts rigidly connected thereto, will fly into the air.

1,681,525. PRINTING MACHINE. JOSEPH S. DUNCAN, Chicago, Ill., assignor, by mesne assignments, to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed May 10, 1924. Serial No. 712,270. 77 Claims. (Cl. 101—65.)

25. In a printing machine, a platen, a plurality of printing devices, means for presenting each printing device to the platen, blank feeding mechanism, a numbering machine, and means controlled by the printing devices for bringing the numbering machine into and out of a printing position.



34. In a printing machine, a platen, a plurality of printing devices, means for presenting each printing device to printing position in respect to the platen a plurality of times, means for taking an impression from said printing device on a blank, blank feeding mechanism, operating automatically to advance the blank in the machine, blank shifting mechanism, a mask, and means for bringing the mask into and out of a position wherein it covers a portion of a printing device presented to the platen during a printing operation.

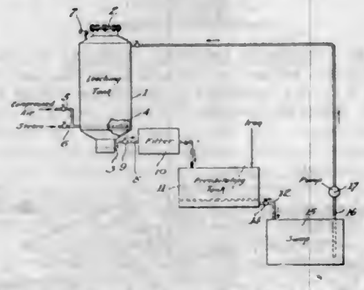
48. In a printing machine, a platen, means for imparting a step-by-step movement to a blank to present the blank to the platen a plurality of times, means for reciprocating the blank, means cooperating with the platen to print on said blank, a mask, and means for reciprocating the mask to expose different portions of said blank.

71. In a printing machine, means for holding a sheet of paper entirely flat in the machine, a plurality of printing devices, means for advancing the sheet, means for shifting the sheet laterally, and means for taking impressions of the printing devices upon the sheet.

1,681,526. CHAIN FASTENER. EMANUEL ECKROAT, Shenandoah, Pa. Filed July 27, 1927. Serial No. 208,867. 3 Claims. (Cl. 24—69.)

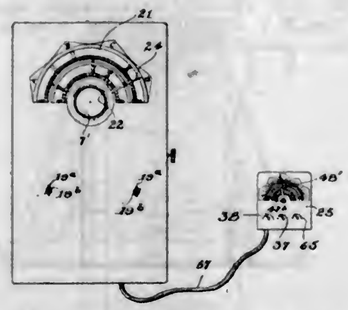
1. In a device of the class described, a plate having a plurality of notches formed along one edge thereof, means pivotally carried by the plate and adapted to be arranged in position with respect to said notches whereby to close the entrance to the same, and plate engaging means carried by the closure means adapted to engage the opposite edge thereof for retaining the parts in closed position.

1,681,527. DISPLAY DEVICE. GEORGE F. EGAN, Jersey City, N. J. Original application filed Aug. 3, 1925, Serial No. 47,866. Divided and this application filed Apr. 8, 1926. Serial No. 100,618. 2 Claims. (Cl. 40—149.)



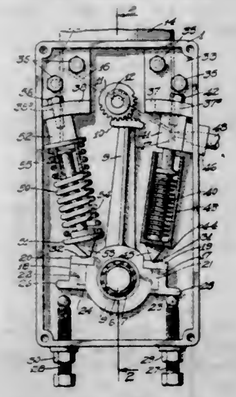
1. A display device comprising a shet body bent transversely to provide a pair of wings extending at acute angles

to one another and adapted to be reversably stood on either end with its angled connecting portion extending substantially vertically, said pair of wings having pairs of mating slots therein, one pair of slots opening through one end of the device and the other pair of slots opening through the



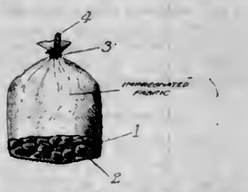
other end of the device, said slots being inclined to the vertical in the set-up position of the device with the open mouths of the slots in approximate central parts of the respective wing edges and with the inner parts of the slots in each wing remote from one another.

1,681,528. PROCESS FOR RECOVERING COPPER FROM ITS ORES. ALEXANDER ELLIOTT, Los Angeles, Calif. Filed Mar. 17, 1924, Serial No. 699,777. Renewed June 23, 1927. 4 Claims. (Cl. 75—18.)



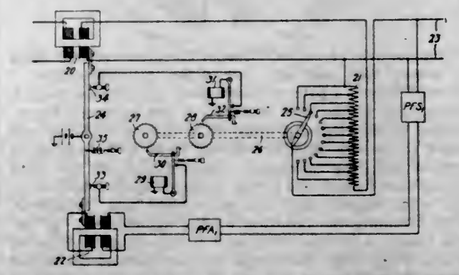
1. The process of extracting copper from its ores which comprises subjecting the ore to the action of a solution of ferrous sulphate in the presence of air distributed in contact with such solution at a pressure in excess of atmospheric pressure and maintaining a pressure in excess of atmospheric pressure throughout the body of solution and ore mixed therewith.

1,681,529. RADIO TUNING MECHANISM. GEORGE R. FREMONT, Richmond, Va. Filed Aug. 18, 1925. Serial No. 51,275. 7 Claims. (Cl. 250—40.)



6. A remote control attachment for radio tuning elements comprising a motor operated drive element to be fixed upon the shaft of such elements, a portable control unit including a motor driven rotatable element, electric circuits connecting such motors to operate in unison, switches controlling the circuits, electrically operated brake element adapted to engage the first mentioned drive element when the last mentioned drive element has rotated a predetermined distance.

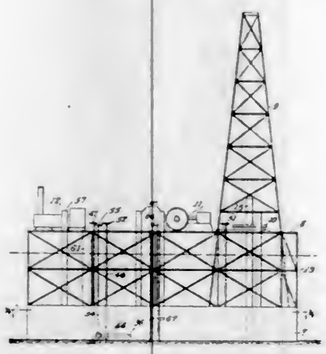
1,681,530. AUTOMATIC FUEL-REGULATING DEVICE FOR STEAM-POWER PLANTS. CHARLES A. FRENCH and RUSSELL R. WATERMAN, Long Beach, Calif., assignors to Farmers National Bank, trustee, Greenville, Ohio, a Corporation of Ohio. Filed Nov. 25, 1924. Serial No. 752,274. 6 Claims. (Cl. 236—26.)



1. In a regulating device of the character as disclosed, a substantially upright balancing arm, a valve, gear and rack means whereby said valve is opened or closed by said balancing arm, pressure operated means acting upon said arm for swinging said arm to close said valve, and a spring acting upon said arm tending to open said valve.

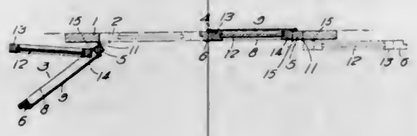
1,681,531. MEANS FOR DEODORIZING COOKING. THOMAS A. GANNON, Chicago, Ill. Filed Dec. 30, 1926. Serial No. 157,961. 2 Claims. (Cl. 99—2.)

1. As an article of manufacture, a deodorizing packet comprising a mass of carbon having high gas adsorbing capacity, and a fabric container investing the same, the fabric of said container being impregnated with a water-soluble preservative of vegetable colors.



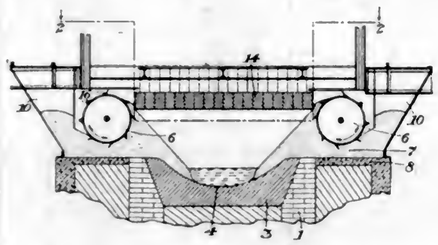
1,681,532. TRANSMISSION CONTROL. FRED G. GARDNER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 2, 1923. Serial No. 648,868. 10 Claims. (Cl. 179—171.)

1. A translating device having input and output circuits, an incoming circuit, an inductive coupling between the



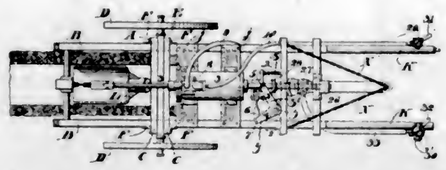
incoming circuit and the input circuit, and means connected to the output circuit to regulate the inductive relation of said coupling between the incoming circuit and the input circuit.

1,681,533. SUBMARINE DRILL. LOUIS GILIASSO, Philadelphia, Pa. Filed Jan. 13, 1928. Serial No. 246,627. 15 Claims. (Cl. 255—1.)



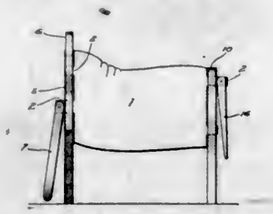
1. In submarine drilling, a barge, means for sinking and for raising the same to enable the seating of the barge on "bottom" for drilling purposes and removal by floating when drilling is completed, a working platform supported in elevated relation on the barge to stand above water when the barge is on "bottom" and a well drilling machine on said elevated platform operative to drive a well when the barge is stationed on "bottom", said barge having buoyancy when unwatered to float the entire load of the elevated working platform and drilling equipment carried thereby.

1,681,534. COMBINATION BLIND AND SCREEN. JOHN W. GREEN, Portsmouth, Va. Filed May 14, 1923. Serial No. 30,324. 1 Claim. (Cl. 20—58.)



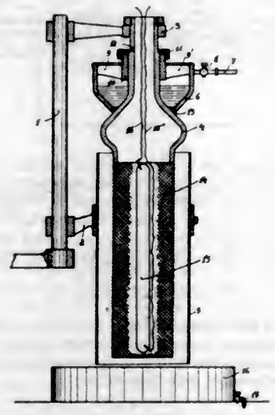
As an article of manufacture, a complete colonial blind and screen unit assembly, comprising, in combination, a casement frame, a pair of rectangular open frames hinged, respectively, to the side members of the casement frame, colonial blinds having a flush fit in the open frames and hinged to the side members thereof so as to be capable of outward swinging movement independently of the open frames, said frames and blinds being of equal thickness so that when closed they are in straight line formation, strips bounding the openings on the opposite side of the open frames, and screens secured to the strips and spaced thereby away from the frames so as to permit the stated independent action of the blinds without the hazard of the corners thereof chafing the screens.

1,681,535. APPARATUS FOR SMELTING. HOWARD W. HALL, Woodbridge, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed July 30, 1925. Serial No. 46,947. 6 Claims. (Cl. 266—24.)



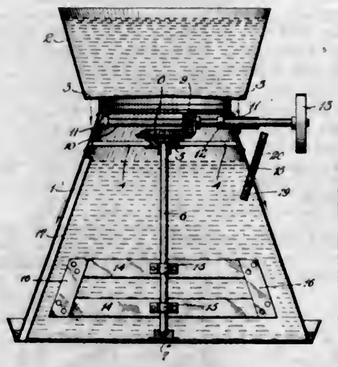
1. In a melting furnace having side walls and a roof, and an opening therein, means for feeding a charge to the furnace inwardly and upwardly through said opening and for keeping it piled above said opening while it is moving for forming a closure therefor.

1,681,536. TRENCH DIGGER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 2, 1927. Serial No. 210,185. 5 Claims. (Cl. 214—132.)



1. An excavating machine comprising a frame, a shovel suspended from said frame, fluid actuated percussive means for driving said shovel forward, means for raising and moving said shovel forwardly said means including a rigid arm and a flexible member, an automatic means to tilt and dump said shovel upon elevation to a predetermined height.

1,681,537. TOY ANIMAL. HELEN SARGENT HITCHCOCK, New York, N. Y. Filed Aug. 28, 1925. Serial No. 53,066. 1 Claim. (Cl. 46—40.)

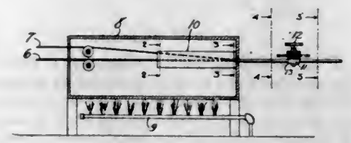


A toy elephant having a vertically disposed flat torso member and vertically disposed hind and fore-quarters substantially at right angles thereto, tongues projecting from said member into and through openings in said respective fore-quarters and hind-quarters, a trunk member pivotally articulated to a tongue piercing said fore-quarter and a tail piece articulated to a tongue penetrating said hind-quarters.

1,681,538. TREATMENT OF LIQUIDS SUCH AS MILK WITH RAYS, MORE PARTICULARLY WITH ULTRA-VIOLET RAYS. FRANZ HOFFMANN, Vienna, Austria. Filed Nov. 28, 1927, Serial No. 236,354, and in Austria Oct. 30, 1926. 4 Claims. (Cl. 99—15.)

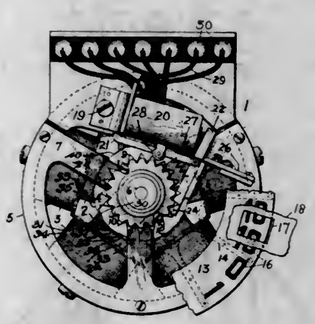
3. Device for irradiating liquids more especially with ultra-violet rays, comprising in combination a hollow bulb-shaped body, a cylindrical grid forming an extension of the latter, a source of light rays arranged within the grid, wires for the supply of electric current passing through the said bulb-shaped body and being connected with the said source of light rays, and a vertically adjustable trough surrounding the bulb-shaped body and open at its lower end, for the purpose specified.

1,681,539. MILK COOLER. WILLIAM LELAND HOLT, Scarboro, Me. Filed July 20, 1927. Serial No. 207,203. 1 Claim. (Cl. 31—4.)



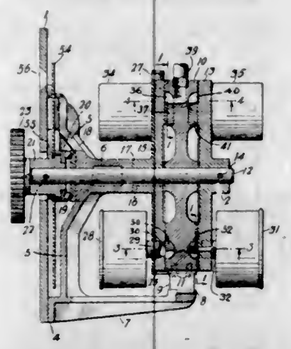
In a milk cooler a truncated cone shaped ice and water chamber, a milk receiving receptacle mounted on said chamber and having milk exit ports in the bottom thereof to permit the milk to flow onto the exterior face of said chamber, a power operated agitator mounted within and near the bottom of said chamber, an overflow port at the predetermined water level discharging outside of the chamber, a thermometer casing extending into said chamber to a point below the predetermined water level and provided with a perforated end portion to permit entrance of the water in the chamber, the outer end of the casing extending above the water level of the chamber, and a thermometer secured in said casing.

1,681,540. PACKING MATERIAL. OLIVER T. HUNGERFORD, Belleville, N. J. Filed Apr. 12, 1927. Serial No. 183,246. 3 Claims. (Cl. 19—146.)



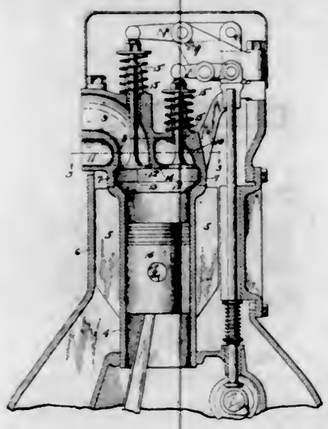
1. A packing material consisting of fibrous material recovered from flax straw and having mixed therewith a percentage of harder, flexible, resilient substance, substantially as set forth.

1,681,541. ELECTRICAL CONDUCTOR. JOHN JOHNSTON, New Haven, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1924. Serial No. 711,039. 6 Claims. (Cl. 173—264.)



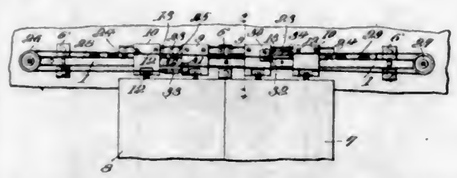
1. The method of insulating a conductor which consists in vulcanizing insulating material, forming a tape of said insulating material, applying said tape to closely surround said conductor, and joining the edges of said tape to provide a continuous sheath of insulating material.

1,681,542. REPEATER-MOTOR INDICATOR. RALPH E. KORTEPETER, Brooklyn, and ADOLF AMUNDSEN, Glendale, N. Y., assignors to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 1, 1921. Serial No. 519,058. 10 Claims. (Cl. 177—327.)



1. In a step by step repeater motor, a plurality of field poles, an armature associated therewith, a star wheel fixedly connected to said armature, a second star wheel connected with said armature, a detent normally engaging said first mentioned wheel to desynchronize the armature with respect to said field poles, means for disengaging said detent when the motor is energized, a second detent normally disengaged and means for causing said second detent to yieldingly engage said second wheel to synchronize the same with the step positions of said armature when the motor is energized.

1,681,543. ACOUSTICAL DEVICE. JOHN J. KUHN, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,449. 4 Claims. (Cl. 181—26.)

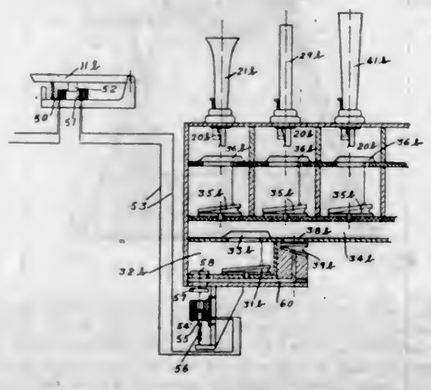


2. In an acoustical device, a framework, a shaft rotatably supported thereby, a body member rigidly supported by the framework and having a circular groove in each of two surfaces, a plate member carried by the shaft in close relation to each such surface of the body member, means rendering each circular groove discontinuous, and a lug attached to each plate member slidably engaging the groove of the cooperating surface of the body member, said lugs cooperating with the above mentioned means for inversely varying the lengths of portions of the grooves interposed therebetween.

1,681,544. INTERNAL-COMBUSTION ENGINE. ROBERT B. KUHN, Canton, Ohio, assignor to Eunice H. Kuhn, Canton, Ohio. Filed Aug. 17, 1922. Serial No. 582,472. 2 Claims. (Cl. 123—177.)

1. An internal combustion engine chamber having a head with a tubular extension forming an exhaust passage and a dome extension forming an inlet passage entirely surrounding the tubular exhaust passage at the mouth thereof, valves and seats therefor in the mouths of the respective passages, the inlet passage being arranged to admit gases for cooling the head of the cylinder and the valves and seats therein, said mouths being located side by side in the head, and the tubular exhaust passage extending through and above the dome.

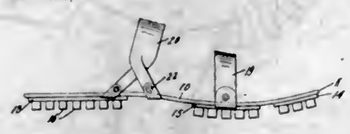
1,681,545. ELEVATOR-DOOR-OPERATING MECHANISM. PHILIP LANG, Cedar Falls, Iowa, assignor to Wagner Manufacturing Company, a Corporation of Iowa. Filed Aug. 1, 1922. Serial No. 579,001. 5 Claims. (Cl. 268—51.)



1. The combination with two sets of sliding doors, a ball carrying plate for each door, cables connected to the outer door of one set and extending in opposite directions around pulleys and having their opposite ends having a spring connection with the outer door of the other set and operating means carried by the ball carrying plates of the outer door of each set.

1,681,546. PRODUCTION OF SOUNDS. MAX MAAG, Schwamendingen, near Zurich, Switzerland. Filed Dec. 30, 1922, Serial No. 610,076, and in Germany Dec. 31, 1921. 6 Claims. (Cl. 84—83.)

3. A sound producing device comprising a sounding tube having a sounding end and a slot-shaped air pulsations producing end, a figurate band movable to co-operate with the latter to close the same more or less, an air pipe connected with the said tube and having a slot-shaped end opening thereinto adjacent to the aforesaid slot-shaped end thereof, a device in connection with said air pipe and adapted to cause a current of air to move therethrough toward the pulsations producing end, means permitting said current to escape simultaneously through said tone producing and pulsation producing end, and means for controlling the operation of the said device, essentially as and for the purpose set forth.

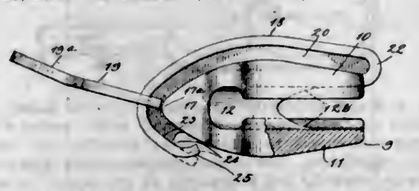


1,681,547. ORGAN ACTION. MAX MAAG, Schwamendingen, Switzerland. Filed Aug. 17, 1923. Serial No. 657,910. 16 Claims. (Cl. 84—335.)

1. A pneumatic action for organs comprising in combination, a plurality of keys, a plurality of tone-producers, means to supply air under pressure to said tone-producers,

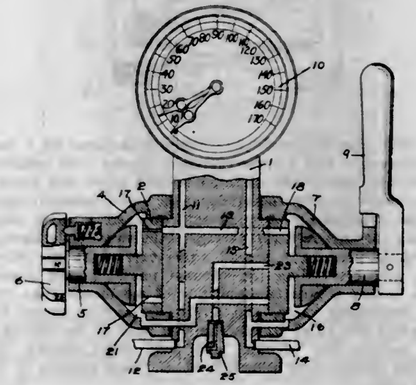
pallets in said air supplying means, a pallet actuated by said key to vary the pressure within individual wind chests, bellows, conduits connecing said wind chests with their bellows, means connecting said bellows to their respective pallets whereby varying the positions of said keys individually varies the positions of the bellows and said pallets and the pressure of air supplied to said tone-producers varies directly with the positions of said keys.

1,681,548. SANDAL. JACOB MARCUS, Brooklyn, N. Y. Filed Jan. 11, 1928. Serial No. 245,935. 1 Claim. (Cl. 36—63.)



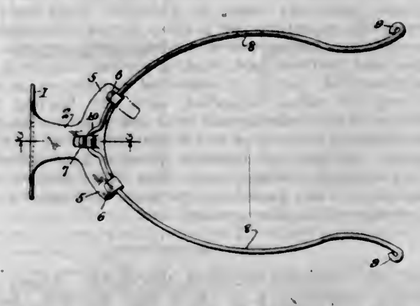
A sandal comprising a metallic sole plate provided all around its edges with a bead, said bead being disposed on the underface of said plate, a strengthening wire disposed within said bead extending all around the edge of the sole plate, a rubber block secured to the underface of the heel portion of said sole plate, a rubber block fastened to the underface of the toe portion of said sole plate, a rubber block attached to the underface of the ball portion of said sole plate, all of said rubber blocks being provided with protuberances on their underfaces to provide anti-slipping devices, and straps secured to said sole plate for holding the sandal to the foot of the wearer.

1,681,549. COUPLING MEMBER FOR ATTACHING DEVICES. DAVIS MARINSKY, Bronx, N. Y. Filed Nov. 17, 1925, Serial No. 69,582. Renewed Jan. 14, 1928. 8 Claims. (Cl. 24—205.)



1. A coupling device of the class described comprising a substantially V-shaped unitary die-cast body having upper and lower walls, the outer faces of which are flat and terminate in curved edge portions at the sides of the body, channels of substantially circular cross sectional form arranged in said body and opening through the opposite ends thereof, the channels of said body intersecting at the contracted end thereof, a partition wall separating said channels at the flared end of said body, said channels opening outwardly through the opposite sides of the body and said partition wall extending in the direction of the contracted end of the body in independent ribs on the inner face of the upper and lower walls of the body, said ribs terminating inwardly of and adjacent the contracted end thereof.

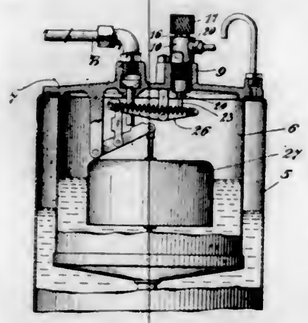
1,681,550. COUPLING MEMBER FOR SEPARABLE FASTENERS. DAVIS MARINSKY, New York, N. Y. Filed Mar. 15, 1926, Serial No. 94,711. Renewed June 23, 1928. 12 Claims. (Cl. 24—205.)



1. A coupling member for separable fasteners comprising a unitary body consisting of substantially similar side portions united by a partition wall adjacent one end of the coupling member, channels formed between said side portions, said channels intersecting at one end of the coupling member and diverging at the other end thereof, said partition wall being tapered in the direction of the intersections of said channels, said channels opening through apertures at the opposite sides of the coupling member and formed between the side portions thereof, said channels being substantially circular in form in cross section, a rib integral with one side face of said coupling member and extending centrally and longitudinally thereof, and said rib having channels in the opposite faces thereof.

1,681,551. LEAKAGE-TESTING DEVICE. RAYMOND E. MILLER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1927. Serial No. 222,998. 9 Claims. (Cl. 303—86.)

4. The method of testing the fluid pressure brake system of a train for leakage which consists in supplying fluid under pressure from a source of fluid under pressure to the brake pipe through an opening of predetermined area and then calculating the leakage from the difference in pressure between the source of pressure and the pressure developed in the brake pipe as indicated by a pressure gage.



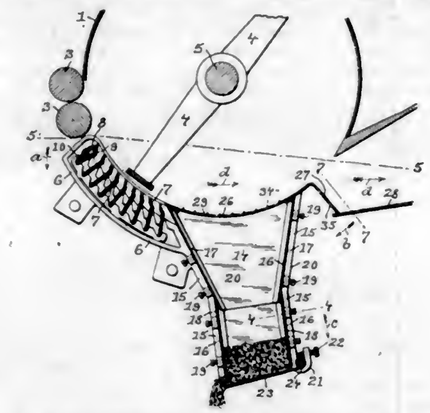
1,681,552. HATRACK. FRANK R. MOUNT and CHARLES P. YOUNG, Warren, Pa. Filed May 7, 1927. Serial No. 189,581. 2 Claims. (Cl. 211—32.)

1. A hat rack consisting of a sheet metal body member having an attaching flange and a plurality of lugs and a discontinuous wire member bent into appropriate shape

and engaged and held to the body member by said lugs, said wire member also having intermediate its ends a short bend which lies against the face of the sheet metal body member.

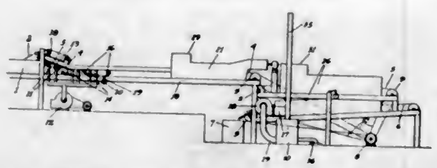
1,681,553. VALVE. JOHN NETTERMAN, Island Heights, N. J. Filed Apr. 14, 1925. Serial No. 22,965. 5 Claims. (Cl. 103—236.)

1. The combination with a vacuum chamber of a fuel supply system and a cover therefor, a valve unit comprising a body detachably mounted in said cover and having an air inlet passage therethrough, a valve normally closing the inlet of air through said passage, a valve stem passing through said air passage, said valve body having a vacuum passage, a second valve carried by the valve stem, and controlling the vacuum passage, said second valve having a greater amplitude of movement than the first mentioned valve, and a float actuating means for unseating the valve to allow air to pass to the chamber and destroy the vacuum, and said valve closing the vacuum passage and allowing the air inlet passage to remain open.



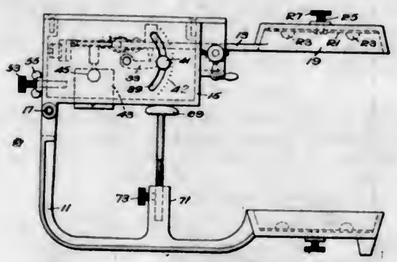
1,681,554. WAVE FILTER. EDWARD L. NORTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 751,748. 14 Claims. (Cl. 178—44.)

11. An impedance transforming wave filter adapted to transmit selectively waves in a desired broad band of frequencies, comprising two portions having unequal characteristic impedances, and a coupling section included between said portions, said coupling section comprising an unsymmetrical system of connected impedances having precomputed values dependent upon the limiting frequencies of the desired broad band and upon the unequal characteristic impedances of the connected filter portions whereby the filter will transmit waves without reflection at its internal junction points, and will transform the amplitudes of the waves in accordance with ratio of the impedances of the two portions.



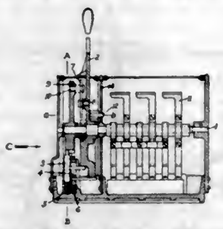
1,681,555. COTTON-PICKING MACHINE. AMASA ST. ONGE, Providence, R. I. Filed Aug. 31, 1926. Serial No. 132,746. 4 Claims. (Cl. 19—95.)

1. In the beater section of cotton picking machine a curved sheet metal perforated plate forming the top of a mote and trash receptacle, each perforation having a straight edge merging into rounded corners which merge



into straight angular edges which in turn merge into a curved edge and upwardly extending tets at the curved edge, for the purpose as described.

1,681,556. WASHING AND DRYING APPARATUS. DONALD PARKER, Fresno, Calif. Filed May 9, 1927. Serial No. 189,908. 8 Claims. (Cl. 34—12.)

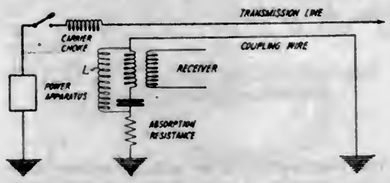


1. A drying apparatus including a foraminous longitudinally moving draper on which the produce to be dried is supported, transversely extending and longitudinally spaced suction pipes under the draper having openings facing the draper, and means for agitating and disturbing the setting of the produce on the draper, disposed intermediate the pipes.

1,681,557. DENTAL ARTICULATOR. GEORGE P. PHILLIPS, Boston, Mass. Filed Aug. 29, 1924. Serial No. 734,930. 7 Claims. (Cl. 32—1.)

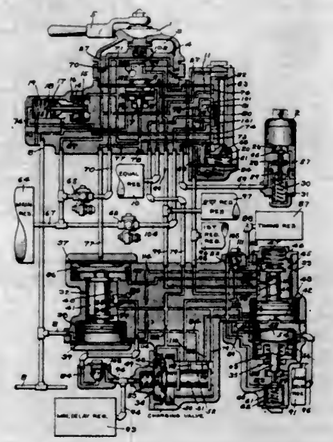
3. A dental articulator comprising a model holder, a support connected thereto, a movable model holder arm having connections to said support providing for mandibular movement, said connections comprising a carrier movable forwardly and backwardly on the support, a universal joint connection between the arm and said carrier and adjustable condyle guides which govern the movement of said arm about its carrier.

1,681,558. ELECTRIC SWITCH. JOSEF SCHLAGENHAUFER, Munich, Germany, assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Oct. 4, 1923, Serial No. 666,548, and in Germany Nov. 25, 1922. 6 Claims. (Cl. 200—17.)



1. In a motor starting switch, the combination with contact members, of a switch lever operable in each direction from a plurality of positions, yielding means operatively connecting said switch lever with said contact members, means comprising a stationary part provided with notches and a locking arm mounted upon said switch lever and adapted to engage said notches for retaining the switch lever positively in its positions, said locking arm and said notches being arranged to require movement of the switch lever in one direction from each of said positions before permitting movement of the lever in the other direction from said position.

1,681,559. SEWING-MACHINE-BOBBIN WINDER. HUGH M. STEPHENSON, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed June 22, 1927. Serial No. 200,726. 20 Claims. (Cl. 242—22.)



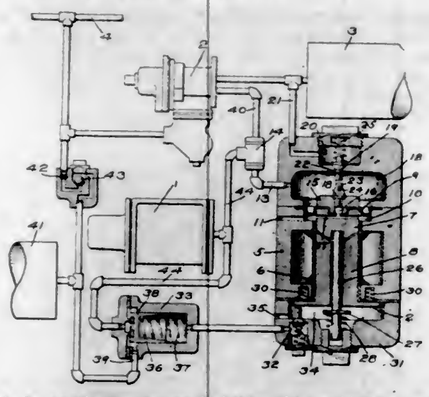
1. In a sewing machine, a needle operating mechanism, means for actuating said needle operating mechanism, means for winding a bobbin, and means for disconnecting said needle from said needle actuating means responsive to placing a bobbin in engagement with said bobbin winding means.

1,681,560. COUPLING BETWEEN RADIO APPARATUS AND HIGH-TENSION TRANSMISSION LINE. PAUL TATZ, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Dec. 8, 1924, Serial No. 754,480, and in Germany Dec. 18, 1923. 6 Claims. (Cl. 179—2.)

1. The method of transferring radio frequency signals to and from a high tension transmission system which comprises transferring the radio frequency signal to or from the high tension line by capacitive coupling and preventing the development of stationary oscillations in said coupling by absorbing the progressive oscillations in resistance elements.

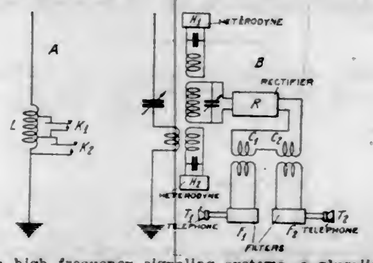
1,681,561. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, and CLAUDE A. NELSON, Wilmerding, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1927. Serial No. 224,867. 19 Claims. (Cl. 303—18.)

2. Apparatus for effecting a reduction in brake pipe pressure in two stages including a first reduction reservoir, a second reduction reservoir, valve means normally connecting said reservoirs, an equalizing reservoir, an application valve device movable to application position to connect the first reduction reservoir with the equalizing reservoir, and means responsive to the movement of said valve device and independent of the initiation of the brake pipe reduction for effecting the movement of said valve means to cut off communication between the first and the second reduction reservoirs.



1,681,562. SAFETY APPARATUS FOR AIRPLANES. WILLIAM HOLMES WENSTROM, Fort Bliss, Tex. Filed Mar. 17, 1925. Serial No. 16,159. 8 Claims. (Cl. 244—1.)

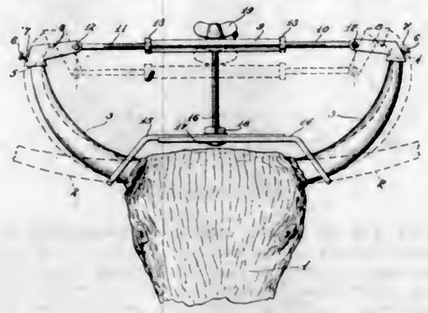
1. That improvement in the method of reducing the speed of an airplane which consists in releasing from the airplane a body of highly compressed gas against a body of water carried by the airplane, causing the gas to force said water forward in the direction of motion of the airplane, and using sufficient quantities of gas and water to create therewith a rearwardly directed force serving to substantially reduce the speed of the airplane.



5. The combination in an airplane, of a metal tube extending longitudinally of the axis of the airplane, a supply of powder in said tube, a body of water in said tube arranged to be expelled by the burning of said powder, and means under the control of the operator for igniting said powder.

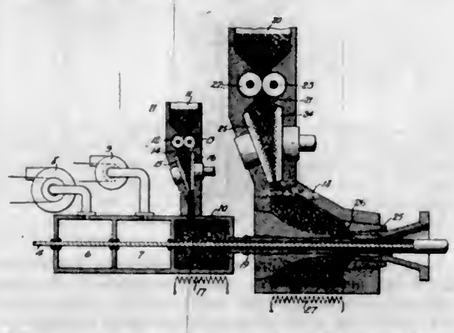
1,681,563. ELECTROPNEUMATIC BRAKE. UNCAS A. WHITAKER, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1927. Serial No. 182,746. 6 Claims. (Cl. 303—15.)

4. In an electro-pneumatic brake, the combination with a brake cylinder, of valve means for controlling the admission and release of fluid under pressure to and from the brake cylinder, an electro-magnet having a solenoid core for operating said valve means and subject to the pressure of a spring tending to operate said solenoid and valve means to supply fluid to the brake cylinder and to the pull of said magnet tending to release fluid from the brake cylinder, additional valve means for controlling the supply of fluid under pressure to the brake cylinder, and an additional solenoid core for said magnet subject to the pressure of a spring for effecting the operation of said additional valve means upon a reduction in current flow through said magnet to a low degree.



1,681,564. RADIO SIGNALING SYSTEM. GEORGE MAURICE WRIGHT, Chesterfield, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 2, 1922, Serial No. 540,387, and in Great Britain Mar. 3, 1921. Renewed July 29, 1925. 12 Claims. (Cl. 250—9.)

1. In high frequency signaling systems, a plurality of means at the sending station adapted to act separately and jointly to vary the sending frequency, each of said means acting separately being adapted to produce a different frequency, and acting jointly to produce a third frequency and a pair of beat receivers each responsive to a different frequency, one responsive to one of the first mentioned frequencies and to the third frequency and the other responsive to the other of the first mentioned frequencies and to the third frequency.

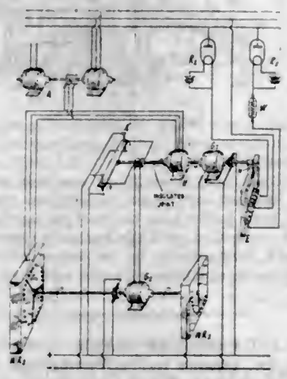


1,681,565. HORN DEFLECTOR. CHARLES ACHENBACH, Manitowoc, Wis. Filed June 29, 1927. Serial No. 202,303. 1 Claim. (Cl. 128—76.)

In a horn deflector, cups, means to secure said cups on the horns of an animal, a turn-buckle provided with internal screw threads at the ends thereof, bolts provided with external screw threads corresponding with and fitting into said internal screw threads, means to secure said bolts in an adjusted position relative to said turn-buckle, and means to pivotally connect said bolts to said cups, in combination with additional members adapted to be placed on the horns

of an animal adjacent to the head of said animal, means to secure said additional members in an adjusted position on said horns, and a bolt extendible through said additional members and through said turn-buckle, and means to control the relative position of said additional members and said turn-buckle.

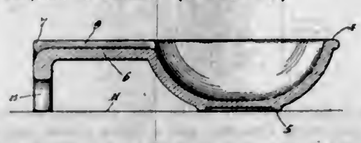
1,681,566. MANUFACTURE OF CABLES. GUSTAVUS A. ANDEREGG, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1924. Serial No. 734,201. 14 Claims. (Cl. 18—59.)



1. A continuous method of insulating a composite conductor which comprises impregnating and coating the conductor with a compound which is relatively fluid at ordinary temperatures, and pressing a uniform layer of plastic insulating material on to said relatively fluid coating.

1,681,567. ACCUMULATOR-CONTROL MEANS OF ADDING MACHINES. GLENN J. BARRETT, Evanston, Ill., assignor to Portable Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1923. Serial No. 637,196. 42 Claims. (Cl. 235—60.)

1. The combination in an adding machine having an adding element and an accumulator element movable into and out of cooperating relation with said adding element, of a control means for said accumulator element comprising a lever operatively connected to said accumulator element, an oscillating actuating member having a cam periphery, a tappet roller carried by said actuating member, a pawl pivotally mounted on said lever to be engaged by said tappet roller during the early part of the forward stroke of said actuating member, to move the accumulator element out of cooperative relation with the adding element, a locking dog pivotally mounted on said lever and provided with a roller adapted to coact with the periphery of said actuating member, to hold the accumulator element out of cooperative relation with the adding element during the forward stroke of the actuating member, the periphery of said actuating member being notched to engage said roller on said locking dog during the early part of the return stroke of said actuating member to release the locking dog, and a spring acting to return said lever when said locking dog is released to return the accumulator element to cooperative relation with the adding element to effect adding on the return stroke of the actuating member.

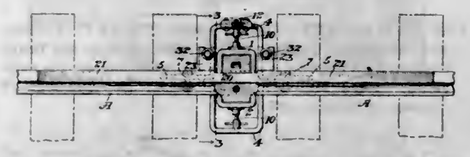


1,681,568. ARRANGEMENT FOR GOVERNING SPEED OF ASYNCHRONOUS MOTORS. OTTO BÖHM, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Sept. 24, 1924, Serial No. 739,456, and in Germany Sept. 25, 1923. 7 Claims. (Cl. 172—274.)

1. The combination with an asynchronous alternating current motor having a wound rotor, of a regulator system comprising, a regulating resistance connected to said rotor, an auxiliary motor supplied from the rotor circuit thereof and adapted to vary said regulating resistance according to changes in the frequency therein, and means responsive to change in voltage of current supply to said motor for simultaneously adjusting said regulating resistance.

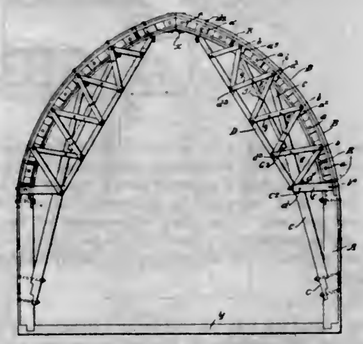
2. A speed regulating system for asynchronous motors comprising means for conducting rotor currents therefrom to an external circuit, adjustable resistances connected in said external circuit, and means for adjusting said resistances comprising means for producing a torque proportional to the frequency in said rotor circuit, means for producing a steady opposing torque, and means also acting upon said resistance for compensating for supply voltage changes.

1,681,569. BOWL WITH WRIST SUPPORT. JOSEPH BRUECK, New York, N. Y. Filed Oct. 14, 1927. Serial No. 226,095. 5 Claims. (Cl. 132—78.)



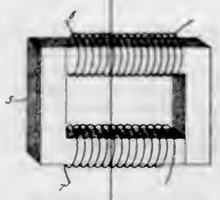
1. A bowl with a wrist support, comprising a bowl provided with a base portion for partially supporting the same, said bowl being further provided with a portion extending radially outward from it and fashioned into a supporting rail, said supporting rail being provided with downwardly extending portions whereby it is supported, said downwardly extending portions being spaced apart.

1,681,570. WATERPROOF CEMENTITIOUS COMPOSITION. JOHN D. CARTER, Lansdowne, Pa. Filed May 9, 1923. Serial No. 637,883. 3 Claims. (Cl. 87—17.)



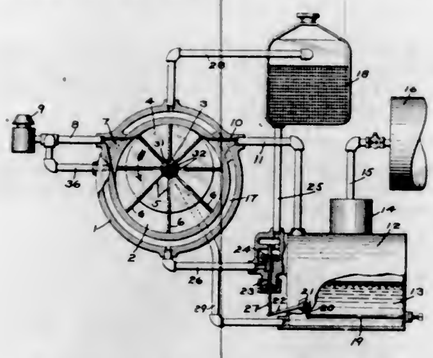
1. A waterproof cementitious composition of matter produced by mixing calcium carbonate with substantially an equal amount by weight of a sodium silicate solution of from 30° to 40° Bé. and in which the ratio of the sodium oxid to the silica is substantially as 1 : 2.

1,681,571. APPARATUS FOR WELDING RAILS UNDER TRAFFIC. JOHN H. DEPPELER, Weehawken, N. J., assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Feb. 16, 1926. Serial No. 88,644. 18 Claims. (Cl. 22—116.)



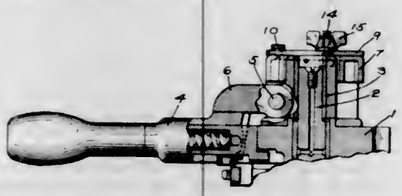
1. Means for forming welded joints between rail ends, comprising a mold receiving box to embrace the rail ends and means adapted to be secured to the rails to support the box and hold the rail ends in alignment.

1,681,572. TRUSS STRUCTURE. CLEMENT L. EWING, Jeromeville, Ohio. Filed Mar. 14, 1928. Serial No. 261,645. 3 Claims. (Cl. 20—1.)



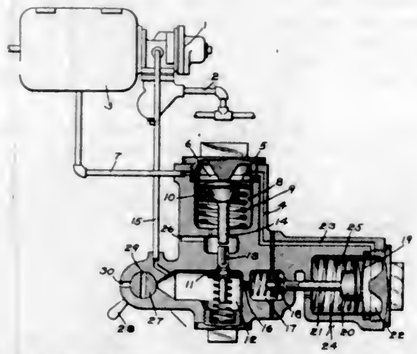
3. A barn frame truss structure having in combination, a pair of opposite arched posts of gothic curvature united together, said posts embodying a unitary structure continuous from the base to the apex of the arch, a sloping post solidly attached at its lower end to said arched post near its lower end, and at its upper end to said arched post at or near the middle of the curved portion thereof, a horizontal beam attached to said sloping post at or near the middle thereof and to said arched post at a point opposite thereto, a tie-beam seated in said sloping post at a point opposite the inner terminus of said horizontal beam, and attached to said arched post near the upper end theref, and a series of struts extending from the tie-beam to the curved portion of said arched post, said struts arranged in pairs in V-shaped bridge formation, and secured together and to said post and tie-beam respectively, and to said sloping post where they intersect the same, substantially as set forth.

1,681,573. TRANSFORMER. GUSTAF W. ELMEN, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 30, 1924. Serial No. 716,845. 5 Claims. (Cl. 175—356.)



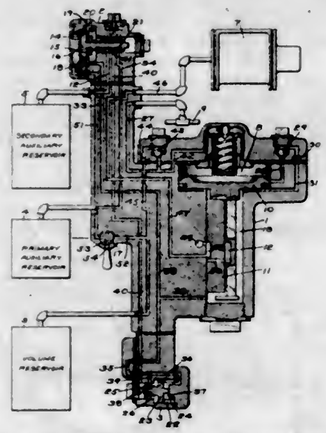
1. A distributing transformer having a primary winding, a secondary winding, and a core comprising an alloy of nickel and iron, said core having a hysteresis loss at a flux density of 5,000 lines per square centimeter not greater than 100 ergs per cubic centimeter per cycle.

1,681,574. ROTARY COMPRESSOR. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1923. Serial No. 622,099. 5 Claims. (Cl. 230—205.)



1. The combination with a rotary fluid compressor, of a reservoir into which flows fluid compressed by the compressor and containing a quantity of oil, means for supplying oil from said reservoir to lubricate the compressor, mechanism for regulating the temperature of the compressor, and a thermostat subject to the temperature of the oil in the reservoir for controlling the operation of said mechanism.

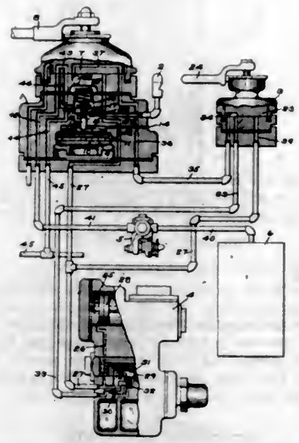
1,681,575. BRAKE-VALVE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 7, 1926. Serial No. 120,958. 3 Claims. (Cl. 303—56.)



3. A brake valve device comprising a body section, a valve operating key, a socket member removably mounted on said key, a handle for operating said member, a handle guard for preventing removal of said socket member and handle except in handle off position, a cover plate pivotally secured to said handle guard and having a position in which said plate extends over said socket member, and means for clamping said plate in said position.

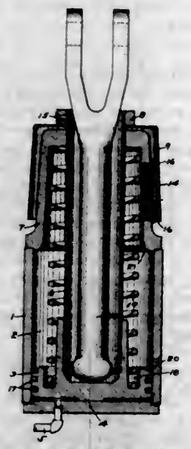
1,681,576. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1926. Serial No. 140,084. 5 Claims. (Cl. 303—7S.)

1. In a fluid pressure brake, the combination with a triple valve device, a brake pipe, and an auxiliary reservoir, of means for controlling the brake cylinder triple valve exhaust port and operated by auxiliary reservoir pressure to connect said exhaust port to an unrestricted atmospheric port when a high brake pipe pressure is carried and to maintain said connection until the auxiliary reservoir pressure is reduced substantially to the degree at which the brake pipe pressure equalizes with the auxiliary reservoir pressure.



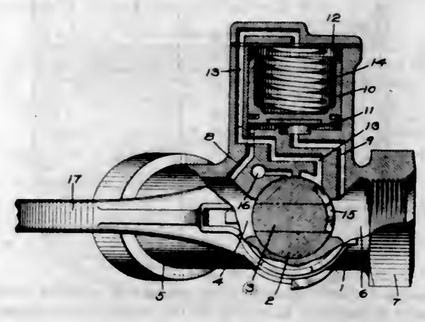
1,681,577. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1926. Serial No. 142,621. 3 Claims. (Cl. 303—46.)

3. In a fluid pressure brake, the combination with a brake pipe, brake cylinder, and a valve device subject to the opposing pressures of the brake pipe and a chamber for controlling the supply of fluid to the brake cylinder, of two auxiliary reservoirs having different volumes, a valve device



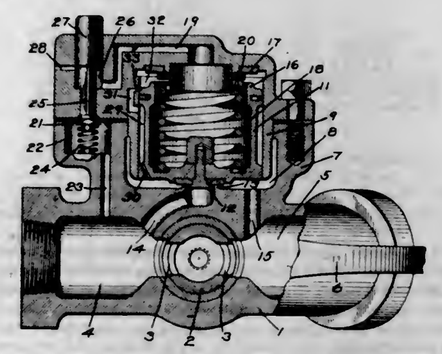
having one position for connecting one reservoir to said chamber and another position for connecting the other reservoir to said chamber, and manually controlled means for controlling the operation of said valve device.

1,681,578. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1927. Serial No. 163,944. 5 Claims. (Cl. 303—68.)



4. In a fluid pressure brake, the combination with a locomotive brake equipment including a distributing valve device having an application cylinder and a brake valve device, of a flexible diaphragm incorporated in said brake valve device and subject to the pressure of fluid in said cylinder, and a valve operated by said diaphragm upon an increase in pressure in said cylinder for warning the engineer of such increase in pressure.

1,681,579. BRAKE CYLINDER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1927. Serial No. 178,307. 4 Claims. (Cl. 303—88.)

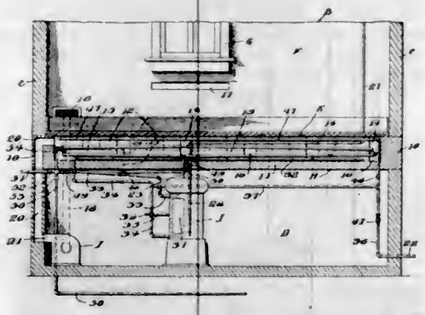


4. The combination with a fluid pressure cylinder having a non-pressure head provided with an annular arcuate face, of a piston in said cylinder provided with grooves for piston rings and having a chamfered inner face adapted to engage said arcuate face, the line of contact being such that the force of impact is transmitted through the solid metal of the piston at the rear of the grooves.

1,681,580. ANGLE-COCK DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1927. Serial No. 185,187. 6 Claims. (Cl. 303—86.)

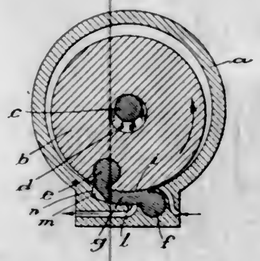
1. The combination with an angle cock having a brake pipe controlling valve, of valve means for controlling a bypass passage around said valve, said valve means having one side subject to brake pipe pressure and having the other side connected to the atmosphere in a closed position of the valve.

1,681,581. ANGLE-COCK DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1927. Serial No. 223,531. 8 Claims. (Cl. 303—86.)



3. An angle cock device having a cock key and provided with a passageway around the key for establishing communication from one side of the key to the other, a valve for controlling said passageway, a piston operated by fluid under pressure for operating said valve to close communication through said passageway, and manually operated means operable to supply fluid under pressure to said piston.

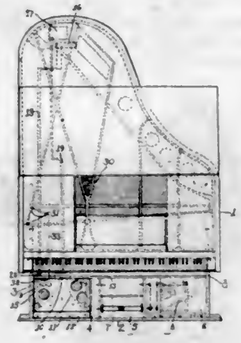
1,681,582. HEATING, COOLING, AND HUMIDIFYING SYSTEM FOR BUILDINGS. CARL A. FJELSTAD, Minneapolis, Minn. Filed Oct. 5, 1923. Serial No. 666,767. 9 Claims. (Cl. 257—8.)



1. In combination with a building, a heating and cooling system therefor, including a basin-like substructure beneath

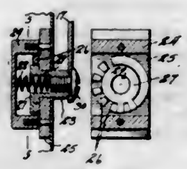
and covered by the floor to form an enclosed chamber, spaced bases in said substructure upon which the floor is supported, said bases dividing the chamber into a series of communicating passages, means for heating or cooling said

passages beneath the floor, and means for spraying water in said passages to humidify the air therein, the passages formed by said bases providing for the drainage of water in said chamber.



1,681,583. ROTARY MOTOR OR COMPRESSOR. GEORG GÜTTNER, Berlin, Germany. Filed Mar. 11, 1927, Serial No. 174,663, and in Germany Mar. 29, 1926. 4 Claims. (Cl. 230—147.)

1. A rotary motor or compressor, comprising a cylinder, an eccentric piston therein, a separating member of sector shape for dividing the free space of the cylinder into a suction compartment and a compression compartment at each revolution of the piston and allowing the compressed fluid to be discharged and cylindrical heads forming the two ends of said member for pivotal connection with the cylinder and the piston, the wall of said cylinder near the two cylindrical heads being adapted to receive the separating member and having an inlet and an outlet for the fluid.

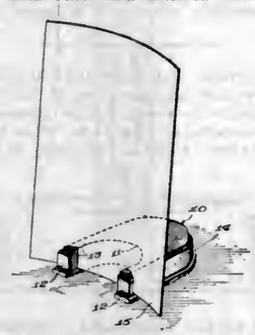


1,681,584. WIRELESS RECEIVING INSTALLATION FOR GRAND PIANOS. JUSTUS HATTEMER, Cliffside, N. J., and LOUIS C. KAULING, Brooklyn, N. Y., assignors to Premier Grand Piano Corporation, New York, N. Y., a Corporation of New York. Filed May 27, 1924. Serial No. 716,193. 2 Claims. (Cl. 250—14.)

1. In a cabinet for a radio receiving installation, in combination, a stationary case, a shallow receptacle supported by said case, said receptacle arranged for movement in a horizontal plane away from said stationary case to an exposed position at the front of the case, said receptacle having rear and opposite side portions, an amplifying horn in said receptacle and movable therewith, said horn arranged to extend horizontally from said rear portion and between said side portions with its bell at the front of said recepta-

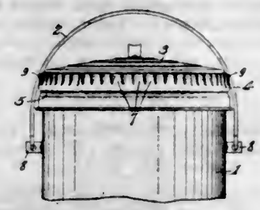
cle, radio receiving apparatus disposed about said amplifying horn, a stationary source of electric energy in said case, and devices connecting said stationary source of electric energy with the radio receiving apparatus in said movable receptacle in both closed and open positions of said receptacle.

1,681,585. ADJUSTABLE SHADE AND AWNING FOR AUTOMOBILE AND OTHER WINDOWS. JOSEPH G. HEDRICK, Hailey, Idaho, and CARL H. NEUSTIS, Baker, Oreg. Filed Jan. 18, 1927. Serial No. 161,879. 2 Claims. (Cl. 156—44.)



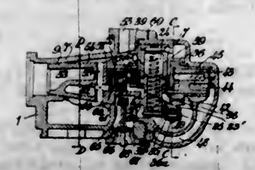
1. In a roller awning construction of the type commonly mounted in the inside of window frames, a mounting comprising a casing having a central opening and a series of teeth disposed radially around the central opening, a tubular pintle entering the central opening and having a shoulder at its outer end, said pintle having radial teeth extending over the margin of the opening and engageable with the teeth on the front of said casing, a headed screw having its shank engaging in the central opening of the pintle, the head of the screw being adapted to engage over a member mounted on the pintle and a spring disposed within the casing bearing against said screw and urging the pintle outward but permitting the inward movement of the pintle to disengage the teeth of the pintle from the teeth of the casing.

1,681,586. DISPLAY-CARD HOLDER. FREDERICK M. KESSLER, Joplin, Mo., assignor of one-half to Joseph C. Beck, Joplin, Mo. Filed Dec. 23, 1926. Serial No. 156,675. 1 Claim. (Cl. 40—146.)



A card holder comprising a rigid base member having a pair of spaced portions at one side thereof, said spaced

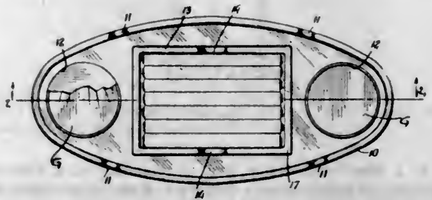
portions having slots therein adapted to receive the normal edge portion of a card, said slots being arranged at an angle to each other and inclined from the vertical



whereby a card held in said slots will be curved transversely thereof and inclined from the vertical and will be supported at a point remote from the center of the base.

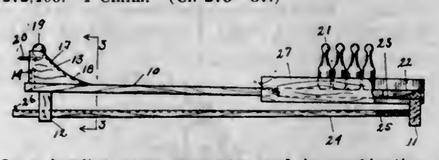
1,681,587. COVER FOR GARBAGE CANS. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed June 5, 1926. Serial No. 113,839. 2 Claims. (Cl. 220—56.)

1. In combination with a container body and a ball attached to the body, a removable cover for the body having a top and a flange depending therefrom, said flange being formed throughout substantially its circumference with a series of integral undulations the concave portions of which latter are upwardly and inwardly inclined to conform to the disposition of the adjacent portions of the bail, said undulations having gradually curved convex portions and said bail being resilient, thereby to enable the latter to ride over the convex portions and into and out of the concave portions of the undulations upon mere swinging of the bail, thus to effect maintenance of the cover on the body when the bail occupies its upward position and to effect release of the cover when the bail occupies its lowered position.



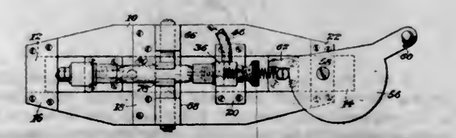
1,681,588. MEANS FOR FILLING TWO CONTAINERS ALTERNATELY. JOSEPH LAWSON, Great St. Helens, London, England, assignor to Asiatic Petroleum Company, Limited, St. Helens Court, London, England. Filed Jan. 3, 1928, Serial No. 244,342, and in Great Britain Sept. 29, 1926. 30 Claims. (Cl. 137—139.)

1. In combination, a plug cock adapted to control the supply and discharge of liquid from supply means to and from a pair of containers, two cylinders, means adapted to place the cylinders alternately in communication with said liquid supply means, pistons in said cylinders, a rocking member, means connecting said rocking member to said pistons, said rocking member being adapted upon actuation of said pistons to initially and partially actuate said plug cock, and means adapted to complete the actuation of said plug cock and to actuate the means adapted to place the cylinders alternately in communication with said liquid supply means.



17. The combination with a plug cock adapted to control the supply of a fluid, of means for neutralizing the side thrust exerted by the fluid pressure on said plug cock comprising a recess located in the side of the plug.

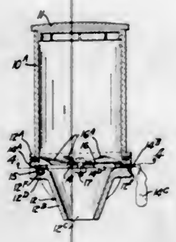
1,681,589. SERVING TRAY. LOUIS LEVIEN, New York, N. Y. Filed Aug. 18, 1927. Serial No. 213,964. 2 Claims. (Cl. 65—53.)



1. A serving tray having a central rectangular receptacle molded integrally therein and continuous with the top surface thereof, said receptacle extending upwardly from the surface of the said tray and having slots therein so that cigarettes could be readily removable therefrom and a series of circular retaining portions integral with the body of said tray on each side of said receptacle adapted to hold a glass or the like, and a series of slots on the rim of said tray adapted to hold cigarettes therein.

1,681,590. BOWLING GAME BOARD. JOSEPH MARCZINKO, Passaic, N. J. Filed Apr. 24, 1928. Serial No. 272,405. 1 Claim. (Cl. 273—37.)

In a bowling game apparatus and in combination, a panel, a horizontally swingable member pivoted on the panel and having a forward inclined groove and a ball seat at the upper end of said groove, and a trigger pivoted to the said swingable member to swing vertically and having a forward arm arranged to lift and displace a ball from said seat and also having a rear handle portion extending rearwardly from said member and adapted to be used in swinging the member.

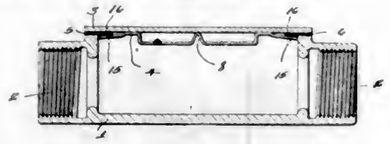


1,681,591. GLASS-WORKING MACHINE. GEORGE A. MILLAR, Ridgefield Park, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 1, 1927. Serial No. 171,745. 12 Claims. (Cl. 49—7.)

3. In combination, in a glass working machine, means for holding a tubular blank comprising a set of side clamps and a set of end clamps, means tending to close said side

clamps, one of said end clamps being movable away from the other end clamp, and means mounted to said movable end clamp and movable therewith effective when said movable end clamp is moved away from the other end clamp to operate said side clamps to open them against the tendency of said closing means.

1,681,592. DISPENSING DEVICE. ARTHUR PERSONS MILLER and DANIEL SIAKEL, Chicago, Ill. Filed Sept. 27, 1926. Serial No. 137,943. 1 Claim. (Cl. 221—109.)



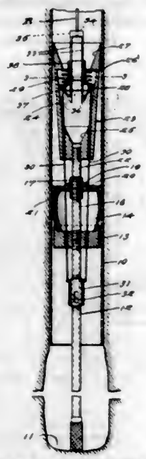
In a dispensing device, and in combination, a material storage container, means for causing and controlling the gravity discharge of the material from said container, comprising a pair of adjacently mounted coacting plates at the lower end of said container, and means for imparting movement to said plates, the upper of said plates having a plurality of blades forming integral portions thereof and being bent upwardly and angularly to the upper surface of said upper plate to provide openings beneath said blades, the lower of said plates having a plurality of openings therein, the upper of said plates being adjustable relatively to said lower plate to vary the relative alignment of the openings in said plates.

1,681,593. SHEET PILING. KARL PAHL, Heidelberg, Germany. Filed Dec. 31, 1925. Serial No. 78,610, and in Germany Mar. 3, 1925. 2 Claims. (Cl. 61—60.)

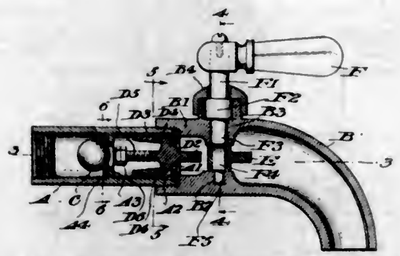
1. A pile wall of sheet piling comprising U-shaped piles having claws at each edge and cooperating with claws of the adjacent pile members, box-shaped pile members at distances apart in the said wall, comprising two U-shaped piles with their open side faced against each other and having the contact surface substantially in the neutral plane of the piling and locking bars having claws on one side embracing two claw members at one side of the said box comprising two piles faced against each other and one claw at the other side of a shape cooperating with one claw at one edge of the said U-shaped piles.

1,681,594. COVER FOR CONDUIT-OUTLET BOXES. JOHN T. PEARSON and RAYMOND H. OLLEY, Syracuse, N. Y., assignors to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 15, 1925. Serial No. 23,333. 1 Claim. (Cl. 247—15.)

A cover for conduit outlet boxes, comprising a body, a plate secured to the inner side of the body, and spaced-apart from the edge of the body leaving a marginal bearing face on the body, the intermediate part of the plate being offset from the inner face of the body, and formed with a transverse corrugation, the plate being formed with a slot therein opening through one edge thereof, the corrugation being alined with the slot, and one end of the corrugation forming the inner end wall of the slot, and fastening means for attaching a cover to a conduit outlet box, comprising a wedge member extending into the slot, the wedge member and the end of the corrugation being formed with coacting surfaces acting to thrust the wedge member laterally upon clamping movement of the wedge member toward the inner face of the cover, and means for clamping the wedge member.



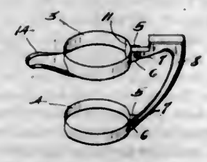
1,681,595. DISPLAY-CARD HOLDER. ALVIS M. RAY, Tacoma, Wash. Filed Dec. 29, 1927. Serial No. 243,307. 3 Claims. (Cl. 40—129.)



1. A display card holder consisting of an integral piece of metal bent to form two parallel oppositely disposed card clamping portions, a loop intermediate the extremities of said card clamping portions at right angles thereto and a shank connecting said loop and card clamping portions, clamping members on opposite sides of said shank and clamping said card clamping portions, and a clamp on said shank for tightening said loop.

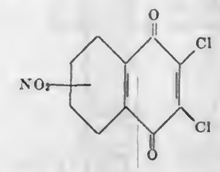
1,681,596. PUMPING APPARATUS. VERN EARNEST REICHARD, Stinnett, Tex. Filed Aug. 16, 1927. Serial No. 213,358. 6 Claims. (Cl. 103—221.)

1. In well pumping apparatus for pumping wells the casings of which are spaced above the lower ends of the bores thereof, a tubing adapted to extend from the lower end of the well to a point slightly above the lower end of the casing and having adjacent its upper end means whereby it is sealed to the casing, a valved port in the tubing below said sealing means, the valve of which is normally closed, and means for supporting the tubing section while inserting the same into or removing the same from the well, said supporting means having engagement with the valve maintaining the valve of said port in open position.



1,681,597. FAUCET. HUGH W. SANFORD, Knoxville, Tenn. Filed Feb. 9, 1926. Serial No. 87,078. 2 Claims. (Cl. 277—27.)

1. In a structure of the kind described, the combination of two valve seats directed toward the source of liquid flow, a cam forward of the forward valve seat, means for turning the cam, a valve member at the rear of the rear valve seat and adapted to seat thereon by forward pressure of liquid, a forward valve member adapted to seat on the forward valve seat by forward pressure of the liquid and extending through said seat into the path of said cam and said valve member having guiding arms and having a stem extending rearward and adapted to engage and dislodge the rear valve member when the forward valve member is pressed rearward by said cam, substantially as described.

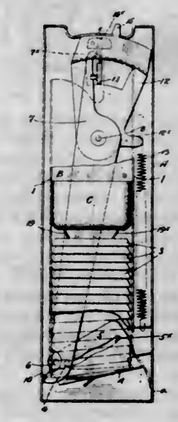


1,681,598. TEAPOT CONSTRUCTION (POTTERY BODY). ALBERT F. SAUNDERS, Syracuse, N. Y., assignor to T. N. Benedict Mfg. Co., East Syracuse, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 83,991. 4 Claims. (Cl. 53—3.)

1. A construction for ten pots and similar articles comprising a body of pottery or the like, a metal frame including spaced apart metal bands enclosing the top and bottom rim portions of the body, a handle having its ends secured to the bands and a cover carried by the upper band.

1,681,599. NITRO-2.3-DICHLOR-1.4-NAPHTHOQUINONE AND PROCESS OF PREPARING THE SAME. JOSEF STOCK, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1927, Serial No. 236,874, and in Germany Mar. 27, 1925. 7 Claims. (Cl. 260—56.)

7. As a new product, the compound of the following formula:

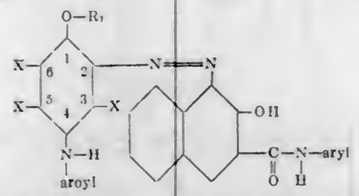


which when recrystallized from glacial acetic acid or alcohol forms crystals melting at 175° C.

1,681,600. PROCESS OF PREPARING ALKALI-METAL ALCOHOLATES OF COMPOUNDS CONTAINING ALCOHOLIC HYDROXYL GROUPS. CHRISTIAAN VAN LOON, Dordrecht, Netherlands. Filed July 20, 1927, Serial No. 207,312, and in the Netherlands July 21, 1925. 8 Claims. (Cl. 260—156.5.)

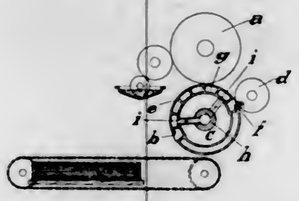
1. A process of preparing alkali metal alcoholates of non-sugar-containing compounds containing two or more alcoholic hydroxyl groups, comprising dehydrating a solution of the hydroxyl containing compound in an aqueous solution of an alkali metal hydroxide by heating to a maximum temperature between 50° C. and 350° C., but lower than the temperature at which deterioration begins and sufficiently high to obtain the expulsion of the last portions of water.

1,681,601. VENDING MACHINE. WILLIAM J. TINTERA, Yonkers, N. Y. Filed Oct. 6, 1924. Serial No. 741,825. 1 Claim. (Cl. 312—63.)



A coin-control vending machine comprising a casing having a vertical wall and a discharge outlet at its lower end, a plate pivoted to the vertical wall and having at its lower end a finger for ejecting lowermost articles from the stack,

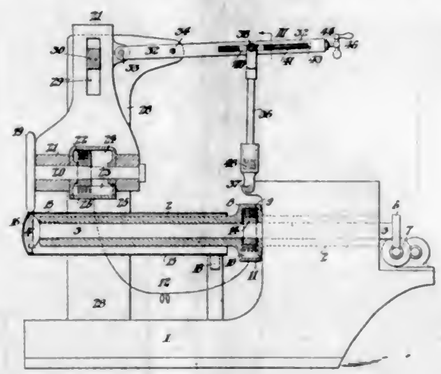
a table pivoted to the casing wall and normally shutting off the stack of articles from said opening, the table having a member extending adjacent and parallel with the casing wall and formed with a cam, and a cam operating member carried by the said plate and engaging said cam whereby the table is pivotally lowered during an ejecting movement.



1,681,602. AZO DYESTUFFS AND PROCESS OF MAKING SAME. HERMANN WAGNER, Soden, and OTTO SOHST, Hochst-on-the-Main, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1925, Serial No. 15,121, and in Germany Mar. 29, 1924. 8 Claims. (Cl. 260—95.)

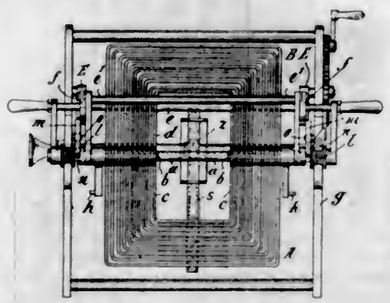
4. As new products, azo dyestuffs of the following formula:

wherein X represents hydrogen or a substituent, R_1 an alkyl group, aryl group or aralkyl group, benig claret-red powders, insoluble in water, soluble in concentrated sulfuric acid with an intense blue-violet color, the coloring matters, when produced on the fibre, giving claret-red tints of good fastness to light and to kier-boiling.



1,681,603. INTAGLIO PRINTING MACHINE. OTTMAR WILHELM, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed July 8, 1926, Serial No. 121,107, and in Germany July 23, 1925. 5 Claims. (Cl. 101—153.)

1. In intaglio printing machines, the combination with the delivery cylinder and means for transferring the printed sheet to said delivery cylinder; of a cooling means for continuously supplying to said delivery cylinder a cooling medium at a temperature substantially lower than the water of the main water line to quickly cool and thereby contract the ink on the printed sheet.

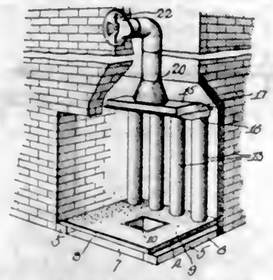


1,681,604. ELECTRIC WELDING MECHANISM. JOSEPH WILLIAM WINTER, Penfield, Pa., assignor to John Wood Manufacturing Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed June 6, 1924. Serial No. 718,208. 6 Claims. (Cl. 219—4.)

1. In electric welding apparatus, the combination with a stationary frame; of a rotary electrode shaft journaled upon a substantially horizontal axis in said frame; a rotary electrode carried by said shaft, at the end of said shaft remote from said frame; a pair of idle bearing rollers, in transversely spaced relation, below said shaft, adjoining said frame and remote from said electrode; whereby tubular bodies to be welded, of different diameters, may be exteriorly supported at one end by said idle rollers and interiorly supported at the other end by said electrode and in cooperative contact but eccentric relation with the latter; a second rotary electrode, mounted upon a shaft with its axis in substantially parallel relation with the axis of

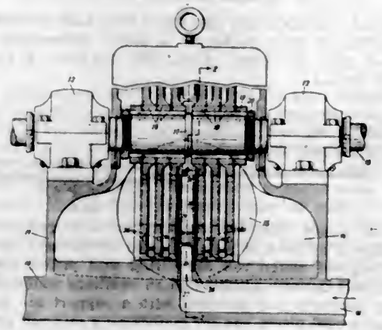
said first electrode; means carrying said second electrode and its shaft, adjustable toward and away from said first electrode; whereby the article to be welded may be gripped between and turned by frictional engagement with said electrodes.

1,681,605. TESTING THE QUALITY OF COTTON FIBERS AND THE LIKE. GOTTLOB ZWEIGLE, Reutlingen, Germany. Filed Jan. 7, 1928, Serial No. 245,203, and in Germany Jan. 17, 1927. 8 Claims. (Cl. 73—51.)



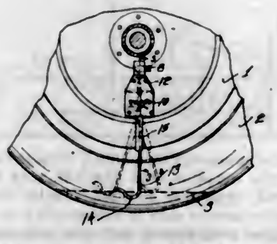
1. A device for testing the quality of cotton fibers and similar fibrous material comprising a frame, two groups of nested needle combs extending horizontally and loosely pivoted each on one of the two superimposed horizontal axes and having their needles extending vertically in staggered relation to and opposite each other, the combs of the upper group being adapted to be rocked from normal position into an inverse position.

1,681,606. FIREPLACE. JULIUS M. BLANCHARD, Oak Park, Ill., assignor of one-half to John W. Mabbs, Chicago, Ill. Filed Oct. 27, 1922, Serial No. 597,273. Renewed Apr. 13, 1928. 2 Claims. (Cl. 126—121.)



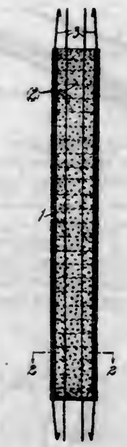
1. The combination with a fire-place having a built-in floor and an open front, of a heater therein comprising means forming a cold air inlet adjacent the said floor of the fire-place, a drum in the upper portion of the fire-place formed of upper and lower substantially horizontal reversible sections removably secured together, substantially straight pipes between and removably connected to the inlet

and the lower section of the drum, means forming a hot air outlet, and a connection between said outlet and the upper section of the drum, said connection being offset relative-



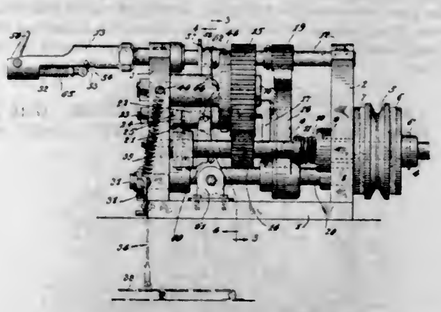
ly to the longitudinal center of the drum so that the position of the outlet may be changed by reversing the upper section relatively to the lower section.

1,681,607. REACTION TURBINE. WILLIAM SPENCER BOWEN, Westfield, N. J. Filed Sept. 2, 1927. Serial No. 217,146. 9 Claims. (Cl. 253—89.)



1. In a reaction turbine, embodying a plurality of stages: a shaft, a rotor member comprising a plurality of disks secured to the shaft having radially directed ports over one face and circumferential channels on the opposite face, the outer ends of the individual ports discharging into the said channels, and an annular cover plate secured to the first-named face of a disk.

1,681,608. DEFLATING INDICATOR. JOHN H. CLARK, Seattle, Wash. Filed July 5, 1927. Serial No. 203,476. 2 Claims. (Cl. 200—58.)

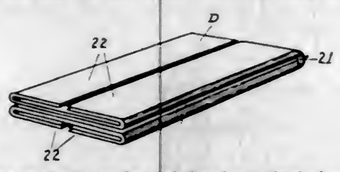


1. The combination with a housing and a circuit closer therein comprising a movable member, of a tappet pivotally supported in the housing, a tappet head on said tappet, and a complementary head on the movable member of the circuit closer, whereby when the tappet member strikes the ground the circuit is closed for the purpose described.

1,681,609. PILE AND PROCESS OF MAKING SAME. JOHN E. CONZELMAN, South Pasadena, Calif. Filed Jan. 15, 1926. Serial No. 81,472. 5 Claims. (Cl. 61—56.)

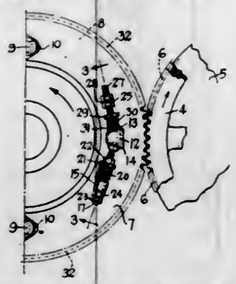
1. A reinforced concrete pile wherein the water line part thereof comprises an exterior shell of denser concrete than the body, said shell having longitudinal reinforcement whose ends are embedded in the concrete of the body.

1,681,610. MACHINE FOR TYING WIRE TIES. HENRY B. FOULDER, Glenbrook, Conn., assignor to J. P. Curry Mfg. Co., Inc., Stamford, Conn., a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,124. 9 Claims. (Cl. 140—119.)



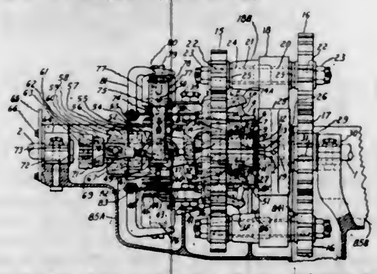
1. In an apparatus of the character described, in combination, a twisting head including a pivoted tie engaging member, a pin slidable on said head and engaging said member for placing said member in and out of tie retaining position, a rod slidably mounted in said head and a pivoted link connecting said rod and said slidable pin, and means for adjusting said rod forwardly and rearwardly in said head to pivot said tie engaging member into tie retaining and tie releasing positions.

1,681,611. FOLDED SHEETS OF MATERIAL. EMIL J. HANSEN, Green Bay, Wis., assignor to Fort Howard Paper Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1924. Serial No. 737,281. 2 Claims. (Cl. 206—57.)



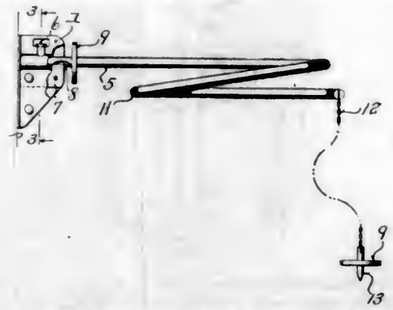
2. An element for use in a dispensing package, wherein the folded sheets are superimposed one upon the other, compris-

ing the following structure, namely, a body folded to form a plurality of tabs at the same side of the sheet and overlapping the body of said sheet, said tabs being in contact



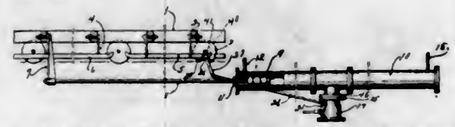
with the same side surface of the sheet, the body and tabs being further folded on a transverse line whereby the body will have two sets of exposed tabs on opposite sides thereof.

1,681,612. COMPENSATING-GEAR MECHANISM. CHARLES W. HARROLD, Cleveland, Ohio, assignor, by mesne assignments, to Harris-Seybold-Potter Company, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,547. 15 Claims. (Cl. 74—29.)



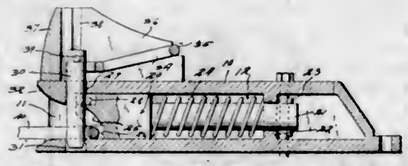
1. In a compensating gear mechanism, a rotary driven member, a drive gear carried thereby, means comprising a spring of heavy compression between said member and gear to rotate the member in one direction, a spring connection of relatively less compression between said member and gear to bring the former into normal rotary relation with the gear whenever said member is rotated out of said relation in an opposite direction, and means for adjusting the compression of either of said springs independently of the other.

1,681,613. POWER-CONTROL DEVICE. GAIL H. HINES, Lansing, Mich. Filed Feb. 2, 1927. Serial No. 165,407. 19 Claims. (Cl. 74—34.)



1. In a device of the class described, a driving shaft to be connected to the power source, a gear thereon, a driven shaft, a gear thereon, a gear assembly positively connecting the gears on the driving and driven shafts, said gear assembly including a countershaft and pinions revoluble about the axis of the driving shaft, a drum associated with the countershaft and pinions concentrically of the driving shaft and revolving therewith, in combination with centrifugally operating clutch members acting upon the driving shaft and in sliding contact therewith to control the speed of revolution of the countershaft and pinions whereby to vary gradually and automatically the ratio of speed transmission.

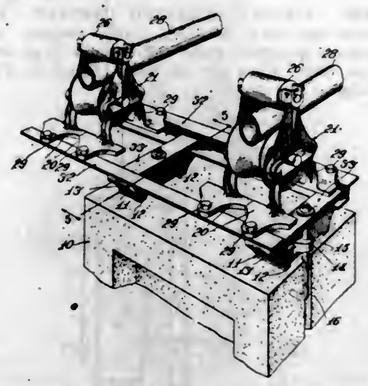
1,681,614. TOWEL CABINET. GEORGE M. HUBINGER, Milwaukee, Wis., assignor to Star Detachable Towel Holder Co., Milwaukee, Wis. Filed June 9, 1926. Serial No. 114,687. 3 Claims. (Cl. 211—6.)



1. A towel dispensing device, comprising a bracket adapted for attachment to a support, a rod carried thereby and coiled upon itself to provide an extensive towel retaining portion, said coiled and storing portion causing the towels to interengage in the interior of the coiled portion and impede the progress of the towels from the looped portion.

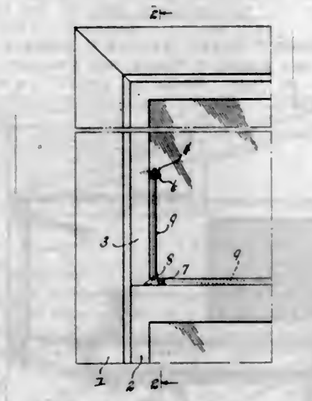
1,681,615. AUXILIARY BEARING FOR SAW-CARRIAGE PISTON RODS. BOLESLAW A. JANIK, Milwaukee, Wis. Filed Mar. 28, 1927. Serial No. 179,010. 4 Claims. (Cl. 308—4.)

1. In a saw mill, the combination of a reciprocatory carriage, a cylinder, a piston located within said cylinder, an elongated piston rod connecting said piston and carriage, an auxiliary cylinder and an auxiliary piston cooperating therewith and provided with a support for directly engaging said piston rod for maintaining said rod straight and fluid pressure means controlled by said carriage for controlling the operation of said auxiliary piston to move said support into one position in engagement with said piston rod and into another position out of the way of said first mentioned piston.



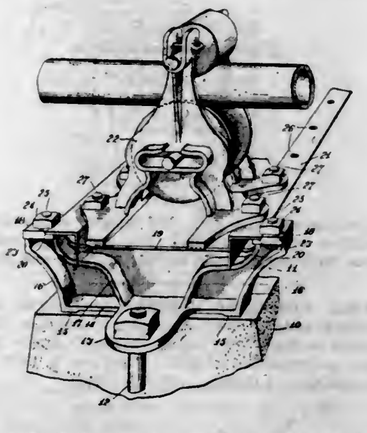
1,681,616. COUPLER FOR MINE CARS. ALBERT D. KOONTZ and AIDRIAN R. KOONTZ, Charleston, W. Va.; Clara B. Koontz, executrix of said Aidrian R. Koontz, deceased, assignors of one-third to Charles Lucas. Filed June 30, 1927. Serial No. 202,634. 1 Claim. (Cl. 213—202.)

A coupler for mine cars including a coupler head open at one end for the reception of a link, the head being vertically apertured, oppositely disposed angular bumper arms pivoted at their forward ends in said opening in the coupler head, the bumper arms having their rear ends urged toward each other by springs and said bumper arms acting to center a link disposed within the coupler head, a coupling pin insertible through said aperture, a buffer slidably mounted within the coupling head, a spring resisting rearward movement of the buffer, the buffer having a downwardly inclined end face recessed to receive the link, the inclined face being



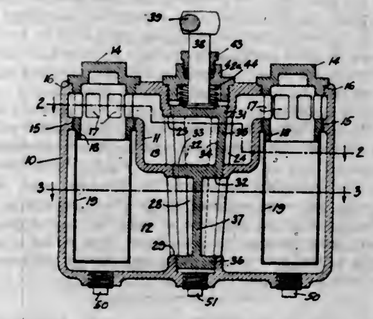
intersected by a slot for the coupling pin and the slot being formed to provide a ledge to support the coupling pin in a raised position, a coupling pin extending down through the head and adapted to engage the link inserted in the head, and manually operable means at one side of the coupling head whereby the pin may be raised.

1,681,617. SWITCH AND SIGNAL ROD OR PIPE-CARRIER SUPPORT. BENJAMIN F. LOLLIS, Berwyn, Ill., assignor of one-half to Otto S. Flath, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,342. 1 Claim. (Cl. 248—30.)



In combination with a foundation of pier, supporting means comprising a pair of long bars Z-shape in cross section, the lower horizontal sides of both bars being disposed laterally toward each other while the upper horizontal sides of both bars extend outwardly, an apertured spacing and clamping plate arranged intermediate of the Z-shape bars in lapping relation with the lower horizontal sides of both bars and in abutting relation with the vertically disposed intermediate portions of said bars, and a hook bolt passing through the aperture in said plate and engaging with the foundation or pier whereby said pair of bars are secured in place.

1,681,618. WINDOW FASTENER. LUKE EDWARD MURPHY, Milwaukee, Wis. Filed May 21, 1927. Serial No. 193,186. 2 Claims. (Cl. 292—194.)

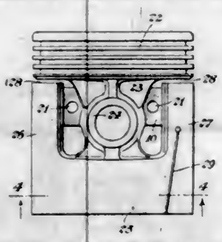


1. In a window latch, the combination of an upper and a lower sash, a rod carried by the lower sash and adapted to project upwardly, and a ring swingingly carried by the upper sash and adapted to be swung over the upper end of the rod, said ring being adapted to freely slide upon the rod and to limit the relative motion of the upper and lower sashes.

1,681,619. CARRIER SUPPORT FOR SWITCH AND SIGNAL RODS. JAMES C. MOCK, Detroit, Mich. Filed Nov. 15, 1924. Serial No. 750,186. 2 Claims. (Cl. 248—30.)

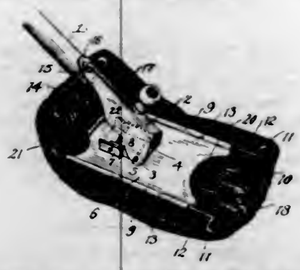
1. In a carrier support, a pedestal comprising an integral structure provided with a base having a side wall integral with one longitudinal side of the base, upwardly extending end walls terminating in horizontal surfaces adapted to extend beyond the vertical plane of and above said side wall, the horizontal top surfaces of the ends and upper edge of said side wall at points adjacent to the ends being each provided with abutting surfaces for the longitudinal edges of carrier supporting rails.

1,681,620. STRAINER. ALBERT W. MORSE and WALTER E. WOLLHEIM, New York, N. Y.; said Wollheim assignor to The Anthony Company, Long Island City, N. Y., a Corporation of New York. Filed July 30, 1927. Serial No. 209,455. 6 Claims. (Cl. 210—168.)



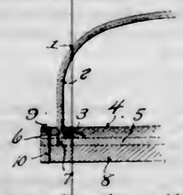
1. A strainer for liquids comprising a structure having an inlet, an outlet and a steam connection, a pair of strainer screens interposed in passages between the said inlet and outlet, and a key having means for shutting off one of the screens from the said inlet and outlet and means for admitting steam from the said steam connection to that screen only which is shut off.

1,681,621. PISTON. ADOLPH L. NELSON, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich. Filed June 22, 1927. Serial No. 200,534. 2 Claims. (Cl. 74—108.)



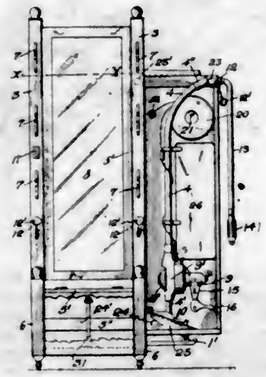
1. A piston having a head, piers depending from the head, piston pin bearings formed in the piers, cylinder-bearing portions on opposite sides of the piston, a pair of chordal struts, each of said struts extending between the

cylinder-bearing portions, the intermediate portion of each strut being surrounded by the material of a pier, there being an integral connection between each of the cylinder-bear-



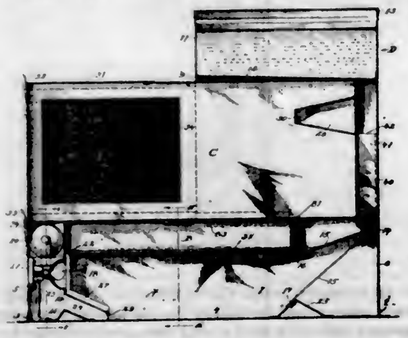
ing portions and each pier, said integral connection being in addition to the struts and being continuous and homogeneous with the cylinder bearing portions and the piers.

1,681,622. COMBINED MOP AND WRINGER. MILO C. NEWTON and JOSEPH A. GREMLING, Delphos, Ohio, assignors to The E. & N. Manufacturing Company, Delphos, Ohio, a Corporation of Ohio. Filed Jan. 5, 1927. Serial No. 159,074. 4 Claims. (Cl. 15—120.)



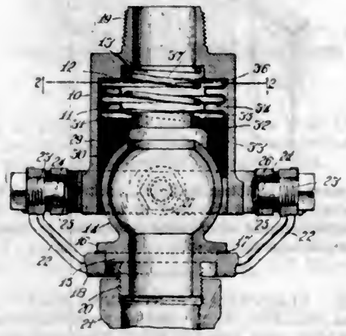
1. A wringer mop comprising a handle, means for supporting the rear end of a mop cloth comprising a wringer member rotatably mounted on the handle rearwardly of the forward end of the handle, means for supporting the front end of the cloth and for pressing the same against the floor in mopping, comprising a substantially flat elongated sheet metal plate having its longitudinal edges bent to form hollow beads, a cloth holding bar formed of wire and having a transverse cloth receiving portion and end portions adapted to fit within the hollow beads of said plate, and a pivotal connection between the forward end of the handle and said plate, the rear edge of the plate being engageable with the handle to limit the downward and rearward movement of the forward end of the plate and rigidly hold the plate during the wringing operation, the forward edge of said plate being cut away between the beads to provide a recess of sufficient depth at the rear of said bar to accommodate the cloth when twisted to cylindrical form so as to permit the cloth to twist to the forward end thereof without binding against said plate.

1,681,623. STITCH-DOWN SHOE AND METHOD OF MAKING THE SAME. SIGMUND JOSEPH PENTLER and OTTO R. SHORT, Wausau, Wis. Filed Oct. 30, 1923. Serial No. 671,700. 3 Claims. (Cl. 36—16.)



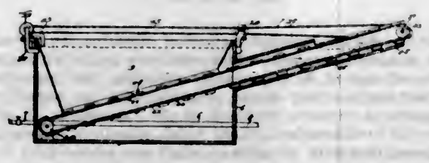
1. In a stitch-down shoe, the combination of an upper and a lining, an inner sole having a beveled lower marginal edge, said lining having its marginal portion positioned against this beveled edge, securing means joining said lining and said inner sole, said securing means extending only through said lining and said inner sole, said upper being turned outwardly at its marginal portions, a doubler positioned in contact with the inner sole throughout the extent of the inner sole, securing means joining the outturned portion of said upper and said doubler, an outer sole positioned below said doubler, a welt strip positioned above said outturned portion, and a line of stitching passing through said welt strip, said outturned portion, said doubler and said outer sole.

1,681,624. AIR-WAY CLEANING CABINET. DANIEL BENSON REPLOGLE, Berkeley, Calif., assignor to The Commerce Guardian Trust and Savings Bank, trustee, Toledo, Ohio. Filed Oct. 29, 1921. Serial No. 511,351. 6 Claims. (Cl. 15—2.)



5. In combination with a suction cleaner having a handle with a passage therethrough and a suction inlet, a suction hose pipe, and supporting means for said suction cleaner and said hose pipe, said supporting means having an upwardly extending part adjacent the handle of the cleaner provided with means for suspending the suction hose pipe on said support and with means for operatively connecting the suction inlet of the handle with said suspended hose pipe.

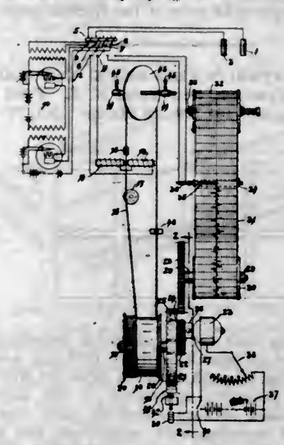
1,681,625. INSECT TRAP. WILLIAM O. ROBERTS, Houston, Tex., and ROBERT J. KEAYS, San Francisco, Calif. Filed May 18, 1926. Serial No. 109,877. 4 Claims. (Cl. 43—113.)



1. A device of the character described comprising a casing having a chamber formed therein into which insects may enter through an entrance opening, means within the chamber to attract insects, a container provided with a trap chamber, means for intermittently and automatically closing the entrance opening, and means for lighting the chamber and for driving the insects into the trap chamber.

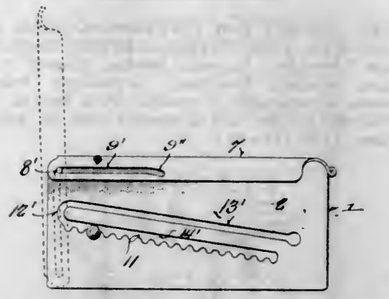
1,681,626. FLEXIBLE PIPE JOINT. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed Jan. 19, 1925, Serial No. 1,407. Divided and this application filed Feb. 27, 1926. Serial No. 91,150. 7 Claims. (Cl. 285—93.)

1. In a flexible pipe connection, a socket member having a substantially cylindrical recess, a ball member projecting within this recess, connecting means for holding the ball centered within but out of contact with the socket member and permitting free angular movement thereof, a gasket freely slidable within the recess and bearing at one end against the ball member, a sealing device comprising an annular follower behind the gasket, an annular plate clamped into the socket member, and a flexible sealing member secured at opposite edges to the follower and the plate.



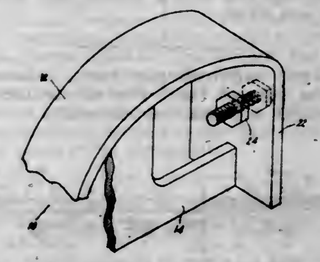
1,681,627. PROCESS AND APPARATUS FOR CLEANING BERRIES. JOSEPH W. SAWYER, Millbridge, Me. Filed Dec. 15, 1922, Serial No. 607,211. Renewed Mar. 19, 1927. 10 Claims. (Cl. 209—178.)

2. The method of separating ripe berries from unripe berries and trash, consisting in subjecting the berries and trash to an aqueous bath at a temperature of about 115° for the purpose of removing the air bubbles from the exterior surface of the berries.



1,681,628. ELECTROCARDIOGRAPH. ERICH SCHWARZKOPF, Long Island City, and GERHARD WODTKE, New York, N. Y. Filed Sept. 16, 1926. Serial No. 135,785. 3 Claims. (Cl. 234—1.5.)

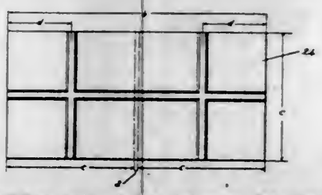
1. In a device for making a record by differently magnetizing a wire by passing it between two magnets, means for reversing the movement of the wire between said magnets, means for amplifying the current produced by



the reverse movement of the wire between said magnets and means for graphically recording the record on the wire in the reverse sense.

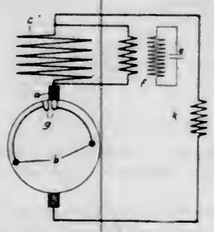
1,681,629. CARD FILE. FRED M. SHOTWELL, Detroit, Mich., assignor to Herman W. Krueger, trustee, Green Bay, Wis. Filed Aug. 6, 1927. Serial No. 211,127. 8 Claims. (Cl. 129—26.)

2. A card, letter, or document file provided with inclined tracks in its sides, and a follower slidably guided in said tracks.



1,681,630. VEHICLE WHEEL BRAKE. GEORGE JOSEPH THOMAS, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1924, Serial No. 747,707. Renewed June 27, 1928. 7 Claims. (Cl. 188—250.)

5. A brake shoe having an outer friction part and a stiffening web jointly forming a T-section shoe, and with the web cut away at one end to form a recess and the

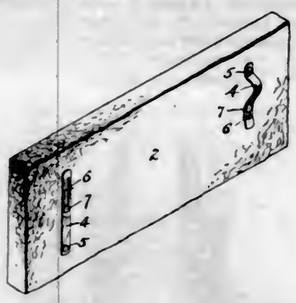


end of said friction part extending inwardly across said recess, in combination with a thrust part threaded through the inwardly-extending part of the friction part.

1,681,631. INTERLOCKING-BRICK CONSTRUCTION. DOMINICK TAMBONE, New York, N. Y. Filed Apr. 10, 1926. Serial No. 101,199. 9 Claims. (Cl. 72—38.)

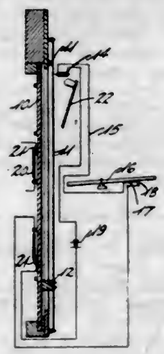
1. A building unit of the character described, having a substantially rectangular outline with top and bottom surfaces, having a length equal to twice its width plus a predetermined quantity equivalent to the thickness of mortar interposed between adjoining units, one of said surfaces being provided with projections and the other with corresponding depressions, permitting interlocking of one unit with another when superimposed thereon so as to totally cover its surface and also permitting interlocking of one end of one unit with one end of another when partly superimposed thereon, a longitudinal sense, the end surface of each unit limiting the interlocking section, remaining at a distance equal to the width of each unit from the end surface of the other.

1,681,632. MEANS FOR SUPPRESSING HIGH HARMONICS IN COMMUTATING ELECTRIC MACHINES. ARLE YTTERBERG, Vasteras, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed June 22, 1922, Serial No. 570,258, and in Sweden June 30, 1921. 4 Claims. (Cl. 171—97.)



1. The combination, with a commutating electric machine operating on an external closed circuit and having an exciting winding connected to said circuit and taking up a fraction of the total voltage of the machine, of a circuit shunting the exciting winding only, and a condenser in said circuit.

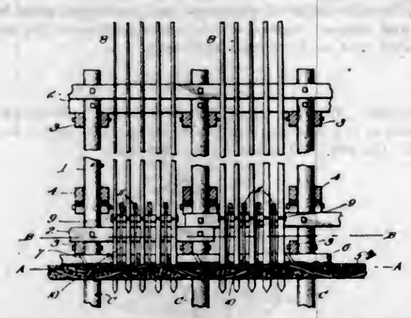
1,681,633. AUTOMOBILE JACK. LAWRENCE E. BEOUGHER, Lynwood, Calif. Filed May 10, 1927. Serial No. 190,283. 8 Claims. (Cl. 254—127.)



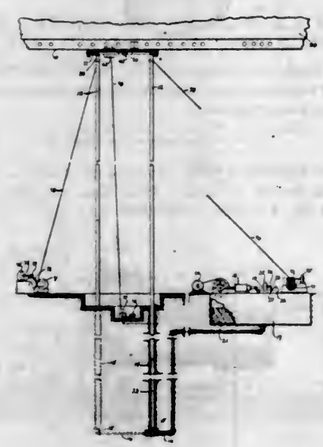
1. An automobile jack comprising a main frame mounted on wheels and adapted to be positioned under the automobile, and means for alternatively raising either end or both ends of said frame and the automobile by moving said wheels toward each other, as desired.

1,681,634. SPOT ANCHOR. GOTTFRIED H. BINDER, Orange, N. J. Filed Oct. 14, 1927. Serial No. 226,065. 3 Claims. (Cl. 72—19.)

2. A piece of building material, a sheet metal strip secured flatwise against the back of said piece, the intermediate portion of said strip being deformable to form a loop for an anchorage for cement.



1,681,635. ELECTRICAL SOSTENUTO PIANO. SIMON COOPER, Brooklyn, N. Y. Refiled for application Serial No. 562,269, filed May 19, 1922. This application filed Jan. 18, 1923. Serial No. 613,534. 18 Claims. (Cl. 84—261.)

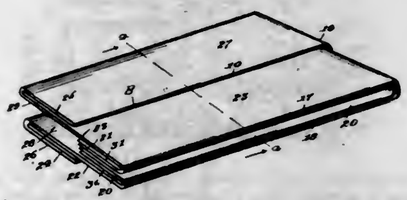


1. The herein described method of vibrating the strings of a musical instrument which comprises producing pulsations of current in magnets for vibrating the respective strings and locating circuit controllers for the respective magnets on vibratile portions of the instrument at empirically predetermined points which vibrate in a definite time relation with the strings which are actuated by the respective magnets, and in accordance with such empirical determinations locating different magnets for coaction with different strings in such manner that a controller having a vibration-location causing its magnet to have a more advantageous coaction with one string than another, will have its magnet arranged to coact with the first of the two last-mentioned strings.

1,681,636. DIKE OR REVETMENT. ASA W. FARNEY, Clay County, Mo. Filed May 2, 1927. Serial No. 188,194. 5 Claims. (Cl. 61—3.)

1. The method of producing a dike in a stream, comprising the sinking of upright piles to a sufficient depth in the bed of the stream for their proper anchorage, the formation of a mat upon the water and around and between the piles, the placing of a longitudinal series of upright screen poles in fixed relation to the mat, the connecting of a cross bar to the said screen poles at a point above the level of the stream, and the connecting of such bar to the mat by substantially upright wiring.

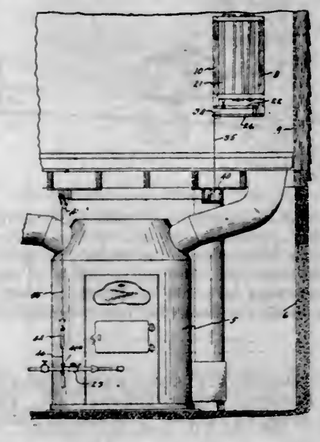
1,681,637. AIRCRAFT LANDING AND HOUSING DEVICE. CHARLES S. HALL, Oakland, Calif. Filed Jan. 11, 1926. Serial No. 80,466. 11 Claims. (Cl. 244—2.)



3. In an aircraft landing device, a landing platform, means to raise and lower said platform, means to turn said platform, means to engage an aircraft and move it to the platform, other means to engage the aircraft after it is on the platform, a cabin on the platform and controls in said cabin for controlling all of said means.

4. In an aircraft landing device, a platform, means on the platform for engaging an aircraft, means for raising said platform, flexible means for lowering said platform, and means for constantly bracing said platform while it is being moved.

1,681,638. REFINING HYDROCARBON OILS. HIRAM J. HALLE, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed May 12, 1920, Serial No. 380,762. Renewed Feb. 12, 1927. 3 Claims. (Cl. 196—36.)

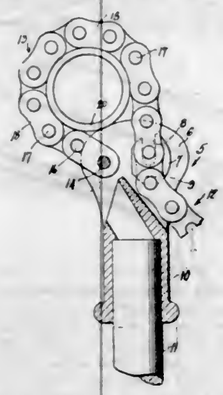


3. The step in a process for refining hydrocarbons which comprises passing the hydrocarbons being treated while in vaporous form through a sulphuric acid solution in excess of concentration of 20% and not exceeding 55%.

1,681,639. SHEET OF FOLDED MATERIAL. EMIL J. HANSEN, Green Bay, Wis., assignor to Fort Howard Paper Company, Green Bay, Wis., a Corporation of Wisconsin. Original application filed Sept. 12, 1924, Serial No. 737,281. Divided and this application filed Nov. 1, 1926. Serial No. 145,565. 2 Claims. (Cl. 206—57.)

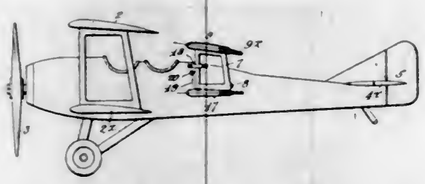
1. An element designed for use in a dispensing package, wherein the folded sheets are superimposed one upon the other, comprising the following structure, namely a folded sheet of material, as an article of manufacture, including a blank initially folded along a median line to present a double half sheet, again folded along lines parallel to the median line, reversey to opposite sides of the doube half sheet, and finally folded on a transverse median line to present double thickness coextensive tabe on opposite sides along one longitudinal edge of the sheet.

1,681,640. HEAT REGULATOR. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor, by mesne assignments, to The C. H. C. Co., Toledo, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,359. 16 Claims. (Cl. 236—9.)



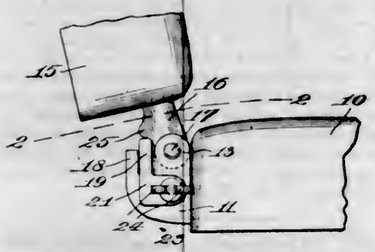
1. A heat regulator for buildings including a burner, a valve arranged to control the admission of fuel to the burner, an operating arm secured adjacent one extremity to the valve and having a slot in its free extremity, a thermostat, a multiplying lever mounted to be actuated thereby, a flexible member suspended from the lever, and a weighted contact member carried by the flexible member and extending through the slot of said operating arm, whereby the contact member and operating arm will be moved to vary the position of the valve in accordance with the alterations of length of the thermostat.

1,681,641. PIPE WRENCH. OSCAR JOHNSON, New York, N. Y. Filed June 8, 1926. Serial No. 114,387. 1 Claim. (Cl. 81—69.)



A pipe wrench adapted to revolve a pipe in either of two directions without removing the wrench therefrom, comprising a head, a chain secured to one end of said head,

pins projecting from said chain, and a catch member on said head provided with an upper locking slot to receive one of said pins when it is desired to revolve the pipe in

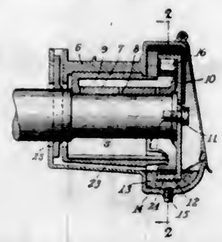


one direction, and a lower locking slot to receive another of said pins when it is desired to revolve the pipe in the opposite direction.

1,681,642. AEROPLANE. AUBREY M. KENNEDY, Los Angeles, Calif. Filed Aug. 25, 1926. Serial No. 131,325. 4 Claims. (Cl. 244—12.)

1. An aeroplane comprising a fuselage, propelling and guiding means, a primary wing structure, and an auxiliary wing structure smaller than the primary wing structure and mounted at the rear and independently of the latter, said auxiliary wing structure comprising a wing having telescopic sections and means for relatively adjusting said sections.

1,681,643. ADJUSTABLE SEAT BACK FOR AUTOMOBILES. ROBERT M. KIMBRO, Calexico, Calif. Filed Oct. 20, 1926. Serial No. 142,836. 2 Claims. (Cl. 155—160.)

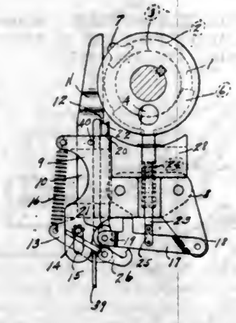


1. The combination with a seat and seat back, of a hinge member projecting rearwardly from the seat, a hinge member secured to the lower portion of the seat back and pivotally connected to the first mentioned hinge member, a stepped plate supported by and mounted for lateral adjustment upon the hinge member that projects from the seat, which stepped plates underlies the hinge member that is connected to the seat back and serves to support the same in differently adjusted positions, and a stepped plate bearing and support formed on the outer portion of the hinge member that projects from said seat.

1,681,644. RADIO GROUND ANTENNA. WILLIAM S. MAPLE, Los Angeles, Calif. Filed Apr. 20, 1927. Serial No. 185,168. 7 Claims. (Cl. 250—33.)

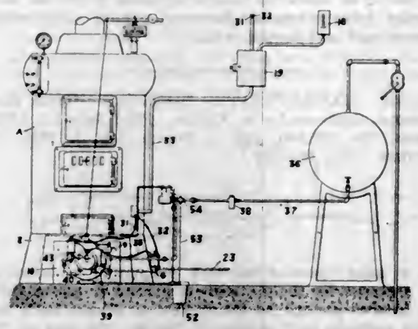
1. In a radio ground antenna, a metal container and a mixture of copper sulfate, sodium chloride and carbonate of soda within said container.

1,681,645. LUBRICATOR. CARLOS E. PADILLA, Bogota, Colombia, South America. Filed Nov. 24, 1925. Serial No. 71,115. 4 Claims. (Cl. 308—86.)



1. In a lubricator, the combination of the following elements; a disk provided with a ring flange; a scraping member pivotally mounted, and provided at one end with means for removing lubricant from the interior surface of the said ring flange, and at the other end with counter-balancing means adapted to hold the scraping end in contact with the said ring flange; means for conducting the removed lubricant to a desired point; means adapted to convey lubricant discharged from the exterior surface of the said ring flange to the inner surface of the said flange, and comprising downwardly and inwardly extending troughs adjacent the said exterior surface of the ring flange; and a drip lip mounted above the bottom section of the said interior surface of the ring flange.

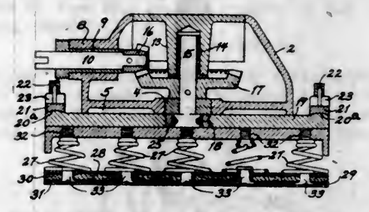
1,681,646. SAFETY DEVICE FOR POWER PUNCH PRESSES. JOHN ELIAS PAPAS, Chicago, Ill. Filed Jan. 30, 1925. Serial No. 5,715. 3 Claims. (Cl. 192—129.)



1. A safety device for power punch presses, comprising the combination with a clutch mounted on a flywheel, a dog

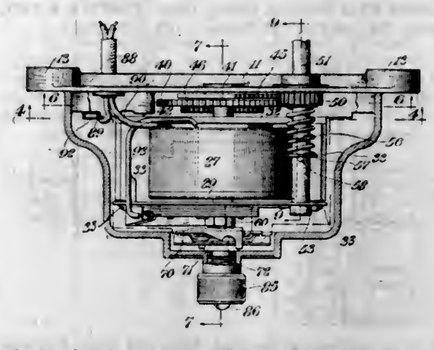
for disengaging said clutch from said flywheel and a dependent stem positioned on said dog, of a block casting having a tripper arm slidingly mounted through one end; a rocker arm pivoted to the opposite side of the casting; a trip operating lever pivotally mounted on the rocker arm,

slidingly mounted through the casting adapted to normally engage the tripper arm; and a lug mounted on the clutch for disengaging the tripper arm from the trip operating lever; said stem being pivoted to the rocker arm and slidingly mounted through the casting.



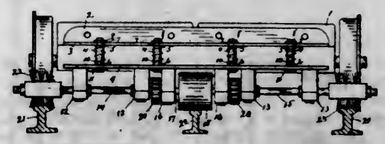
1,681,647. OIL BURNER. WILLIAM R. RAY, San Francisco, Calif. Filed May 5, 1923. Serial No. 636,965. 3 Claims. (Cl. 158—28.)

1. The combination with an electric motor driven oil burner of the character described and a gas feed-pilot burner cooperating therewith, of means for maintaining a continuous flow of gas to the pilot burner, a valve cooperating with the pilot burner adapted to increase or decrease the flow of gas to the pilot burner, and an electro-magnet adapted to open and close the valve, said magnet being responsive to the starting current flowing to said motor and adapted to momentarily open the valve in response to said current when a circuit through the motor is closed, said magnet being non-responsive to the running current of the motor.



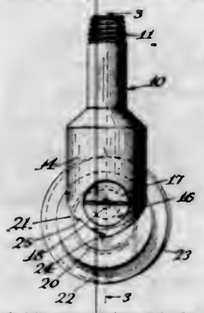
1,681,648. RUBBING MACHINE. CHARLES S. ROOT, Springfield, Mass. Filed Oct. 30, 1925. Serial No. 65,758. 2 Claims. (Cl. 51—189.)

2. In a rubbing machine, a casing, a plurality of helical springs arranged with their small ends uppermost and having said ends attached to said casing, flexible sheets and an intermediate yielding pad, means to secure said sheets and pad to said springs at their bottom ends, and a flexible sheet secured to the under side of the lower of said first-named sheets and covering said securing means, said springs, sheets, and pad forming a cushion for a finishing



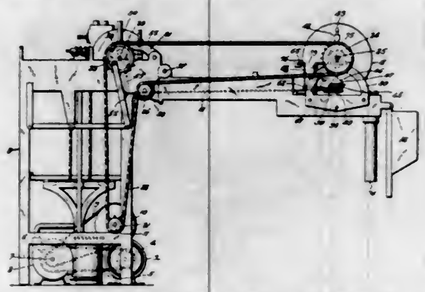
strip, and being unattached except by the small ends of said springs to said casing, whereby great freedom of movement in all directions is permitted to said cushion.

1,681,649. IMPULSE ELECTRIC MOTOR. JAMES T. SIBLEY, New York, N. Y., assignor to S. & U. Holding Company Inc., New York, N. Y., a Corporation of New York. Filed Sept. 30, 1926. Serial No. 138,672. 10 Claims. (Cl. 172—36.)



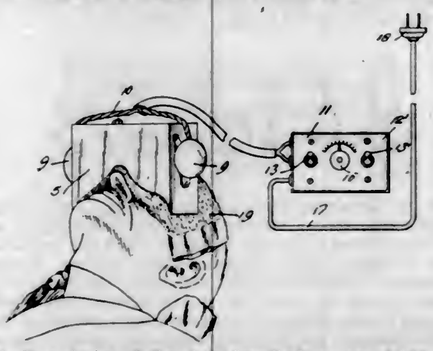
1. An electric motor comprising a field magnet, a rotor therefor, a supporting plate associated with the field magnet, plates carried by the supporting plate and insulated therefrom and from each other, said plates being in the circuit of the field magnet, normally separated arms on said plates and carrying contacts, and a cam on the rotor shaft for intermittently closing the contacts.

1,681,650. RAIL BRUSH FOR ELECTRIC CARS. OWEN P. SMITH, deceased, Miami, Fla., by Hannah M. Smith, administratrix, Miami, Fla. Filed Mar. 17, 1927. Serial No. 176,222. 2 Claims. (Cl. 15—55.)



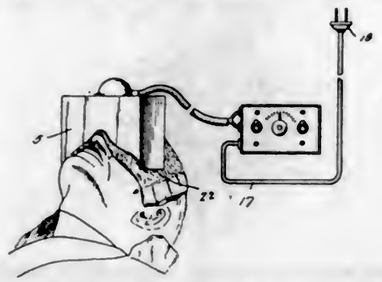
1. In combination with a rail car for operation upon rails, spaced transversely disposed upper and lower plates on the forward end of said car, the upper one of said plates being stationary and the lower one being movable, springs interposed between the upper and lower plates and normally urging the lower plate downwardly, a power shaft carried by the movable plate, driven shafts carried by the same plate and having means thereon for receiving power from the power shaft, brushes on the outer end of each driven shaft yieldingly engaging the rails, and means for rotating the power shaft.

1,681,651. ROTARY-DISK ECCENTRIC BIT. SHELLEY G. WOODRUFF, Inglewood, Calif. Filed July 1, 1925. Serial No. 40,857. 10 Claims. (Cl. 255—76.)



1. A rotary disk bit comprising a body having depending arms, members rotatable upon said arms, eccentrics detachably secured to said members, and disk cutters rotatable upon said eccentrics.

1,681,652. DUPLICATING-MACHINE DRIVE AND FEED. LESTER KYLE ALDRICH, Sidney, Ohio. Filed Jan. 5, 1927. Serial No. 159,137. 28 Claims. (Cl. 101—233.)



1. In a duplicating machine drive and feed, the combination of a feeder having a motor and sheet feeding mechanism, a duplicating machine supported by the feeder, and a duplicating machine drive actuated by the motor of the feeder and including a shaft having a driving arm located at one side of the duplicating machine and provided with means for engaging the hand crank of the duplicating machine.

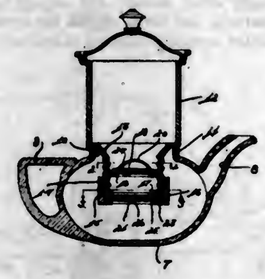
1,681,653. CATARACT ABSORBER. ALBERT ASLESON, Redwood Falls, Minn. Filed June 13, 1927. Serial No. 198,644. 3 Claims. (Cl. 174—177.)

1. In a device of the class described, an eye shield, a pair of electric light bulbs arranged therein, each of said bulbs being disposed respectively above the eyes of a patient, a switch box, and a pair of switch elements arranged therein and connected respectively to the bulbs for selective operation of either thereof and a rheostat arranged in the switch-box and interposed between said bulbs and said switch elements.

1,681,654. CATARACT ABSORBER. ALBERT ASLESON, Redwood Falls, Minn. Filed Aug. 19, 1927. Serial No. 214,134. 1 Claim. (Cl. 174—177.)

In a cataract absorber, an eyeshield having its lower edge shaped to conform with the contour of the eyes of a person, a partition removably secured within the shield adjacent the lower edge thereof, a pair of electric heating coils mounted within the shield, a heat insulating lining for the top and side portions of the shield, a switchbox remote from the shield, a pair of switch elements operatively arranged within the box and connected respectively to said heating coils whereby to selectively control the same and an electric rheostat mounted within the switchbox having an operating handle extending therefrom, said rheostat being interposed between each of said switch elements and said heating coils.

1,681,655. HAND-OPERATED DIESTOCK. HENRI BERNAUDIN, Cosne-sur-Loire, France. Filed July 12, 1926, Serial No. 121,960, and in France Aug. 7, 1925. 2 Claims. (Cl. 10—127.)

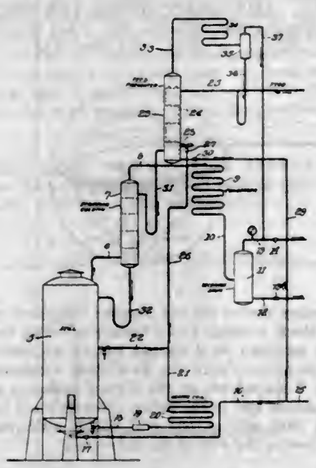


1. A hand operated die-stock comprising in combination a carrier for the die, a die supported by said carrier, two handles pivoted to the carrier at diametrically opposite positions with respect to the die, the axes of the pivots being disposed at right angles to the axis of the die, interconnecting means between the pivoted handles for ensuring equal angular movement of the handles in opposite directions, and guide members attached to the handles, the extremities of said guide members being disposed opposite each other and at equal distances from the axis of the die.

1,681,656. COFFEE PERCOLATOR. HENRY C. BIETTE, Detroit, Mich., assignor of twenty per cent to John S. Longtin, Wyandotte, Mich., and ten per cent to Ernest C. Schaffer, Detroit, Mich. Filed Oct. 13, 1927. Serial No. 225,891. 1 Claim. (Cl. 53—3.)

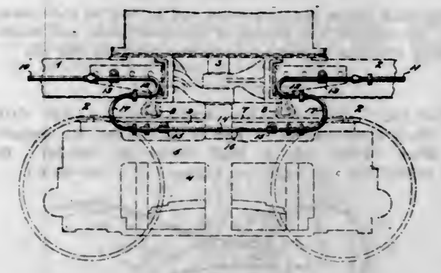
A coffee percolator of the class described, comprising: a lower container having its upper end open and provided with an upwardly directed flange around said opening; an upper container; an inwardly flared base on said container, inwardly of the marginal edges thereof, to provide a shoulder for engaging the upper edge of said flange; an interiorly and exteriorly threaded neck depending centrally from said base and extending into said lower container; an inwardly directed flange on the lower end of said neck; a ring threadable on the exterior of said neck;

an inwardly directed flange on the lower end of said ring; a filter member engaging the lower end of said neck; a perforated disc engaging the undersurface of said filter, the inwardly directed flange on said ring retaining said



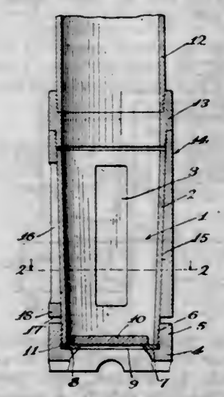
perforated disc and said filter in engagement with the lower end of said neck; and a perforated disc threadable into said neck for compressing coffee therein against said filter and disc, said threadable perforated disc having a concave center.

1,681,657. OIL-SOLUBLE NAPHTHENIC COMPOUND. OSCAR E. BRANSKY, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Illinois. Filed Oct. 29, 1923. Serial No. 671,478. 6 Claims. (Cl. 260—108.)



1. The method of preparing naphthenic acid bodies from oils which comprises treating such oils with aqueous alkali solutions and washing the oil with a diluted alcohol.

1,681,658. APPARATUS FOR CONVERTING HYDROCARBON OILS. OSWALD C. BREWSTER, Casper, Wyo., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed June 20, 1925. Serial No. 38,514. 7 Claims. (Cl. 196—104.)

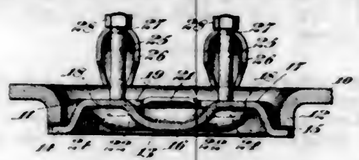


1. In apparatus for the conversion of hydrocarbon oils, a chamber adapted to contain a body of oil, means for heating said body of oil whereby said body of oil is maintained at conversion temperatures, means for conducting vapors away from said chamber, a separate chamber adapted to contain oil, means for passing heated oil from said chamber to said separate chamber whereby the oil in said separate chamber is brought to oxidizing temperature, means for supplying fresh oil to said separate chamber, means for supplying an oxidizing gas in said separate chamber whereby the oil supplied thereto is brought to conversion temperatures, and means for conveying the heated oil from said separate chamber to said oil containing chamber.

1,681,659. AIR-PIPE CONNECTION FOR ARTICULATED CARS. ALFRED T. CLARK, HENRY A. LEONHAUSER, and JOHN R. JESTER, Baltimore, Md. Filed June 28, 1927. Serial No. 202,104. 14 Claims. (Cl. 105—4.)

1. In an articulated car embodying pivotally connected sections and a truck beneath the pivot, an air system including rigid pipes carried by the car sections, rigid pipes carried by the truck, and flexible connections between the first and second named pipes.

1,681,660. BAILER. CLAUDE E. COLESTON, McKittrick, Calif. Filed Nov. 10, 1926, Serial No. 147,455. Renewed Jan. 30, 1928. 6 Claims. (Cl. 166—19.)

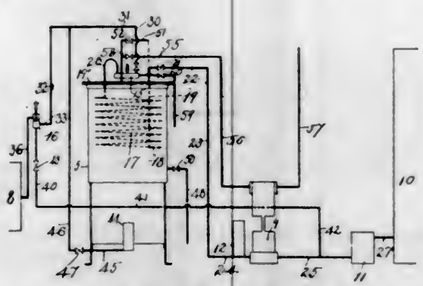


3. A bailer comprising in combination, a tube having a coupling connected thereto, a bucket supporting structure having a vertical wall secured to the coupling and said wall having a lateral opening, a bucket having a vertical wall with a lateral opening fitting inside the supporting wall and sustained thereby, a shoe connected to the bucket wall having a trap, the bucket being slidable and rotatable in the supporting wall.

1,681,661. CLOSURE. JOSEPH H. DILLON and HOWARD H. FAIRWEATHER, Coatesville, Pa., assignors to Bethlehem Steel Company. Filed June 1, 1925. Serial No. 33,967. 4 Claims. (Cl. 220—23.)

1. A closure device comprising an imperforate cover-plate, having a flanged edge, a depressed central portion,

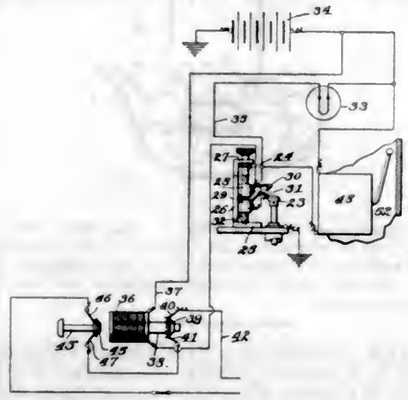
a hollow rib between the central depressed portion and the flanged edge, and recesses formed in the hollow rib at opposite sides of the depressed portion, and a handle



extending across the depression and having its ends seated in the recesses and welded to the cover-plate, said handle being disposed in substantially the plane of the rib.

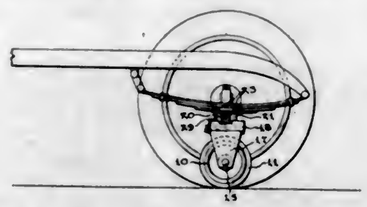
1,681,662. PISTON-RING EXPANDING AND CONTRACTING PLIERS. ROY D. DOUGLASS, Minneapolis, Minn. Filed July 5, 1923, Serial No. 649,767. Renewed Jan. 20, 1928. 4 Claims. (Cl. 29—86.4.)

1. A pair of pliers, the jaws of which are channel-shaped in cross section and having on their outer ends sleeve-like holders, and tips removably telescoped in said sleeve-like holders and having work-engaging lips.



1,681,663. AUXILIARY FUEL-OIL HEATER. ROBERT FAICKNEY, Glasgow, Scotland, assignor to Bethlehem Shipbuilding Corporation, Quincy, Mass., a Corporation of Delaware. Filed Oct. 26, 1922. Serial No. 597,086. 9 Claims. (Cl. 158—36.)

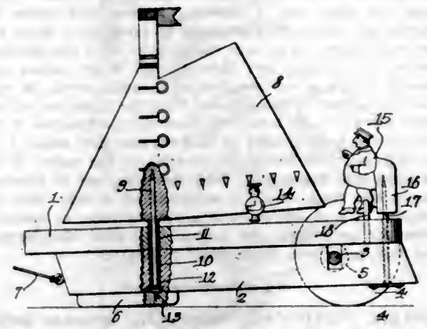
1. In apparatus for heating and supplying oil to a main furnace burner the combination of an auxiliary heating chamber, means to introduce water thereinto, means for raising the water to a vaporizing temperature in the auxiliary chamber, an oil container disposed in the upper part of the auxiliary chamber, means to force fuel oil through said container in heat exchanging contact with the water vaporized in the auxiliary chamber, a vapor conduit connecting the auxiliary chamber with the forcing means, whereby the latter may be operated by the steam generated in the auxiliary chamber, and means to conduct the heated fuel oil from the container to the burner.



1,681,664. VEHICLE SPEED CONTROL. CHARLES GOBB, Los Angeles, Calif. Filed Oct. 18, 1922. Serial No. 595,432. 2 Claims. (Cl. 175—355.)

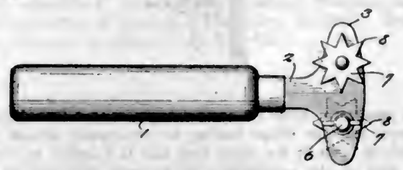
1. In a device of the character described, a reciprocal stem, a piston on said stem, a tube encircling said piston, an impeller wheel for directing a flow of liquid through said tube to advance said piston and stem, means for retracting said stem, means whereby said impeller wheel may be driven by the propulsion of a vehicle, a wiper contact carried by said stem, a pair of contact members arranged in offset relation in the path of travel of said wiper contact, whereby said wiper contact will engage said contact members successively, and screw means for collectively adjusting said contact members relative to said wiper contact.

2. In a device of the character described, a solenoid, a solenoid core, a switch in an ignition circuit controlled by said core, means controlled by the propulsion of a vehicle for energizing said solenoid, said solenoid adapted when energized to open said switch, a push button adapted to be operated to close said switch, and a second ignition circuit switch controlled by said push button operable on advance of the push button to open the switch, said push button being adapted on being advanced to close the switch controlled by the solenoid.



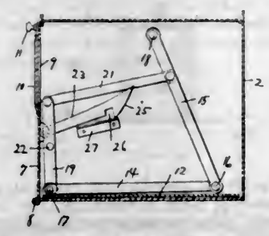
1,681,665. EMERGENCY WHEEL FOR VEHICLES. URLES JAMES HAYNES, Pascola, Mo. Filed May 7, 1927. Serial No. 189,627. 1 Claim. (Cl. 280—150.)

An emergency device for the purpose indicated comprising an axle block, a roller, and a hanger in which the roller is rotatably mounted, said hanger having an interlocking detachable connection with the axle block consisting of a transversely T-shaped rib on the former engaging a correspondingly shaped slot in the latter, the axle block having a wall closing said slot at one end and a swinging plate releasingly closing the slot at the other end.



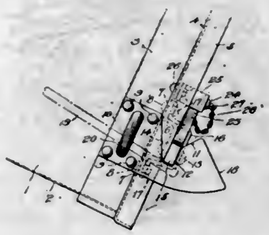
1,681,666. FIGURE WHEELED TOY. ALBERT L. HIGGINS, Bar Harbor, Me. Filed Jan. 7, 1927. Serial No. 159,646. 2 Claims. (Cl. 46—45.)

1. A figure wheeled toy including a body, a runner at the front end thereof for sliding contact with a supporting surface, a pull cord connected to the front end of the body, oppositely mounted eccentric wheels supporting the rear end of the body constituting means, when rotated, for imparting a tilting movement to the body in all directions, said body, when tilted, moving about the point of contact between the runner and the supporting surface, members supported by the body and mounted to swing freely about



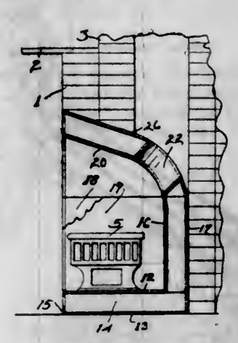
an axis extending upwardly from the body, said body, when tilted by the wheels, constituting means for oscillating the members, and means on the body cooperating with the members for limiting the movement of the members and producing a noise.

1,681,667. MARKING TOOL. WILLIAM B. JOHNSTON and JOHN R. CARMAN, Chadron, Nebr. Filed Mar. 6, 1926. Serial No. 92,917. 1 Claim. (Cl. 12—103.)



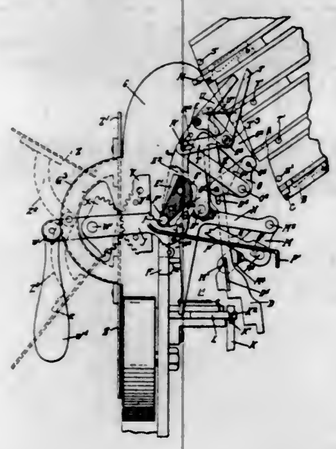
A tool of the class described including a head, a guide portion extending therefrom for sliding engagement with one edge of the work, a centrally supported disk adjustably connected to and located at one side of the head, a work engaging device carried by the disk adjacent the periphery thereof, and means extending from the head for engaging the disk to hold it against rotation relative to the head and maintain the work engaging means in operative position.

1,681,668. OVEN FOR COOKING STOVES. WILLIAM JORDAN, Lancaster, Nebr. Filed Sept. 2, 1927. Serial No. 217,156. 3 Claims. (Cl. 126—340.)



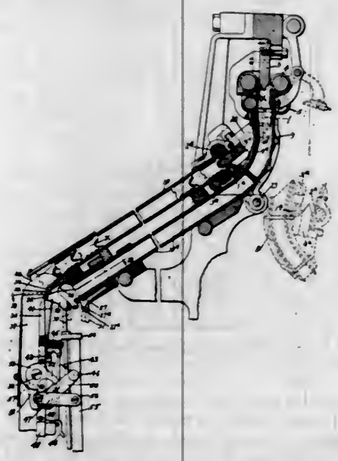
1. In a cooking stove, an oven, the front side thereof being open, the door therefor hingedly secured to the lower edge of the oven, a plate adapted for horizontal slidable movement in the oven, a pair of pivotally connected links secured to the forward edge of the plate and each side of the oven respectively, a vertically disposed arm pivotally secured at its lower end to each side of the oven adjacent the open front side thereof, means for operatively connecting the upper end of each arm to one of the links of each pair which is connected to the side of the oven, and cooperating means between the door and said arms whereby the plate will move outwardly of the oven simultaneously with the downward swinging movement of the door to an open position, the plate being returned to its initial position within the oven simultaneously with the closing of the door, said last mentioned means comprising a pair of hooked shaped levers pivotally connected to the door, pins projecting laterally from the arms for cooperation with the hooked ends of the levers, and additional means for releasing the hooked levers from the pins to permit the return of the door to a fully closed position.

1,681,669. CAR-DOOR-LOCKING MECHANISM. BYERS W. KADEL, Baltimore, Md. Filed June 2, 1927. Serial No. 196,063. 11 Claims. (Cl. 105—308.)



1. A railway car having a lading discharge opening, a door for said opening movable to open position under the influence of gravity, means for supporting the door in closed position involving a shouldered member and a beam member, one of said members being fixed with respect to the part upon which it is mounted and the other being pivoted with respect to the part upon which it is mounted, and one of said members being provided with an inclined portion cooperable with the other of said members to force the door to closed position upon a locking rotation of the pivoted member, and means carried by the car body forming a plurality of fulcrum points respectively adapted to cooperate with a removable lever for forcing the pivoted member into and out of door supporting position.

1,681,670. FIREPLACE STRUCTURE. JOHN WESLEY MARKS, Oakland, Calif. Filed May 13, 1927. Serial No. 191,055. 1 Claim. (Cl. 126—121.)

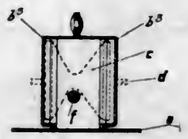


A fire place structure comprising a fire place opening, a hollow bottom section, a hollow back section on said bottom section, a hollow section on each side on said bottom section, a top hollow section on said back and side sections, a smoke flue in said top section, each of said hollow sections communicating with each other, each of said bottom, side and top sections being open in front all around the fire place, and having an open grille work section for each of said open sections.

1,681,671. TYPOGRAPHICAL MACHINE. GEORGE E. MARLATT, Pasadena, Calif. Filed Oct. 5, 1926, Serial No. 139,718. Renewed July 5, 1928. 9 Claims. (Cl. 199—20.)

1. In combination, superposed matrix-magazines, an assembler-entrance throat having an angular portion thereof pivotally movable for conducting matrices from a selected magazine, a series of throat partitions between which matrices are conducted from said magazines, and the specified construction whereby the angular portion of said throat may be moved from one to another operative position regardless of the fact that said throat partitions are rigid and continuous.

1,681,672. TYPOGRAPHICAL MACHINE. GEORGE E. MARLATT, Pasadena, Calif. Filed Oct. 5, 1926, Serial No. 139,719. Renewed July 5, 1928. 9 Claims. (Cl. 199—15.)

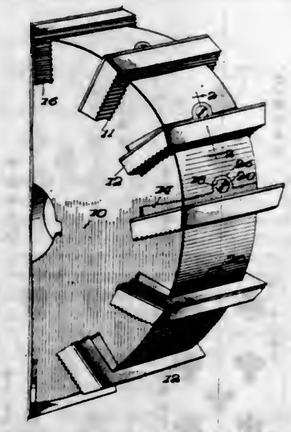


1. In a typographical machine, in combination with upper and lower channeled magazines for receiving matrices from individual lower and upper distributors employing sets of conveyor screws, matrices having upper and lower lugs on each edge thereof, upper and lower conveyor screws in each set thereof for engaging the lugs on said matrices, means for causing the matrices destined for the lower distributor to be released successively at a common point from the upper set of conveyor screws, and means for causing and permitting matrices so released to enter successively between and into engagement with the conveyor screws in the lower set thereof, said latter means comprising an opposed-groove channel through which the matrices are guided in their travel from the upper set of conveyor screws to the lower set thereof, a perforation in the floor of the lower groove of said channel into which a lug on said matrices lodges in advance of the entry of the matrices into engagement with the lower set of conveyor screws and from which it is dislodged in time with the rotation of said screws, and a special form of conveyor screw for permitting the matrices to pass therebetween and then enter into engagement therewith.

1,681,673. CONDUCTOR TERMINAL. CHARLES GEORGE MERIDETH, Evansville, Ind. Filed June 30, 1927. Serial No. 202,544. 1 Claim. (Cl. 173—273.)

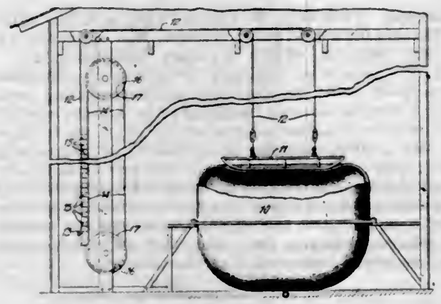
A conductor terminal comprising a contractible band of general circular shape having an arc-shaped hollow bead which is open at its inner face and is adapted to receive the end of the conductor and to hold said end in arc-shaped arrangement exposed for direct contact with a battery post or other terminal, said band being provided with overlapping end parts, and a cam lever carried by one of said ends and co-operating with the other end for the purpose of effecting clamping of the band and conductor end on the battery post.

1,681,674. CORD GUIDE FOR ROLLING TOYS RUNNING ON CORDS. CARL MEYER, Zurich, Switzerland. Filed July 23, 1925, Serial No. 45,558, and in Germany July 26, 1924. 2 Claims. (Cl. 46—14.)



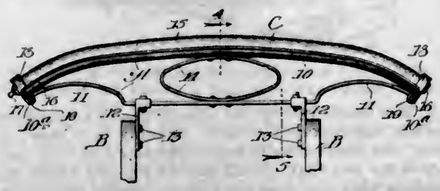
2. A cord guide for rolling toys, comprising, in combination, a supporting plate, a roller, cap like coverings for the ends of the roller, mounted on the supporting plate, and forming both bearings for the roller shaft, and bows to prevent dislodgment of the cord at the ends of the roller.

1,681,675. ROTARY CUTTER. FRANK P. MILLER, Meadville, Pa. Filed May 16, 1925. Serial No. 30,782. 5 Claims. (Cl. 29—105.)



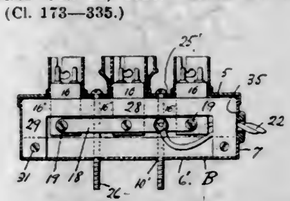
1. A cutter comprising a body having a slot, a blade and a wedge in the slot and having the opposed sides thereof flatly in contact, the wedge being provided with a

boss, and a screw threaded through the boss substantially parallel to the plane of the blade and engaging the



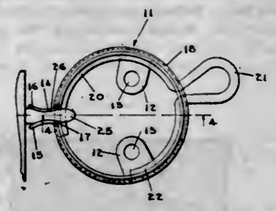
bottom wall of the slot to urge the wedge outwardly whereby one side of the wedge is flatly in binding engagement throughout with the opposed side of the blade.

1,681,676. BREATHER BAG. JOHN E. MOORE, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed May 13, 1927. Serial No. 191,153. 8 Claims. (Cl. 220—85.)



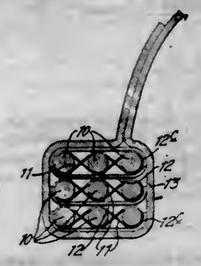
1. In combination, a breather bag, a superimposed weight, a varying counterpoise for said weight connected thereto, said counterpoise comprising a continuous member mounted so as to be moved in conjunction with said superimposed weight, and weight members mounted on said continuous member and adapted to exercise a varying counterpoising effect upon said superimposed weight.

1,681,677. AUTOMOBILE BUMPER. ALVIN J. MUSSELMAN, Chicago, Ill. Filed Apr. 20, 1927. Serial No. 185,205. 5 Claims. (Cl. 293—55.)



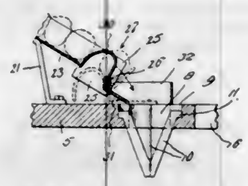
1. In an automobile bumper, a yieldable support having a supporting member of concave cross-section, said member being arcuate, a pneumatic tube secured in the concave portion of said arcuate member, an air valve on said tube, a clamp at each end of said tube having laterally projecting ears adapted to engage in notches on the ends of said supporting members.

1,681,678. SOCKET BOX. THOMAS O'DONNELL, Ironwood, Mich. Filed Oct. 15, 1926. Serial No. 141,807. 3 Claims. (Cl. 173—335.)



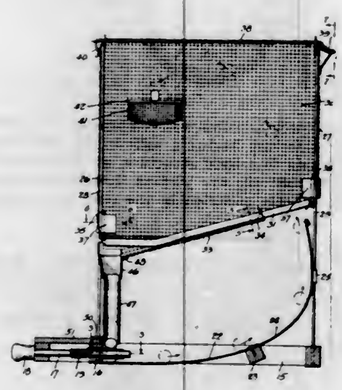
1. A device of the class described including, in combination, a box, a lid for the box, means for holding the lid on the box, a plug supporting structure in the box, said structure comprising a body block having extending from each end a lateral pair of legs in spaced parallelism and provided with registering openings, a bar having openings at its ends, said bar adapted to be received at its ends between the ends of the respective pairs of legs, screws adapted to pierce the openings, plugs mounted in the block body and extending through openings in the lid.

1,681,679. DOOR CATCH AND FASTENER. PETER PETERSEN, Los Angeles, Calif., assignor of one-half to Earl L. Parker, Los Angeles, Calif. Filed July 20, 1927. Serial No. 207,079. 7 Claims. (Cl. 292—17.)



1. A door catch and fastener comprising in combination a ring like structure having a split in one side, means to secure said ring to a fixed structure, an eye attached to a movable structure, the eye passing through the said split, and a bolt slidably mounted in the ring and engaging in the eye.

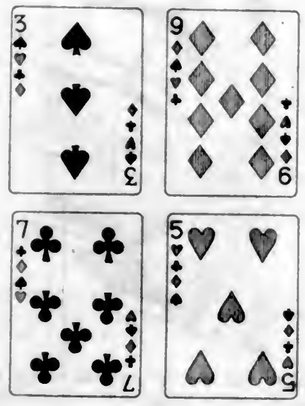
1,681,680. BEAD FOR PNEUMATIC TIRES. ROBERT C. PIERCE, Niles, Mich., assignor to National-Standard Company, Niles, Mich., a Corporation of Michigan. Filed June 18, 1927. Serial No. 199,808. 5 Claims. (Cl. 245—1.5.)



1. A tire bead having embedded therein a convolutely disposed reinforcing element, the wraps of said element being separated by a convolutely disposed fibrous ribbon impregnated with rubber, the ribbon and the element being parallel substantially throughout their lengths.

1,681,681. SEED-POTATO CUTTER. WHARTON H. PIGG, Canon City, Colo. Filed Feb. 5, 1927. Serial No. 166,186. 2 Claims. (Cl. 146—169.)

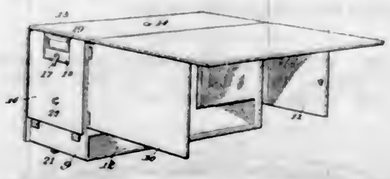
1. The combination in a potato cutter, of a table board having a vertical opening therein, cutting means in said opening, an inclined chute with its lower discharge end spaced above and to one side of said opening, spaced guide wings disposed vertically and arranged between said lower end of the chute and said opening, a transverse shaft journaled in said side wings, means for turning said shaft, and a feed control member including a loop shaped portion at one side of said shaft and movable between said wings above and below the lower end of the chute and also including a plate-like portion adapted in its upper position to check potatoes and in its lower position to shoot a potato to said opening.



1,681,682. GAME. LELAND S. MCVEY, Fontana, Calif. Filed Jan. 8, 1927. Serial No. 159,958. 8 Claims. (Cl. 273—101.)

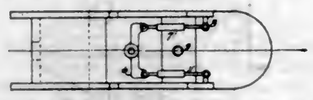
1. A game comprising a cage having an opening in its bottom, a ball projecting device beneath the cage, a chute for directing projected balls upwardly through the bottom and into said cage, and a basket in the cage adapted to receive balls projected into the cage.

1,681,683. CARD GAME. SARAH K. RAMER, Vancouver, British Columbia, Canada. Filed May 4, 1927. Serial No. 188,864. 1 Claim. (Cl. 273—152.)



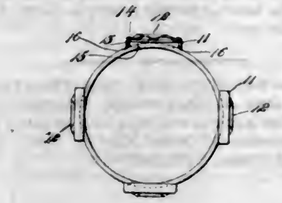
A card game comprising a deck of conventional monarchical playing cards having the four conventional heart, club, diamond, and spade suits, each of said suits being an arbitrarily assigned trump for each particular playing position, and each of the cards having, in addition to its own main corner index, an extra corner index, said extra corner index indicating the trump suit assigned to the playing position following the playing position to which the main index is assigned as trump.

1,681,684. PROCESS OF PRODUCING ACETIC ACID. FRANCIS GEORGE RAWLING, Madison, Wis. Filed Feb. 12, 1926. Serial No. 87,951. 9 Claims. (Cl. 260—112.)



1. The process of preparing acetic acid by extraction from wood, which process comprises impregnating wood with a treating material consisting of an aqueous solution of a mixture of sodium sulphite and an alkali, the strength of said treating material being capable of neutralizing acetic acid from the wood but not sufficient to materially affect the lignin content of the wood, subjecting the wood and said treating material to a heat treatment of at least 110° C. and not over 160° C. and thereby forming acetates in solution, rendering the material of the solution acid, and recovering acetic acid from the solution.

1,681,685. TOURIST'S COMBINATION CABINET. CHESLEY RODGERS, Cedar Rapids, Iowa. Filed Oct. 19, 1925. Serial No. 63,386. 2 Claims. (Cl. 190—12.)

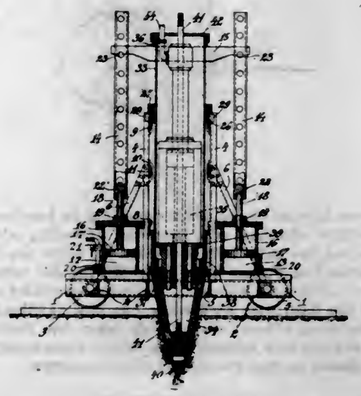


1. In a tourist cabinet, the combination of a box-like receptacle, end-flaps hinged thereto to swing up to closed position, and downwardly to form supporting legs, with openings in the free ends, folding handles disposed within said openings when the flaps are elevated, means for securing the flaps in the elevated and in the depressed positions, and a cover closing over the whole, with openings therein to give access to said handles.

1,681,686. SLED. RUGGIERO ROSSI, Ellwood City, Pa. Filed Oct. 12, 1926. Serial No. 141,064. 1 Claim. (Cl. 280—16.)

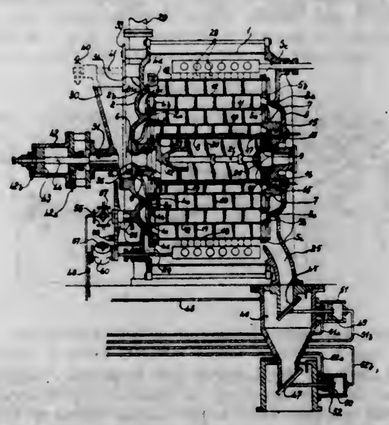
In a sled, a seat, a pair of rear runners rigidly connected thereto and provided with forwardly and upwardly curved front ends, a board pivotally connected to the seat in advance of the rear runners, runners rigidly connected to the board and provided with downwardly and backwardly curved rear ends, the front runners being spaced from the rear runners sufficiently to permit steering, the rear face of the front runners being adapted to contact with the front face of the rear runners to prevent wide-angle steering, and means for steering the front runners.

1,681,687. BAND BRACELET. CARL SCHRAYSSHUEN, Providence, R. I., assignor to Speidel Chain Co., a Firm composed of Frederick Speidel and Eugen Speidel, Pforzheim, Germany, doing business at Providence, R. I. Filed Jan. 3, 1927. Serial No. 158,552. 5 Claims. (Cl. 63—16.)



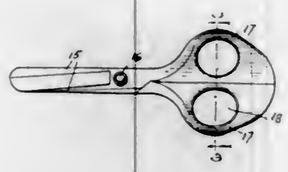
5. A band bracelet comprising a master ring, a plurality of ornaments fixed to said ring in spaced relation about its periphery, said ornaments extending on either side of said ring, and a plurality of separate rings releasably connected to said ornaments on either side of the master ring to jointly form a band of extended width.

1,681,688. TRIMMING AND CUTTING TOOL. MARIN M. SIMESCU, Youngstown, Ohio. Filed Aug. 31, 1927. Serial No. 216,573. 4 Claims. (Cl. 30—11.)



1. A trimming and cutting tool, comprising a vertically-inclined handle bar having a horizontal bar affixed to its lower end, a pair of cutter bars detachably secured to said horizontal bar, one of said cutters being reciprocable, a crank member mounted upon said main bar, a link connecting said crank member and reciprocable cutter bar, a spring adapted to co-act with said crank member in operating said reciprocable cutter bar, an operating handle mounted upon said handle bar, and a connecting rod extending from said handle to said crank member.

1,681,689. ARRANGEMENT FOR LAYING FOUNDATIONS. OTTOKAR STERN, Vienna, Austria. Filed Jan. 21, 1926, Serial No. 82,792, and in Austria Jan. 24, 1925. 14 Claims. (Cl. 61—50.)

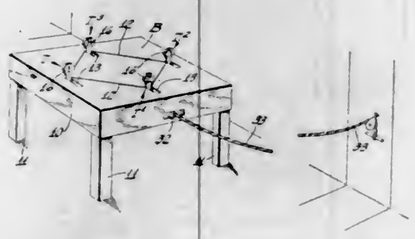


1. An arrangement for laying foundations of structures, buildings and the like, comprising in combination a carriage provided with upright supporting members, a guide-tube carried by the said supporting members and longitudinally movable, a shaft centrally and rotatably arranged in the said guide-tube, a conical pile arranged round the said shaft and guided by the guide-tube, and a ram disposed within the guide-tube and longitudinally movable outside the said shaft and acting directly on the conical pile, for the purpose specified.

1,681,690. DRYING APPARATUS. JEAN BAPTISTE VERNAY, Villeurbanne, France. Filed Oct. 31, 1927, Serial No. 230,096, and in France Dec. 18, 1926. 15 Claims. (Cl. 34—5.)

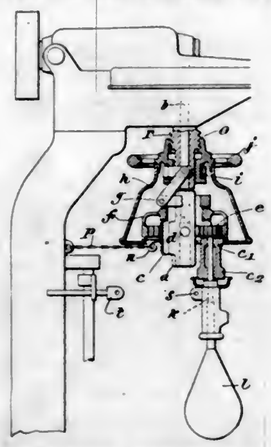
1. A drying apparatus comprising in combination a tight casing; rotatable co-axial cylinders therein, said cylinders providing a zig-zag path for the material to be dried; and end plates for supporting said cylinders, said end plates being formed of concentric rings connected together by means of radial arms.

1,681,691. COMBINED SCISSORS AND SHOEHORN. OTTO ALTENBACH, Los Angeles, Calif. Filed May 9, 1927. Serial No. 190,049. 1 Claim. (Cl. 7—6.)



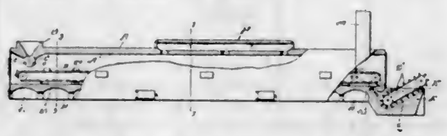
Scissors having the blades terminating in handles having straight abutting edge portions extending along a longitudinal line with the blades when the latter are closed, the handles being offset from the blades so that when the edges are in relative abutment the respective sides of the handles are flush with each other, the said handles mutually describing a heart-shaped body when the blades are closed, and the said handles being curved transversely and longitudinally so that the body is concavo-convex.

1,681,692. METHOD OF REMOVING AND RECOVERING VOLATILE PLASTICIZERS FROM CELLULOID, AND THE LIKE. HARRY P. BASSETT, Cynthiana, Ky. Filed June 11, 1927. Serial No. 198,312. 8 Claims. (Cl. 260—133.)



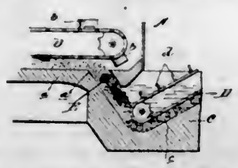
1. The herein described process of removing and recovering volatile plasticizers from celluloid and the like which comprises maintaining a body of the material under treatment in acid state at approximately 100° C., the amount of acid present being insufficient to cause carbonization or decomposition of the cellulose-containing material, passing a current of steam through such body of material to drive off the volatile plasticizing material present, and recovering such plasticizing material.

1,681,693. GAME APPARATUS. FRANK W. BECKER, Ocean Park, Calif. Filed Dec. 13, 1927. Serial No. 239,789. 14 Claims. (Cl. 273—102.)



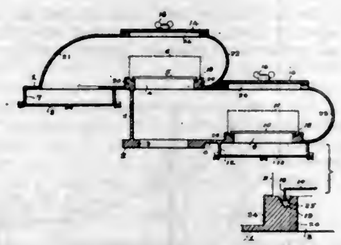
1. In a game apparatus, a pair of movably supported targets normally occupying one position and movable to a second position when struck, means normally locking one of the targets in normal position and being mounted for movement to a released position with respect to said target to permit the latter to move to its second position when struck, and means for actuating the locking means, operable in response to movement of the other target to its second position to move the locking means to released position, whereby the corresponding target will be released for movement to its second position when struck.

1,681,694. PLANET GEAR. MAX M. BOCK, Hamburg, Germany. Filed July 8, 1927, Serial No. 204,328, and in Germany Mar. 11, 1926. 2 Claims. (Cl. 74—34.)



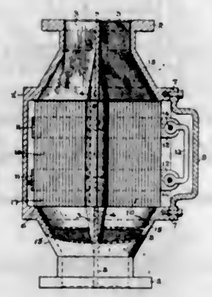
1. A planet gear system comprising a driving shaft and a driven shaft, an orbit gear, means for arresting said orbit gear, means operatively connecting said shafts and comprising a planet gear, and means for varying the relative angle of said shafts comprising means for common swinging of the bearing for the orbit gear with the bearing for the planet gear.

1,681,695. APPARATUS FOR THE TREATMENT OF ORES. MILTON E. BRANTHAVER, Shadygrove, Pa., assignor to The American Milling and Refining Company, a Trust Association. Filed May 10, 1924. Serial No. 712,285. 13 Claims. (Cl. 266—8.)



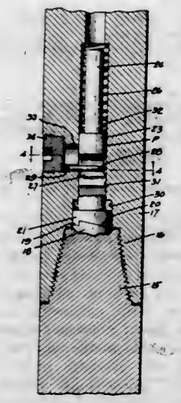
1. An ore roasting furnace comprising a roasting chamber having its floor provided with an ore discharge opening and an endless traveling conveyor in said chamber operative to force the ore under treatment along the floor of the roasting chamber and to discharge it through said opening, in combination with a leaching pool or vat operatively related to said discharge opening to receive the hot ore therefrom, and a liquid supply means operative to direct the liquid into the ore in its passage from the furnace.

1,681,696. MEANS FOR LIQUID TREATMENT OF ROASTED ORES. MILTON E. BRANTHAVER, Shadygrove, Pa., assignor to The American Milling and Refining Company, a Trust Association. Filed May 10, 1924. Serial No. 712,286. 10 Claims. (Cl. 266—8.)



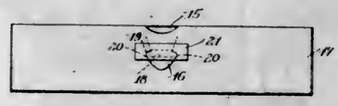
1. An ore roasting furnace having its roasting chamber provided with a duct through which the hot roasted ore is discharged, a vat containing water whose level is such as to seal the discharge end of said duct and whose depth adjacent said discharge end is such that the ore will be submerged therein when it leaves the duct, and means for injecting water into the ore within the duct.

1,681,697. SAFETY VALVE FOR STORAGE TANKS. STEPHEN H. BROOKS, Los Angeles, Calif., assignor to Brooks Engineering Corporation, a Corporation of California. Filed Aug. 17, 1925. Serial No. 50,633. 5 Claims. (Cl. 277—61.)



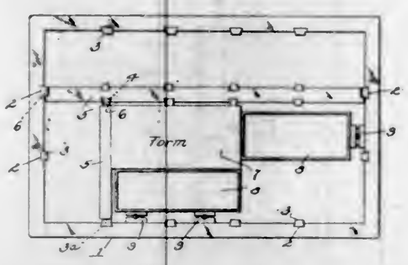
1. In safety valves for tanks, a suitable casing having an inlet for attachment to a tank opening, a shallow flanged sheet metal pressure stemless valve of minimum weight, a similarly formed vacuum valve of minimum weight in operative relation to the inlet, a separate V-grooved seat for each valve, a mercury sealing agent in the grooves, recurving walls adjacent the said valves presenting internal curved flow surfaces, said body having a pressure outlet connected to the pressure valve, a vacuum inlet to the vacuum valve and means positioned adjacent the valves and disconnected therefrom adapted to prevent an inoperaive displacement of said valves.

1,681,698. FLAME ARRESTER. STEPHEN H. BROOKS, Los Angeles, Calif., assignor to Brooks Engineering Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 16, 1926. Serial No. 135,797. 6 Claims. (Cl. 220—88.)



1. In flame arresters, a suitable cylindrical casing having an opening on one side, reduced diameter connecting flanges having a passageway therethrough of conical shape leading to the interior of the casing, radial partitions across such passageways, a removable flame arrester unit, a seat for the same in the casing, bands encircling the arrester unit, a handle secured to said bands, and a cover for the casing opening.

1,681,699. TOOL JOINT LOCK. JASPER CLAY COATES, Santa Paula, Calif. Filed Feb. 23, 1927. Serial No. 170,273. 1 Claim. (Cl. 287—125.)

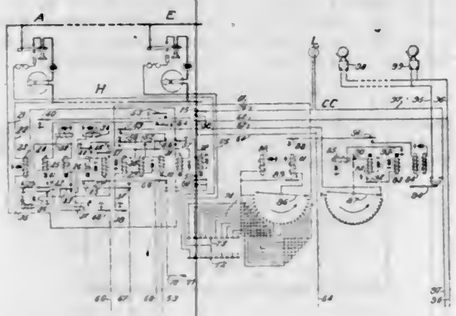


In combination, a tool joint comprising a box having a threaded cavity and a reduced bore communicating with the cavity and having a cylindrical portion and a squared portion, a plunger having an enlarged toothed head movable within the cavity and a shank in the bore having cylindrical and squared portions disposed respectively in the corresponding portions of the bore, a threaded pin in said cavity and having a toothed head adapted to engage the first toothed head to lock the pin against unscrewing movement from the box, means for yieldingly urging the plunger and its toothed head toward the second toothed head, the plunger and the box being formed with openings, and a pin having an enlarged threaded portion threaded into said opening of the box and a second portion extending into the plunger for limiting the movement of the plunger under the action of said urging means, said box having a relatively large opening communicating with said plunger and box openings and through which an instrument is adapted to be extended into the plunger opening to manually move the plunger against the action of said urging means, and a plug threaded into said relatively large opening in covering relation to the outer end of the last mentioned pin.

1,681,700. CARTON. WILLIAM F. FOLMER, Rochester, N. Y. Filed Jan. 28, 1926. Serial No. 84,315. 6 Claims. (Cl. 229—45.)

1. A distributing carton for merchandise comprising a container of sheet material having a cover, a wall of said container having a slit spaced interiorly from an edge of the open face which is closed by the cover, said cover having a projecting tongue lying behind the inner face of said wall and engageable in said slit when the cover is closed, and a sticker seal secured to said wall over the slit and the adjacent intermediate portion of the tongue when the cover is closed, leaving he free tip end of the tongue exposed as an opening tab, whereby the consumer in opening the carton will by pulling up the opening tab, usually tear the tongue through the wall and render unlikely subsequent use of the carton for merchandise distribution purposes.

1,681,701. PRINTER'S CHASE. OLIVER P. GAYMAN, Canal Winchester, Ohio. Filed May 3, 1927, Serial No. 188,562. Renewed May 2, 1928. 5 Claims. (Cl. 101—393.)

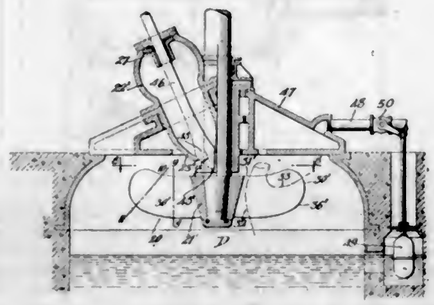


1. In a printer's chase, a frame structure including a plurality of open ended wedge shaped sockets, and a locking bar having the opposite ends thereof provided with wedge shaped projections removably positioned within said socket.

1,681,702. METHOD FOR PURIFYING GASES. FRIEDRICH JOST, Sodingen, Germany, assignor to Karl Müller, Berlin-Lichterfelde-West, Germany. Filed Nov. 8, 1926, Serial No. 147,190, and in Germany Nov. 12, 1925. 7 Claims. (Cl. 23—7.)

1. A process of freeing gases from small amounts of oxygen, water vapor, carbon monoxide, carbon dioxide and sulphurous gases, which comprises contacting said gas to be purified with alkali metal hydride.

1,681,703. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 9, 1925. Serial No. 29,001. 15 Claims. (Cl. 179—17.)



1. In a telephone system, the combination with a common talking, selective signaling system provided with a line having a plurality of subscribers' stations thereon, of a direct line system accessible to two subscribers of said common line, a source of signaling current, automatic means controlled over said common line for signaling with said current any subscriber thereon individually, automatic means responsive to the lifting of a receiver on said direct line for signaling with said current the other subscriber thereon, and automatic means responsive to the lifting of said other subscriber's receiver for stopping said signaling and connecting up said subscribers for talking.

1,681,704. OPTICAL GLASS. ROBERT J. MONTGOMERY, Rochester, N. Y., assignor to Bausch & Lomb Optical Company. Filed Apr. 16, 1923. Serial No. 632,565. 2 Claims. (Cl. 106—36.1.)

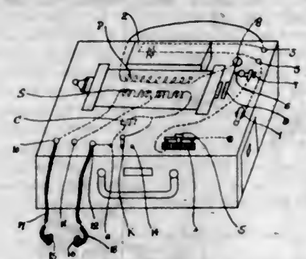
2. A glass mix or batch containing the following materials in substantially the proportions stated:

	Per centum.
Silica	69.5
Sodium oxide	15.8
Boric oxide	.3
Commercial didymium oxide	12.0
Antimony oxide	1.9
Arsenic oxide	.5

1,681,705. HIGH-SPEED IMPULSE TURBINE. LEWIS FERRY MOODY, Philadelphia, Pa. Filed May 25, 1923. Serial No. 641,318. 24 Claims. (Cl. 253—130.)

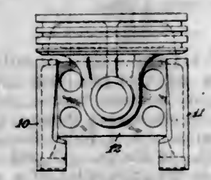
1. In an impulse turbine a runner having buckets and a nozzle for directing a jet against the bucket edges at one side of said runner, said buckets spreading said jet so that at the discharge the meridian components of the outer and inner portions will be at an angle of between 70° and 180° to each other.

1,681,706. HYDRAULIC TURBINE. LEWIS FERRY MOODY, Philadelphia, Pa. Filed Nov. 13, 1923. Serial No. 674,461. 33 Claims. (Cl. 253—117.)



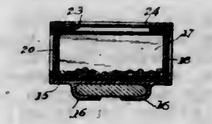
1. A hydraulic turbine having a runner and a draft tube, said draft tube comprising a central core excluding the flow from the central portion of the draft tube, an outer surface curving progressively from a substantially axial direction at entrance to a direction at discharge inclined at a large angle to the axis, and intermediate guiding means cooperating with said core and outer surface to provide a plurality of outwardly directed concentric annular passages surrounding said core and spaced to gradually decelerate the flow.

1,681,707. CLASSING CLAMP. ARTHUR MÜLLER, Bern, Switzerland. Filed Dec. 5, 1927, Serial No. 237,974, and in Belgium July 26, 1927. 1 Claim. (Cl. 24—81.)



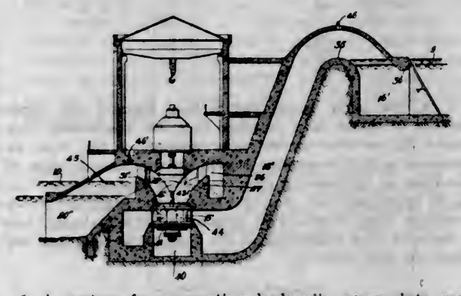
In a classing clamp for file papers adapted to be fastened to a cover board and in combination, a rigid metallic strip provided at the ends with two lateral lugs and having bent-up lateral edges forming grooves, a resilient strip attached to the middle portion of the rigid strip and having both its ends bent-up between the grooves of the rigid strip, curved flat springs riveted to the up standing ends of this resilient strip and extended sideways so as to match with the lateral lugs of the rigid strip with a view of forming clamps, and rectangular buttons arranged slidably within said grooves and above each of the up-standing legs of the resilient strip and having a roughened surface so as to present a safe grip when being operated.

1,681,708. INDUCED-CURRENT MEDICAL INSTRUMENT WITH CONDENSER. KOGORO MURAKOSHI, Tokyo Prefecture, Japan. Filed Apr. 7, 1923, Serial No. 630,663, and in Japan June 13, 1921. 2 Claims. (Cl. 174—177.)



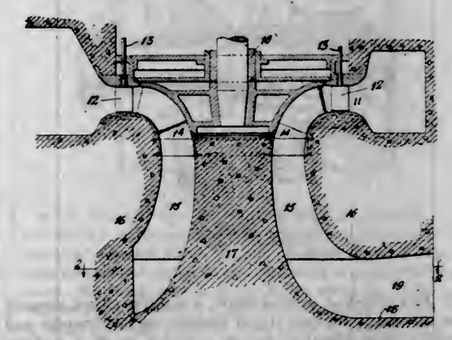
1. In an electro-therapeutic apparatus, an induction coil including primary and secondary windings, and an applicator permanently connected with one terminal of the secondary winding, a condenser interposed between said terminal or secondary winding and the applicator, means for short-circuiting said condenser, a plurality of separate electrical connectors, means electrically connecting said connectors with the opposite end and intermediate portion of the secondary winding, and a second applicator selectively engageable with the electrical connectors.

1,681,709. PISTON. ADOLPH L. NELSON, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich. Filed Mar. 22, 1926. Serial No. 96,379. 4 Claims. (Cl. 74—108.)



1. The method of making a piston having opposite bearing surfaces and struts of a material different from the bearing surfaces and with a predetermined rate of expansion, which comprises spacing the struts such a distance apart and spacing their end such a distance inwardly from the piston circumference that the spacing of the struts together with the coefficients of expansion of the materials of the skirt and struts cooperate to produce a predetermined rate of expansion diametrically of the bearing portions.

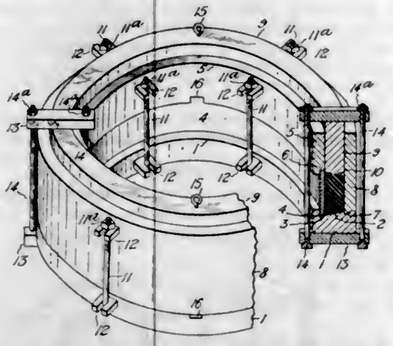
1,681,710. MATCH-BOX HOLDER. ROBERT M. OSTRANDER, Los Angeles, Calif. Filed June 15, 1927. Serial No. 199,005. 1 Claim. (Cl. 206—19.5.)



An advertising display device comprising a container formed of elastic material and provided with spaced apart channels for the reception of the edges of a display card, and spaced apart flanges formed as an integral part of the container and adapted to serve as an attaching clamp to hold the container upon the spoke of a vehicle steering wheel, the container being open at one end so that a match box may be inserted in or withdrawn from the container.

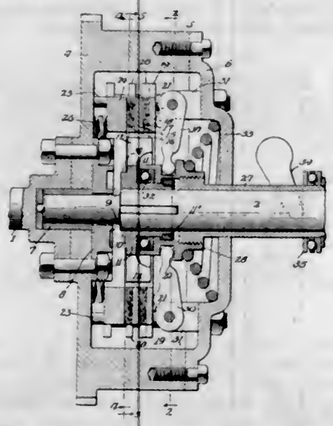
1,681,711. HYDRAULIC POWER SYSTEM. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed Dec. 4, 1919. Serial No. 342,383. 62 Claims. (Cl. 253—117.)

1. A system for converting hydraulic power into mechanical power comprising means for passing water through a turbine runner and discharging it therefrom at a velocity so related to the static discharge head on the runner that the absolute discharge pressure on the runner is only sufficient to insure continuity of the water column.



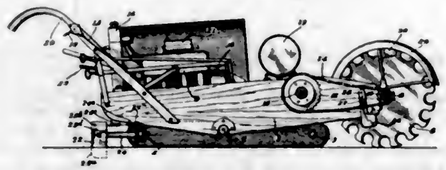
1,681,712. HYDRAULIC TURBINE. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed Mar. 1, 1923. Serial No. 622,016. 38 Claims. (Cl. 253—117.)

1. A turbine having a runner discharging the flow with a whirl, and a draft tube comprising an inner and an outer wall forming between them an annular passage which



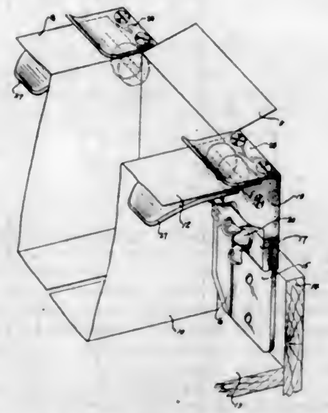
entirely receives said whirling discharge, said inner wall conforming to the flow lines from the inner hub and of substantial diameter at the runner hub at least one fourth of the diameter of said outer wall at the discharge from said runner so that the entire flow from the runner is guided at a sufficiently large radial distance from the turbine axis to prevent the water from attaining high angular velocities of rotation around the axis.

1,681,713. MOLD FOR RUBBER TIRES. EDWARD WILLIAM THURLOW, Middle Brighton, Victoria, Australia, assignor to Vulcan Rubber Proprietary Limited, Kensington, Victoria, Australia, a Corporation of Victoria. Filed Mar. 3, 1927, Serial No. 172,344, and in Australia July 13, 1926. 6 Claims. (Cl. 18—42.)



1. A tire mold, comprising a base member the upper surface of which is a molding face, an upstanding ring removably secured to the outer portion of the base, an upstanding ring removably seated on the inner portion of the base, an upstanding ring removably seated on the rim at its upper end, the channel between the said upstanding members being intended to receive the tire material, and a pressure ring adjustable in the channel to compress and mold the tire material.

1,681,714. CLUTCH. WILLIAM E. TULLAR, Chicago, Ill. Filed Sept. 27, 1924. Serial No. 740,241. 7 Claims. (Cl. 192—53.)

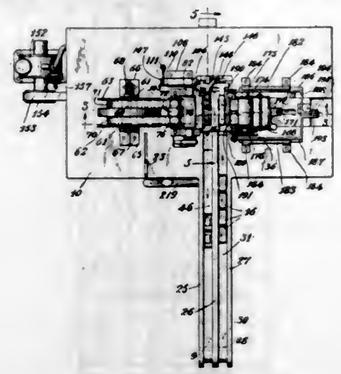


1. In a clutch, a driving shaft, a positive clutch element fast thereon, a friction clutch element carried thereby and movable longitudinally thereof, a driven shaft, a positive clutch element splined thereon to co-act with the positive clutch element on said driving shaft, the surfaces of the clutch elements being adapted to be brought into face contact with each other, a friction driving element carried by said driven shaft and movable longitudinally thereof, and a single means to cause engagement first of said friction clutch elements and then of said positive clutch elements.

1,681,715. ICE-CUTTING MACHINE. WILLIAM HENRY WAY, Ossining, N. Y. Filed May 23, 1923. Serial No. 640,866. 4 Claims. (Cl. 262—20.)

1. In an ice cutting machine comprising a running gear movable over the ice to be cut and a tiltable frame thereon, a saw carried by the frame for rotation in a vertical plane at one end of the tiltable frame; a driving motor mounted on the frame, and means including a differential device carried by the frame, driven by the motor and connected to the opposite sides of the saw to drive the same.

1,681,716. CARTON-MARKING DEVICE. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 2, 1927. Serial No. 180,354. 12 Claims. (Cl. 101—85.)



1. A method of marking a group of cartons for identification, which comprises placing a visible but apparently meaningless mark on a flap of each carton to serve as a point of reference, and simultaneously placing another similar mark on a flap at a distance from the first marking, the spacing of the marks being variable and dependent on the data to be provided thereby.

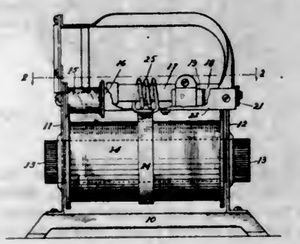
1,681,717. SUBSTITUTED THIURAM POLYSULPHIDES AND PROCESS OF MAKING THE SAME. GEORGE STAFFORD WHITBY, Montreal, Quebec, Canada, assignor to The Roessler & Hasslacher Chemical Co., New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,153. 12 Claims. (Cl. 260—16.)

1. A process for the preparation of a composition of matter consisting in reacting an ammonium salt of a substituted dithiocarbamic acid with a chloride of sulphur corresponding to the general formula S_xCl_2 wherein x represents a whole number other than zero.

5. A composition of matter comprising diphenyl-diethyl thiuram tetrasulphide.

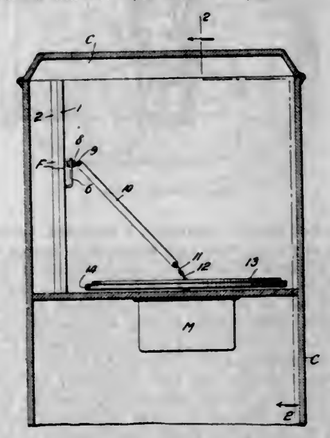
1,681,718. APPARATUS FOR COVERING THE OPENINGS IN PERFORATED COVERS FOR CONTAINERS WITH PAPER OR LIKE MATERIAL. CHARLES A. ALEXANDERSON, New York, N. Y., assignor to Emma W. D. Humphrey, Helen W. D. Mileham, and Guaranty Trust Company, administrators of Eugene W. Durkee, deceased. Filed Aug. 18, 1927. Serial No. 213,963. 8 Claims. (Cl. 216—22.)

1. In an apparatus for covering the openings in perforated covers for containers with paper or like material, the combination of a conveyor for the covers, means for applying adhesive to the surface of the covers, means for supporting a roll or rolls of paper or like material, means for drawing such material from the roll or rolls, means for picking up the forward ends of such material by suction, means for cutting off such picked up portions, means for conveying the covers after receiving the adhesive to a position below and in alignment with the suspended strips of material, means for shutting off the suction, and means for pressing such strips of material upon the surfaces of the covers to which the adhesive has been applied.



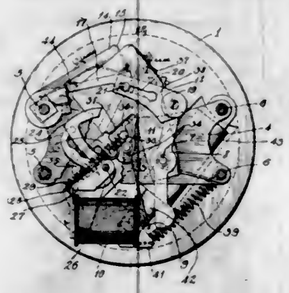
1,681,719. LAWN SPRINKLER. GERALD L. BALDWIN, San Diego, Calif. Filed Aug. 2, 1922. Serial No. 579,218. 5 Claims. (Cl. 299—61.)

1. In a lawn sprinkler, a hollow, reciprocally mounted plunger provided with relatively long, narrow, partially vertical and partially horizontal, angularly positioned slots extending outwardly from the middle portion thereof, whereby a revoluble motion is imparted to said plunger by the efflux of the water from said slots, and a bevel-headed screw mounted centrally in said plunger contiguous to said slots positioned so that the water impinges upon said head to regulate and direct the flow of water from said slots.



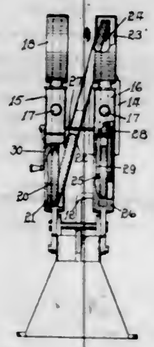
2. In a lawn sprinkler, a hollow nozzle member provided with a central threaded aperture and with relatively long, narrow slots opening into said aperture and directed outwardly and upwardly on an angle to the vertical axis of said nozzle member from the inner portion of said nozzle at its upper end, and a spray adjusting screw mounted in said aperture for adjusting the effective size and shape of the inlet to said slots.

1,681,720. SYNCHRONOUS ELECTRIC VIBRATOR. JOSEPH R. BARNHART, Cleveland, Ohio, assignor to Walter M. Scott, Cleveland, Ohio. Filed Feb. 10, 1923. Serial No. 618,280. 17 Claims. (Cl. 175—365.)



1. In a combined rectifier and transformer, a vibratory armature supported in series with the primary magnetic flux of said transformer and tuned out of resonance with the frequency thereof, in combination with means additional to the magnetic circuit of the transformer itself for impressing two additional magnetic fluxes thereon, one of which is uni-directional and the other of which is alternating having a frequency equal to that of the primary flux and a phase displaced therefrom.

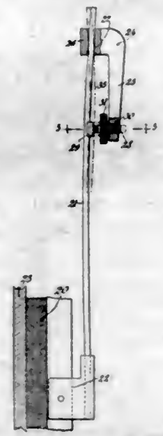
1,681,721. APPARATUS FOR RECORDING AND REPRODUCING SOUND. CHARLES RLIEBERGER, New York, N. Y., assignor of forty-five per cent to Adolph R. Thomas, New York, N. Y. Filed Mar. 28, 1923. Serial No. 628,196. 9 Claims. (Cl. 181—31–.)



6. A homogeneous acoustic diaphragm having a thick flat section at the center and a plurality of thin flat sections surrounding said thick section, the area of said thick section being about equal to the combined area of the thin sections, the thick section being about twice as thick as the thin sections, and each of said thick and thin sections being of approximately uniform cross-section, whereby said thick section acts like a stiff diaphragm most sensitive to one band of frequencies and said thin sections act like a flexible diaphragm most sensitive to a different band of frequencies.

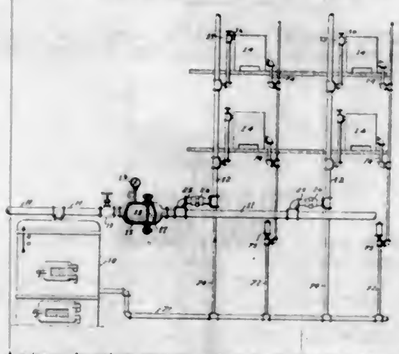
1,681,722. CIRCUIT CONTROLLER. ALFRED W. BURKE, Pelham Manor, N. Y. Original application filed Aug. 13, 1921, Serial No. 491,206, Patent No. 1,565,546. Divided and this application filed Sept. 15, 1925. Serial No. 56,429. 8 Claims. (Cl. 200—106.)

1. In an apparatus of the class described, the combination of a starting switch, a running switch, manually operable means for closing said switches, a locking lever for locking the running switch closed, means for opening the starting switch while the locking lever is in operative position and means for preventing closure of the starting switch until said locking lever has been released.



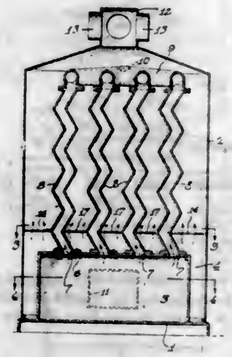
1,681,723. MOTION-PICTURE APPARATUS. ANGELO ROBERT CLAS, Toledo, Ohio. Filed Nov. 3, 1924. Serial No. 747,409. 1 Claim. (Cl. 88—24.)

In a motion picture apparatus, a standard, bracket arms extending upwardly from said standard in spaced relation, lanterns mounted on the upper end portions of said arms and arranged in transversely offset relation, a pair of housings supported by said base and positioned in advance of each lantern, each housing having an opening thru which light rays from the adjacent lantern may pass, a plurality of means for guiding a film downwardly in one housing past the respective opening and then diagonally upward to the other housing and thence downwardly past the respective opening, a shaft journaled in and projecting through said housing, a toothed wheel within each housing on said shaft for imparting feeding movements to the film, and means for rotating said shaft.



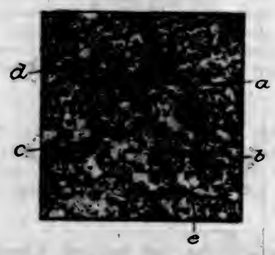
1,681,724. WINDSHIELD-WIPER ADJUSTER. JOSEPH DEMAND, New York, N. Y., assignor to D. & R. Auto Products Company, Inc., Jamaica, N. Y., a Corporation of New York. Filed Mar. 10, 1924. Serial No. 698,025. 5 Claims. (Cl. 15—255.)

1. The combination, with a wiper having a flexible supporting arm, of an adjusting device therefor comprising a bar having an open channel recessed in one of its lateral surfaces to receive said arm and thereby permit said bar to be applied to said arm by relative lateral movement and moved lengthwise thereof, the walls of said channel affording contacting surfaces whereby angular movement of said bar in the plane common to the axes of said bar and arm is restrained, a jack mounted in said bar at a distance from



its recessed portion, said jack having a head provided with a groove to receive said arm and means for effecting relative movement between said head and said bar in a direction such as to bind said arm in the recessed portion of said bar and flex the intervening portion of said arm to effect an adjustment.

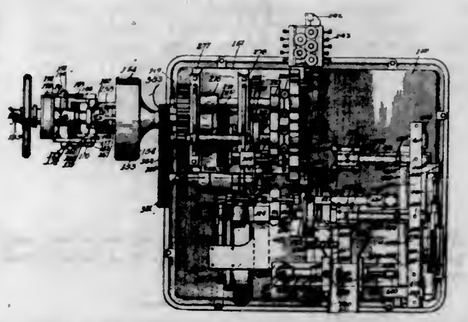
1,681,725. STEAM-HEATING SYSTEM. JAMES A. DONNELLY, Brooklyn, N. Y., assignor to Warren Webster & Company, a Corporation of New Jersey. Filed June 18, 1924. Serial No. 720,829. 4 Claims. (Cl. 237—67.)



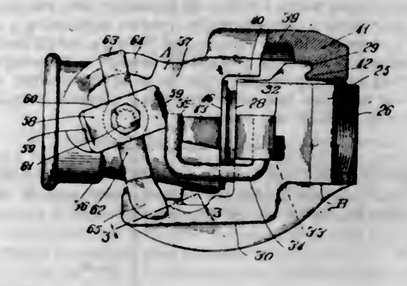
1. A steam heating system, wherein there are associated and combined, a source of steam supply, a substantially horizontal steam main, a plurality of branching mains or risers respectively opening from the steam main at different distances from the source of steam supply, a plurality of groups of radiators of which a separate group is connected to each of the branching main or risers and receives steam therefrom, fixed orifices between the several radiators of each group and the respective branching mains or risers to cause the steam therefrom to be supplied to the radiators in predetermined quantities, means in communication with the source of steam supply for initially supplying the system as a whole with steam of a predetermined quantity required for all of the radiators thereof, means having orifices of predetermined area arranged in the respective branching mains between their connection with the radiators and the substantially horizontal steam main and each such orifice proportioned as to area to insure the passage of the predetermined quantity of the steam required by the radiators of the corresponding group.

1,681,726. HEATER. STANLEY R. DU BRIE, Grosse Pointe Park, Mich. Filed Mar. 21, 1928. Serial No. 263,354. 5 Claims. (Cl. 126—116.)

1. A heater comprising a casing, a fire box therein, flues communicating with said fire box and extending upwardly into said casing, an air inlet to the casing, and baffles between said flues, said baffles closing the spaces between the flues at the ends of said spaces and leaving clearance intermediate said ends.



1,681,727. ARTIFICIAL CAST STONE AND PROCESS OF PRODUCING THE SAME. FREDERIC M. EMERSON, Boston, Mass., assignor to Emerson & Norris Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1927. Serial No. 212,048. 23 Claims. (Cl. 18—60.)



1. The process of casting artificial stone to produce a revealed, textured surface which consists in preparing a sand mold, roughening a surface thereof corresponding to a revealed face of the piece to be cast by applying thereto irregularly arranged granular particles to produce a mold surface presenting irregularly arranged elevations, fluid coating said mold surface by spattering or spraying thereon masses of paraffin commingled with an oily fluid, and introducing into the mold a wet, stone-producing compound containing hydraulic cement.

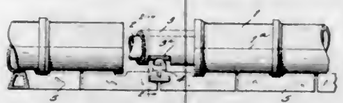
1,681,728. MACHINE FOR MAKING SPIRAL SPRINGS. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Apr. 28, 1922. Serial No. 557,121. 51 Claims. (Cl. 140—78.)

1. In a spiral spring making machine, the combination of feed rolls, means for continuously operating said feed rolls to move forward a length of wire, a pivotally mounted bender engaging said wire fed forward by said rolls, means for swinging said bender on its pivot as it engages said wire so as to shape the same into helical form, means for temporarily arresting the effect of said feed rolls, while maintaining them in rotation, a pitch controller, means for moving said pitch controller to regulate the pitch of the spring convolutions, and a cutting device operative during the period of rest of the wire.

1,681,729. HOSE COUPLER. EGBERT H. GOLD, Evanston, and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed June 21, 1926. Serial No. 117,431. 9 Claims. (Cl. 285—68.)

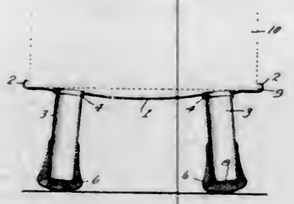
1. In combination with a hose coupler comprising a head formed on one side with a cam lug and an arm projecting forwardly from the other side of the head and adapted to engage a cam lug of a mating coupler, the mating couplers being engaged with one another by a downward swinging movement of the forwardly projecting arms, a locking member pivoted to the top of the hose coupler for rotation to locking position so that one end thereof will engage the upper surface of the arm of the mating coupler and move along the arm toward its free end so as to gradually force the arm downwardly into engagement with the cam lug and lock it in this position.

1,681,730. NOVELTY BOX. THOMAS S. GORTON, Jr., Evanston, Ill. Filed Jan. 25, 1927. Serial No. 163,518. 3 Claims. (Cl. 206—446.)



1. A one-piece novelty box made up from a one piece blank having portions thereof adapted for interlocking to provide a bottom, sides, an apertured top, also a closure therefor which is both foldable down over the top or extensible vertically therefrom, a leg having its base con-

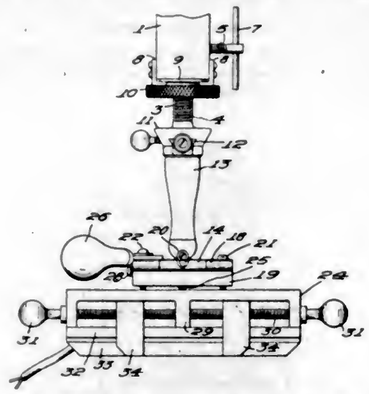
nected to the top and swingable thereupon about an axis which is angular with respect to the folding axis of the closure, and adapted to lie thereunder when the closure is



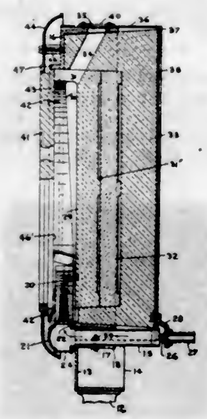
folded down, and means whereby the leg when erect may lock with the closure to hold the same in a vertical position, substantially as described.

1,681,731. CONDUIT CONSTRUCTION FOR UNDERGROUND PIPES. CHRISTIAN GOTTWALD, Cleveland, Ohio, assignor to The Ric-Wil Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1922. Serial No. 549,236. 11 Claims. (Cl. 137—75.)

1. In combination an underground conduit for pipes comprising a conduit composed of abutting sections and having openings in the bottom thereof, conduit supporting members upon which sections of the conduit rest, and means for supporting a pipe within the conduit comprising a plurality of supporting structures each having a saddle portion extending transversely beneath the conduit and having end portions engaging opposite side faces of the conduit supporting members and pipe supporting portions extending upwardly through said openings.



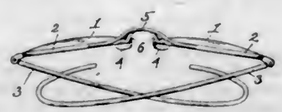
1,681,732. SUPPORT FOR COMPUTING MACHINES. DUDLEY D. GRAY, Lakewood, Ohio. Filed Sept. 2, 1925. Serial No. 54,165. 6 Claims. (Cl. 248—30.)



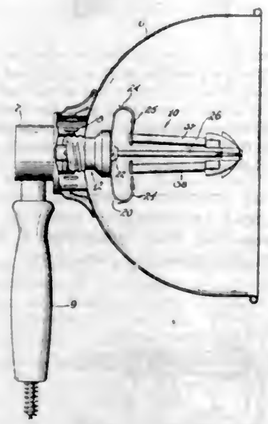
1. An attachment for computing machines comprising a saddle of resilient sheet metal having grips at its opposite ends for cooperation with the base of the computing machine, said plate being curved from end to end, and legs depending from said plate adjacent the ends thereof.

1,681,733. PALETTE FOR GOLD-STAMPING PRESSES. JOSEPH KAHN, Chicago, Ill. Filed Nov. 19, 1927. Serial No. 234,430. 4 Claims. (Cl. 101—27.)

1. In a palette for gold stamping presses, a carriage block, a second block hinged thereto, a handle fulcrumed to said carriage block for movement into and out of engagement with said second block, a post fixedly secured to said second block, a threaded plunger shaft for releasably carrying said post, means for adjustably securing said plunger shaft to the press plunger, a typeholder, adjustable connection between said typeholder and carriage block whereby the typeholder is supported in spaced relation to the carriage block, and a heater for said typeholder.

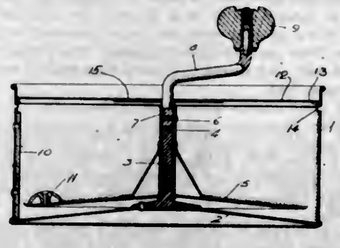


1,681,734. GAS HEATER. WALTER KENNEDY, Cliffside, N. J. Filed Feb. 8, 1923. Serial No. 617,792. 13 Claims. (Cl. 126—92.)



1. In a heater of the class described, a heat radiating element substantially circular upon its horizontal axis, a burner adjacent the lower front of said element, said burner at its outlet curved substantially in conformity with the curvature of said element.

1,681,735. SPECTACLES. LOUISE C. KING, Cleveland, Ohio. Filed May 29, 1926. Serial No. 112,503. 2 Claims. (Cl. 88—43.)

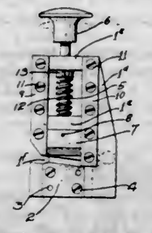


1. Spectacles comprising a pair of lenses having rims, a bridge bar attached at its opposite ends to top portions of the rims, said bar being bowed outwardly with respect to the planes of the lens rims, and a pair of brace bars extending downwardly and inwardly from the bowed portion of the bridge bar, one to each of the lens rims, said bars being bowed outwardly between the lens rim and bridge bar, said bridge and brace bars being formed integrally and being bendable in a plurality of directions to permit universal adjustment of the lenses with respect to each other, the material of said bars being sufficiently stiff to hold the lenses in the positions to which they are adjusted.

1,681,736. THERAPEUTIC LAMP. ANDREW A. KULL, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed July 26, 1926. Serial No. 124,833. 10 Claims. (Cl. 174—177.)

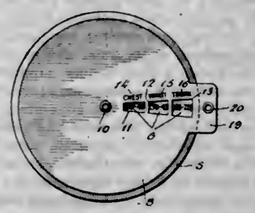
1. In a therapeutic lamp in combination with a reflector having a screw plug receptacle associated therewith, of a radiant energy emitting unit adapted to be screwed into said receptacle to make electrical contact therewith, said unit comprising a plurality of resistor rods forming a path for an electric current, and means for holding said rods in position, including a head having a plurality of heat radiating fins positioned so as to form a minimum obstruction to the emission of radiant energy from said rods and reflector.

1,681,737. PEELING MACHINE FOR POTATOES AND THE LIKE. JOHN TEODOR LINDAHL, Stockholm, Sweden. Filed Jan. 7, 1927, Serial No. 159,663, and in Sweden June 2, 1926. 2 Claims. (Cl. 146—49.)



1. A peeling machine for potatoes and the like comprising a drum, grinding means on the inside of said drum, a conical bottom in said drum, a vertical stem fixed at the center of said bottom, a tube pivotably mounted on said stem, a conical disc fixed at the lower end of the said tube, grinding means on the upper side of the said disc, a crankshaft provided with a crank and a handle, means for detachably fixing the said shaft to the upper part of the said tube, the lower end of the said shaft bearing against the upper end of the stem, a loose cover plate in the upper part of the drum and a central opening in said cover for permitting it to be removed without removing the rotating parts.

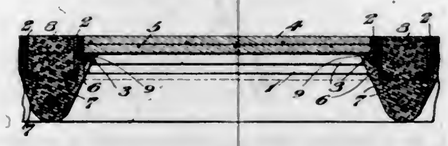
1,681,738. CIGARETTE-MAKING APPLIANCE. OSWALD GWILLIM MANDERSON, Footscray, Victoria, Australia, assignor of one-half to Benjamin Williams, Yarraville, Victoria, Australia. Filed June 5, 1925, Serial No. 35,080, and in Australia Feb. 12, 1925. 3 Claims. (Cl. 131—5.)



1. In a cigarette making appliance having a tubular mould, a cap having an indented end to fit and remain in the mouthpiece end of the mould until the rest of the mould has been charged with tobacco.

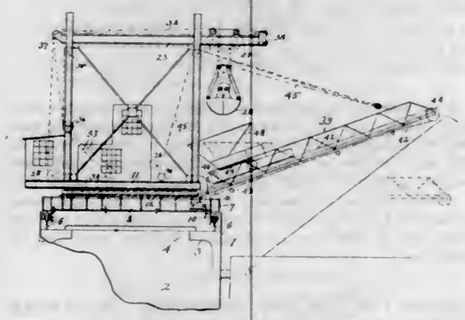
1,681,739. CUTTING DEVICE. DENIS P. MCLAUGHLIN, San Diego, Calif. Filed Mar. 4, 1926. Serial No. 92,190. 5 Claims. (Cl. 164—47.)

1. In a device of the class described, a base member having a backwardly and downwardly inclined supporting surface at its upper side and an upwardly extending ledge at the rear portion of said supporting surface, said base member having a cutting edge forwardly of said ledge, and a cutting member reciprocally supported by said base member with its cutting edge normally positioned above the cutting edge of said base member and inclined with respect thereto.



1,681,740. DEVICE FOR COMPUTING UNDERWEAR SIZES. NORMAN G. MEYERS, New York, N. Y., assignor to The B. V. D. Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 22, 1926. Serial No. 103,743. 2 Claims. (Cl. 40—70.)

1. A device for computing underwear sizes comprising a main member provided upon one face with a table of measurements arranged in related groups and upon its oppo-

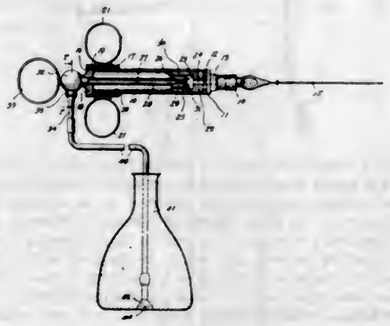


site face with a table of underwear sizes related to each group of measurements and a device connected with said member and covering the opposite surfaces thereof, said device being movable relatively to said member and being provided with apertures located upon a common radius upon opposite surfaces of said device to expose to view on one face one group of said table of measurements and to coincidentally expose to view on the opposite face the corelated size item in the table of sizes.

1,681,741. SHIELD FOR SKYLIGHT AND FLOOR-LIGHT CONSTRUCTION. LOGAN WILLARD MULFORD, Kew Gardens, N. Y. Filed July 20, 1927. Serial No. 207,080. 1 Claim. (Cl. 94—28.)

In a device of the character stated, a lens holder comprising an outer vertical wall forming a shield and an internal inwardly projecting gutter adapted to support a lens, said outer wall being continued below the plane of said gutter and being rearwardly and upwardly deflected at its bottom terminal to form anchoring means and a body of concrete completely enclosing said anchoring means, shield and the underside of said gutter, whereby said shield, anchoring means and gutter are prevented from corrosion.

1,681,742. BOAT UNLOADER. DONALD S. MUNN, South Euclid, Ohio, assignor to The McMyler Interstate Company, Bedford, Ohio, a Corporation of Ohio. Filed May 20, 1925. Serial No. 31,488. 2 Claims. (Cl. 214—14.)

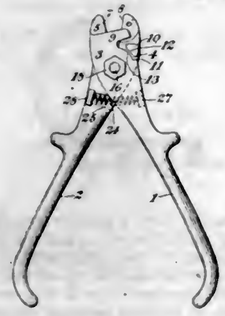


1. The combination with a vessel, of a carriage mounted on the deck of said vessel, said carriage spanning the hatch of the vessel and being movable longitudinally of the vessel, a turntable mounted on said carriage and having an opening adapted to be positioned over the hatch, said carriage and turntable having open central portions, an outwardly extending boom secured at its inner end to the turntable, a conveyor on the boom, a feed hopper supported above the inner end of the conveyor, a superstructure carried by the turntable, a track carried by the superstructure over the open central portion of the turntable and carriage and projecting over said hopper, a trolley on said track, means for shifting the trolley on the track from a position over the open central portion of the turntable to a position over said hopper, a hoisting member suspended from the trolley, means for raising and lowering said member through the opening in the turntable and for discharging the same into the hopper, and means for adjusting said boom and turntable.

1,681,743. CONTAINER-CAP MEANS. CONRAD N. PETERSON, Camp Kearney, Calif. Filed May 26, 1924. Serial No. 715,934. 6 Claims. (Cl. 220—84.)

1. In a container cover means, a receptacle having a throat-like extension provided with a ridge and an inwardly tapered end formed on the upper end of the said throat-like extension, a bar pivotally mounted near the lower end of the said throat-like extension and a considerable distance from and below said ridge and a cover hinged on said bar adapted to fit on said ridge and inwardly tapered end.

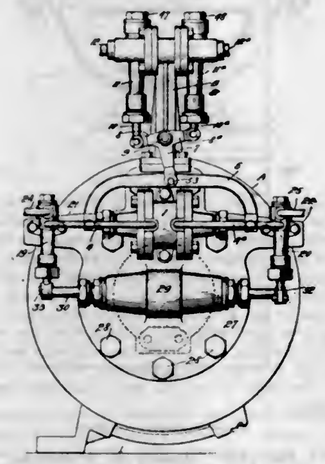
1,681,744. LOCAL-ANÆSTHETIC SYRINGE. GEORGE P. PITKIN, Bergenfield, N. J. Filed June 7, 1927. Serial No. 197,042. 2 Claims. (Cl. 128—220.)



1. The herein described anæsthetic syringe comprising a barrel having a needle connection at one end, a piston slidable within the barrel, said piston having a socket within it, a tubular rod connected to the piston, the end of the rod adjacent to the piston constituting a valve seat, a valve seated loosely within the piston socket and adapted to seat against said seat, means to reciprocate the piston and rod to cause fluid to pass through the rod and piston past the valve, an abutment pin being provided to prevent the valve from seating closely against the piston remote from said seat, and means to convey fluid from a receptacle to said piston rod.

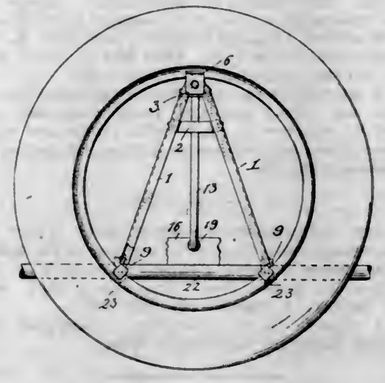
1,681,745. COATING FOR TEXTILE THREADS. EDWARD POHL, New York, N. Y., assignor to Neutrasol Products Corporation, a Corporation of Delaware. Filed July 27, 1925. Serial No. 46,486. 11 Claims. (Cl. 134—22.)

2. A textile fibre or thread having a coating comprising finely divided beeswax intimately mixed with a saponified wax.



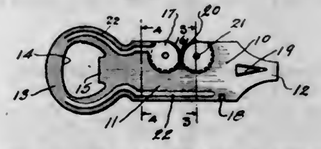
1,681,746. CLIPPER. FREDERIC H. RAUH, South Orange, N. J., assignor to J. Wiss & Sons Co., Newark, N. J., a Corporation of New Jersey. Filed Sept. 1, 1926. Serial No. 132,924. 4 Claims. (Cl. 30—24.)

1. A clipper embodying a pair of relatively-crossed, jawed shanks provided with cooperating cutting edges, positioning means connecting the jawed shanks, the inner face of one shank being provided with an annular flange having a substantially vertical outer face, and the inner face of the other shank being provided with a complementary, annular



groove having a substantially vertical outer face to receive the annular flange the outer face of the groove making a close sent for the outer face of the flange, the inner face of the flange being spaced from the inner face of the groove, forming a pivotal connection between the shanks.

1,681,747. AUTOMATIC RECEIVER PUMP. HOWARD G. SHORTT, Carthage, N. Y., assignor of one-half to Stebbins Engineering and Manufacturing Company, Watertown, N. Y., a Corporation of New York. Filed Nov. 18, 1926. Serial No. 149,159. 4 Claims. (Cl. 103—246.)



1. In an alternating mechanism of the kind described, the combination of a tank having inlet and outlet valves controlling an inlet and outlet opening, a buoyant member in the tank which rises and falls in the liquid, a cylinder and its piston reciprocable by fluid pressure, air valve devices, having exhaust means, means whereby the buoyant member actuates the air valve devices to control the flow of pressure to said cylinder, one valve being operated when the buoyant member is at the upper limit of its travel, and the other valve being operated when the said member is at the lower limit of its travel, steam and exhaust valve mechanisms arranged in connection with a common passage to the tank, piston rods on opposite sides of the aforesaid piston, a yoke connecting them, a rocker arm engaging the yoke and acting in connection with said steam and exhaust valve mechanisms, so that the latter may be actuated in correspondence with the changing level of the liquid within the tank, the steam valve when the tank is full of liquid, and the exhaust valve when the tank is empty, together with relief valves carried by the steam and exhaust valves.

1,681,748. TIRE CARRIER. FREDERIC W. SLACK, Cleveland, Ohio, assignor, by mesne assignments, to The Peerless Motor Car Corporation, Cleveland, Ohio, a Corporation of Virginia. Filed July 25, 1925. Serial No. 45,983. 6 Claims. (Cl. 224—29.)

1. A tire carrier comprising a V-shaped frame formed by a pair of diverging bars secured together at their converging ends, rim retaining means carried by the frame at the apex of the V and at the free ends of said bars, and means for rigidly securing said V-shaped frame to an automobile and for adjusting the free ends of the bars one with respect to the other.

1,681,749. COMBINATION TOOL. ARTHUR SMITH, Chicago, Ill., assignor, by direct and mesne assignments, to The Barrett Bindery Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1925. Serial No. 62,843. 1 Claim. (Cl. 76—87.)

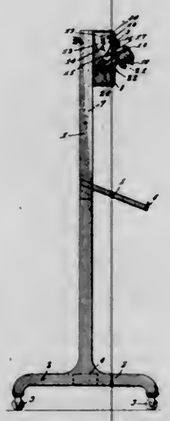
In a device of the class described, a sheet-metal body member having a slot opening through one edge thereof, the said body member having offset portions defining pockets at the opposite sides of the slot, blade-sharpening disks mounted for free rotation within the said pockets and positioned in a common plane at opposite sides of the slot with the relatively adjacent sides of their peripheries substantially in contact, the pockets being of a depth substantially equal to the thickness of the disks whereby the outer faces of the disks will be substantially flush with the face of the body member in which the pockets are formed.

1,681,750. SYNTHESIS OF ORGANIC COMPOUNDS. HENRY HERMAN STORCH, New York, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed May 16, 1927. Serial No. 191,924. 12 Claims. (Cl. 260—156.)

1. Process for the synthesis of methanol which comprises passing a mixture of hydrogen and carbon monoxide over a heated catalyst comprising copper obtained from a cuprammonium compound.

1,681,751. SYNTHESIS OF METHANOL. HENRY HERMAN STORCH, New York, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed May 16, 1927. Serial No. 191,925. 20 Claims. (Cl. 260—156.)

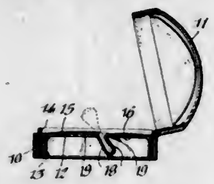
1. A catalyst for the synthesis of methanol from hydrogen and carbon monoxide which comprises copper and a fluoride of a metal of the group consisting of calcium, barium, strontium and magnesium.



1,681,752. SYNTHESIS OF METHANOL. HENRY HERMAN STORCH, New York, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed May 27, 1927. Serial No. 194,855. 6 Claims. (Cl. 260—156.)

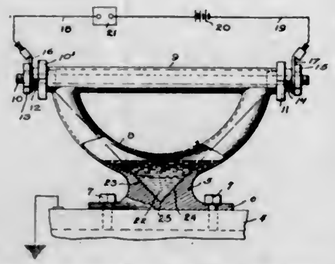
2. A catalyst for the production of methanol from hydrogen and carbon monoxide which comprises copper formed by reduction of cupric oxide precipitated from a cuprammonium salt solution in intimate admixture with magnesium hydroxide.

1,681,753. SYNTHESIS OF METHANOL. HENRY HERMAN STORCH, New York, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed June 4, 1927. Serial No. 196,631. 7 Claims. (Cl. 260—156.)



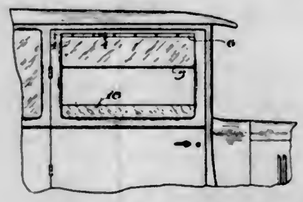
1. A catalyst for the production of methanol which comprises palladium and chromic oxide.

1,681,754. TELEPHONE STAND OR EQUIPMENT. JOHN STRAUB, Ashley, N. Dak. Filed July 29, 1926. Serial No. 125,746. 1 Claim. (Cl. 179—178.)



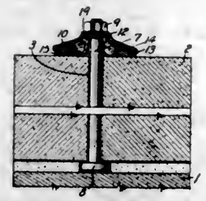
In combination, a telephone box including a receiver arm switch projecting through one side thereof and adapted for vertical movement, a substantially L-shaped receiver having one arm extended laterally from and pivotally supported by said side and its other arm projecting forwardly of said side, a transmitter connected to the front of the box, a vertically disposed latch pivoted intermediate its ends to said side in proximity to said switch, positioned over the pivoted end of the receiver and having at its upper end a rearwardly extending bill movable into the path of movement of said switch arm to latch it in lowered position, a spring connected with the lower end of the latch and to said side of the box and normally acting to maintain said bill in the path of said switch, and a finger engaging lateral extension on the latch at its upper end, forwardly of the bill above the receiver and accessible from the front of the box.

1,681,755. JEWELRY BOX. RUDOLPH J. WARNER and JOSEPH SCHAEFER, Buffalo, N. Y., assignors to Warner Jewelry Case Company, Buffalo, N. Y., a Corporation of New York. Filed June 24, 1926. Serial No. 118,232. 4 Claims. (Cl. 206—76.)



1. The combination with a jewelry box, of a block fitted in the same and consisting of a rigid top plate and a depending rim stamped in one piece, said top plate having a slot, and a ring-holder carried by said plate and having its receiving end arranged in said slot, said holder consisting of a strip of resilient material doubled upon itself to form a pair of jaws, one of said jaws being secured at its free end to the top plate and the other being detached therefrom and free to move bodily relative to its companion jaw.

1,681,756. CIRCUIT BREAKER. WALTER G. WHITLOW, Roanoke, Va. Filed May 1, 1926. Serial No. 106,062. 3 Claims. (Cl. 200—52.)



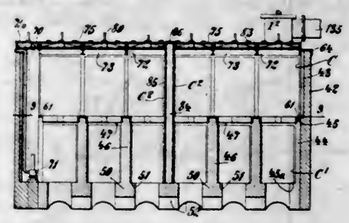
1. A circuit breaker comprising a U-shaped tube having a V-shaped cavity at its central portion extending on the convex side thereof, a base for the tube extending about said cavity whereby the tube is secured to a fixed support, a horizontal tube extending across from one end to the other of the U-tube and communicating at its end with the end portions of the U-tube, perforated insulating bushings in the ends of the horizontal tube, a metallic conductor rod carried through the perforated bushings and extending centrally through the horizontal tube, a circuit connected to the ends of the rod, and a metallic liquid body in the U-tube.

1,681,757. AWNING. HORACE G. WHITMORE, Chicago, Ill. Filed Aug. 10, 1927. Serial No. 211,929. 3 Claims. (Cl. 296—44.)

2. An automobile awning of the character described, comprising a supporting frame, a shield member connected thereto to project laterally outward and downwardly from said frame, a mounting plate slidably mounted on said frame and adjustable means connecting said mounting plate to said frame to move said mounting plate outwardly into engagement with a window opening to support said frame.

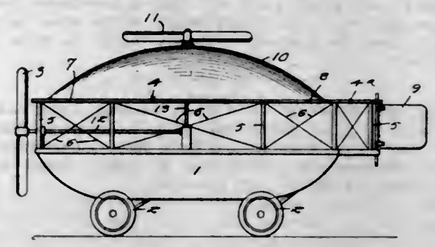
1,681,758. COPING SEAL. THOMAS WIGHT, Kansas City, Mo. Filed Jan. 26, 1927. Serial No. 163,659. 6 Claims. (Cl. 72—86.)

1. The combination with coping blocks of a sealer comprising a strip having tapering sides, the sides inbent and downwardly inwardly projected forming bearing flanges, packing elements positioned outwardly of said flanges, and bolts engaged with the strips and with the blocks and compressing the strip upon the packing elements.



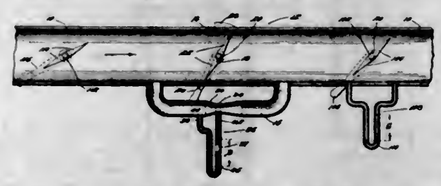
1,681,759. MOSAIC TOY. LENA GRACE APPLEY, St. Paul, Minn. Filed May 28, 1926. Serial No. 112,273. 3 Claims. (Cl. 35—9.)

1. A mosaic toy of the character described, comprising a background having cut-away portions therein, word indicia adjacent said cut-away portions, and pictured representations removably insertible in said cut-away portions, the pictured representations being described by the word indicia adjacent the cut-away portions of the background in which they are insertible.



1,681,760. APPARATUS FOR THE MANUFACTURE OF SODIUM SULPHATE AND HYDROCHLORIC ACID. EMANUEL V. BENJAMIN, New Orleans, La., assignor to Myles Salt Company, Limited, New Orleans, La., a Corporation of Louisiana. Filed Jan. 2, 1925. Serial No. 128. 3 Claims. (Cl. 23—284.)

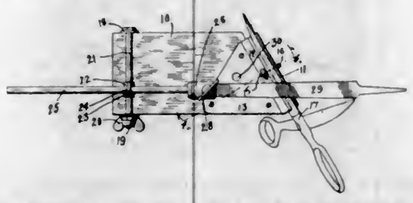
2. In an apparatus of the character described the combination of a decomposing chamber comprising outer vertical walls having formed therewith upper ledges and lower ledges, vertical cross walls in the chamber between said outer walls extending from the bottom of the chamber upwardly a predetermined distance, said cross walls having ledges formed therewith on the same horizontal plane with the lower ledges of the outer walls, and the top level of the cross walls in the same plane with the upper ledges of the outer walls of the decomposing chamber, said cross walls having openings at their lower ends, cross beams extending between the outer walls at their upper ends, detachable



covers for the decomposing chamber supported on said beams and the top ends of the outer walls, removable crates for the material to be treated, supported on the upper ledges of the outer walls, and upon the top faces of the cross walls and the lower ledges of the outer and inner walls, means to introduce a reacting agent into the decomposing chamber and an outlet for gases connected to the decomposing chamber.

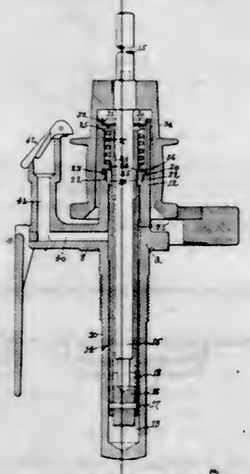
1,681,761. SAFETY AEROPLANE. HARVEY D. BLASI, Detroit, Mich. Filed Aug. 12, 1926. Serial No. 128,787. 1 Claim. (Cl. 244—12.)

An aeroplane having a wing of substantially diamond formation in plan and provided at its widest part with an upstanding hollow portion of substantially semi-spherical formation.



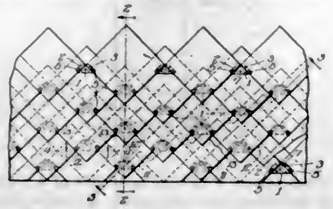
1,681,762. PROPORTIONATE METER. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 8, 1924. Serial No. 736,578. 12 Claims. (Cl. 73—68.)

2. A meter for metering the rate of flow of a fluid in a conduit comprising in combination, a main pipe line, a line containing pressure differential producing means connected in shunt thereto, adjustable means to produce a variable resistance in said main line between the terminals of said shunt line to proportion the flow between said shunt and main lines calibrated to indicate the flow in said shunt and main lines, means responsive to the pressure differential produced in said shunt line, and means actuated by said pressure differential responsive means to automatically adjust said flow proportioning means to regulate the resist-



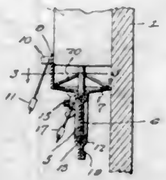
ance in said main line to produce a constant differential in the shunt line whereby the calibrated adjustable resistance producing means may indicate the total rate of flow through said shunt and main lines so long as the proportioning means is open.

1,681,763. SHEAR-SHARPENER VISE. FRANK EATON, Des Moines, Iowa. Filed Apr. 26, 1926. Serial No. 104,786. 2 Claims. (Cl. 76—82.)



2. A shear sharpening device comprising a base, a vise mounted on one end thereof and arranged at an angle relative to the sides of the base, a guide rod extending across said base from side to side, a sleeve thereon capable of movement from one end of said guide rod to the other end thereof, a file engaging rod slidably mounted relative to said sleeve, said file engaging rod including a fitting adapted to be secured to one end of a file, said guide rod being supported by arms which are pivotally mounted above the base and are capable of being moved to various angles relative to the base and a bolt extending through said base and said arms for locking said guide rod in any of its adjusted positions, said bolt having a nut thereon which, when tightened causes the arms to frictionally engage the sides of the base.

1,681,764. SPINDLE. EDWARD B. FEASTER, Lowell, and CECIL B. ALMY, Marblehead, Mass., assignors to Saco-Lowell Shops, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1926. Serial No. 158,343. 4 Claims. (Cl. 308—152.)



3. In a spindle, in combination, a bolster housing having a base provided with a lower tubular portion extended downward therefrom to form an oil well, and having an upwardly extended tubular portion open at its upper end and provided within it with a rigid socket member opening upwardly, a bolster for the spindle blade insertible into said housing through said upper tubular member and having its lower end extended into said oil well, a ball member attached to said bolster above the rigid socket member and co-operating with the latter to suspend the bolster within said upper tubular member by a ball and socket bearing, a spring located within said upper tubular member above the ball member and under substantial initial compression to force the ball member into firm contact with its co-operating rigid socket member, and means co-operating with said upper tubular member for retaining said spring in its initially compressed condition.

1,681,765. ROOF AND SHINGLE SECURING MEANS. CARROLL C. FIGGE, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 633,828. 7 Claims. (Cl. 108—33.)

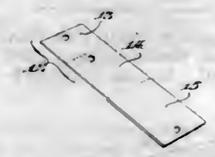
1. A shingle holding means for angular butt shingles having a portion for attachment to a shingle of one course and having projecting ears for compressive engagement with the lower angular end of a shingle in an overlying course, and having lateral projections at an angle to each other for engaging the sides of shingles in an intermediate course.

1,681,766. ELECTRIC-METER GUARD. CHARLES J. GILLEN, Carbondale, Pa. Filed Nov. 9, 1926. Serial No. 147,373. 3 Claims. (Cl. 247—2.)

1. An electric meter guard, comprising a pair of plate members substantially counterpart of each other and formed with offset portions at one side, one of said members having the opposite side formed to project over the adjacent portion of the member in spaced parallel reintion to receive the edge of the other plate member, each of said plate members being formed with wire receiving grooves in predetermined relation, and means for securing said plate members in opposed cooperating relation on an electric meter, whereby the wire connections with the meters are covered to prevent access to the meter terminals.

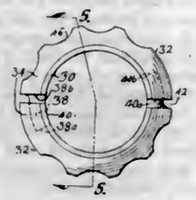
1,681,767. SHADE ROLLER. JOSEPH GOODMAN, Whitneyville, and WILLIAM A. SOMERS, Hamden, Conn., assignors to The Mt. Carmel Manufacturing Company, Mount Carmel, Conn., a Corporation of Connecticut. Filed Aug. 1, 1927. Serial No. 209,694. 7 Claims. (Cl. 166—36.)

1. In a shade roller, a stationary member having a notch or shoulder, an end member having a recess about said stationary member provided with an outer wall comprising



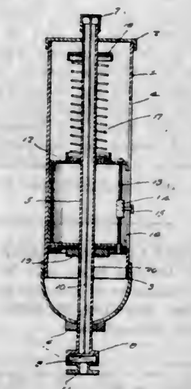
alternately arranged flat and curved portions, a plurality of pawls loosely mounted in said recess so that the end member may turn relative to said pawls, said pawls having hooks adapted to engage in said recess and tails having outer walls to engage the outer wall of the recess and so arranged that when a hook is in the recess the tail of the pawl will engage the adjacent pawl and clamp it against said wall to hold the end member against turning.

1,681,768. STRETCHING FRAME FOR FIBROUS MATERIAL. EMIL GMINDER, Reutlingen, Germany. Filed Nov. 11, 1926, Serial No. 147,652, and in Germany Dec. 19, 1925. 2 Claims. (Cl. 19—130.)



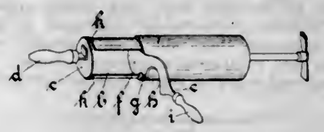
1. A stretching frame for fibrous material including a series of lower rollers, a series of upper rollers mounted for vertical floating movement to permit the passage of fibrous material of varying thickness between the upper and lower rollers, gears connected to said upper rollers, and auxiliary driving gears having their axes disposed at substantially the same elevation as the axes of the upper rollers and meshing with the gears of the upper rollers for driving the latter.

1,681,769. LABEL. CHARLES B. HESTON, Philadelphia, Pa. Filed May 24, 1927. Serial No. 193,783. 2 Claims. (Cl. 40—2.)



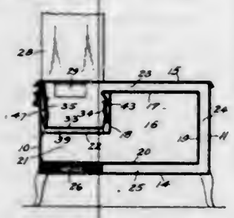
1. A label comprising a plurality of parts detachably connected into a single strip and having one surface coated with adhesive, a like identifying mark on each part, and a reinforcing part secured to the coated surface of one part.

1,681,770. METALLIC PACKING RING. RUDOLPH H. KAUTZKY, Des Moines, Iowa, assignor to Walter L. Kautzky, Des Moines, Iowa. Filed Sept. 6, 1927. Serial No. 217,758. 1 Claim. (Cl. 288—3.)



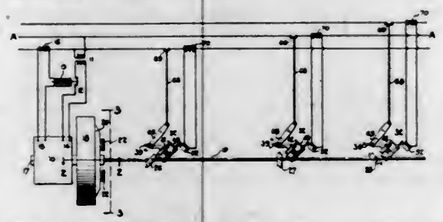
A metallic packing ring comprising a pair of similar sections having overlapping joints with radial shoulders, the inner overlapped joint portions being longer than the outer overlapping joint portions, the cross sectional areas of the inner shoulders being less than the cross sectional areas of the outer shoulders, the inner shoulders abutting for resisting the friction of the packing ring excessive of what is necessary to maintain a tight joint on its rod, and the outer shoulders not abutting to allow the two sections to automatically take up and close uniformly as wear sets in, each section having a side face in a plane at right angles to the axis of the ring and an inclined side face and an intermediate outer face concentric with the axis of the ring, the outer portion of each section being provided with regularly spaced recesses of substantial, circumferential length and of width greater than that of the outer, intermediate face, so as to extend into the inclined face, whereby the ring will be afforded flexibility and the thicker portion thereof will be subjected to inward radial pressure over substantial areas, thus maintaining the packing ring in an undistortable steam-tight condition at all times.

1,681,771. TIRE GAUGE. THOMAS F. KEARNEY, Sharon, Pa. Filed Nov. 2, 1926. Serial No. 145,822. 1 Claim. (Cl. 73—111.)



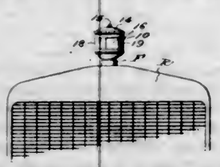
In a pressure gauge a slotted cylinder, a spring pressed piston slidably mounted in said cylinder, an adjusting screw carried by the piston, a screw threaded sleeve carried by and adjustable upon said screw, a stem carried by said sleeve and extending outwardly through the slot in said cylinder, and an indicator on the outer end of the stem.

1,681,772. GREASE-GUN-CHARGING DEVICE. HANS KREIDEL, Wiesbaden, Germany. Filed July 14, 1925, Serial No. 43,541, and in Germany July 17, 1924. 2 Claims. (Cl. 221—475.)



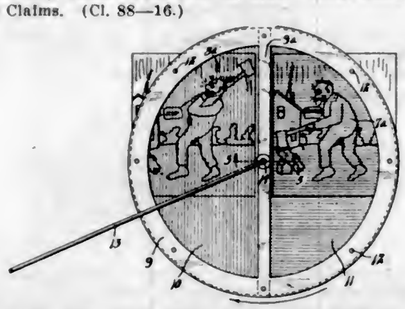
1. A device for filling grease into grease pumps or grease guns comprising a tubular scoop adapted to fit into the cylinder of the grease gun, said scoop being open at one end and closed at the other and having a longitudinal slot extending along the whole length thereof, said scoop also having a transverse slot adjacent its closed end and extending at least 180° about its periphery, and a discharging member having a portion thereof dimensioned to fit within said scoop and to be passed laterally into said scoop through said transverse slot, said member being further provided with a portion for engaging said longitudinal slot and to be guided thereby when said member and scoop are moved relatively and longitudinally of each other for the purpose of discharging the grease from the scoop into the cylinder of the grease gun.

1,681,773. COOKING STOVE. FRANK S. LANG, Seattle, Wash. Filed June 20, 1925. Serial No. 38,425. 2 Claims. (Cl. 126—15.)



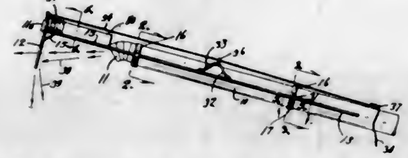
1. In a cooking-stove, a fire-pot, liners therefor, said liners including a front member having ports below an imperforate lower portion, and an imperforate floor member extending between the front and back members, said liners being arranged to provide within the fire-pot two ducts for the admission of air into the combustion space inclosed by said liners, one of said ducts discharging air through the ports of said back member into the upper rear portion of said space and the other duct discharging air through the ports of said front member into the lower front portion of said space and immediately above said floor member, and means for controlling the last mentioned duct whereby air for combustion purposes is supplied exclusively into the upper rear portion of the combustion space.

1,681,774. ALTERNATING-CURRENT SWITCH. FREDERICK W. LEE, Owings Mills, and MYRICK W. PULLEN, Towson, Md., assignors of one-fourth to Leon Edelson, Philadelphia, Pa. Filed Oct. 24, 1925. Serial No. 64,484. 23 Claims. (Cl. 175—294.)



2. In an alternating current circuit controlling system, a circuit breaker device, means normally in engagement with said circuit breaker device, a continuously operating element having definite sequences of mechanical position bearing a direct relation to the phase of the current to be operated upon, and means actuated by virtue of certain predetermined conditions in said system for interconnecting said circuit breaker engaging means and said continuously operating element whereby to disengage said engaging means from said circuit breaker device.

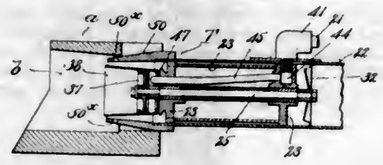
1,681,775. COOLING AND FILLING CAP FOR RADIATORS. FRANK Z. MATHIEU, Midland, Mich. Filed June 22, 1926. Serial No. 117,787. 6 Claims. (Cl. 220—85.)



1. In a radiator cap, a casing formed with a port therethrough, and a sleeve rotatably mounted around said casing over the said port to adjusted positions thereon, said sleeve formed with a port therethrough for adjusted registry with said casing port to form an air passage of desired area, and the said sleeve rotatable to retained position with the port therein in non-registry with said casing port with the sleeve closing the casing port.

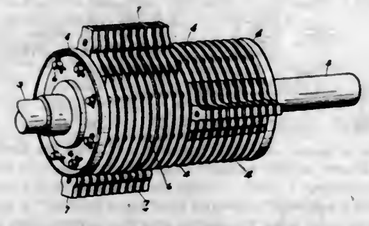
1,681,776. APPARATUS FOR PRODUCING OPTICAL EFFECTS FROM PICTURES. JAMES P. MCDONNELL, Waverly, Minn. Filed Feb. 18, 1925. Serial No. 9,948. 2 Claims. (Cl. 88—16.)

1. Apparatus of the class described for producing apparent action from still pictures, comprising a picture having represented thereon certain figures or characters of one color and certain figures or characters of a different color, a revoluble member having a transparent section of said first mentioned color and a transparent section of said second mentioned color, means for supporting said member for revolution over said picture whereby when said member is revolved and said picture viewed there through said figures will be alternately obscured and intensified and will appear to move.



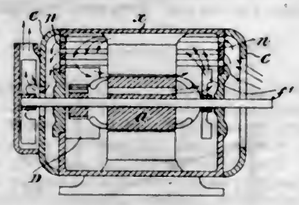
1,681,777. EXTENSION HOOD FOR WIND STACKERS. CHARLIE MCNABB, Scranton, Iowa. Filed Oct. 12, 1925. Serial No. 62,007. 3 Claims. (Cl. 302—10.)

1. In a device of the class described, the combination of a wind stacker pipe, clamp devices mounted thereon in positions spaced from each other longitudinally of the pipe, pairs of spaced bracket fingers on the opposite sides of said clamp devices, rollers between the forward pairs of fingers near the lower parts thereof, rollers between the rearward pairs of fingers between the upper parts thereof, arms slidably mounted between the pairs of fingers on the opposite sides of the pipe, and means for locking said arms in different positions of their longitudinal adjustment on said clamps, a cross plate pivoted to the forward ends of said arms, spaced fingers on said cross plate, yielding means for connecting some of said fingers with said arms, for tending to move the fingers toward one limit of their pivotal adjustment, and a flexible member connected with said plate for moving the fingers against the tension of the yielding means.



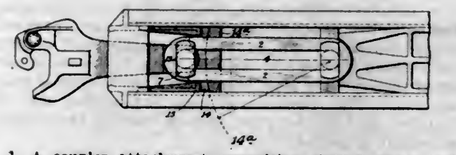
1,681,778. COMBINED MIXING AND COMBUSTION CHAMBER FOR LIQUID-FUEL-BURNING APPARATUS. CARL A. OLSEN, Lynn, Mass., assignor, by mesne assignments, to A T Oil Burner Co., Lynn, Mass., a Corporation of Massachusetts. Filed July 19, 1926. Serial No. 123,562. 7 Claims. (Cl. 158—77.)

1. A liquid fuel burning apparatus comprising a burner tip; means to supply fuel to said tip; means to supply air under pressure to said tip; a pilot; a combined mixing and combustion chamber arranged to surround a portion of said tip and said pilot and to extend a substantial distance therebeyond; said tip having a fuel exit; a nozzle forming part of said tip and surrounding said exit and through which air under pressure passes into said



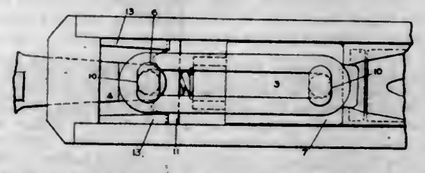
chamber, said nozzle having air passages adjacent its mouth whereby air is directed against the wall of said chamber to thereby pick up and mix with stray portions of fuel which may have broken through the film of air emanating from the mouth of said nozzle so that all the fuel entering said chamber may be carried into a flame emanating from said chamber.

1,681,779. CRUSHING APPARATUS. STANLEY F. OSBING, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 26, 1925. Serial No. 64,889. 8 Claims. (Cl. 83—11.)



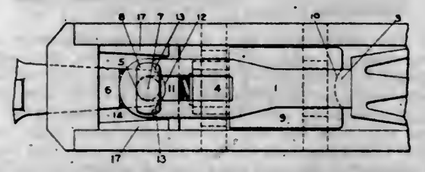
1. In a crushing machine comprising a casing and a rotor within the casing, said rotor comprising the combination with a shaft and a plurality of concentric discs fixed to said shaft in spaced relation longitudinally thereof, of radially projecting arms arranged in longitudinally extending rows equally spaced circumferentially of the rotor each row extending half the length of the rotor from the end opposite the adjacent row as and for the purpose set forth.

1,681,780. DYNAMO-ELECTRIC MACHINE. NICOLO PENSABENE, London, England. Filed Dec. 27, 1927, Serial No. 242,860, and in Great Britain Nov. 25, 1926. 1 Claim. (Cl. 172—36.)



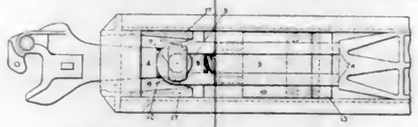
A dynamo electric machine having an enclosing casing with inwardly extending spaced ribs on its inner wall, a shaft and armature positioned centrally of said casing, a split pole field element comprising a plurality of separate magnetic paths supported by said ribs between said casing and armature, a plurality of cooling tubes extending lengthwise of said casing between said ribs, said armature having passages formed lengthwise thereof, means for causing flow of air through said first mentioned tubes for external cooling, and a separate means for circulating air about said tubes and through the passages in the armature in a closed internal cooling circuit.

1,681,781. COUPLER ATTACHMENT. JOHN A. PILCHER, Roanoke, Va. Filed Apr. 18, 1921. Serial No. 462,082. 23 Claims. (Cl. 213—66.)



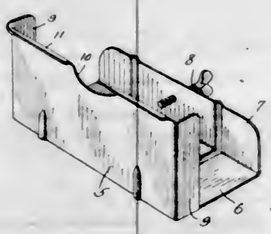
1. A coupler attachment comprising slotted upper and lower links, a coupler having lugs on the top and bottom surfaces of the butt of greater lateral extent than the width of the slots in the links, said lugs being insertable and removable through said slots when arranged at right angles to their normal position, corresponding arc-shaped pulling surfaces on coupler and links permitting, when the links and coupler have been locked together, lateral angling of the coupler relative to the links.

1,681,782. COUPLER ATTACHMENT. JOHN A. PILCHER, Roanoke, Va. Filed Sept. 1, 1922, Serial No. 585,771. Renewed June 26, 1928. 3 Claims. (Cl. 213—66.)



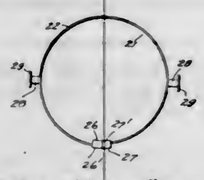
2. In a device of the character described, a coupler attachment comprising a pair of links, a coupler and a cushioning mechanism, trunnions on the coupler butt and on the main portion of the cushioning mechanism engaging said links and permitting, respectively, rotary movement between the coupler and links and between links and cushioning mechanism, and means for holding the links on said trunnions.

1,681,783. DRAFT CONNECTION. JOHN A. PILCHER, Roanoke, Va. Filed Sept. 1, 1922. Serial No. 585,772. 27 Claims. (Cl. 213—72.)



16. A coupler yoke having slotted upper and lower arms, a coupler, the butt thereof having a slot and projection engagement with the forward ends of the yoke arms, a cushioning mechanism, a front follower, the butt of said coupler being so formed that all points on its rear surface lie in a surface of revolution, the forward face of said front follower being formed to cooperate with the rear face of said coupler butt, whereby said front follower may rotate about said coupler butt to permit the easy insertion of said cushioning mechanism.

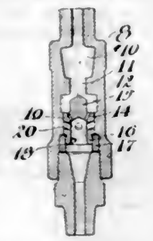
1,681,784. COUPLER YOKE. JOHN A. PILCHER, Roanoke, Va. Filed Sept. 1, 1922, Serial No. 585,773. Renewed Jan. 20, 1928. 8 Claims. (Cl. 213—72.)



1. In a device of the character described, a coupler yoke, having slotted upper and lower arms, a coupler, trunnions on the top and bottom faces of the coupler butt projecting through the slots in the yoke arms, plates above and below the yoke, the plate below engaging the bottom trunnion supporting coupler and yoke and holding the top trunnion near the top plate, thereby limiting the vertical movement of coupler butt.

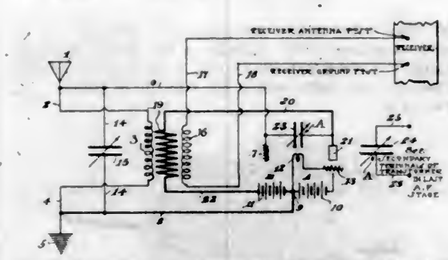
1,681,785. HOLDER. JAMES KING RICHIE, Butler, Pa. Filed July 9, 1927. Serial No. 204,591. 3 Claims. (Cl. 224—29.)

1. An article holder of the class described including a body portion having a bottom, an upstanding member at the forward end of the bottom, said upstanding member having rearwardly extended flanges adapted to engage an instrument board of a motor vehicle, and means cooperating with the flanges for clamping the article holder to the instrument board.



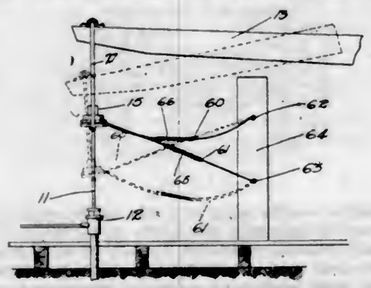
1,681,786. COFFEE-SACK HOLDER. SAMUEL RICKLES, Seattle, Wash. Filed May 26, 1925. Serial No. 32,884. 4 Claims. (Cl. 53—3.)

1. The combination with a coffee urn comprising an outer casing, a crock secured therein with its upper edge disposed to afford a ledge below the upper edge of said casing, and a porous sack, of a support for said sack, said support consisting of a tube adjustable diametrically to enter the crock and also to seat upon said ledge, and means protruding from the tube to engage upon said ledge for suspending the tube when the latter extends into the crock.



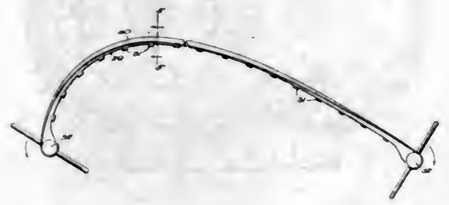
1,681,787. OIL PUMP FOR STEAM ENGINES. HUGO F. RIPKEN, Minneapolis, Minn., assignor of one-half to Charles A. McCulloch, Minneapolis, Minn. Filed Feb. 6, 1926. Serial No. 86,607. 11 Claims. (Cl. 184—52.)

1. An oil feed mechanism, having a casing with a shoulder therein, a piston, mounted in said casing and having an offset portion to register with the shoulder of the casing, the shoulder and the offset portion being positioned to cooperate upon an operative stroke of the piston to form a compression chamber, a normally open by-pass past the piston, and a normally closed by-pass past the piston being



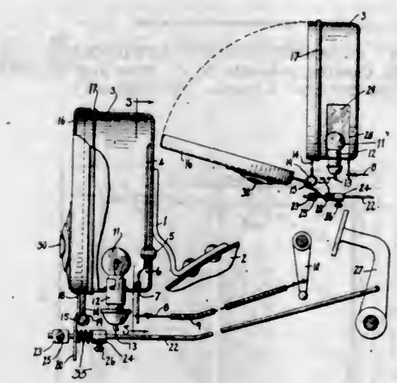
opened by an operative movement of said piston, said normally open by-pass being smaller than the normally closed by-pass.

1,681,788. STATIC ELIMINATOR. HARVEY H. RUCKEL, Pittsburgh, Pa. Filed June 24, 1925. Serial No. 39,306. 2 Claims. (Cl. 250—20.)



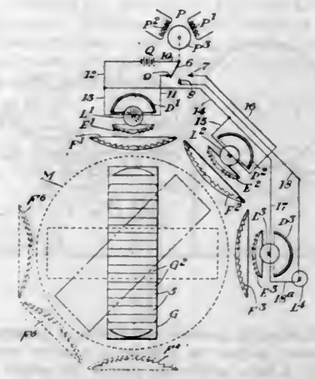
1. In a means for the purpose set forth an aerial, an "A" battery, a "B" battery connected together, a vacuum tube including a grid, a plate and a filament, an antenna post for a receiver, a ground post for a receiver, a primary coil connected with the aerial and the ground and having its aerial end connected to said grid and its other end connected to the "A" battery, a secondary coil connected to the antenna post and the ground post of the receiver and coupled with the primary coil, a variable condenser shunted across said primary, a reversely wound coil superimposed over said primary and secondary and having one end connected to said plate and its other end to the filament of said tube through said "B" battery, and a variable condenser interposed between and connected with said grid and plate.

1,681,789. SUCKER-ROD ROTOR. SUMNER B. SARGENT, Los Angeles, Calif., assignor to Sargent Engineering Corporation, a Corporation of California. Filed Mar. 19, 1924. Serial No. 700,435. 7 Claims. (Cl. 255—14.)



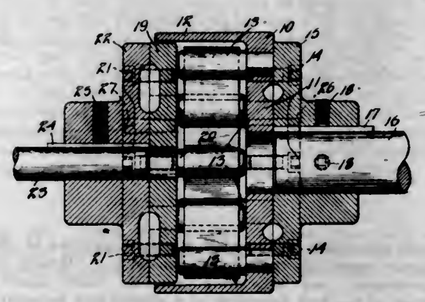
1. In a rod rotator for oil wells, the combination of: a polish rod; means comprising a clamp resting on a plate which is pivotally suspended below a walking beam for vertically reciprocating said polish rod; horizontal actuating means for rotating said rod about a vertical axis; and externally extending means angularly movable in vertical planes and secured at different levels to a fixed member supporting said walking beam for actuating said actuating means.

1,681,790. PROCESS FOR CONSTRUCTING THE HULLS OF AIRSHIPS. THOMAS B. SLATE, Glendale, Calif., assignor to Slate Aircraft Corporation, a Corporation of Nevada. Filed Aug. 25, 1925. Serial No. 52,390. 9 Claims. (Cl. 153—68.)



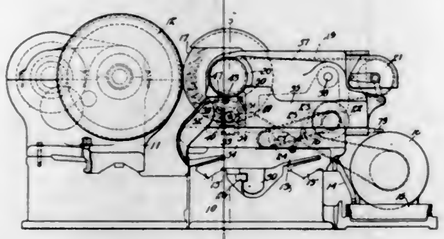
1. The process of constructing the hull of an airship consisting in forming corrugated metal strips of the desired curvature for a section of an airship hull said strips having their corrugations tapered to a point at the end of the strip, sealing the longitudinal edges of adjacent strips together to form the hull, and affixing corrugated rings to the hull transversely thereof.

1,681,791. AUTOMOBILE SIGNAL. JOSEPH C. SLOANE, Detroit, Mich., assignor of one-half to Alfred T. Harrow, Detroit, Mich. Filed Nov. 26, 1926. Serial No. 150,719. 4 Claims. (Cl. 116—36.)



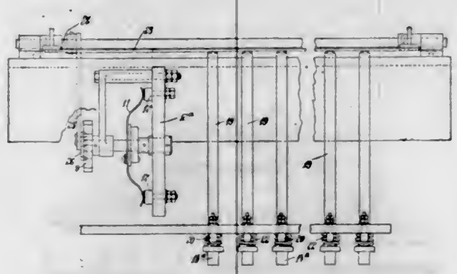
1. An automobile signal comprising a casing having signals indicating a left or right hand turn, a pointer pivotally mounted in the casing and adapted to be moved over the signals, an incandescent lamp within the casing adapted to illuminate the pointer and signals, means connecting the pointer with the automobile steering mechanism whereby operation of the steering mechanism in either direction produces a corresponding movement of the pointer, a cap hinged to the lower side of the casing and adapted to form a cover therefor, the said cap being provided with a depending end, a rod connecting the said depending end of the cap with the automobile brake pedal whereby actuation of the pedal moves the cap on its hinge to expose the pointer and signals and release of the brake pedal moves the cap to cover the pointer and signals.

1,681,792. LIGHT SIGNAL. CLARENCE S. SNAVELY, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1923. Serial No. 623,755. 4 Claims. (Cl. 177—327.)



3. A light signal comprising a casing having an opening, a plurality of pairs of light sources disposed around an axis, the two sources of each pair being diametrically opposite each other, means associated with each source for projecting therefrom towards said axis an original beam of parallel rays, and a light deflector pivotally mounted for rotation about said axis, means for rotating said deflector into a plurality of positions in each of which it redirects the beams from a different pair of said sources through said opening in an ultimate beam of elongated cross section having a different angular position, said deflector comprising a group of spaced prisms for redirecting the beam from one source of each pair and a second group of spaced prisms interspersed between the prisms of the first group for redirecting the beam from the other source of each pair.

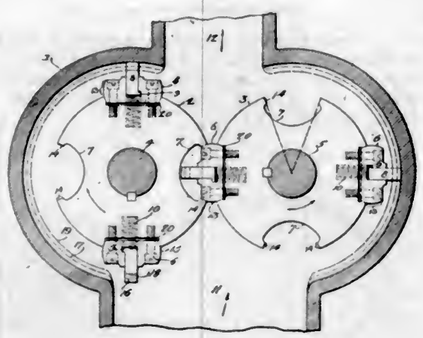
1,681,793. FLEXIBLE COUPLING. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation. Filed Mar. 15, 1927. Serial No. 175,543. 1 Claim. (Cl. 64—36.)



Flexible coupling means for a pair of alined shafts having flanges on the ends, comprising a pair of opposed spaced disks, a series of axially disposed pins carried by one of said disks, a series of pins carried by the other of the disks, a flexible member passing alternately around the pins on one disk and those on the other to provide driving connection between the disks, tapered pins adapted to seat in tapered sockets in the flanges on the shafts and in the disks to center the disks with the shafts, and means for removably securing the disks to said flanges, substantially as set forth.

1,681,794. CROWNING DEVICE FOR ROLL-GRINDING MACHINES. PAUL STONER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Feb. 25, 1926. Serial No. 90,641. 2 Claims. (Cl. 51—49.)

1. A roll grinding machine comprising a grinding wheel, a work holder, means for causing a relative traverse between them, a base pivoted to permit the wheel to swing tangential to the work, cam followers on the base, a cam shaft having thereon a pair of oppositely positioned cams for each cam follower adapted to be selectively engaged therewith, means for rotating the cam shaft in timed relation with the relative traverse of the grinding wheel and the work carriage and means for varying the speed of rotation of the cam shaft with respect to the relative traverse of the grinding wheel and the work holder whereby the depth of concavity or convexity on the work may be varied in proportion to the length of the work or to cause equal reduction in work of different lengths, substantially as set forth.

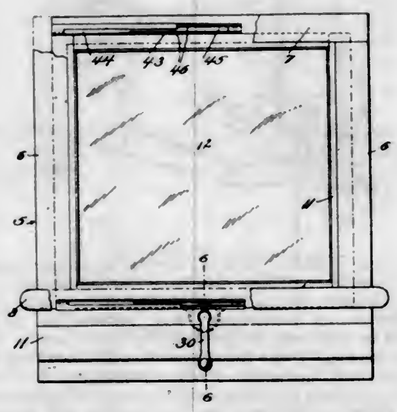


1,681,795. ELECTRICAL DISPLAY APPARATUS. PAUL HENRY WALLER, London, England. Filed Sept. 8, 1927, Serial No. 218,275, and in Great Britain July 23, 1926. 4 Claims. (Cl. 200—5.)

1. In electrically illuminated display apparatus of the character described, the combination with a plurality of independently and selectively operable main display switches of the kind described, of a step-by-step secondary display switch, and means interposed between said main switches and said step-by-step switch so that operation of any main display switch is accompanied by a simultaneous movement of said step-by-step switch.

1,681,796. ROTARY PUMP. EVERT J. WENDELL, Wayne, Pa. Filed Feb. 15, 1926. Serial No. 88,307. 1 Claim. (Cl. 301—126.)

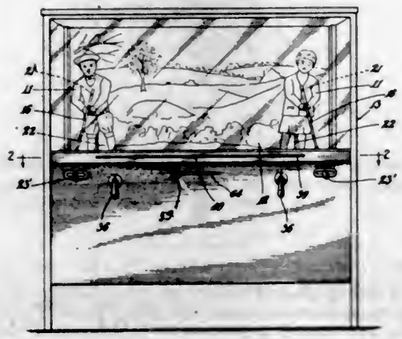
In a pump, the combination with a housing, of a pair of peripherally-contacting rotors mounted in said housing and each having a plurality of longitudinal sockets, teeth mounted in said sockets and having projecting vanes adapted to sweep the surfaces of the rotor chamber, said rotor having also a plurality of longitudinal recesses



adapted to register with and receive the teeth of the opposite rotor as the two rotors simultaneously revolve, and having their outer parts corresponding in form with said sockets.

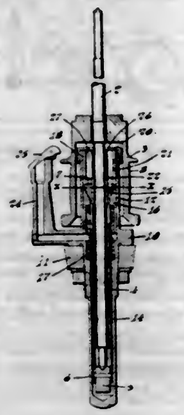
1,681,797. ALLOY STEEL. HENRY B. ALLEN, Philadelphia, Pa., assignor to Henry Disston and Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1925. Serial No. 26,303. 3 Claims. (Cl. 75—1.)

1. A high carbon tool steel containing only nickel and molybdenum as alloying elements, the nickel content ranging from 1% to 1.5% and the molybdenum content ranging from .1% to .7%.



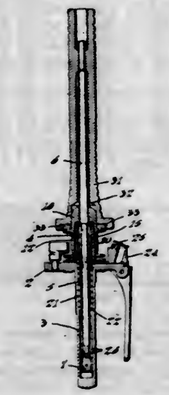
1,681,798. CASEMENT-WINDOW ATTACHMENT. ALBERT H. CARRIER, Asheville, N. C. Filed July 20, 1927. Serial No. 207,289. 8 Claims. (Cl. 268—98.)

1. In an attachment of the class specified, the combination with a frame and a casement sash, of means for opening and closing the sash and consisting of pivot devices connected to the sash and a portion of the frame and including a brace-arm pivoted at its ends to the frame and sash,



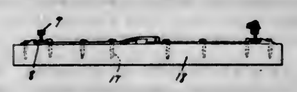
a sliding rack operatively associated with the sash and frame, and an operating shaft carrying means to operate the brace arm and a pinion to mesh with the teeth of the rack and swing the sash inwardly and outwardly.

1,681,799. GAME APPARATUS. CHARLES W. CLARK, Brooklyn, N. Y. Filed Nov. 12, 1927. Serial No. 232,732. 14 Claims. (Cl. 273—87.)



1. In a toy golf game, a runway, manikins at opposite ends of said runway, clubs connected with said manikins, devices adjacent said manikins for elevating a ball into position to be struck by said clubs, and connections between such elevating devices to cause them to act alternately.

1,681,800. SPINDLE. EDWARD B. FEASTER and ALBERT W. ARNOLD, Lowell, Mass., assignors to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1923. Serial No. 666,293. 7 Claims. (Cl. 308—152.)

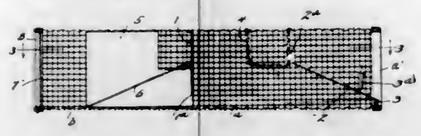


5. In a spindle, the combination of a spindle blade, a bolster supporting said blade for rapid rotation, a whirl carried by said blade, a ball and socket bearing supporting said bolster in a suspended position, a spring within the housing below the ball and socket bearing, a sleeve within the housing above the ball and socket bearing and movable in said housing to move said ball and socket bearing within the housing and effect initial compression of said spring, and means cooperating with said sleeve and housing to retain said spring in its initially compressed condition.

1,681,801. SPINDLE. EDWARD B. FEASTER, Lowell, and CECIL B. ALMY, Marblehead, Mass., assignors to Saco-Lowell Shops, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1926. Serial No. 127,928. 1 Claim. (Cl. 308—152.)

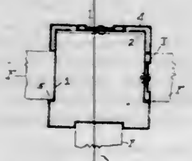
In a spindle, in combination, a bolster housing having a rail-engaging base, a tubular member extended upwardly from said base and open at its upper end, and a tubular member extended downward from said base and closed at its lower end to form an oil well, a bolster for the spindle blade insertible into the housing through the upper tubular member thereof and suspended at its upper end and having its lower end extended into said oil well, a ball and socket bearing for said bolster having a member attached to the bolster, and a co-operating member insertible into the housing through the open upper end of the upper tubular member of said housing and movable lengthwise of the said upper tubular member, a sleeve slidable within the upper tubular member of the housing and co-operating with the bearing member attached to the bolster, a spring located in said housing below said sleeve and co-operating with the latter, said spring being constructed and arranged to be placed under a substantial initial compression by movement of the ball and socket bearing members within and lengthwise of the upper tubular member of the housing, and means co-operating with the upper tubular member of the housing and with the upper member of the ball and socket bearing to retain said spring in its initially compressed condition.

1,681,802. RAIL FASTENER. SAMUEL GAGLIARDI and FRANK BRUTTO, Missoula, Mont. Filed Sept. 13, 1927. Serial No. 219,264. 2 Claims. (Cl. 238—288.)



1. In combination, a sectional rail fastener comprising a pair of fastener sections having their outer ends engageable with the opposite rails of a railway and their inner ends provided with inter-gripping heads, and an insulator plate carried by one of said heads and retained in position between said heads by reason of the intergripping engagement thereof.

1,681,803. PUSH POLE. GROVER F. GATES, Degraff, Ohio. Filed Nov. 14, 1927. Serial No. 233,026. 5 Claims. (Cl. 213—224.)

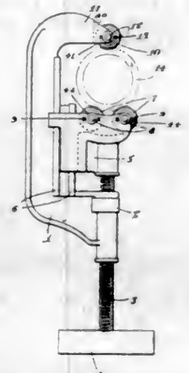


1. The combination with a locomotive having a push pole pocket on an end sill, of a horizontally disposed sleeve member pivoted to said sill to swing about a vertical axis disposed centrally of the pocket, and a push pole slidably mounted in said sleeve and engaging in said pocket.

1,681,804. ANIMAL TRAP. BENJAMIN F. HATCHELL, Crockett, Tex. Filed June 21, 1927. Serial No. 200,417. 1 Claim. (Cl. 43—69.)

An animal trap comprising an oblong wire body having a transverse partition dividing it into an entrance compartment and a prison compartment, means permitting an animal to pass from the former to the latter compartment and for preventing its return, said entrance compartment having an open doorway, a bait container extending centrally across the upper part of the entrance compartment and spaced from the bottom of the trap and from said doorway, a door hinged at one of its ends near the bottom of the doorway and having its free end adapted to swing from a position in front of said container downwardly against the bottom of the trap, and a spring yieldingly supporting said door in inclined position with its free end in front of the bait container.

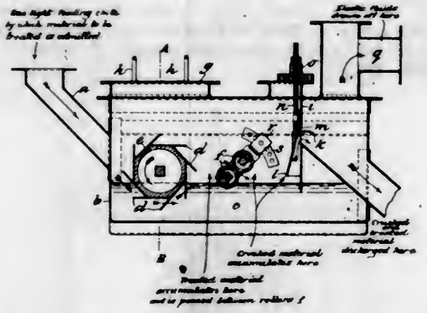
1,681,805. WALL STRUCTURE. EARL F. HAUSERMAN, Cleveland Heights, LEROY D. MOWERY, Cleveland, and JOHN A. BOHNSACK, East Cleveland, Ohio, assignors to The E. F. Hauserman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 134,110. 18 Claims. (Cl. 189—34.)



1. In partition construction, the combination of a support member of generally rectangular channel section as a three-sided hollow sheet metal member presenting a longitudinal opening on its fourth side, and a face plate to cover such opening.

1,681,806. VULCANIZATION OF RUBBER. RALPH V. HEUSER, Burrage, Mass., assignor, by mesne assignments, to Albert C. Burrage, jr., Ipswich, Mass. Filed Jan. 27, 1921. Serial No. 440,518. 13 Claims. (Cl. 18—53.)

1. The process of vulcanizing rubber, characterized by heating rubber with vulcanizing material and tritolylguanidin.

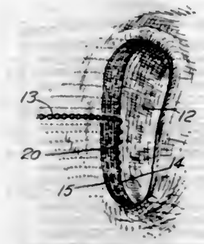


5. The process of treating rubber or similar material which comprises combining with the rubber compound an ortho-tolylguanidine.

1,681,807. PIPE CUTTER AND CUTTING WHEEL THEREFOR. JOSEPH E. KENERSON, Saugus, Mass., assignor to Trimont Manufacturing Company, Roxbury, Mass., a Corporation of Massachusetts. Filed May 11, 1926. Serial No. 108,274. 8 Claims. (Cl. 81—192.)

1. A cutting wheel of the kind described, having a single, sharp, circumferential cutting edge, with a plurality of reinforcing and expanding portions at predetermined spaced intervals relative to the diameter of the cutting wheel.

1,681,808. HEAT TREATMENT OF SUBSTANCES BY MEANS OF MOLTEN METAL. JOHN STANLEY MORGAN, London, England, assignor to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England. Filed Nov. 20, 1922, Serial No. 602,188, and in Great Britain Jan. 4, 1922. 9 Claims. (Cl. 202—8.)

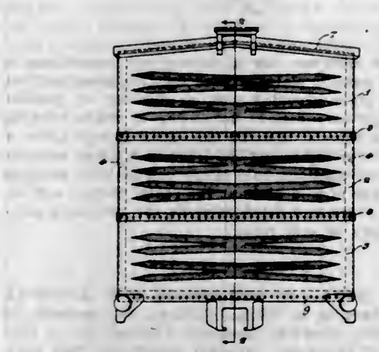


1. In processes of subjecting to heat treatment, by contact with a bath of molten metal, materials which yield by the treatment a solid residue of lower specific gravity than the molten metal, the method of removing the solid residue from the surface of the molten metal in a condition substantially free from metal, which consists in causing the residue to accumulate on the surface of the molten metal beneath an upwardly directed duct and to be entrained in a stream of elastic fluid moving upwardly through the duct.

1,681,809. SWEATER GARMENT. HARRY MOSS, Philadelphia, Pa. Filed Jan. 6, 1927. Serial No. 159,445. 1 Claim. (Cl. 2—90.)

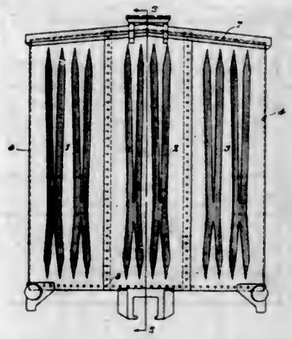
A garment having, in combination, a knitted body portion and a plurality of knitted sleeves connected to said body portion and forming a reinforced rib at the juncture of each of the sleeves and said body portion, a line of reinforcing stitches formed on the inner side of the body

portion near the upper end thereof and extending crosswise with respect thereto from one of the ribs to the other, the stitches at the ends of the said line of reinforcing



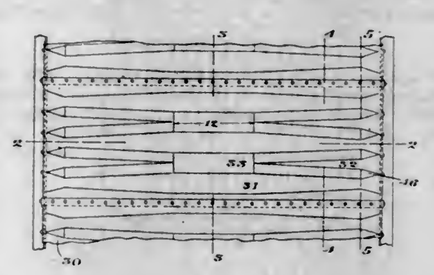
stitches being imbedded into said ribs, and extending in a substantially right angular direction with respect to said crosswise extending stitches.

1,681,810. TYPE-CLEANING KIT. JULIUS A. NELSON, Savannah, Ga. Filed Jan. 28, 1928. Serial No. 250,266. 5 Claims. (Cl. 15—118.)



1. A cleaning kit comprising a container having a partition, forming compartments in its ends, a cap for closing each compartment, a rod carried by each cap and a swab carried by each rod.

1,681,811. METAL STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 9, 1922. Serial No. 595,634. 43 Claims. (Cl. 105—410.)

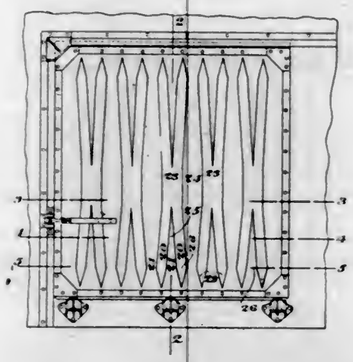


1. A metallic wall panel for railway cars having a reinforcement formed therein, comprising a plurality of stiffening ribs which merge into each other to form a relatively wider stiffening rib, adjacent the center of said reinforcement substantially parallel to the first mentioned ribs.

1,681,812. METAL STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,247. 14 Claims. (Cl. 105—410.)

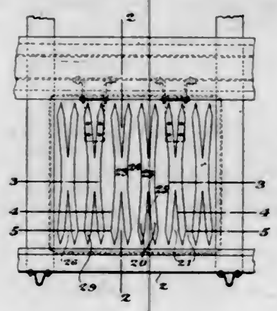
1. A wall structure for a railway car comprising a metallic plate provided with a plurality of vertical corrugations spaced apart distances substantially equal to their width, said corrugations merging between their ends adjacent the floor of the car into a plurality of fewer corrugations spaced apart distances substantially equal to their width.

1,681,813. ROOF FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,733. 6 Claims. (Cl. 108—5.4.)



1. A roof for a railway car, comprising one of a plurality of members to form the roof consisting of substantially an arch between the opposite side plates of the car, said sheet provided with a plurality of major corrugations which decrease in width toward their opposite ends, said sheet also provided with a plurality of minor corrugations lying between said major corrugations which increase in width toward their outer ends until the major and minor corrugations terminate into the sheet adjacent the opposite side plates of the car.

1,681,814. SIDE DOOR FOR RAILWAY BOX CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Railway Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,702. 8 Claims. (Cl. 189—46.)



1. A horizontally movable side door for a railway car comprising a metallic plate secured to oppositely disposed

frame members of the door, said plate provided with a series of corrugations with their opposite ends terminating into the plate adjacent said oppositely disposed frame

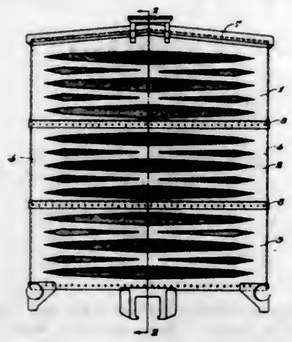
members, said corrugations merging together between their opposite ends to form a plurality of fewer wider corrugations.

1,681,815. DROP DOOR FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,703. 16 Claims. (Cl. 105—280.)

1. In a railway car having a door opening, a door hinged adjacent one edge thereof and supported at the opposite edge thereof, said door comprising a metallic plate provided with a plurality of corrugations with their opposite ends terminating into the plate adjacent the opposite marginal portions of the door, said corrugations merging together adjacent the middle of the plate to form a lesser number of wider corrugations.

1,681,816. METALLIC STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 19, 1922, Serial No. 595,634. Divided and this application filed Sept. 8, 1925. Serial No. 55,207. 33 Claims. (Cl. 105—410.)

1. A metallic plate provided with a plurality of parallel major corrugations whose width is greatest at the center decreasing in width towards the terminal thereof adjacent the edges of said plate, a plurality of minor corrugations lying in a plane between said major corrugations, said minor corrugations merging from the plane of said



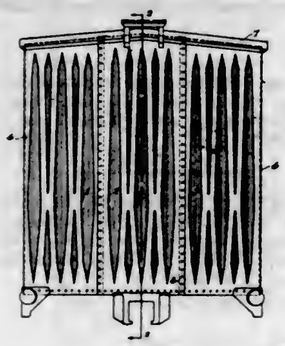


plate adjacent the center thereof and increasing in width and depth towards the terminals adjacent the edges of said plate.

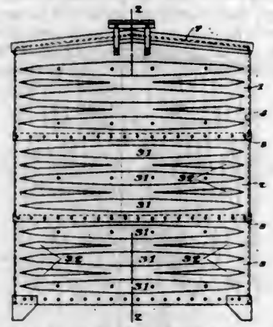
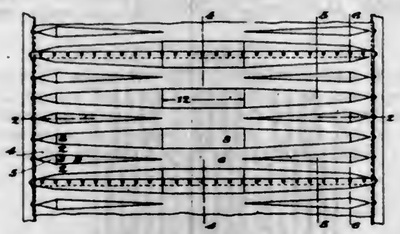


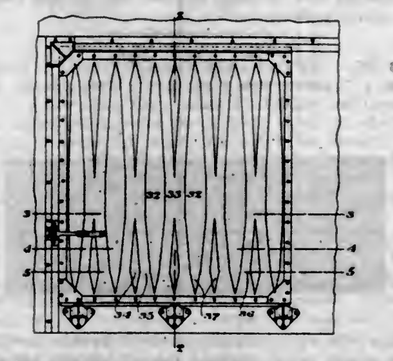
1,681,817. METALLIC STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,246. 24 Claims. (Cl. 105—410.)

1. A wall structure for a railway car comprising a plurality of metallic plates secured together along vertical lines, each plate provided with a plurality of parallel vertical major corrugations decreasing in width towards the terminal thereof adjacent the edges of said plate, a plurality of minor corrugations lying in a plane between said major corrugations, said minor corrugations merging from the plane of said plate at the center thereof and increasing in width and depth towards the terminals adjacent the edges of said plate.



1,681,818. METALLIC STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Sept. 8, 1925, Serial No. 55,207, which is a division of application filed Oct. 19, 1922, Serial No. 595,634. Divided and this application filed Jan. 3, 1927. Serial No. 158,596. 41 Claims. (Cl. 105—410.)

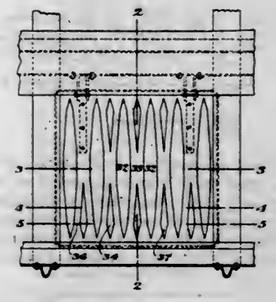
1. A metallic plate having a plurality of major and minor corrugations terminating within the plate, said major corrugations decreasing in width and height from the middle toward the ends of the plate, said minor corrugations increasing in width from adjacent the middle toward the ends of the plate, the cross sectional areas



of said corrugated plate being substantially equal anywhere between the planes where said corrugations begin to terminate into the plane of the plate.

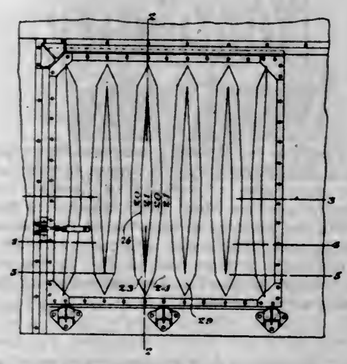
1,681,819. RAILWAY-CAR ROOF. ARTHUR E. SMALL, Chicago, Ill., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,732. 10 Claims. (Cl. 108—5.4.)

1. A roof sheet for a railway car, comprising one of a plurality of members to form the roof, consisting of substantially an arch between the opposite side plates of the car, said sheet provided with a plurality of corrugations adjacent said side plates, said corrugations merging together adjacent the middle of the sheet to form a plurality of fewer corrugations.



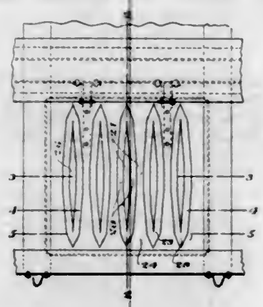
1,681,820. SIDE DOOR FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Railway Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,704. 10 Claims. (Cl. 189—46.)

1. A horizontally movable side door for a railway car comprising a metallic plate secured to oppositely disposed



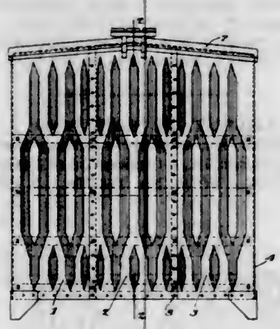
frame members of the door, said plate provided with a plurality of major corrugations which decrease in width toward their ends, each plate also provided with a plurality of minor corrugations lying between said major corrugations which increase in width toward the edges of the plate until the major and minor corrugations terminate into the plate adjacent said oppositely disposed frame members and in line with each other.

1,681,821. CORRUGATED DROP DOOR FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,705. 10 Claims. (Cl. 105—280.)



1. In a railway car having a door opening, a door hinged adjacent one edge thereof and supported at the opposite edge thereof, said door comprising a metallic plate provided with a plurality of major corrugations which decrease in width toward their ends, each plate also provided with a plurality of minor corrugations lying between said major corrugations which increase in width toward the edges of the plate until the major and minor corrugations terminate into the plate adjacent the opposite marginal portions of the door and in line with each other.

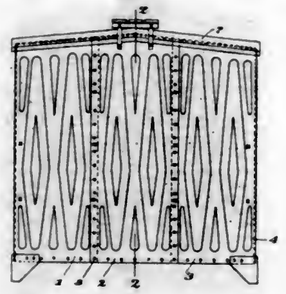
1,681,822. RAILWAY-CAR SIDE DOOR. ARTHUR E. SMALL, Chicago, Ill., assignor to Railway Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,706. 5 Claims. (Cl. 189—46.)



1. A horizontally movable side door for a railway car comprising a metallic plate secured to oppositely disposed frame members of the door, said plate provided with a plurality of corrugations merging into each other and into the plate adjacent said oppositely disposed frame members to form a plurality of fewer corrugations.

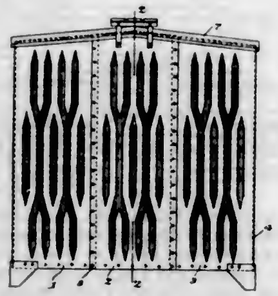
1,681,823. RAILWAY-CAR DROP DOOR. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1926. Serial No. 156,707. 8 Claims. (Cl. 105—280.)

1. In a railway car having a door opening, a door hinged adjacent one edge thereof and supported at the opposite edge thereof, said door comprising a metallic plate provided with a plurality of corrugations merging into each other and terminating into the plate adjacent the opposite marginal portions of the door to form a lesser number of corrugations.



1,681,824. CORRUGATED METALLIC PLATE. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 2, 1926. Serial No. 152,251. 12 Claims. (Cl. 105—410.)

1. In a railway car structure, a metallic plate having a plurality of parallel embossments formed therein, each embossment comprising a plurality of parallel, constant width, central portions which merge together to form constant width end portions at each end of the embossment, said metallic plate also formed with constant width corrugations positioned between and parallel to the said end portions and terminating into the plate adjacent the merger of the central portions.



1,681,825. EMBOSSED METALLIC PLATE. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 2, 1926. Serial No. 152,252. 11 Claims. (Cl. 105—410.)

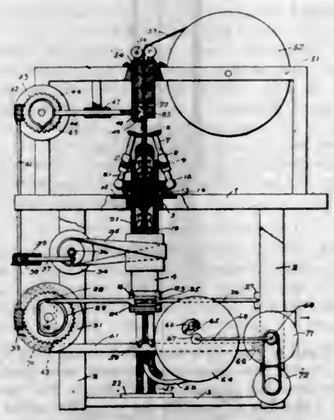
1. In a railway car structure, a metallic plate having a plurality of varying width embossments formed therein, each embossment comprising a plurality of constant width central portions which merge together adjacent the ends of the embossment, said metallic plate also formed

with varying width corrugations positioned between the ends of the embossments and terminating into the plate in line with the embossments.

1,681,826. EMBOSSED METALLIC PLATE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 2, 1926. Serial No. 152,253. 12 Claims. (Cl. 105—410.)

1. In a railway car structure, a metallic plate having a plurality of parallel embossments formed therein, each embossment comprising a constant width central portion which divides to form constant width end portions at each end of the embossment, said metallic plate also formed with constant width corrugations, said corrugations positioned between and parallel to said central portions and terminating into the plate adjacent the dividing place of said central portion.

1,684,827. ARTIFICIALLY-HEMSTITCHED FABRIC. FELIX TAUSEND, New York, N. Y. Filed Apr. 22, 1926. Serial No. 103,957. 1 Claim. (Cl. 139—416.)



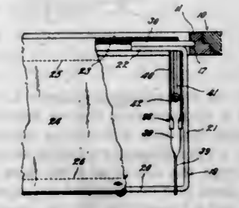
As a new article of manufacture a towel or the like of light colored fabric having a line of artificial hemstitching paralleling one of its edges and arranged relatively close to said edge, the line of artificial hemstitching comprising a series of black threads arranged side by side and interwoven with a plurality of series of juxtaposed light colored threads of the fabric proper so that groops of light colored threads extend at regularly spaced intervals across the series of black thread producing in the fabric a row of alternating black and light areas simulating the openings of a hemstitched fabric.

1,681,828. BOTTLE CAP. WILLIAM G. J. THOMPSON, Clinton, Mass. Filed Feb. 19, 1926. Serial No. 89,395. 1 Claim. (Cl. 215—46.)

The combination with a bottle cap having a sealing cork fitted therein, of a fabric tape folded back upon itself with the terminals placed one upon the other and secured between the cap and sealing cork, said terminals extending diametrically across the cap and terminating short of one side thereof, the major portion of the tape extending beyond the edges of said cap defining a flexible pulling loop, said loop constituting a finger grip for permitting the operator to engage the loop between fingers whereby to facilitate the removal of the cap from the neck of a bottle.

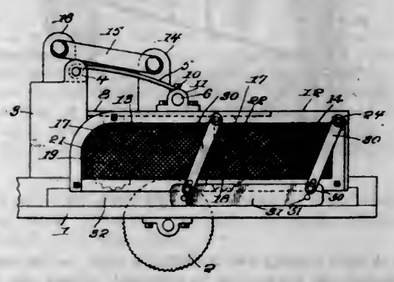
1,681,829. METHOD AND APPARATUS FOR MAKING ARTICLES HAVING RELATIVELY-RIGID CONFINING MEMBERS AND ELASTIC CORES. WILLIAM J. WESSELER, East Cleveland, Ohio. Filed Oct. 7, 1927. Serial No. 224,746. 20 Claims. (Cl. 29—88.2.)

17. In an apparatus of the character described, the combination of means for supporting a confining member, and means for stretching an elastic member and engaging the same within said confining member for maintaining said elastic member in a longitudinally elongated and transversely narrowed condition.



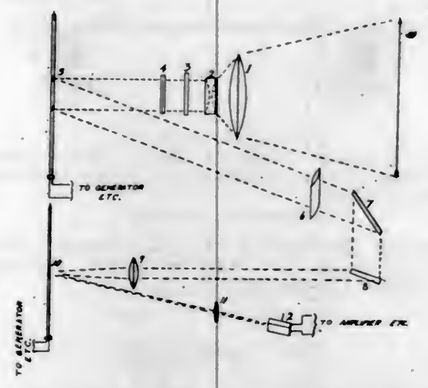
1,681,830. FASTENING MEANS FOR METAL ROOF DECKING. HERBERT E. WHITE, Youngstown, Ohio, assignor to The Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 25, 1927. Serial No. 194,175. 7 Claims. (Cl. 189—35.)

1. A fastening device for metal roof deck plates having depending abutting flanged rib elements at their undersides, comprising a body conforming to the shape of and telescoping over the rib elements of adjacent plates, said



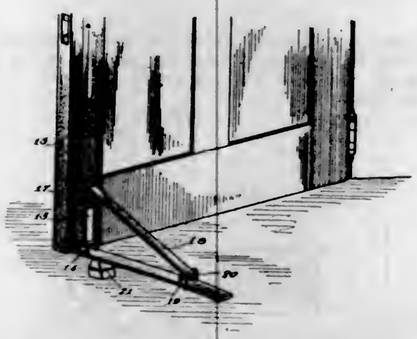
body having the intermediate portion thereof pressed inwardly to provide an abutment for engaging the undersides of the ribs.

1,681,831. AWNING FOR VEHICLES. HAROLD E. WILLIAMS, Carthage, Mo. Filed Jan. 4, 1927. Serial No. 158,904. 3 Claims. (Cl. 156—15.)



1. In a vehicle awning of the class described, a pair of aligned substantially U-shaped supporting members, each having a portion adapted to enter the glass run of a vehicle door; means connecting said members for adjusting them toward and from one another; a frame and a cover therefor, slidably and pivotally connected to one pair of legs of said members; and longitudinally extensible braces pivotally connected to said frame, and slidably and pivotally connected to the other legs of said members.

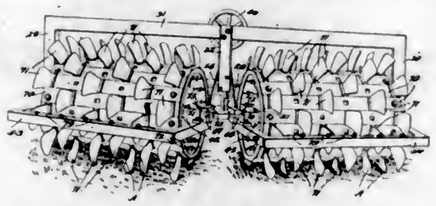
1,681,832. SAFETY GUARD FOR RIPSAWS. JOSEPH H. WULF, Tell City, Ind. Filed Apr. 20, 1925, Serial No. 24,542. Renewed June 29, 1928. 1 Claim. (Cl. 143—159.)



The combination with rotary saws and a bed therefor, of a standard fixed on the bed at one side of the saws, a substantially rectangular frame member opposite the standard, a pivoted link connection between the frame member and the standard, depending elements on the frame member, shafts journaled therethrough, and saw work engaging rollers fixed on the ends of the shafts, an upper shaft fixed on the frame and extending over the bed above the saws, a spring fixed on this shaft and fixed on the standard and urging the shaft and frame in the direction of the saw bed, and a saw guard removably fixed on the outer end of the last mentioned shaft.

1,681,833. ELECTRIC TELESCOPY. JAMES GILLESPIE ALLEN, Chicago, Ill. Filed Feb. 22, 1923. Serial No. 620,555. 10 Claims. (Cl. 178—6.)

1. In the art of transmitting pictures and the like the combination of a transmission station including means to produce electrical impulses, a receiving station including a source of light, a light intensity grading screen thru which the light rays from the source of light pass, a screen, and an integrating dead beat oscillograph actuated by electrical impulses from said transmitting station operably positioned between said grading screen and the second mentioned screen for receiving light rays from the former and projecting them on the way to the latter.



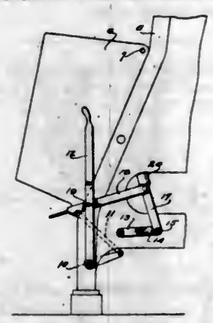
1,681,834. DOOR-HOLDING TOOL. ALBERT A. ARENDS, Redwood City, Calif. Filed May 14, 1926. Serial No. 109,132. 3 Claims. (Cl. 292—339.)

1. A door holding tool including a main bar having one up-turned end adapted to be extended beneath the lower edge of a door and having a floor engaging fulcrum block adjacent to said door engaging end, and a pair of brace bars extending upwardly from said main bar at spaced points in the length of the latter and having relatively engaging free ends for the purpose set forth.

1,681,835. COMBINED GROUNDWORKING AND PULVERIZING MACHINE. LEE BIRD, Rock Springs, Ga. Filed June 21, 1927. Serial No. 200,490. 8 Claims. (Cl. 55—24.)

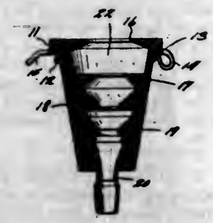
1. In an implement having a rolling drum and means for holding the drum in angled position relative to the line of draft, ground working devices secured to the periphery of the drum and having sharp forward and outer edges to effect a cutting action when entering the ground, the working surface of the ground working devices extending substantially radially where they adjoin the surface of the drum and being curved at their outer ends toward the forward end of the axis of the drum.

7. In an implement having rolling drums and means for simultaneously holding the drums in opposed angled positions relative to the line of draft, ground working devices secured to the periphery of each drum, the working faces of the ground working devices having a substantial width and radial height, the outer ends of the ground working devices curving toward the forward end of the axis of the respective drums to which attached.



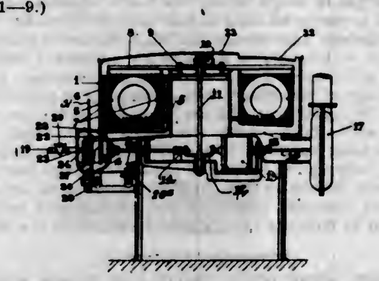
1,681,836. SHAVING BRUSH. GEORGE BOKA, San Diego, Calif. Filed Mar. 25, 1927, Serial No. 178,346. Renewed May 26, 1928. 2 Claims. (Cl. 15—135.)

1. A brush of the class described comprising a head, an annular row of bristles carried thereby, said head having a centrally arranged passage therethrough, the inner end of which is threaded to receive the threaded outlet end of a tube of paste, a tubular handle fitting over the tube and head, the open end of which has a reinforcing band around the same, said tubular handle and band being split to permit the head and tube to be placed therein and means for fastening the ends of the reinforced part together.



1,681,837. COTTON-GIN-BREAST-ACTUATING DEVICE. THOMAS M. BRUCE, Calumet, Okla. Filed Dec. 13, 1927. Serial No. 239,756. 7 Claims. (Cl. 19—48.)

1. In a gin attachment, an actuating lever to be pivotally supported on a gin frame and have operative connection with the gin breast, a pair of normally divergent members, one of which being pivotally supported and the other being pivotally attached to the actuating lever whereby such members will be caused to assume a substantially horizontal position upon actuation of the actuating lever in one direction, and a stop carried by one of such divergent members and engageable with the other when the divergent

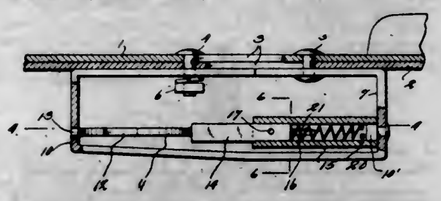


members assume such horizontal position and thereby render the pivot joint between them rigid to support the gin breast in elevated position.

1,681,838. FAUCET CONNECTION. JOHN EDWARD CONKLIN, Brooklyn, N. Y. Filed Apr. 19, 1927. Serial No. 185,004. 3 Claims. (Cl. 137—111.)

2. A faucet connection of the character described comprising a body of soft rubber having a hollow interior, opening through the body at its upper and lower ends, the body being readily flexible throughout its entire extent the upper end of the body being formed with an inwardly projecting flexible annular faucet engaging flange and the interior of the flange defining the upper end of a suction chamber, the interior of the body being formed with a plurality of inwardly projecting annular flexible flanges successively decreasing in interior diameter from the top toward the bottom of the body.

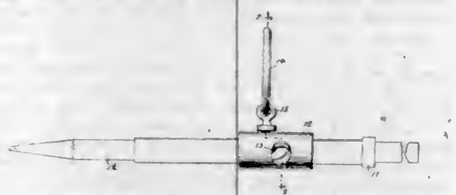
1,681,839. DISH WASHING, STERILIZING, AND DRYING MACHINE. JULES LOUIS BRETON, Bellevue, France. Original application filed Nov. 8, 1923, Serial No. 673,542, and in France May 7, 1923. Divided and this application filed June 3, 1925. Serial No. 34,664. 1 Claim. (Cl. 141—9.)



In a machine for washing, sterilizing and drying dishes, the combination of a circular washing trough the walls of which are provided with apertures for the introduction of the soiled dishes and for the removal of the clean dishes, a dish holding basket also of circular shape in the said washing trough, means for rotating slowly the said dish holding basket, means for projecting upon the dishes jets of washing water and jets of rinsing water, pumps for supplying the said means with washing and rinsing water, tanks disposed in cascade below the washing trough and adapted to receive the water projected by each pump, the first pump being adapted to withdraw the water of the first tank, said first tank being adapted to receive the water projected by the said first pump, the second pump being adapted to withdraw the water of the second tank, said second tank being adapted to receive the water projected by the said second pump, a pipe for the continuous supply of clear and boiling water and a series of overflow devices through which the water in excess flows successively from one tank into the next and finally into the sewer, the direction of the displacement of the dishes being contrary to the direction of the flow of the water, means for withdrawing the air and the vapors out of the washing trough and for producing an air current through the apertures through which the said dishes are introduced into and removed from the said trough.

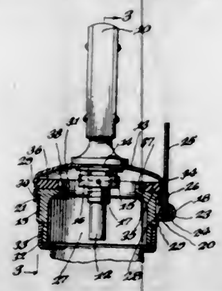
1,681,840. TOWEL DISPENSING AND STORAGE CABINET. ALVIN E. CARLSON, Nevis, Minn. Filed May 11, 1926. Serial No. 108,369. 1 Claim. (Cl. 312—60.)

A cabinet of the class described including a door at the front thereof, a holder for a stack of towels to be dispensed mounted on the back of the door, and including a bottom having a slot therein through which the towels are drawn, said door having an opening therein exposing the slotted bottom of the towel holder, and a flap hinged to the bottom of the towel holder and spring pressed against the door, said flap being manually depressible to permit the insertion of soiled towels into the bottom of the cabinet.



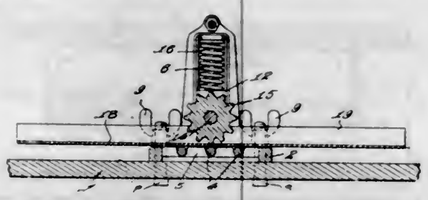
1,681,841. ROLLER SKATE. JAMES COHEN, Northampton, Mass. Filed Oct. 27, 1927. Serial No. 229,205. 7 Claims. (Cl. 208—173.)

1. A skate comprising a frame having overlapping plates provided with bolt and slot connecting means, a frame having an opening adapted to receive the bolt and adapted to be positioned at the under side of the nether plate, said



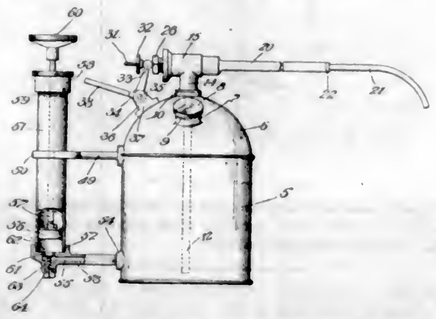
frame being provided at one end with a recess and at its opposite end with a stud and a key having a sleeve telescopically mounted thereon, said key having a lug adapted to enter said recess and said sleeve adapted to engage said stud.

1,681,842. DEVICE FOR USE IN WRITING. DANIEL COLLEN, Tilston, Manitoba, Canada. Filed June 9, 1928. Serial No. 284,090. 3 Claims. (Cl. 120—108.)



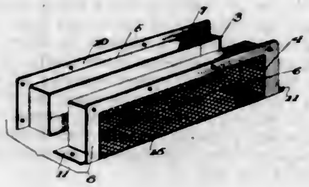
1. A device for use in writing to insure proper position for correct writing, said device including an elongated and protective tube adapted to be sleeved on a writing implement, a slide fitting said tube and positioned along the tube, means to fasten the slide in adjusted position along the tube, and a ring at a side of the tube and swiveled to said tube.

1,681,843. AUTOMOBILE RADIATOR CAP. HERBERT A. DENT, Chicago, Ill.; Helene Dent administratrix of said Herbert A. Dent, deceased. Filed Nov. 20, 1925. Serial No. 70,361. 2 Claims. (Cl. 220—24.)



1. The combination with a radiator nipple, of a cap for the nipple, a finger piece having one end portion providing a knuckle and having inwardly of the knuckle laterally extending ears, said finger piece extending upwardly from one side of said cap, means for connecting said ears to said side of the cap, an adapter adapted for connection with the nipple, a member carried by the adapter and having its opposite end portions extending laterally from the adapter, said knuckle being disposed between said opposite end portions, and a pin member connecting said opposite end portions to said knuckle.

1,681,844. DOUGH KNEADER. LOUIS DE VITO, Cleveland, Ohio. Filed Sept. 21, 1927. Serial No. 221,067. 5 Claims. (Cl. 107—32.)



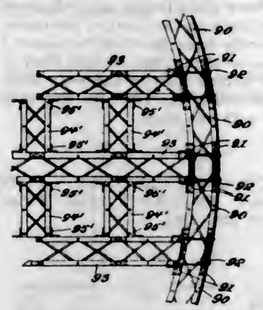
1. In a dough kneading machine of the type described, a pan having side flanges, a base frame on which the pan rests, said frame having bearing notches and rollers arranged in said notches projecting above the top of the frame and providing a support for the pan, a spring influenced roller carried by the base arranged in the pan, and a handle for revolving the roller.

1,681,845. PRESSURE OIL CAN. FRED M. DILLEY and CLAY F. HALLBERG, Oelwein, Iowa. Filed Oct. 10, 1925. Serial No. 61,768. 4 Claims. (Cl. 221—52.)

1. In a device of the character described, a spout, a valve seat in the spout, a valve head, a link extending rearwardly from the valve head, a valve rod, means acting on the rod to normally seat the valve head, a link extending forwardly from the valve rod and interlocked with the valve head link, a washer on the valve head link adapted to abut against the valve stem link, and a compression spring interposed between the valve head and the washer.

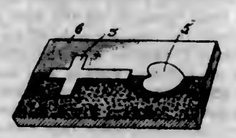
1,681,846. DRAINAGE DEVICE FOR WINDOW SCREENS. CHRISTIAN C. ENGELBART, Rochester, Minn. Filed Nov. 15, 1926. Serial No. 148,516. 2 Claims. (Cl. 156—14.)

1. A drainage device for use with window screens having a frame including a lower bar provided with a notch opening through the lower edge thereof and comprising an outer and inner section, each section having a tubular body, the tubular bodies being telescoped in assembly, said tubular bodies snugly fitting the notch, attaching flanges formed at the outer sides of said tubular bodies and with the upper side and opposite end edges thereof and adapted to coact with screws to permanently secure the drainage device to the screen frame, outturned flanges formed at the lower sides of the opposite ends of the outer of said tubular bodies for engagement with the lower edge of the lower bar of the screen frame and to either side of said notch, said flanges being apertured to receive securing screws, and a screen covering the opening of the outer tubular body, the telescopic portion of the outer of said sections engaging over the telescopic portion of the inner of said sections, whereby to facilitate the drainage outwardly of the device.



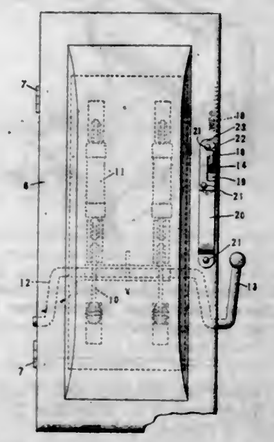
1,681,847. FUSE PLUG. WILLIAM H. FABREY, Schenectady, N. Y., assignor to Weber Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Nov. 4, 1927. Serial No. 231,069. 8 Claims. (Cl. 200—130.)

1. In an electric fuse plug, a core element including a substantially cylindrical boss portion, an interiorly threaded contact shell surrounding said boss portion, said boss portion being unthreaded and having a lateral recess, a filler



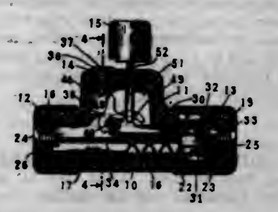
piece seated in said recess and having a portion projecting therefrom into screw-engagement with the threads of said shell and a fuse element in said core element.

1,681,848. DIRIGIBLE AIRSHIP. RALPH P. FOX, Harrisburg, Pa. Filed Mar. 6, 1926. Serial No. 92,827. 10 Claims. (Cl. 244—3.)



1. In a device of the class described, a plurality of spaced circular transverse units each including outer segmental structural elements, transverse girders extending across said units, brackets connected with the transverse girders, and connected with the segmental elements, columns extending between the transverse girders, and longitudinal girders connected by the brackets with the transverse girders.

1,681,849. METHOD OF PREPARING RUST-RESISTING IRON AND STEEL PRINTING PLATES. RUDOLF FRITSCHE, New York, N. Y. Filed Apr. 7, 1927. Serial No. 181,774. 6 Claims. (Cl. 41—41.5.)

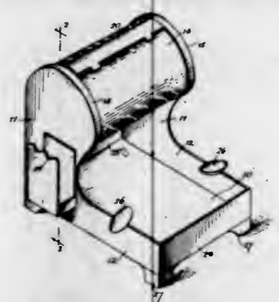


1. A lithographic plate, comprising a chrome steel body formed with graining on one surface, with said grained surface having a porous formation.

1,681,850. LATCH FOR ELECTRIC-SWITCH BOXES. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed June 14, 1926. Serial No. 115,811. 5 Claims. (Cl. 292—128.)

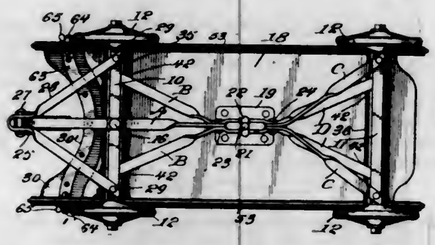
1. A latch construction for an electric switch box, said box having a cover hinged to said box and said cover having a latch opening, a handle member secured to said cover adjacent said opening and having a latch engaging extension, a latch member pivoted in said box, said latch having a shoulder for engaging with said handle extension when the cover is closed, and a counterweight extension and a spring for normally moving said latch.

1,681,851. RESETTABLE RELAY. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Dec. 3, 1927. Serial No. 237,437. 14 Claims. (Cl. 200—122.)



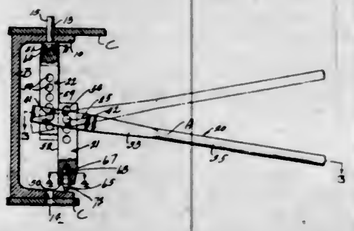
7. In a relay, a housing, a heater strip mounted therein, a bendable bimetallic arm mounted adjacent said heater strip, a spring-pressed switch member pivotally carried by and movable with said arm, a contact for said switch member supported in said housing and a push button supported in said housing and coacting with said switch member for resetting said member.

1,681,852. SMOKER'S RECEPTACLE. WILLIAM I. GOSCENER, Jersey City, N. J. Filed Oct. 26, 1927. Serial No. 228,951. 6 Claims. (Cl. 312—75.)



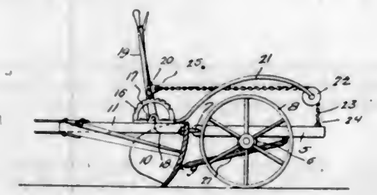
1. A device for containing and dispensing cigars, cigarettes, or the like, including a base, a pair of laterally spaced upstanding resilient bracket arms, circular flanges on the confronting faces of the free upper ends of the bracket arms, and a cylindrical container having a closed

end and an open end positioned between the bracket arms and mounted for rotatory movement in the circular flanges, said container having a longitudinally disposed slot extend-



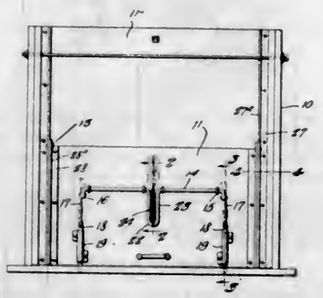
ing from the open end to the closed end to allow for dispensing of the contents when the container is turned to dispose the slot downwardly.

1,681,853. COMBINED WAGON AND SLED. WILLIAM S. HANCE, Washington, D. C. Filed Mar. 15, 1927. Serial No. 175,591. 3 Claims. (Cl. 280—8.)



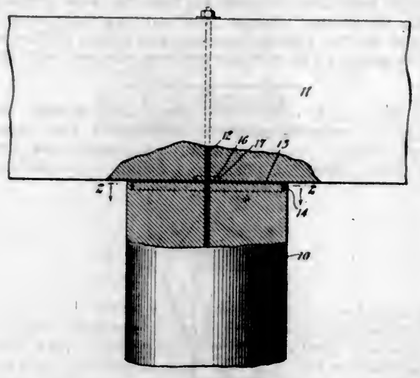
1. In a device of the class described, a plurality of axles and wheels carried thereby, a plurality of longitudinal elements extending in parallel relation, a substantially horizontal member mounted between the longitudinal elements, the latter maintaining their position with reference to the ground, means for securing the horizontal member in an upper position and in a lower position with reference to the longitudinal elements, and means for connecting the horizontal member with the axles.

1,681,854. ADJUSTABLE-SHACKLE DOLLY. WILLIAM R. HODGES, Eupora, Miss. Filed May 21, 1925. Serial No. 31,888. 1 Claim. (Cl. 78—53.5.)



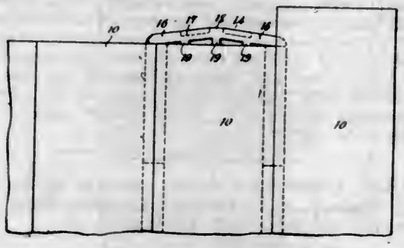
In a shackle dolly of the class described the combination of a handle frame, a pair of shanks, means pivotally connecting the shanks to the frame, each of the shanks at the free end thereof having a rivet head receiving socket therein, one of said shanks axially therealong and inwardly in communicating relation with the rivet head receiving socket having a reduced socket, a work engaging pin having a pointed end, the work engaging pin being adapted to extend into the last mentioned reduced socket, and means for connecting the pin in said reduced socket in detachable relation with the pointed end extending beyond the free end of the respective shank.

1,681,855. ROAD SCRAPER. WALTER HULSE, Flournoy, Calif. Filed Aug. 3, 1927. Serial No. 210,352. 2 Claims. (Cl. 37—169.)



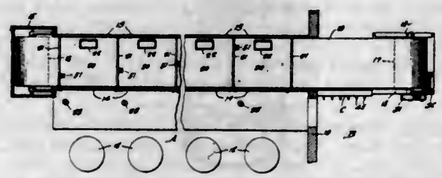
1. In combination, a wheeled frame, a scraper blade transversely of the front of the frame, means for rockably mounting the scraper blade on the front of the frame, an arm extending rearwardly from the blade, a sheave journaled on the rear extremity of the arm, a chain fixed to the rear of the frame and trained over the sheave, a lever, and means for rockably mounting the lever on the blade, the chain being engaged with the lever.

1,681,856. END-GATE FASTENER. CLARENCE HUNT, Churdan, Iowa. Filed Feb. 3, 1926. Serial No. 85,768. 1 Claim. (Cl. 292—36.)



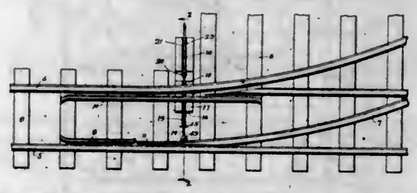
A latch mechanism for end gates comprising a pair of spaced tubular guides secured to said gate, a pair of latch bolts slidably mounted in said guides, stationary means for engagement by said bolts when the latter are in latching position, a rock shaft mounted on the gate and arranged transversely thereof, the opposed ends of said shaft being offset, links pivotally connected with the offset extremities of the shaft and the adjacent ends of said bolts, the intermediate portion of said shaft being extended to provide a handle including spaced parallel limbs, whereby said shaft may be rocked to move said bolts into active or inactive positions, a coil spring arranged between the limbs of said handle and substantially coextensive in length therewith, one end of the spring being secured to the adjacent end of the handle, and the other end secured to the gate, with said spring arranged at an angle with relation to said handle, and adapted to maintain said bolts in either latched or unlatched position.

1,681,857. PROTECTIVE CAP FOR WOOD PILING. JOHN JACOBSON, Galveston, Tex. Filed Nov. 18, 1927. Serial No. 234,224. 5 Claims. (Cl. 61—48.)



2. As a new article of manufacture, a protective cap for wooden pile heads including a flat metal plate and a sharp marginal flange turned downwardly from the plate and adapted to be driven into the pile, said plate having an opening therein adapted to accommodate a drift bolt for securing a superimposed structure.

1,681,858. KEY ALIGNER. JOHN JACOBSON, Galveston, Tex. Filed Nov. 18, 1927. Serial No. 234,225. 5 Claims. (Cl. 61—58.)



1. A device for aligning concrete sheet piling or the like having vertical longitudinal grooves in its abutment faces, the device including a pair of spaced arms straddling a piling, lying in the grooves thereof, and presenting projecting key portions to fit the grooves of adjacent pilings, and a yoke member connecting the upper ends of the arms.

1,681,859. CONVEYER. WALTER E. JONES, Lynchburg, Va. Filed Oct. 11, 1926. Serial No. 140,947. 8 Claims. (Cl. 186—1.)

1. In combination, an endless conveyer divided into sections, a plurality of compartments through which said sections are adapted to pass, means including an electric motor for moving the conveyer in either direction through the compartments, means for automatically stopping the conveyer at predetermined positions when moving in one direction, and means for automatically stopping the conveyer at a predetermined position upon movement of the conveyer in an opposite direction.

1,681,860. RAILROAD SWITCH. EUSTACHIUS JOSEPH KING, Philadelphia, Pa. Filed Apr. 25, 1927. Serial No. 186,541. 3 Claims. (Cl. 246—318.)

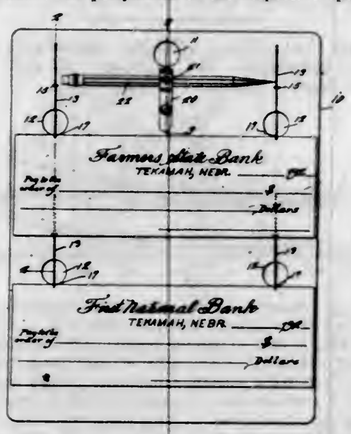
1. In combination with a main track comprising a pair of spaced substantially straight rails and a side track comprising a pair of spaced curved rails extending substantially tangent to the rails of said main track, one of said side track curved rails being formed continuous with the corresponding straight rail of the main track, the portion of said rail of said main track adjacent the curve being beveled and spaced from said curve to permit the passage of the flanges of vehicle wheels moving around said curve, the second rail of said main track being substantially straight and unbroken throughout and the second rail of said side track terminating in a spring switch tongue adapted to engage said unbroken rail of the main track; a plate extending transversely of and located under said tracks, a flange on said plate, a rod connected at one end to said spring tongue and extending through an opening in said flange, a collar secured to said rod between said spring tongue and said flange, a spring coiled around said rod between said collar and said flange for moving and resiliently maintaining said spring tongue in contact with said unbroken straight rail of the main track, an arm pivoted to the opposite end of said rod, an undercut lug on said arm adapted to engage a correspondingly undercut shoulder on said plate, for positively holding the point of said opening switch tongue away from the said unbroken straight rail of the main track when the flange of a wheel of a vehicle moving along the main track in the direction in which said switch tongue is pointing, passes between said tongue and the adjacent unbroken straight rail of the main track for permitting subsequent passage of vehicles in both directions along said main track.

1,681,861. PROCESS OF A MANUFACTURE OF DIOXAN. ANGELO KNORR, Berlin, and GERHARD STEIMMIG, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 6, 1926, Serial No. 127,706, and in Germany Dec. 23, 1924. 3 Claims. (Cl. 260—54.)

1. A process of a manufacture of dioxan in a continuous operation which consists in heating in the presence of a catalyst used in the manufacture of ethylether compounds of the general formula:

$$HO{\cdot}CH_2CH_2{\cdot}OX,$$

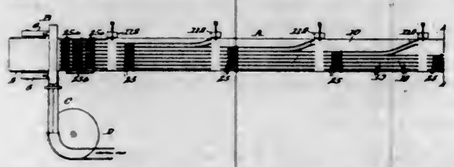
wherein X represents a univalent radical of the group



$$-H,\ -CH_2{\cdot}CH_2OH,\ \text{and}\ -CH_2{\cdot}CH_2O$$

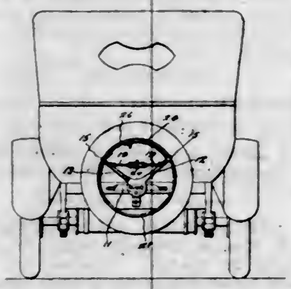
alkyl and in adding to the boiling mixture the starting material in the same quantity as dioxan distills off.

1,681,862. CHECK-BOARD AND PENCIL HOLDER. ROBERT W. KOHLER, Tekamah, Nebr. Filed June 13, 1927. Serial No. 198,531. 2 Claims. (Cl. 281—44.)



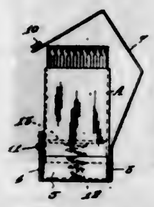
1. A check holder comprising a plate provided with spaced openings, grooves aligned upon the plate being inclined toward the adjacent edges of and having communication with each of said openings, spring fingers car-

ried within the grooves and extended within the respective openings, upstanding offset portions upon the fingers being extended above the peripheries of the respective openings,



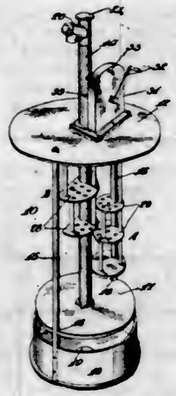
and said fingers being successively offset from the upstanding offset portions and terminating in pointed end portions adapted for biting engagement with the adjacent portions of checks to retain the same in position for use.

1,681,863. CONVEYER MECHANISM FOR MATCH MACHINES. HARRY I. LAHR and ORLO ELMER SWARTZ, Wadsworth, Ohio, assignors to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Nov. 8, 1924. Serial No. 748,758. 19 Claims. (198—30.)



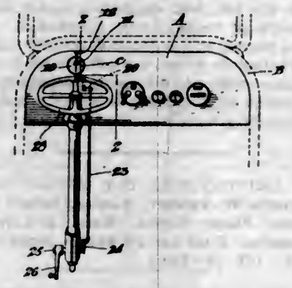
1. A conveyer mechanism for match machines, including a traveling conveyer arranged to receive the product of a plurality of machines, means for depositing the product of said machines upon said conveyer, means associated with said conveyer for arranging the thus deposited product laterally and longitudinally thereof during its travel with the conveyer, and means for discharging the product from said conveyer.

1,681,864. TIRE-CARRYING RIM SUPPORT. ARTHUR D. LONG, El Paso, Tex. Filed May 3, 1927. Serial No. 188,531. 1 Claim. (Cl. 224—29.)



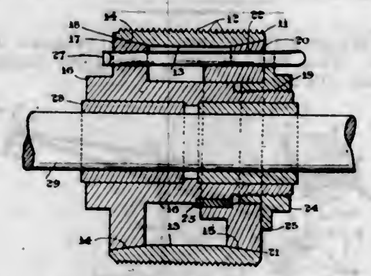
In combination, a split tire carrying rim, supporting means therefor comprising a stationary plate, a rigid arm projecting from said plate, a second arm mounted for pivotal movement on said plate, said arms being arranged in diverging relation and designed to engage the rim at spaced points, a curved extension carried by the rigid arm and arranged to engage the said rim, said extension having an opening adapted to receive the valve stem of the tire for the purpose specified, and means for operating the movable arm to either contract or expand said rim.

1,681,865. MATCH-BOX HOLDER. CARL MARCH, Chicago, Ill. Original application filed Sept. 8, 1926, Serial No. 134,316. Divided and this application filed Mar. 4, 1927. Serial No. 172,862. 1 Claim. (Cl. 206—31.)



A match box holder of the character described comprising a body including a bottom, end walls of a different height secured to said bottom and being provided with openings adjacent the upper edges thereof, front and rear walls of uniform size and being arranged in spaced relation from the end walls, a substantially conical shape coil spring having one end convolution secured to the bottom, a follower secured to the uppermost and largest convolution of said spring, and being adapted to engage the carrier of a match box disposed in said body, flexible means secured to said end walls and underlying said bottom, threads passing through said openings for securing said covering to said end walls, said flexible strip being arranged in substantially U-shaped formation from its connection with one end wall and means for securing the ends of said flexible strip together about the top of the carrier for retaining the latter in closed position against the tension of the spring.

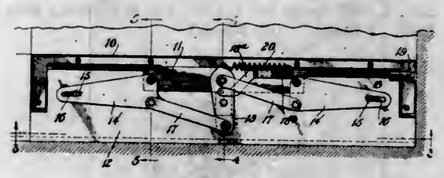
1,681,866. DISPENSING PUMP. FRANCIS P. MCCAULEY, Westbury, N. Y. Filed Oct. 14, 1927. Serial No. 226,118. 10 Claims. (Cl. 225—35.)



1. In a dispensing pump, a cylinder, a reciprocable plunger movable into said cylinder and having a tubular plunger rod, reciprocable mixing elements, and means for actuating said mixing elements in opposite directions with respect to each other and for simultaneously imparting reciprocation to said plunger.

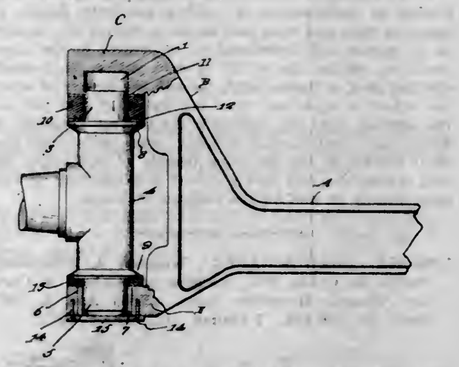
1,681,867. DIRECTION INDICATOR. CORA MCGANNON, Brockville, Ontario, Canada. Filed Aug. 22, 1927. Serial No. 214,735. 3 Claims. (Cl. 116—31.)

1. A front wheel angle indicator for automobiles and the like comprising a dial in the instrument board provided with an indicator, a spindle rotatably mounted in said board and rigidly connected to the dial, a pinion wheel fixedly mounted on said spindle, an arcuate rack member formed with an arm pivotally mounted on the instrument board and designated to progressively engage with said pinion wheel, a pivotally mounted bell crank lever, link connected to the rack member, a rod connected to said lever at one end and operatively connected to the steering column at the other end whereby movement of the front wheels will effect a corresponding movement of the indicator dial to disclose the angle and direction of the front wheels.



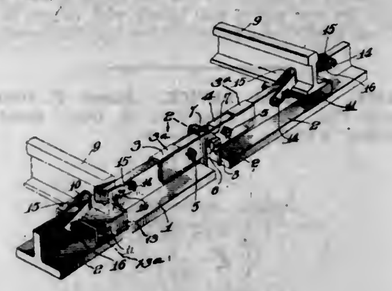
1,681,868. BURR FOR GRINDSTONES. WILLIAM B. MCLEAN, Montreal, Quebec, Canada. Filed Jan. 17, 1927. Serial No. 161,657. 3 Claims. (Cl. 125—37.)

1. In a shell burr, a cylindrical shell having stone cutting teeth formed in its outer face, the bore of the shell having tapered portions at each end, a support for said burrs, extending through the bore of same, a flange formed integral with said support and provided with a tapered edge adapted to fit into one end of the shell, a flanged collar mounted on the support, the flange of the collar being tapered to fit into the other tapered end of the bore and a nut mounted on a threaded portion of the support to hold the flanges in contact with the bore, said nut having a flange provided with peripheral slots and a pin passing through one of said slots and through aligned openings formed in the flanges of the support and collar.



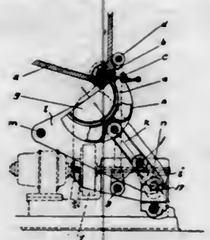
1,681,869. WEATHER-STRIP ATTACHMENT. HAMILTON DUNBAR MEEK, Los Angeles, Calif. Filed Mar. 12, 1927. Serial No. 174,914. 4 Claims. (Cl. 20—68.)

1. A weather strip attachment of the class described comprising, in combination, a sheet metal housing having provision to be secured to the lower portion of a shutter, said housing having an open lower portion, a strip within the housing arranged to be projected therefrom, and retracted therein, a pair of bell cranks near both ends cooperating with the strip to actuate it, a centrally arranged and pivotally mounted master lever connected to actuate said bell cranks, spring means normally holding said master lever in position to retract the strip, and an adjustable actuating arm projecting from one end of the casing and



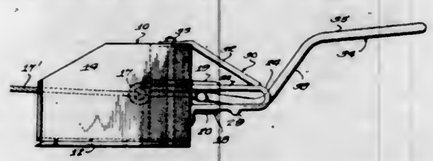
arranged to engage the shutter casing upon final closing movement thereof to project said strip into engagement with the sill.

1,681,870. SHOCK ABSORBER. THOMAS A. MILLER, Miami, Fla. Filed Feb. 4, 1927. Serial No. 165,915. 2 Claims. (Cl. 280—96.2.)



1. A steering knuckle of the character described comprising a spindle bolt having bearing ends, a resilient sleeve surrounding one of said ends, washers surrounding said last mentioned end and disposed upon opposite sides of said sleeve, a washer surrounding the other of said bearing ends, a sleeve surrounding said last mentioned end and means for retaining said sleeve thereon.

1,681,871. STEEL TIE AND RAIL ANCHOR. CHARLES MULHERN and BERNARD A. MULHERN, Wilkes-Barre, Pa. Filed Feb. 24, 1928. Serial No. 256,666. 6 Claims. (Cl. 238—32.)

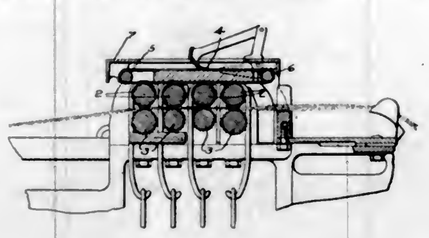


1. A railroad tie comprising a tie body consisting of two sections, means for clamping the rails to the tie sections, a coupling straddling and pivotally uniting the tie sections, and means operatively mounted on the coupling and engaging between the adjacent ends of the tie sections tending toward applying resiliency between the tie sections and thereby enabling them to rotate about their pivotal connection and reseat themselves on the road bed.

1,681,872. MACHINE FOR CASTING STEREOTYPE PLATES HAVING A MOLD ADAPTED TO BE PRESSED AGAINST THE OUTLET OPENING OF THE POT. ERNST MÜLLER, Bern, Switzerland. Filed Mar. 1, 1927, Serial No. 171,837, and in Germany Mar. 1, 1926. 3 Claims. (Cl. 22—2.)

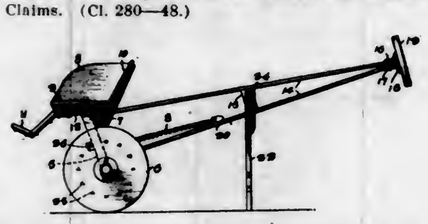
1. An automatic machine for casting stereo-plates, comprising in combination, a melting pot with outlet, an organ to open and close said outlet, a casting box adapted to be opened and closed and to be pressed in the closed condition against the outlet of said pot, a continuously rotating part, a timing shaft through the agency of which the organ to open and close the outlet of said pot and the casting box are operated, mechanical elements by which said continuously rotating part turns said time shaft quickly in the operating periods of said organ and said casing box, and slowly in the non-operating periods, substantially as, and for the purpose, set forth.

1,681,873. ROAD SCRAPER. WILLIAM A. NICHOLSON, Prairie du Chien, Wis., assignor of one-half to Christian Wingen, Marquette, Iowa. Filed Apr. 8, 1927. Serial No. 182,138. 7 Claims. (Cl. 37—138.)



1. A device of the character described comprising a scraper body, means for connecting a source of power to said body to move it forwardly, a handle projecting rearwardly from said body, and a tranverse rod carried by said body rearwardly thereof for limiting the downward movement of the rear end of said handle with respect to said body, said handle being movable to release it from said rod.

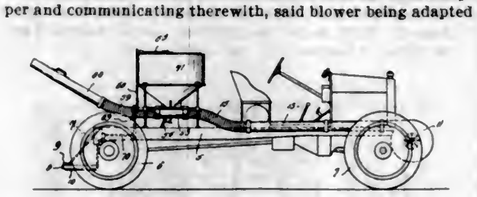
1,681,874. OPTICAL DEVICE. ALBERT F. OUELLET, Jersey City, N. J. Filed Dec. 15, 1926. Serial No. 155,004. 3 Claims. (Cl. 88—1.)



1. A device for facilitating the removal from the eye by the user, of a cinder or other foreign object, comprising a mirror, and means for supporting the same from a portion of one hand while using the thumb and forefinger of the same hand to open the eye whereby the other hand is free to effect the removal of the cinder or other foreign object from the eye, said supporting means consisting of a single length of resilient wire attached at its opposite ends to the mirror and coiled intermediate its length to provide a contractile helical portion adjacent convolutions of which define outwardly divergent clamping jaws between which a portion of the hand is received and by which it is frictionally gripped.

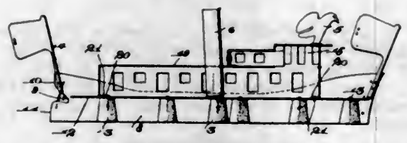
1,681,875. DRIVING ROLL FOR REVOLVING CLEARERS. LOREN W. PENNEY, Newton, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1926. Serial No. 104,532. 8 Claims. (Cl. 19—139.)

1. A driving roll for clearer cloths having a series of blunt teeth integral therewith and projecting from the periphery thereof, said teeth being spaced from each other both longitudinally and circumferentially of the roll all of said teeth pointing circumferentially of the roll and in the same direction.



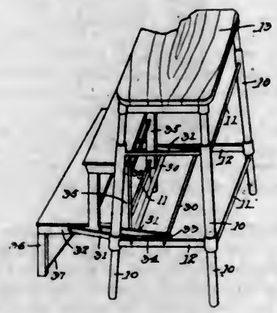
1,681,876. TOY PUSHCART. OSCAR PETERSON, Dent, Minn. Filed Sept. 14, 1925. Serial No. 56,335. 3 Claims. (Cl. 280—48.)

1. A toy push cart, comprising a handle having a pair of super-imposed rigid members having their forward end portions in spaced relation, an axle normally disposed at an angle to the perpendicular and arranged transversely of the handle and having said spaced forward ends across the top and bottom edges intermediate the ends thereof and pivotally secured thereto, whereby axial turning movement of the attached handle will effect swinging of the axle and steering of the cart, and supporting wheels journaled upon the ends of the axle.



1,681,877. DUSTER FOR FORD TRUCKS. HOYLE POUNDS and HENRY E. PATRICK, Winter Garden, Fla. Filed June 14, 1927. Serial No. 198,859. 2 Claims. (Cl. 43—148.)

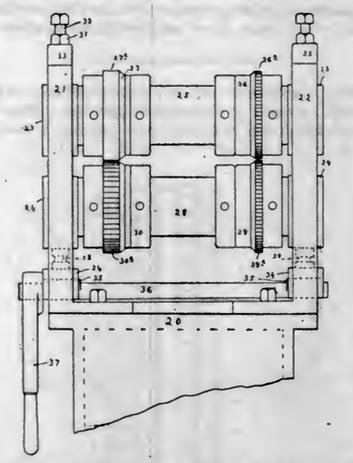
1. In a combination, a motor vehicle truck including a differential, a housing supported by the differential, a pinion in the housing and rotatable by the differential, a gear in the housing and meshing with the pinion, a shaft journaled through the housing on which is fixed said gear, a hopper mounted on the truck, an agitating shaft in the hopper, agitating means on the shaft, means for driving the shaft from the first mentioned shaft, a blower mounted on the truck, a tubular member at the bottom of the hopper and communicating therewith, said blower being adapted



to create a draft through the tubular member, a valve for closing all communication between the tubular member and the hopper, and means for operating the valve.

1,681,878. STEAMBOAT AND LIKE TOY CONSTRUCTION AND PRINTED BLANK THEREFOR. FRANK ELMER PRINCE, Bangor, Me. Filed July 8, 1926. Serial No. 121,235. 6 Claims. (Cl. 46—37.)

1. A toy steamboat comprising a base structure having a horizontal deck, a superstructure simulating a cabin and pilot house secured on top of the deck, and stabilizing means consisting of cork applied to the base structure and deck in concealed position below the deck.

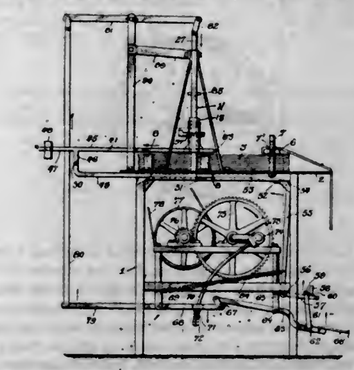


1,681,879. STEPLADDER. WILLIS E. PUTNAM, Worcester, Mass. Filed Jan. 21, 1927. Serial No. 162,624. 3 Claims. (Cl. 228—30.)

1. In an article of furniture, a step ladder having a top and legs constituting a frame, a step frame having a parallel motion and pivotal connection with the legs near the bottom and adapted to swing into the interior of the frame, said step ladder having a rod across it near the rear connecting two legs and constituting a stop for the step frame, and yielding means for normally tending to swing the step frame upwardly into the frame against said rod.

1,681,880. MACHINE FOR MAKING LOCK-JOINT TUBING. FRANK W. SCHNEIBLE, Rome, N. Y., assignor to Rome Manufacturing Company, Rome, N. Y., a Corporation. Filed Aug. 10, 1925. Serial No. 49,389. 5 Claims. (Cl. 113—33.)

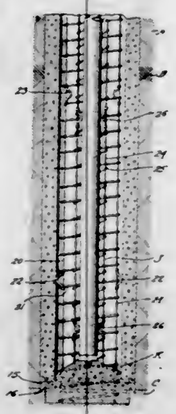
1. In a machine for knurling the interengaging faces of the metal in lock-joint metal tubing prior to the metal being formed into tubing, the combination of a supporting frame, two oppositely located shafts, a pair of rolls on each shaft to engage the opposite surfaces of the strip of sheet metal which is to make the tubing adjacent the edges thereof, sufficient of said rolls having knurling faces to knurl the



surfaces that are to interengage in the lock-joint and the remaining rolls having plain faces to form supporting anvil rolls and bearings in said frame for said shafts.

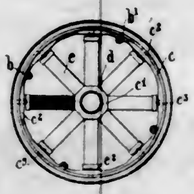
1,681,881. TOOL FOR TAKING UP TAPPETS AND THE LIKE. PAUL N. SHAW, Cleveland, Ohio. Filed Apr. 5, 1926. Serial No. 99,719. 5 Claims. (Cl. 81—3.)

1. In a tool of the character described, the combination of a hollow barrel having an end of non-circular contour externally, a nut socket engageable over such end, a laterally-extending handle engageable with said barrel for turning the same, a stem rotatable within said barrel and having a screw-slot blade, and a handle for rotating said stem.



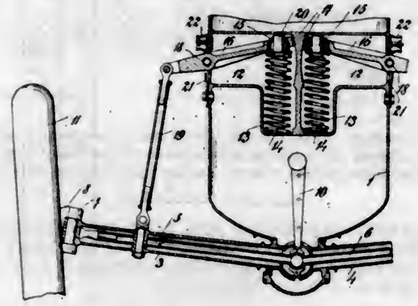
1,681,882. POCKET-SPACE STAMPING MACHINE. JACOB F. SILVERMAN, Brooklyn, N. Y. Filed Sept. 27, 1927. Serial No. 222,326. 9 Claims. (Cl. 101—316.)

1. A pocket space stamping machine, comprising a platform for receiving an article to be stamped, a printing



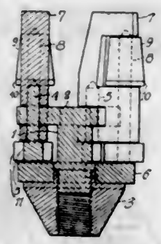
structure for stamping marks on said article, power driven means for moving said printing structure against said article and away from said article, and automatically actuated means for moving the printed part of said article to one side immediately after each printing operation.

1,681,883. METHOD OF PRODUCING AND PLACING PILES. GEORGE B. SIPE, Shreveport, La. Filed Oct. 26, 1923. Serial No. 671,015. 7 Claims. (Cl. 61—57.)



1. A method of producing and placing piles which comprises, drilling a cavity in the soil and removing the dislodged material through the cavity; placing a hollow cylindrical casing, open to the atmosphere and of slightly greater diameter than the cavity thus formed, to follow in the cavity as the drilling and removal of the dislodged material progresses, and to disrupt or sever parts of the strata encountered by the casing; placing reinforcement in the cavity when same has been drilled to the desired extent, and centering said reinforcement by engagement with the interior of the casing and filling the cavity with concrete embedding the reinforcement therein.

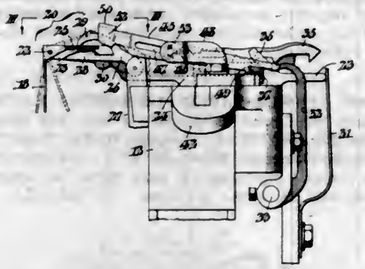
1,681,884. ELECTRICAL CONDENSER. WILLIAM HENRY GOODMAN, Kensington, London, England, assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1923, Serial No. 618,695, and in Great Britain Mar. 22, 1922. 6 Claims. (Cl. 175—41.)



5. An electrical condenser comprising a casing, a central support and conductor in said casing, an abutment upon said support, condenser plates grouped to form units in substantially radial arrangement about said support as an axis, said units engaging the abutment at one end, an annular member surrounding said units to enable them to be engaged at their opposite ends and held in position with reference to said support, and one or more rods forming terminals or conductors for the opposite ends of said units.

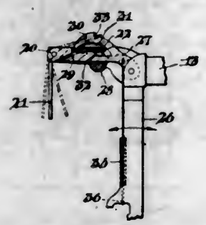
1,681,885. MOTOR VEHICLE. LEOPOLD RAAB, Vienna, Austria, assignor to Oesterreichische Daimler-Motoren Aktiengesellschaft, Wiener-Neustadt, Austria. Filed June 17, 1926, Serial No. 116,758, and in Austria June 24, 1925. 9 Claims. (Cl. 180—70.)

1. In a motor-vehicle, the combination with an axle divided into two spring-controlled parts adapted to be relatively deflected about a point situated below the level of the wheel centres, of a propeller shaft arranged with its axis in alignment with the point about which the axle parts are deflected.



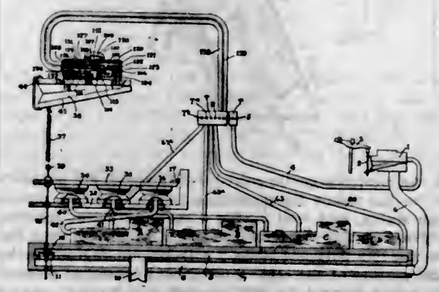
1,681,886. TUBE CLEANER. OTTO C. RUNGE, Baltimore, Md., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 7, 1923. Serial No. 637,145. 4 Claims. (Cl. 15—104.14.)

1. In a tube-cleaner a body member having transverse projections, headed pivot pins through said transverse projections, yoke members mounted on said pivot pins, spindles in said yoke members carrying rotary cutters and supported at their forward ends by step bearings in the yoke members, a backing plate contacting with the rear end of the spindles and the heads of the pivot pins, and a support screw-threadedly engaging the body member and holding the backing plate in position.



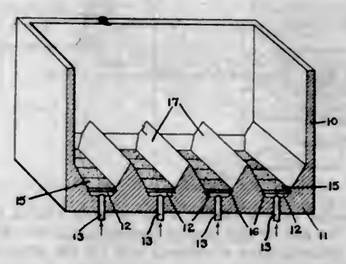
1,681,887. STOP MOTION FOR LOOMS. DAVID E. SKEDGELL, Millville, N. J., assignor to The Millville Manufacturing Company, Millville, N. J., a Corporation of New Jersey. Filed June 20, 1927. Serial No. 200,121. 5 Claims. (Cl. 139—377.)

1. In an automatic loom with filling-replenishing mechanism, stopping mechanism, a filling detector to cooperate with a grid on the lay, a constantly reciprocating element with hooks in different planes to engage the tail loop of the detector in the absence of filling before the grid, also when said detector is swung to an abnormal extent due to the presence of an obstruction larger than the filling before the grid, the combination of a thrust bar lying in the path of the tail of the detector when the latter is moved to abnormal position and adapted to trip the loom stopping mechanism without entailing actuation of the filling-replenishing mechanism, said bar incorporating a U-shaped portion



fitting over the hook element for contact with the detector tail loop at more than one point, thereby to insure positive actuation of said stopping mechanism.

1,681,888. STOP MOTION FOR LOOMS. DAVID SKEDGELL, Millville, N. J., assignor to Millville Manufacturing Company, Millville, N. J., a Corporation of New Jersey. Filed June 20, 1927. Serial No. 200,122. 3 Claims. (Cl. 139—377.)

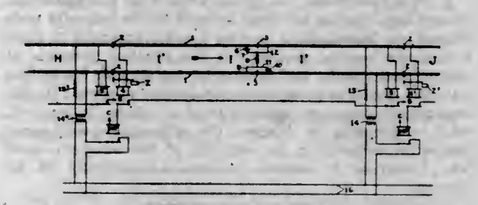


1. In a filling stop motion for looms, comprising a hook element with notches in different planes, said element pivotally connected to a constantly vibrating actuator and confined by an underlying supporting rest to definite reciprocatory movement relative to the filling detector in readiness to be automatically engaged by the tail loop of the latter in the absence of filling or in the presence of an abnormal obstruction before the reed, the combination of a spring in tension means to prevent the hook element from being accidentally lifted from its supporting rest and causing mal-operation of the loom stopping mechanism.

1,681,889. AUTOMATIC PLAYER PIANO. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed June 1, 1923. Serial No. 642,749. 5 Claims. (Cl. 84—41.)

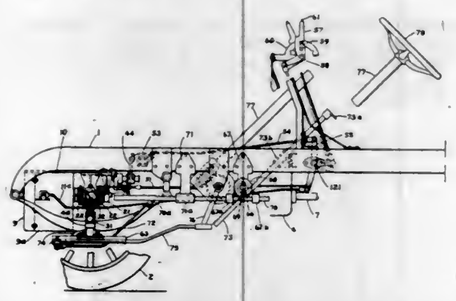
1. A throttle valve for automatic expression mechanisms, comprising, in combination, a valve stem, a valve mounted loosely thereon having a rounded bearing surface through which the stem passes, a pair of collars fixed to said stem mounted on either side of said valve and cooperating with said bearing surface to prevent longitudinal movement of the valve relative to the stem while permitting relative angular movement therebetween.

1,681,890. DIFFUSION PLATE. LORENZO S. WASHBURN, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 25, 1924. Serial No. 688,560. 1 Claim. (Cl. 261—122.)



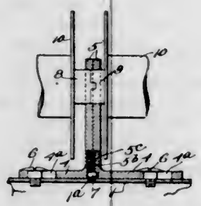
An apparatus for treating liquids, such as sewage, comprising a vessel divided into an upper and lower compartment by a porous diffusion plate of granular material united by a vitrified ceramic material having the walls of its pores treated with a water repellent substance adapted to reduce the capillarity of the plate so as to permit the free passage of a fluid therethrough, said upper compartment being adapted to contain liquid, and means for passing a gaseous agent, such as air, under pressure into the lower compartment so that it may pass through the plate into the liquid confined in the upper compartment.

1,681,891. MANUFACTURE OF ABRASIVE ARTICLES. DUANE E. WEBSTER, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1926. Serial No. 144,408. 5 Claims. (Cl. 18—53.)



1. The improvement in the manufacture of rubber bonded articles containing granular material comprising admixing abrasive grain and a vulcanizing agent with rubber latex having a total rubber content of not less than 30 per cent by weight, shaping the resultant mixture substantially to the desired form, and subsequently drying and vulcanizing the thus shaped article.

1,681,892. TRAIN CONTROL. WALTER W. WENHOLZ, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Nov. 20, 1924. Serial No. 751,061. 12 Claims. (Cl. 246—34.)

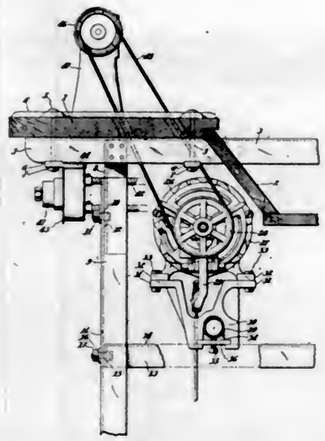


1. Trackway apparatus for a train control system employing direct current and alternating current comprising, an insulated section of the track rails, means for independently impressing a direct current potential across two portions of said section of the track rails, and for impressing alternating current potential across the entire section of the track rails.

1,681,893. MOTOR VEHICLE AND STEERING DEVICE. FREDERCK B. BARSHELL, New York, N. Y., assignor of one-half to David Barshell, New York, N. Y. Original application filed Feb. 1, 1923, Serial No. 616,423. Divided and this application filed Sept. 17, 1926. Serial No. 136,116. 12 Claims. (Cl. 180—45.)

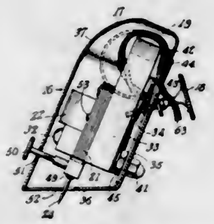
1. A motor vehicle having dirigible front wheels, a steering arm for one of said wheels, extending in one direction from its steering axis, a steering arm for the other of said wheels extending from the steering axis of said second wheel in substantially the same direction as said first crank arm, said second steering arm also extending in substantially the opposite direction from the steering axis of the second wheel, and a cross member adapted to connect the first steering arm with the second steering arm as desired, either with the extension of said second steering arm in the same direction as said first arm or with the extension of said second arm in the opposite direction, whereby said wheels may be steered in parallelism or in opposite directions to each other.

1,681,894. BEARING FOR DEMOUNTABLE SPOOLS. WALTER BIXBY, Boston, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1923. Serial No. 666,839. 8 Claims. (Cl. 139—10.)



1. In a tube-frame, the combination with a longitudinal carrier-bar, bearing brackets secured to the opposite ends thereof, an intermediate bearing bracket arranged to form a common bearing support for the abutting journals of aligned yarn-spools, said bracket having slidable connection with the carrier-bar longitudinally thereof to permit its disengagement from one spool-journal to allow its removal, while continuing to support the adjacent spool-journal thereafter permitting the removal of the adjacent spool when returned to normal position, substantially as described.

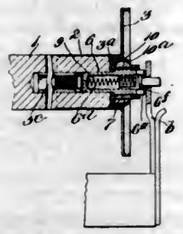
1,681,895. REFINING OILS. LOUS BURGESS, Bayonne, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 13, 1923. Serial No. 651,435. 3 Claims. (Cl. 196—38.)



1. The improvement in the art of refining hydrocarbon oils, which comprises repeatedly treating the oil with fuming sulfuric acid in the proportion of 5–10%, whereby sludge and oil-soluble sulfur containing compounds are formed, and after each treatment with 5 to 10% of fuming sulphuric acid separating the sludge and after each sludge separation subjecting the oil to the action of caustic soda and an aliphatic monohydric alcohol, and removing from the oil the alcohol solution containing dissolved oil-soluble sulfur compounds.

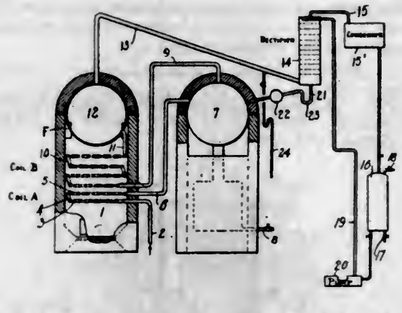
1,681,896. POWER TABLE FOR SEWING MACHINES. GEORGE M. EAMES, Bridgeport, Conn., and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 15, 1925, Serial No. 2,540. Renewed Jan. 28, 1928. 5 Claims. (Cl. 45—27.)

1. A power-table for sewing and like machines comprising a table-top, table-top end standards, a tubular supporting member sustained by said standards and affording a conduit for electric-current leads, and an electric-transmitter mounted upon said member.



1,681,897. ELECTRICAL PHONOGRAPH REPRODUCER. CARL F. GOUDY, Flushing, N. Y., assignor to Pacent Radio Corporation, New York, N. Y., a Corporation of Delaware. Filed July 30, 1927. Serial No. 209,500. 14 Claims. (Cl. 179—100.1.)

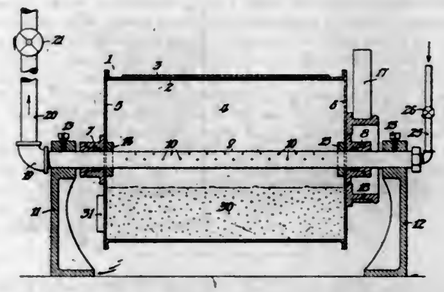
2. An electromagnetic reproducer comprising a magnetic reed having means for connecting the same with a phonograph stylus, said reed having a base portion of substantially rectangular cross section and a cylindrical stem terminating in a flattened blade, a coil surrounding said cylindrical portion of the reed, a permanent horseshoe magnet, pole pieces secured to said magnet and having opposed branches forming a magnetic gap for the flattened tip of the reed and opposed branches providing a seat for the substantially rectangular portion of the reed, an elastic



sleeve about the angular portion of the reed, clamp bars closing opposite sides of the seat and securing said elastic sleeve in compressed relation with the intervening portions of the pole pieces acting as spacers holding said clamp bars spaced in definite relation.

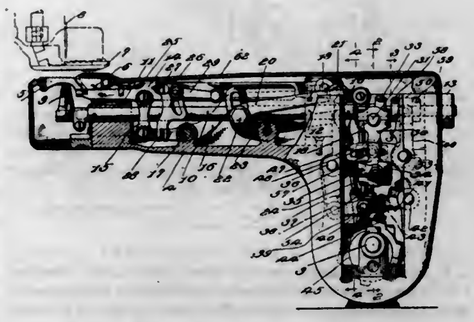
1,681,898. YARN SPOOL FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, and WALTER BIXBY, Boston, Mass., assignors to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 5, 1926. Serial No. 146,425. 6 Claims. (Cl. 242—123.)

1. A yarn spool for a tube frame or the like, embracing in combination a spool-barrel having an axial bore in its end, a threaded bushing anchored in said bore by a transverse locking pin, a journal gudgeon having threaded engagement with said bushing and arranged, when screwed home, to form an interlocking engagement with the transverse pin to lock the pin against displacement transversely of the spool, and acting by the thrust against said pin to lock itself against unscrewing.



1,681,899. ART OF CRACKING HYDROCARBONS. FRANK A. HOWARD, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Mar. 20, 1923. Serial No. 626,264. 7 Claims. (Cl. 196—60.)

6. In apparatus of the character described, the combination of a heating coil located as a screen to absorb radiant heat, a distillation chamber into which said coil discharges, another heating coil screened solely by the first-mentioned coil, and a vapor line from the chamber to the last-mentioned heating coil.

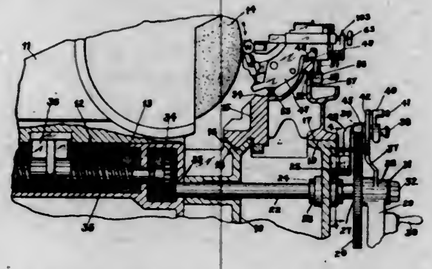


1,681,900. CELLULOSE-XANTHATING PROCESS. WILLIAM MENDEL, Beverly, N. J., assignor to Samuel A. Neidich, Edgewater Park, N. J. Filed May 1, 1926. Serial No. 106,155. 7 Claims. (Cl. 260—100.)

1. A cellulose xanthating process, which includes subjecting a mass of alkali-cellulose to a vacuum, while agitating said mass, until air and water vapor are exhausted therefrom; then subjecting said evacuated mass to the action of carbon bisulphide, while agitating said mass, until it is transformed to cellulose xanthate; then subjecting

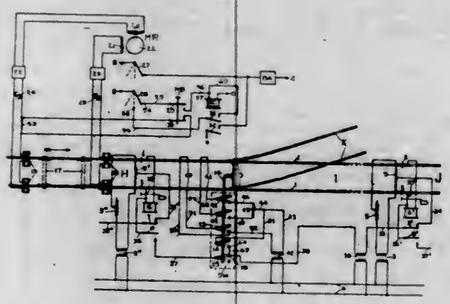
said mass to the action of a vacuum, while agitating said mass, until the fumes of carbon bisulphide are exhausted therefrom.

1,681,901. LOOPER MECHANISM FOR SEWING MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1921. Serial No. 508,930. 8 Claims. (Cl. 112—200.)



1. The combination of a vertically extending frame member, a work supporting arm projecting laterally therefrom, an operating shaft extending into said frame member, a looper supporting shaft extending longitudinally of said work supporting arm, a threaded looper carried thereby, means actuated by said operating shaft for giving the looper supporting shaft an endwise movement, and independent means actuated by said operating shaft for oscillating said looper supporting shaft, said means including toggle links movable toward and from a dead center, said toggle links being in substantial alinement when the looper is at the forward end of its stroke and during the endwise movement of the looper shaft.

1,681,902. CYLINDRICAL GRINDING MACHINE. CHARLES H. NORTON, Plainville, Conn., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 29, 1926. Serial No. 119,435. 19 Claims. (Cl. 51—238.)

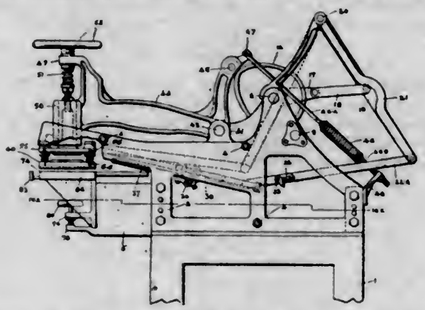


1. A grinding machine comprising a rotatably mounted grinding wheel, means for moving the grinding wheel mounting to feed the wheel a predetermined distance into the work, a movably mounted work steadying member, and

an automatically operated mechanism for positively moving said member forward so that it will maintain contact with the work at a uniform pressure as it is reduced in size,

which is constructed and arranged to effectively resist movement in the opposite direction by forces set up during the grinding operation.

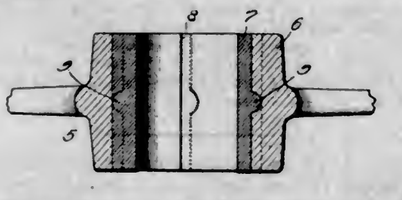
1,681,903. TRAIN CONTROL. HERMON P. OBER, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Aug. 15, 1924. Serial No. 732,212. 14 Claims. (Cl. 246—63.)



1. In an automatic train control system, the combination with car-carried apparatus including a brake control device, and means for controlling said device in response to control energy transmitted from the trackway, of manually controllable means for rendering said brake control device inactive only if an amount of energy in excess of said control energy is received from the trackway and, a track switch, and trackway means adjacent said track switch for transmitting said excess amount of energy to said car-carried apparatus only when the track switch is in a given position.

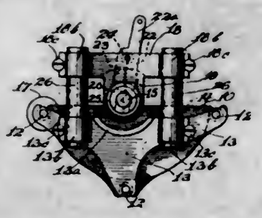
1,681,904. WELDING ROD. PLINY P. PIPER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 18, 1927. Serial No. 176,583. 2 Claims. (Cl. 219—8.)

1. A copper welding rod containing phosphorus between the limits of about 0.10% and 0.20% and tin between the limits of about 0.50% and 1.00%.



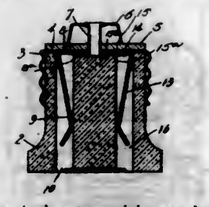
1,681,905. PRINTING MACHINE. ALVIN A. SCUBE, Rochester, N. Y. Filed Apr. 13, 1925. Serial No. 22,551. 21 Claims. (Cl. 101—302.)

1. In a printing machine, the combination of a frame, an arm mounted to swing thereon, a bed plate carried by said arm, type supported by said bed plate, a frame having ink rollers therein, stationary inclined guides in which said frame can travel back and forth, an ink supply at one end of the guides from which the rollers take ink, said bed plate and type being raised by the arm to tilted position substantially parallel with the other end of said guides to



permit the ink rollers to move in contact with the type and a platen for supporting the box to be printed with reference to which the guides are inclined.

1,681,906. BUSHED MANGANESE-STEEL SHEAVE AND THE LIKE. JOHN C. TAYLOR, Jr., High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Sept. 21, 1927. Serial No. 220,958. 4 Claims. (Cl. 22—203.)

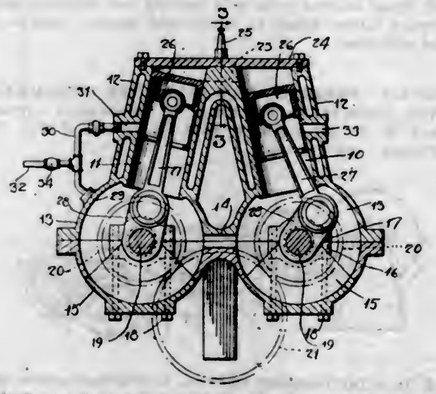


1. The method of eliminating excess metal and otherwise to insure uniformity of sound metal section in wheel shapes of manganese steel or other substantially non-machinable metal, which consists in moulding the shape around a machinable bushing having spaced longitudinal wall sections whereby it is free to contract to relieve strains incidental to shrinkage of the manganese steel.

1,681,907. VARIABLE CONDENSER. HAROLD E. BECK, Chicago, Ill. Filed Oct. 31, 1924. Serial No. 746,923. 12 Claims. (Cl. 175—41.5.)

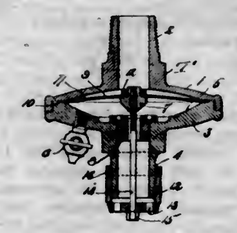
1. In a variable condenser, the combination of spaced stator plates, spaced rotor plates intermediate said stator plates, a shaft supporting said rotor plates for rotary movement, a first mounting plate at one end of the condenser substantially parallel with said stator plates and secured thereto at a substantial distance therefrom, a second mounting plate substantially in the plane of said first mounting plate and substantially separated therefrom and carrying a bearing for said shaft, and rods of high dielectric strength securing said mounting plates together to maintain said stator and rotor plates in spaced relation from each other.

1,681,908. ELECTRIC CONNECTING PLUG. JOHAN G. PETERSON, Hartford, Conn. Filed Apr. 7, 1924. Serial No. 704,639. 11 Claims. (Cl. 173—343.)



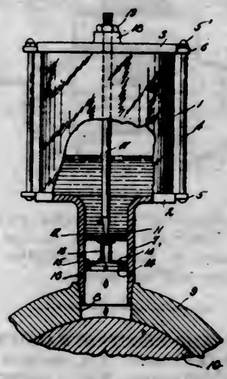
1. An attachment plug comprising an insulating body of substantially uniform diameter at its inner end presenting a substantially flat inner end, a conducting shell fitted on the inner end thereof, a shallow insulating disc overlying the inner ends of said shell and body, a hollow outstanding central contact boss outside said disc and of substantially greater height than the latter, contacts in said body insulated from one another and respectively electrically connectable to said shell and boss, and means holding the parts in assembled relation with said contacts respectively electrically connected to said shell and boss.

1,681,909. AUTOMOBILE HEADLIGHT. RUFUS A. RUSSELL, Jr., San Diego, Calif. Filed Feb. 24, 1927. Serial No. 170,588. 1 Claim. (Cl. 240—7.1.)



An automobile headlight comprising a horizontal elongated casing, an elongated reflector in said casing formed of a sheet metal body stamped to provide a series of integrally connected parabolic reflectors connected to each other by curved reflectors at each end of the series having their sides which form the ends of the reflector extending outwardly and joining the ends of the casing, and lamps in the reflectors mounted in a plane behind the extremities of the reflecting surfaces of the end reflectors and in a plane coinciding with the plane of the curved connecting surfaces, substantially as set forth.

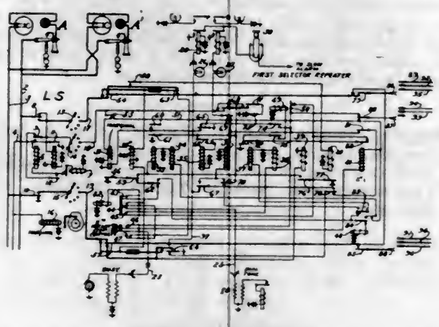
1,681,910. INTERNAL-COMBUSTION ENGINE. DANIEL C. SLAGHT, Easton, Pa. Filed July 6, 1926, Serial No. 120,810. Renewed Jan. 26, 1928. 2 Claims. (Cl. 123—53.)



2. In an internal combustion engine, a pair of cylinders arranged with their axes at an acute angle, said axes being disposed in inverted V-shaped arrangement, said cylinders having port communication at their upper ends, a piston in each cylinder, a crank shaft for each cylinder, piston rods each connecting a piston with a respective crank shaft, one of said cylinders having an inlet port and the other cylinder having an exhaust port, said ports being positioned in the sides of the cylinders for covering and uncovering by respective pistons, gearing connecting the crank shafts arranged to cause them to revolve in unison with the cranks of the crank shafts in relative angular displacement whereby one of said pistons moves through its cycle slightly in advance of the other, a pair of closed crank cases each connected to the lower end of a respective cylinder, said crank casing having port communication with each other, a pipe leading from one of the crank cases to said inlet port, a carburized air supply pipe communicating with the last mentioned pipe between the crank case and inlet port, and a check valve in the supply pipe opening toward the first pipe.

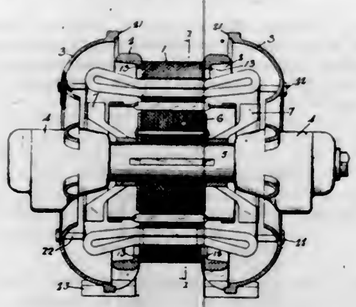
1,681,911. TRAIN-HEATING SYSTEM. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1924. Serial No. 745,831. 18 Claims. (Cl. 236—59.)

1. An escape valve for train heating systems and the like comprising a casing having a threaded nipple at its upper end for connection to the under side of a conduit, the casing having a vertical passageway to drain the conduit, a cupped sheet-metal thermostat disposed horizontally in said casing, and a valve connected to said thermostat for closing said passageway.



1,681,912. LUBRICATING DEVICE. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1924. Serial No. 746,314. 14 Claims. (Cl. 184—68.)

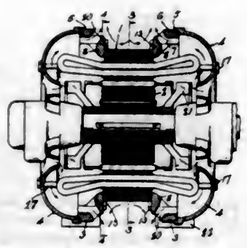
1. A lubricating device for bearings comprising a receptacle having an outlet, means for restricting the flow of oil through said outlet, and snap action temperature



controlled means responsive to the bearing temperature connected to said last means for automatically and instantaneously augmenting the flow when the temperature reaches a predetermined point.

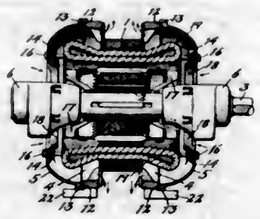
1,681,913. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 19, 1924, Serial No. 714,240. Renewed May 11, 1928. 38 Claims. (Cl. 179—18.)

1. In a telephone system, means including a selector repeater and a final connector for connecting a calling and a called line, a control circuit extending between said switches, means in said selector repeater for supplying current to said control circuit and for interrupting the current supply to transmit digit impulses, and a relay in said connector responsive to such impulses for setting the connector on a called line.



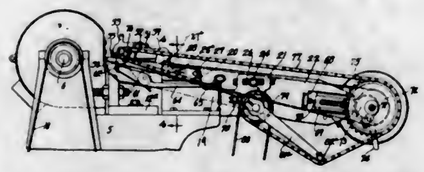
1,681,914. DYNAMO-ELECTRIC-MACHINE STATOR. JOHN M. BARR, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 12, 1923. Serial No. 680,159. 13 Claims. (Cl. 172—36.)

1. A stator comprising a laminated core, end frames supporting said core, and castings carried by said end frames and formed to provide ventilating passages between the same and said end frames.



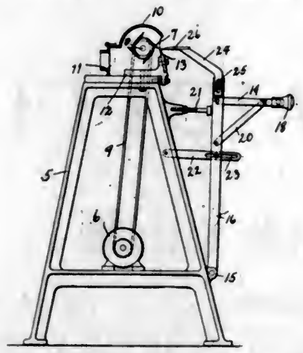
1,681,915. DYNAMO-ELECTRIC-MACHINE STATOR. JOHN M. BARR, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 12, 1923. Serial No. 680,160. 3 Claims. (Cl. 172—36.)

2. A dynamo electric machine stator comprising a core, an end frame having continuous engagement with each end thereof and provided with passages therethrough formed to direct discharged air outward and away from



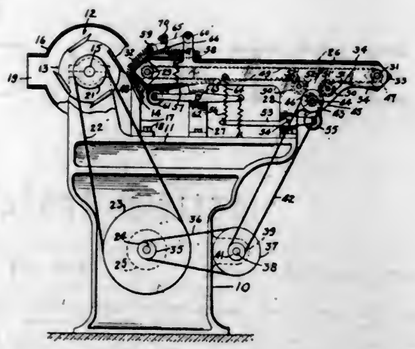
said core and cause external air to circulate upon the outside thereof, and an end casing carried by each end frame and having continuous engagement therewith.

1,681,916. DYNAMO-ELECTRIC-MACHINE STATOR. JOHN M. BARR, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 18, 1924. Serial No. 693,615. 2 Claims. (Cl. 172—36.)



1. A stator for dynamo electric machines comprising separate end frames each having concentric inward and outward lateral flanges and inward radial lugs, a laminated core having a central circular pole face and outer corners concentric thereto and arranged between said end frames and held concentric thereto and in alinement therewith by said inward lateral flanges engaging said corners, bolts passing through said core near said corners and said inward radial lugs to hold said end frames and core together, and an end casing carried by each end frame and having a central bearing and an inward lateral flange concentric to said bearing and engaging said outward lateral flange to center said bearing relative to said pole face.

1,681,917. FEEDING MECHANISM FOR FUR-SHEARING MACHINES. FREDERICK W. HORSTMANN, Irvington, N. J. Filed Feb. 7, 1925. Serial No. 7,671. 23 Claims. (Cl. 149—26.)



1. In a fur trimming machine, a shearing mechanism, an endless conveyor adjustable relative to the shearing mechanism and flexible means carried by said conveyor for holding a skin upon said conveyor.

1,681,918. FUR-SHEARING MACHINE. FREDERICK W. HORSTMANN, Maplewood, N. J. Filed June 22, 1925. Serial No. 38,832. 1 Claim. (Cl. 149—26.)

In a fur trimming machine, the combination with a stand having a bed knife and rotary knives cooperating therewith, a frame pivotally mounted on said stand, arms carried at the upper end of said frame, a flat stretcher bar or apron formed with said arms, means for moving said stretcher bar in an approximately horizontal plane toward the rotary knives and in proximity to the bed knife and means for limiting the inner and outer movements of said frame and stretcher bar.

1,681,919. MACHINE FOR CUTTING DESIGNS IN FURS. FREDERICK W. HORSTMANN, Maplewood, N. J. Filed Mar. 25, 1926. Serial No. 97,182. 10 Claims. (Cl. 149—26.)

1. In a fur cutting machine, the combination of a fur shearing device, a conveyor for feeding a fur past said device, and means for moving one end of said conveyor toward and from said device while a fur is being fed past said device whereby the fur will be cut in a predetermined design.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 373—No. 4. TUESDAY, AUGUST 28, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. Patent Office, *Washington, Aug. 11, 1928.*

Union Baking Company, Incorporated, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fischer Baking Co., of Rose and Livingston Streets, Newark, N. J., for registration of a trade-mark and trade-mark registered September 16, 1924, No. 189,190, to Union Baking Company, Incorporated, of Fifth and Columbia Streets, Vancouver, Wash., and a notice of such declaration sent by registered mail to said Union Baking Company, Incorporated, at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Union Baking Company, Incorporated, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notices of Cancellation.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

William P. Saunders, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The American Products Company, of 3265 Colerain Avenue, Cincinnati, Ohio, to effect the cancellation of the trade-mark registration of William P. Saunders, of care of Sano Mfg. Co., 310 North 18th Street, Birmingham, Ala., No. 126,897, dated October 7, 1919, and the notice of such proceeding sent by registered mail to the said William P. Saunders at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said William P. Saunders, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

Tiger Products Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Union Supply Company, of 10 South Brond Street, Elizabeth, N. J., to effect the cancellation of the trade-mark registration of Tiger Products Company, of 1503 Merchants Bank Building and 55 East Third Street, St. Paul, Minn., No. 139,410, dated February 1, 1921, and the notice of such proceeding sent by registered mail to the said Tiger Products Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless Tiger Products Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Aug. 2, 1928.*

Diamond Creamery Co., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of National Creamery Company, of Boston, Mass., to effect the cancellation of the trade-mark registration of Diamond Creamery Co., of Massena, N. Y., No. 84,216, dated November 21, 1911, and the notice of such proceeding sent by registered mail to the said Diamond Creamery Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Diamond Creamery Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business August 17, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 111,453; Trade-Mark Division, 1,722. Oldest new case, Oct. 19, 1927; oldest amended, Oct. 24, 1927. The dates given are 1927 except where † indicates 1928.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

In re Gregg & Son, Inc.

No. 1,999. Decided March 5, 1928.

1. Trade-Marks—Trade-Mark Use.

The placing of a mark on labels attached to cleaned or renovated goods when they are returned to the owners *Held* not a trade-mark use of that mark since it indicates neither origin or ownership of the goods.

2. Same—Right of Registration—How Acquired.

"To entitle an applicant to the registration of a trade-mark it must appear that the mark has been used on an article of commerce, and that it has been used in commerce. The mark must likewise possess a distinctive identifying characteristic of the article to which it is affixed and must be used to indicate the origin or ownership of the article to which it is attached."

Appeal from the Commissioner of Patents. Affirmed.

Mr. Arthur M. Hood for Gregg & Son, Inc.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before Martin, Chief Justice, Van Orsdel, Associate Justice, and Smith, Judge of the U. S. Court of Customs Appeals.

Van Orsdel, *J.:*

This appeal is from the decision of the Commissioner of Patents denying the application of appellant for the registration of a trade-mark on the ground of lack of trade-mark use.

[1] It appears that appellant company is a service corporation carrying on the business of repairing, cleaning, renovating, and dyeing fabrics and furs. The mark sought to be registered is used by appellant company on labels attached to goods that have been cleaned or renovated when the same are returned to the owners. Registration was refused on the ground that the mark does not indicate either the origin or the ownership of the goods on which it is used. Clearly the goods do not originate with appellant company, neither is it the owner of the goods, since all that is done by appellant is the repairing, cleaning, renovating, or dyeing of the fabrics or furs, the origin and ownership of which are in the persons for whom appellant's services are engaged.

[2] To entitle an applicant to the registration of a trade-mark it must appear that the mark has been used on an article of commerce, and that it has been used in commerce. The mark must likewise possess a distinctive identifying characteristic of the article to which it is affixed and must be used to indicate the origin or ownership of the article to which it is attached. Nims, in his work on Unfair Competition and Trade-Marks (2d ed.) section 212, in defining who may acquire a trade-mark says:

> Not only a manufacturer of goods but a merchant, distributor, jobber, bottler, or other person who selects goods and markets them or places them before the public may adopt for use his own trade-mark. *Hughes v. Alfred H. Smith Company*, 205 Fed. 302.

In section 214 of the same work, the author defines the manner in which a trade-mark may be acquired, as follows:

> The trader must do three things in order to acquire a good title to a technical trade-mark: first, he must adopt a trade-mark open to appropriation; second, he must apply it or attach it physically to a vendible commodity, and, third, he must actually put the commodity so marked on the market. *Schneider v. Williams*, 44 N. J. Eq. 391.

It will be observed that the appellant falls far short of meeting the requirements that would entitle it to the registration of its mark. The mark is not attached to vendible articles, nor does appellant occupy such a relation to the goods to which the mark is attached as to entitle it to sell or dispose of the same. It is neither the owner of the goods nor an agent authorized to sell or dispose of them.

Appellant company does not rise to the dignity of a dealer or retailer, who may have his mark placed upon the goods he handles by the manufacturer, for in such cases the dealer or retailer is the owner of the goods, and as such comes clearly within the registration requirements. Neither is appellant a producer of the goods, since he possesses neither origination nor ownership.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

Gray v. The Armand Company.

No. 2,022. Decided March 6, 1928.

1. Trade-Marks—Right to Registration—How Acquired.

It is settled law that the office of a trade-mark is to distinctly point out the origin or ownership of the article to which the mark is attached. It follows, therefore, that to establish a right to the registration of a trade-mark two things are necessary: That it must have been actually applied to vendible goods; and that the goods have been sold in interstate commerce.

2. Same—Trade-Marks—Trade-Mark Use.

Where, in connection with the goods of the A. Co. a picture was affixed to a box containing such goods and placed on a counter where these goods were for sale, the combination not being sold to a customer, but retained in the store. *Held* that this did not constitute a use by the A. Co. of such picture as a trade-mark for the goods in question.

Appeal from the Commissioner of Patents. Reversed.

Mr. W. P. Preble for Gray.

Mr. Paul Finckel, Mr. W. P. Blair, and *Mr. Jas. T. Newton* for the Armand Co.

Before Martin, Chief Justice, Van Orsdel, Justice and Smith, Judge U. S. Court of Customs Appeals.

Van Orsdel, *J.:*

The trade-marks in interference are substantially the same consisting of the picture of a girl in

similar-style dress, slightly differing in color. The goods on which the marks are claimed to have been used by the respective parties are cosmetics, including face powders, talcum powders, creams, lip sticks, preparations for the hair, etc. The Armand Company established prior use of the design in interference.

The Examiner of Trade-Mark Interferences decided in favor of the Armand Company, his decision was affirmed by the Commissioner, and the case is here on appeal.

There is no dispute as to the facts. It is contended by counsel for appellant that no legal trade-mark use has been made by the Armand Company of its mark, for the reason that the mark was never affixed, attached, or applied to any goods which were sold and passed into the customer's possession. The mark was labeled "The Armand Girl." The picture was affixed to a box containing powder or cold cream and attached to a block of wood, which stood on the counter where the goods were displayed for sale. This combination, picture, box, and block, was not sold or in any way conveyed to a customer, but was retained in the store merely to attract the attention of customers to the goods. The box, attached to the block of wood and standing on the counter, contained a free sample of face powder or cold cream so that customers desiring to, might sample it. If, however, the customer should purchase a box of the goods, the package purchased would not contain the Armand Girl mark. It is urged, therefore, that the use made by appellee company was merely for advertising purposes to attract the attention of the public to the goods on sale.

It also appears that a pamphlet was issued by the Armand Company which contained on the lower right hand corner of the back cover a small picture of the Armand Girl. The front cover contained a silhouette head of a lady of the time of Louis XVI of France, which is a trade-mark of the Armand Company used on face powder, packages, and many other articles. This pamphlet it was also claimed was issued for advertising purposes.

[1] The sole question, therefore, is whether or not this constitutes a legal trade-mark use. It is settled law that the office of a trade-mark is to distinctly point out the origin or ownership of the article to which the mark is attached. It follows, therefore, that to establish a right to the registration of a trade-mark two things are necessary: That it must have been actually applied to vendible goods, and that the goods have been sold in interstate commerce. As this court said in *Battle Creek Sanitarium Company* v. *Fuller*, 1334 O. G. 1297, 30 App. D. C. 411—

> To constitute a trade-mark use, the mark must be attached or applied to the goods. *Columbia Mill Co.* v. *Alcorn*, 65 O. G. 1916, 150 U. S. 460, 464. Property in it can only be acquired by the actual application of it to goods of a certain class, so that it serves to indicate the origin of the goods; that is to say, identify them with the particular manufacturer or trader, and to distinguish them from similar goods. *United States* v. *Braun*, 39 Fed. 775. The mere advertisement of the words or symbol without application to the goods themselves is insufficient to constitute a trade-mark.

[2] The use made by the Armand Company amounts to nothing more than an attractive and effective method of advertising. The failure to affix the mark to the goods actually sold and carried away by the customer deprives it of the fundamental element entering into trade-mark use. The Commissioner, in his opinion, while conceding "the proposition that there must be a physical association of the mark with the goods," and that this proposition is supported by the authorities generally, attempts to distinguish the rule by reference to the provisions of the Trade-Mark Act of February 20, 1905, section 29, which provides in part as follows:

> A trade-mark shall be deemed to be "affixed" to an article when it is placed in any manner in or upon either the article itself or the receptacle or package or upon the envelope or other thing in, by, or with which the goods are packed or inclosed or otherwise prepared for sale of distribution.

But the statute, it will be observed, requires that the mark shall appear on the receptacle or package in which the goods are inclosed, "prepared for sale or distribution." The use made by the Armand Company falls far short of meeting this requirement. The display of the picture on the counter where the goods were for sale; or in another instance, where the exhibition consists of a "double Armand Girl supporting a box of powder, or a box of cold cream;" or in the pamphlet referred to; or where, as disclosed in the record, the Armand goods were placed on exhibition at fairs, and a girl, dressed as the Armand Girl, was on exhibition with the goods. We are of opinion that none of these, or all of these combined, constitute a trade-mark use. They were simply novel and effective methods of advertising. Nor is the suggestion of the Commissioner that the Armand goods were known to the public by the name of the Armand Girl, and that they were frequently identified as such, of importance. This identification attached to the goods does not originate from a trade-mark use, but from the methods of advertising used by the Armand Company. The identification, therefore, does not strengthen the case so far as indicating or establishing a legal trade-mark use.

The decision of the Commissioner is reversed.

Court of Appeals of the District of Columbia.

IN RE KAPLAN.

No. 2,046. Decided May 7, 1928.

PATENTABILITY—INVENTION.

Where turbine water wheels of both high and low speed were old in the art and it was also old to adjust the blades to regulate the flow of water and the degree of power in water wheels, which would not be regarded as of high speed, *Held* that there was nothing inventive in merely using or adopting the adjustable blade construction for a high speed turbine.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. J. W. Hazell for Kaplan.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents denying patentability of an invention relating to an alleged improvement on high-speed water turbine wheels in which the blades are adjustable on pivots so as to vary the inlet and outlet of the water supplied by the guide wheel.

The alleged invention is expressed in a single claim as follows:

> A runner wheel for high speed turbines provided with guide vanes, said wheel comprising a plurality of angularly adjustable blades, and means to adjust said blades while the wheel is running so as to vary not only the outlet angles and passages but also the inlet angles and passages of the wheel, to correspond to variations in the supply of water and in the power required.

The reference on which the patent was denied is a patent to one Ludlow, in which a water wheel is disclosed with blades adjustable in practically the same manner as in applicant's wheel. The blades in the Ludlow wheel can be brought in such position that there is a tangential passage of water to the blade surfaces. Ludlow states that one of the objects of his invention is to regulate the capacity of the wheel—

> to suit the amount of power it is required to give out and the wheel made to work at a less power than its maximum, with the use of a proportionate amount of water only.

Turbine water wheels of high or low speed are old in the art. The means adopted for adjusting the blades to regulate the flow of water and the degree of power imparted is likewise old in the art. It is clear, we think, from the disclosure of Ludlow that he contemplated the adjustment of the blades in such position that a given volume of water would produce maximum efficiency and operation. Whatever importance he attached to his invention it is clear, we think, that he disclosed a wheel having adjustable blades capable of maintaining maximum efficiency of operation and speed of rotation with the variations in the volume of water.

We, therefore, agree with the conclusion of the Commissioner that—

> the claim does not define any structure not found in this reference (the Ludlow patent) but specifies that the runner wheel is "for high speed water turbines." While Ludlow's water wheel is not of the type now recognized as constituting a high speed turbine yet it is believed there would be nothing inventive in merely using or adopting this adjustable blade construction for a high speed turbine, a wheel which revolved at a much higher speed than would that of Ludlow.

The means vaguely disclosed by applicant for varying the supply of water is not different from that disclosed by Ludlow, and would seem, therefore, no more effective for the regulation of a particular volume than that disclosed in the prior art.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

IN RE WILLIS.

No. 2,052. Decided May 7, 1928.

DESIGNS—PATENTABILITY.

A design for a handle for a suction cleaner *Held* not patentable, since it "presents no pleasing or ornamental effect to the eye, but is simply and plainly utilitarian."

APPEAL from the Commissioner of Patents. Affirmed.

Mr. A. L. Lawrence for Willis.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

The appellant, Willis, claims to be the inventor of a new type or style of handle for a suction cleaner, and he has applied for a design patent therefor. The design is thus described in the application, to wit:

> This design is characterized by a gradually tapering grip portion shaped to fit the hand and merging into an annular shoulder; said grip portion being at an angle with the lower portion of the handle, to which is attached a mounting plate along its underside.

The application was denied by concurring decisions of the Patent Office upon the ground that the design is not novel nor ornamental.

We think the application was rightly denied. A tapering grip handle substantially similar to applicant's is shown by reference to Kirby's patent, issued June 10, 1913. In *Clements* v. *Pittsburgh Electric Specialties Co.*, 294 Fed. 279, it is held that a handle with an inclined curve or straight grip is old for vacuum cleaners, and is not patentable. It is indeed well within common knowledge that such construction is old in the arts. *Towne Steering Wheel Co.* v. *Lee*, 199 Fed. 776. We think that the present design presents no pleasing or ornamental effect to the eye, but is simply and plainly utilitarian. In this particular it differs from the articles involved in the *Grigsby Case*, 55 App. D. C. 294, 339 O. G. 501, and in the *Drew Case*, *idem* 291, 339 O. G. 500.

The decision of the Commissioner of Patents is affirmed.

Patent Suits.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,501,532, N. F. Egler, Furnace, decided July 19, 1928, claims 1, 6, and 8.

Pat. 1,616,175, B. Bogoslowsky, Machine for making match cards, decided August 10, 1928, claims 1 to 11, inclusive, 17, and 18.

Pat. 1,639,597, W. Dubilier, Condenser, decided August 6, 1928, claim 1.

Final decision in interference has been rendered against the following trade-mark:

T. M. 167,441, Frozen and chilled mutton, lamb, and beef, and tallow derived from livestock for edible purposes, The New Zealand Refrigerating Company, Limited, of Christchurch, New Zealand. Registered May 1, 1923. Decided July 10, 1928.

Disclaimer.

1,664,772.—*Robert Louis Daine,* New York, N. Y. METHOD AND MEANS FOR FEEDING TAPE. Patent dated April 3, 1928. Disclaimer filed August 11, 1928, by the patentee, assignee, *Trans-Lux Daylight Picture Screen Corporation,* consenting.

Hereby enters this disclaimer to claims Nos. 1-57, inclusive, of said patent.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 28, 1928.

[VOL. 373. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

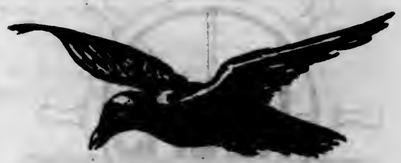
Ser. No. 268,351. CLOVER SPLINT COAL COMPANY, Pittsburgh, Pa. Filed June 20, 1928.

BLACK CLOVER

For Coal.
Claims use since May 24, 1928.

Ser. No. 268,352. CLOVER SPLINT COAL COMPANY, Pittsburgh, Pa. Filed June 20, 1928.

GREEN CLOVER



For Coal.
Claims use since May 24, 1928.

Ser. No. 268,353. CLOVER SPLINT COAL COMPANY, Pittsburgh, Pa. Filed June 20, 1928.

RED CLOVER

For Coal.
Claims use since May 24, 1928.

Ser. No. 268,699. PENN PRODUCTS CORPORATION, Aspers, Pa. Filed June 26, 1928.

Blackbird

For Clay.
Claims use since Feb. 5, 1928.

CLASS 2.

Receptacles.

Ser. No. 235,254. CROWN WILLAMETTE PAPER COMPANY, San Francisco, Calif. Filed July 28, 1926.

CROWN

For Bags, Containers, and Merchandise Envelopes Made of Sulphite and/or Sulphate Paper or Paperboard for Use by Grocers, Fruit Vendors, Department Stores, Etc., Also Paper Bags and Paper Receptacles for Special Purposes.
Claims use since January, 1890.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 239,966. CHEMISCHE FABRIK VON HEYDEN, A. G., Radebeul, near Dresden, Germany, assignor to Heyden Chemical Corporation, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 12, 1926.

Aktivin

For Mixtures of Soap and Na-p. Toluenesulfochloramide, Mixtures of Soap with Sodium Carbonate and Na-p. Toluenesulfochloramide, Mixtures of Soap with Sodium Bicarbonate and Na-p. Toluenesulfochloramide, Mixtures of Soap with Sodium Silicate and Na-p. Toluenesulfochloramide.
Claims use since Oct. 23, 1923.

Ser. No. 258,870. JOHN C. P. HELM, doing business as Helm Laboratories, New Orleans, La. Filed Dec. 13, 1927.

HELM'S

For Metal Polishes, Sweeping Compounds, and Pine-Oil Cleansers Containing Pine Oil, Alkali, and Rosin, Not a Soap.
Claims use since Sept. 24, 1923.

Ser. No. 260,749. REDMANOL CHEMICAL PRODUCTS COMPANY, New York, N. Y. Filed Jan. 27, 1928.

REDMANOL

For Abrasive Grinding Wheels and Abrasive Cutting Wheels.
Claims use since Sept. 15, 1919.

Ser. No. 261,988. PURITY CHEMICAL PRODUCTS CO., Santa Rosa, Calif. Filed Feb. 20, 1928.

LITTLE VALET

For Liquid Dry Cleaner (Carbontetrachlorid).
Claims use since Jan. 1, 1928.

Ser. No. 262,171. THE M & H COMPANY, Cleveland, Ohio. Filed Feb. 24, 1928.

Savol

When printed on the box, the mark usually appears in white letters on a blue background; but the color is not deemed essential.
For Soaps.
Claims use since about Mar. 12, 1925.

Ser. No. 263,395. ROLLAND FRANCIS HATFIELD, Sr., doing business as Ro-Hel-Gen Products Co., Not Inc., Cicero, Ill. Filed Mar. 19, 1928.

RO-HEL-GEN

For General Household Cleaner Consisting of 99% Pure Trisodium Phosphate.
Claims use since Oct. 1, 1925.

Ser. No. 268,272. CORINNA INCORPORATED, doing business as Frezo Laboratories, New York, N. Y. Filed June 19, 1928.

Frezo

For Shaving Cream of Saponaceous Nature.
Claims use since Nov. 15, 1927.

Ser. No. 268,927. ANNETTE R. JENNINGS, doing business as Annette's Perfect Cleanser Co., Boston, Mass. Filed June 30, 1928.

ANNETTE'S PERFECT CLEANSER

No claim is made to the words "Perfect Cleanser" apart from the mark shown.
For Dry-Cleaning Composition for Fabrics, Furs, and Felts.
Claims use since on or about Apr. 22, 1927.

Ser. No. 268,967. COMMUTATOR CLEANSER CO., Brooklyn, N. Y. Filed July 2, 1928.

APOL

For Cleaning Compound for Metals.
Claims use since about May 1, 1928.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 221,913. E. MYERS LYE CO., St. Louis, Mo. Filed Oct. 17, 1925.

Lightning

For Lye or Caustic Soda, Which Latter is the Technical Name for Lye.
Claims use since Feb. 20, 1903.

Ser. No. 231,212. WILLIAM JOHN TREVASKIS, doing business under the name of Salo-Sedatus Chemical Company, Fruitland Park, Fla. Filed May 6, 1926.

SALO-SEDATUS

For Antiseptic, Antipyretic, Diuretic, and Anodyne Preparations.
Claims use since 1900.

Ser. No. 246,417. LAGNO LABORATORIES, INC., Lockport, Ill. Filed Mar. 26, 1927.

LAGNOX

For Compound for the Treatment of Coccidiosis and Other Diseases of the Skin and Bowels of Poultry, Hogs, and Other Animals.
Claims use since Sept. 1, 1926.

Ser. No. 255,621. ACME LABORATORIES, INC., New York, N. Y. Filed Oct. 5, 1927.

RioRita

For Skin Creams, Nail Polish, and Remover.
Claims use since May 18, 1927.

Ser. No. 256,014. S. A. R. M. SOCIETÁ ANONIMA RITROVATI MEDICINALI, Rome, Italy. Filed Oct. 12, 1927.

For Cleanser, Sterilizer, Deodorant, and Disinfectant.
Claims use since Mar. 1, 1928.

Ser. No. 268,705. ERNST SCHAUFLER, Reutlingen, Germany. Filed June 26, 1928.

KREML

For Hair Tonic.
Claims use since about 1911.

Ser. No. 268,729. CHEMISCHE FABRIK VON HEYDEN, A. G., Radebeul, near Dresden, Germany. Filed June 27, 1928.

Aktivin

For Sodium-p. Toluenesulfochloramide, Potassium-p. Toluenesulfochloramide, Mixtures of Sodium Chloride with Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Sulfate with Sodium-p. Toluenesulfochloramide, Mixtures of Magnesium Sulfate and Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Nitrate and Sodium-p. Toluenesulfochloramide, Mixtures of Potassium Nitrate and Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Hydrate and Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Carbonate with Sodium-p. Toluenesulfochloramide, Mixtures of Potassium Hydrate and Sodium-p. Toluenesulfochloramide, Mixtures of Potassium Carbonate and Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Diphosphate with Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Triphosphate and Sodium-p. Toluenesulfochloramide, Mixtures of Starch with Sodium-p. Toluenesulfochloramide, Mixtures of Vegetable Gum with Sodium-p. Toluenesulfochloramide, Mixtures of Sodium Silicate and Sodium-p. Toluenesulfochloramide.
Claims use since Aug. 20, 1919.

Ser. No. 268,745. H. CHRIS OLTMAN, doing business as Spearo Manufacturing Company, Joplin, Mo. Filed June 27, 1928.

For Dentifrice, Tooth Powder, and Preparation for the Treatment of Pyorrhea.
Claims use since Mar. 20, 1928.

Ser. No. 268,769. CAVENDISH CHEMICAL CORP., New York, N. Y. Filed June 28, 1928.

Atocin

For Preparation for Treatment of Rheumatism, Neuralgia, Gout, and Sciatica.
Claims use since about March, 1925.

Ser. No. 268,794. LA LYSINE FORNARI INTERNATIONAL AMERICAN CORPORATION, Boston, Mass. Filed June 28, 1928.

La Lasine

For Antiseptic Preparation for External and Internal Use.
Claims use since Jan. 15, 1928.

Ser. No. 268,799. THE ODORONO COMPANY, Cincinnati, Ohio. Filed June 28, 1928.

NO. 3

For Deodorants.
Claims use since May 1, 1928.

Ser. No. 268,801. PACIFIC CHEMICAL COMPANY, Los Angeles, Calif. Filed June 28, 1928.

MOTH-PAK

For Moth Repellent.
Claims use since November, 1927.

Ser. No. 268,822. E. R. SQUIBB & SONS, New York, N. Y. Filed June 28, 1928.

IPRALGEN

For Analgeso Hypnotic.
Claims use since June 23, 1928.

Ser. No. 268,839. AMERICAN NICOTINE COMPANY, Henderson, Ky. Filed June 29, 1928.

For Nicotine Dusting Powder.
Claims use since Jan. 30, 1928.

Ser. No. 268,857. FAIRCHILD BROS. & FOSTER, New York, N. Y. Filed June 29, 1928.

PANCENTRATE

For Concentrate of the Fresh Pancreas Gland, of the Water-Soluble Constituents, Freed from Connective Tissue, Associated Lipoid and Protein, and Designed for Use in Pancreatic Deficiency.
Claims use since June 12, 1928.

Ser. No. 268,865. HARRY HEROLD, doing business as Herold Drug Co., Petaluma, Calif. Filed June 29, 1928.

SOLVINE

For Preparation for the Removal of Callous and Corns.
Claims use since Apr. 19, 1928.

Ser. No. 268,869. KEYSTONE LABORATORIES, Memphis, Tenn. Filed June 29, 1928.

Darbalx

For Perfumes, Toilet Water, Face Creams, Face Powder, and Face Lotions.
Claims use since Mar. 1, 1928.
